TO EXHIBITORS IN THE CRYSTAL PALACE.

As we are bringing to a close the weekly Supplements connected with the Great Exhibition, we receive numerous applications daily from Exhibitors and others for the insertion of Illustrations of their articles in the ILLUSTRATED LONDON NEWS. It being quite impossible to comply with these requests in our ordinary space, we beg to inform Exhibitors that we are willing to receive any drawings, with descriptions of articles now in the Crystal Palace, to be PAID for, ADVERTISEMENT PRICE. If this arrangement be satisfactory to Exhibitors, extra sheets will be Presented GRATIS to our Subscribers. Immediate application must be made; and no Drawings or Sketches, &c., can be possibly attended to, unless sent during the present month. Re-applications will be received.

Office, 198, Strand, August 1, 1851.

THE ILLUSTRATED LONDON NEWS.
LONDON, SATURDAY, AUGUST 2, 1851.

THE Crystal Palace is spared! The Goths and Vizigoths, the Huns and the Barbarians, are not to be allowed to raze to the earth that beautiful and unique Building—at least, until the 1st of May, 1852. The House of Commons, which originally granted the site for the Building, has decided that it shall stand for the winter, with a view to determine in the meantime whether it cannot be adapted to purposes of public utility and recreation. The Legislature, which is, in this respect, the organ, as well as the representative of the whole people, has, we think, acted wisely in rescuing the Building from immediate destruction. To have pulled it down would have inflicted a loss that might have proved irreparable; for, if once removed, there would have been neither funding nor, now opportunity for its restoration. London is not so conspicuously rich in public buildings, combining both beauty and utility, as to justify the Legislature—merely to gratify

the prejudices, or, it may be, the well-founded objections of a few ladies and gentlemen, under the guidance and championship of Lord Campbell and Colonel Sibthorp—in hastily sealing the doom of an edifice which the press and the public, and all our foreign visitors of every class and degree, have, with a singular unanimity, pronounced to be unrivalled in Europe, or in the world. Between this date and the re-assembling of Parliament, there will be ample time to ascertain decisively, whether the Building is calculated to withstand the blasts of our insular Boreas, and whether, in point of fact, the summer glories of the Great Exhibition of Art and Industry may not be—we will not say eclipsed, but, to a certain extent—rivalled, by the winter splendours to which Mr. Paxton proposes to devote it.

At all events, the decision of the House of Commons, that it shall remain until the dawn of another May morning—though it may possibly offend some few persons, and especially that small portion of society who object, from habit, to everything which the rest of the world approves, and who like nothing so much as to run a tilt against anything or any person that is popular and successful—will, we are certain, meet with the warm approval of the country generally. The Londoners, on whose behalf some few voices are raised, are quite content to lose a slice of their beautiful Park if they can gain the Crystal Palace in exchange; and the inhabitants of the remotest towns and cities in Great Britain, each of whom has as large a vested right in Hyde Park as any Londoner can have, share the feelings of the Londoners upon this point with a fervour and unanimity, not the less real because they have not been expressed in noisy public meetings. The Crystal Palace was a happy thought from the beginning. It made the fortune of the Exhibition; and people have learned to make a kind of faith in it, and to believe that its second adaptation have a kind of faith in it, and to believe that its second adaptation will be as brilliantly successful as its first. There is certainly something to be said in favour of removing it; but so there would be in favour of an insane plan for pulling down St. Paul's. It might be urged that there would be a fine open space at the top of Ludgate-hill if this were done; and that it would be a great convenience for cabs and omnibuses. But the world would keep its St. Paul's, notwithstanding such an argument, as it will, we think, keep its Crystal Palace, now that it has got it.

THE House of Commons, under the leadership of the Prime Minister, has refused to entertain the question of admitting Mr. Salomons to his seat, without the express sanction of an act of the united Parliament. So far there is an end of the case until February next, when Lord John Russell, in office or out of office, must, in justice to his own character, re-introduce the bill, which the House of Lords has five times rejected. In the meantime, the spirited conduct of Mr. Salomons has given such an impetus to the Jewish cause, and to that greater cause of civil and religious liberty of which it is an off-shoot, that we may expect one or two, if not half a dozen, Jews, to try the chances of an election, whenever any vacancies shall occur in the representation. There are wealthy members of that faith highly respected in London, who will be ready, should a general election take place next year, to contest either a metropolitan or some other borough; and there is a moral certainty that the agitation which has commenced will never be allowed to drop, until the Jew is placed on a footing of complete equality with the Christian. Indeed, the discussions that have taken place on the claim of Mr. Salomons show that the opponents of the Jews are losing confidence. When a Jew solemnly, before the House of Commons, declares that an oath upon the New Testament is not binding upon his conscience, and demands to be sworn on the Old Testament, the question of the Christianity of the Legislature is at an end if his demand be acceded to. The House of Commons, in allowing Mr. Salomons to refuse the oath upon the New, and to take it upon the Old Testament, virtually yielded the whole question. Every one sees the absurdity of the Jew being branded as a "Popish recusant," for refusing to make the subsequent declaration which excluded him from Parliament, and feels that, sooner or later, the House of Lords must reverse its decisions upon this matter, and assent to what the Commons require of it. In the meantime, Mr. Salomons, and the two actions pending against him for voting in the House—he being, in the eyes of Parliamentary law, a Popish recusant, and a friend of the Pope and the Pretender—will keep public attention fixed upon his claims; and a new election of some other Jew will give the question additional importance. We cannot but think, that, under all circumstances, it would have been better for the Lords to have yielded the point with a good grace in 1851, than to be forced into it, after five refusals, in 1852.

COURT AND HAUT TON.

Her Majesty, the Prince Consort, and junior members of the Royal family are still enjoying the retirement of Osborne. The Royal movements during the week have been of a routine character.

Her Royal Highness the Duchess of Kent returned to her residence, Frogmore, near Windsor, on Wednesday, from a visit to her Majesty at Osborne. Her Royal Highness was accompanied by Lady Augusta Bruce and Sir George Cowper.

Miss Burdett Coutts gave her last grand *soirée* for the season on Wednesday.

METROPOLITAN NEWS.

SOCIETY OF ARTS.—The annual meeting of this valuable institution was held on Wednesday evening at the Society's rooms, John-street, Adelphi. The report congratulated the members on the increasing confidence of the society. The ordinary income of the society for the financial year ending June 30, 1851, was £1946, being an increase of £92 over the income of the previous year. The ordinary expenditure was £1464, being £340 below the receipts. The liabilities at present amount to £1396. last year they were £2409. There were at present in the hands of the treasurer a balance of £430, and uncollected subscriptions of £479; £250 of which amount might be reckoned upon as certain, making a sum of £680 to be set against a liability of £941 noted upon as certain, making a sum of £680 to be set against a liability of £941 incurred in the ordinary business of the society. During the last year no less than £706 of liability incurred in former years had been liquidated, and the current annual income over the expenditure was £106 3s. 8d.; after providing for all the proper expenditure, and allowing £125 for depreciation in value of the society's lease. The question of the alteration of the by-laws was taken into consideration. It was explained that at present the business of the society was conducted by five committees, of eleven members each, besides the council; it was found that large committees were, to a certain extent, inoperative; in the case of the Fine Arts Committee, for instance, which had charge of sculpture, painting, engraving, &c. Some departments were sure to be looked after more than others, and some might be altogether neglected. It was, therefore, proposed that there should in future be thirty committees, with only three members in each, and that each committee should be required annually to present a report to the society. Another change was proposed to provide against the sleepiness of long sessions. At present the members of the council were all eligible for re-election, upon retiring *pro formâ*. but it was now proposed that one-fourth of the council should be compelled to retire annually, the same principle being applied to the vice-presidents, the treasurer, and auditors. It was also proposed that six of the most efficient reporters upon the committee should be annually nominated to fill vacancies in the council. The thirty standing committees are to take charge of the several classes of subjects under which the Exhibition of the Works of Industry has been arranged. The secretary then read the new code of bye-laws, the main features of which we have noticed. After some conversation the by-laws were adopted, and the proceedings terminated.

ELECTION OF A SHERIFF.—On Monday a common hall was held for the election of a sheriff in the room of Mr. James Hartley, who, upon being declared, together with Mr. Cotterell, to fill the office, declined to serve, and paid the fine. Soon after the announcement that Mr. Hartley would not accept the office, several gentlemen of influence in the City waited upon Mr. Richard Swift, a gentleman of high respectability and considerable attainments and influence, and without difficulty obtained his consent to become a candidate for the dignity. He was accordingly proposed on Monday as a candidate for the Shrievalty, and elected without opposition, under the title of Richard Swift, "artisan and spectacle maker."

The Lord Mayor gave a grand entertainment to the master, wardens, court, and other members of his own company, the Worshipful Cothworkers' Company, on Monday, at the Mansion House. Covers were laid for 150 in the Egyptian Hall. To day the Lady Mayoress will entertain, on board the navy-garion barge at Twickenham, according to annual custom, the aldermen and a distinguished party of friends invited to meet them. Arrangements have been made for the elegant accommodation of 120 guests.

ROYAL BOTANIC SOCIETY.—The last promenade of the season was held on Wednesday afternoon, and was very numerously and fashionably attended, although, with the same ill-fortune as befel the *conversazione* last week, heavy showers of rain disturbed the proceedings. Many foreign visitors were present, and some of the spectators, in their desire for shelter, got into the reeking atmosphere of the *Victoria regia* house, the flower of which was in fine condition. The winter garden was filled, and was made a lounge for the unprisoned visitants, who indulged themselves in forming groups and eating ices.

CHANCERY REFORM.—A public meeting, called by the Chancery Reform Association, was held at Exeter Hall on Wednesday, Lord Brougham and Vaux in the chair, at which resolutions were passed pointing out the necessity of an efficient reform in the proceedings of the Court of Chancery, and determining to petition Parliament praying for such a reform, and the abolition of all distinction between the practice of the law and equity courts. The usual vote of thanks to the chairman closed the proceedings.

CONVERSAZIONE AT THE ROYAL COLLEGE OF PHYSICIANS.—The second soiree of the season for the reception of distinguished and scientific foreigners, and other visitors, was held on Wednesday evening, at the Royal College of Physicians, under the auspices of Dr. Paris, the President, and Fellows of the College. The company began to assemble at nine o'clock in the library of the college, dispersed through which were various objects of scientific interest, which attracted considerable notice from the visitors. Notwithstanding the rain, which fell heavily during the early part of the evening, there was a numerous assemblage, including some of the most distinguished literary and scientific men in the metropolis. Amongst others present were the following:—The Duke of Newcastle, the Right Hon. Lord Auckland, Dr. Paton, Dr. Brandis, Mr. Cornelius Fielding, Dr. Lee, Judge Tatoem, Mr. H. Ellis, Don Cubi of Solars, D. Carlos de Odriozola, D. José Miguel de Odriozola, Dr. Allison, Mr. Pickersgill, Seyd Abdoolah, Baron Holmfeldt, Rev. Dr. Plumptre, Sir J. Tinsley, Mr. Goldsmith, Dr. Cohen, Dr. Toogood, Mr. Travers, the Rev. Dr. Russell, Lord Colborne, Dr. Babbington, Sir C. Fellows, Mr. G. Rennie, Mr. Layard, Sir J. Herschell, Mr. Barry, Sir J. Louth, Padre Gavazzi, Mr. Hastie, Mr. Pusey, Mr. Lawrence, &c.

CHARING-CROSS HOSPITAL MEDICAL SCHOOL.—On Wednesday, a meeting of the governors, medical officers, medical students, and friends of this institution, was held in the board-room of the hospital, for the annual distribution of prizes and testimonials of honour to the students most distinguished for their acquirements in the various branches of medical study. The Rev. H. Mackenzie, the rector of St. Martin's-in-the-Fields, presided, and on taking the chair expressed his diffidence in occupying such a position, but on reflection he considered that he was only following the example of his Master, who sent out his disciples to heal the sick; and in such an institution science and faith should be combined. The Charing-cross Medical School, he said, had grown up with the hospital, and now bore a high rank among such institutions. The distribution of prizes then took place.

ROYAL ORTHOPEDIC HOSPITAL.—A fancy sale and night *fête* were held at Vauxhall, on Tuesday and Wednesday, on behalf of this excellent institution, with varied success, at least so far as the weather was concerned. Tuesday having been a very pleasant day for out-of-door amusements, and consequently a large throng of visitors having been drawn together, whilst Wednesday proved so inauspicious that the balloon ascent and pyrotechnic display were alike impossible. But the sale of fancy articles proceeded prosperously, and the martial strains of the bands of the 1st Life Guards, the Royal Artillery, and the Royal Marines, enlivened the proceedings, and counteracted the gloomy influence of the weather. The Gardens were illuminated with extra devices appropriate to the occasion: on a transparency, with an inscription, "Prosperity to the Royal Orthopedic Hospital, Mr. Quarles Harris, and the Committee of Management." Notwithstanding the disagreeableness of the second evening, the general result must have been satisfactory to the projectors, and beneficial to the fund which the arrangements were intended to as ist.

INFIRMARY FOR FISTULA.—The eighth anniversary festival of the auxiliary society of this institution (founded by the patients in 1839) took place on Monday, at Highbury-barn tavern, Islington; Mr. Gwilim in the chair. About 120 gentlemen sat down to dinner. The usual loyal toasts were duly drunk; after which the chairman proposed "Success to the Fistula Infirmary, Charter-house square," which, he said, during the 15 years of its existence had done a vast amount of good, by the alleviation of human suffering. He was glad that he was surrounded by those who had been relieved by the institution, and they could bear ample testimony to the truth of what he asserted. Since the establishment of the society, 6000 sufferers had been relieved, out of which number upwards of 2000 had undergone surgical operations, and were effectually cured. A more gratifying fact was, that during the existence of the society, not a single death had occurred while the patients were under treatment. The chairman further stated that it was in contemplation to erect a more commodious building in the City-road, and expressed a hope that the appeal to the public in support of the society would not be in vain. It was intended that the new building should be capable of accommodating for the time the staff now conveyed into the present institution on in Charter-house-square, and that it should be called after its founder, Mr Salmon, the "Salmonian Institution." The toast was warmly responded to.

ROYAL NAVAL SCHOOL.—On Wednesday a meeting of the governors of this school was held at the schools, Deptford, for the purpose of passing the necessary by-laws to authorise the admission into the school of the sons of persons not being officers in the Royal Navy and Marines. Admiral Sir Watkin Pell presided; and resolutions to the following effect were agreed to; viz. that the children of persons not being officers in her Majesty's Navy or Marines, and the children of officers in her Majesty's Navy and Marines, but not holding the rank heretofore mentioned, should also be eligible for admission upon certain terms and resolutions. That the number of pupils not being sons of officers in her Majesty's Navy and Marines, should not at any time exceed the one-third of the number of the pupils that the school might for the time being be capable of accommodating. That no pupil admitted into the school not being the son of an officer holding such rank in her Majesty's Navy or the Marines should be capable of being presented with any naval or marine cadetship placed at the disposal of the council by the Lord High Admiral of Great Britain, or of participating in any benefit arising from "The Carbonnell Scholarship," as well as from any benefit arising from "Malcolm's Royal Naval School Legacy," and that the council be empowered from time to time to fix the number of boys as well as the sum of money to be paid for their board and education, and to make such rules as they may deem expedient.

THE GREAT EXHIBITION.—On Thursday evening a meeting of the exhibitors was held at St. Martin's Hall, Long-acre, when it was resolved that a protest should be presented to his Royal Highness Prince Albert, complaining of the exclusion of the exhibitors, except as attendants, from the Exhibition. It was also resolved that the jurors be called upon immediately to make their awards of prizes public; and that the Commissioners be called upon to give an account of their expenditure, and take steps for the establishment of a permanent industrial museum with the balance, such museum to be taken from under the control of the present managers. It was stated that out of 5000 exhibitors who had been workers to, only 600 had signed the protest.

LONDON REVERSIONARY INTEREST SOCIETY.—The eleventh annual meeting of this company was held on Thursday, at the offices, 4, Bank-buildings, Lothbury; Sir Peter Laurie in the chair. The report stated that the society's assets, including the value of all reversions, policies of life assurance, annuities, and cash in hand, amounted to £120,037 5s. 10d., their liabilities to £117,111 18s., leaving a balance of £2918 16s. 10d. The total annual expenditure had been reduced to £597. During the past year reversions had been realised amounting to £6755, which yielded a clear profit of about £1300, after allowing compound interest at 4 per cent. Reversions amounting to £11,000 were also one of the society's investments. The report was adopted, the retiring directors re-elected, a dividend of 5 per cent. declared, and, after a vote of thanks to the chairman, the meeting separated.

THE BRITLANDS' BENEVOLENT INSTITUTION.—The annual meeting of the friends and patrons of this institution was held on Thursday, at the London Tavern; Mr. W. Cubitt, M.P., in the chair. The report stated that the number of pensioners receiving assistance from this institution was 12 in 1847, 24 in 1848, 36 in 1849, 48 in 1850, and 60 in 1851. The subscriptions and donations for the past year amounted to £688. There had been £650 added to the funded stock, making the total amount £2250. The report was adopted; Thomas Grissell, Esq., was elected president, and three males and one female were chosen as fitting objects to receive the advantages and bounty of this charitable institution. After a vote of thanks to the chairman, the meeting separated.

PERPETUAL INVESTMENT, LAND, AND BUILDING SOCIETY.—On Tuesday evening a public meeting was held at Radley's Hotel, Bridge-street, Blackfriars, to explain the objects and mode of operation of this society; the chair was taken by Sir John Dean Paul. Mr. William Gover, in recommending the society to the support of the meeting, observed that there were four requisites to induce men to make investments of their money: first, a sure investment; next, it must be profitable; next, it must be good management; and the investment must be accessible or convertible without difficulty or delay. As to securing investments, it was clear that the funds fluctuated much in their value, but this society desired that every man should be able at any time not only to fund what he had paid in, but something more. This was an obstacle to savi. gs-banks that a man could not wait for his interest of £2 18s. 6d. for one year. This society let out on mortgage to which he had reserved. In the case of borrowers they would have a right to demand a loan, which they might repay by instalments extending over a period of years. Mr. William H. Watson (a member) pointed out the difficulty in a party obtaining money from this society, it not being a terminating, but a perpetual society. A man might borrow money for any period not exceeding fifteen years. The directors were desirous of mitigating the difficulty in some cases of keeping up month y payments, and they had determined that payments might be made monthly, quarterly, half-yearly, or yearly. The rate of interest was fixed and moderate, and in all charges made legal expenses of all kinds were included. Taxes were no deductions made; if the securities were ready, the secretary was bound to prepare the requisite documents without cost to the member, and a fee instead of making payments could be enlarged, as shown by the tables. Mr. Miller called the attention of the meeting to the question of fines, which, as shown by the tables, were very moderate, but which, in other societies, were a very serious matter.

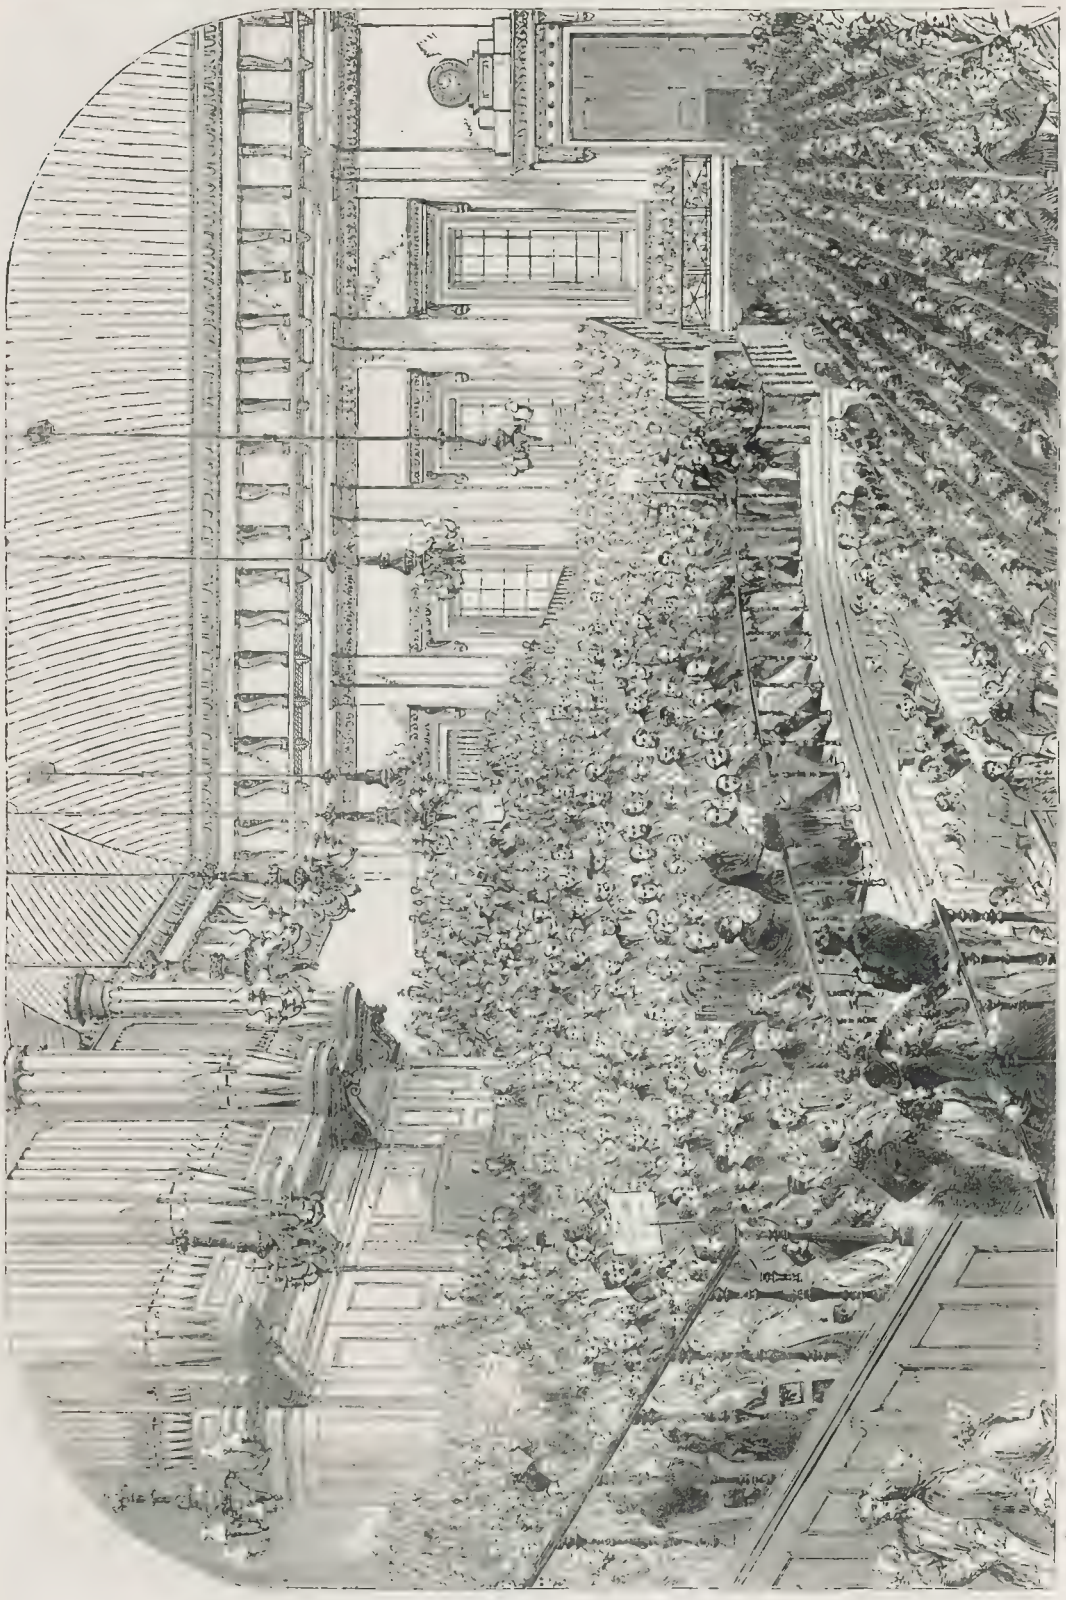
ROYAL GENERAL ANNUITY SOCIETY.—A general meeting of the subscribers and friends of this society, established for granting annuities to decayed merchants, bankers, and professional men, tradesmen, and their widows, was held on Monday, at the London Tavern, for the purpose of electing five annuitants on the funds, from a list of 139 candidates; viz. two men and three women. Mr. Henry Pownall took the chair, and briefly addressed the meeting after which three women and two men were elected as annuitants, and a vote of thanks was passed to the chairman, who acknowledged the same, and the meeting broke up.

BLACKFRIARS BRIDGE.—On Tuesday the preparations for closing the traffic over Blackfriars-bridge commenced, and in the course of a few days the thoroughfare for carriages will be stopped. Foot passengers will, however, be permitted to pass over as usual. The committee have been reluctantly obliged to adopt this step, the continual sinking of the defective pier giving rise to serious apprehensions for the safety of the public. On the exclusion of carriages from the bridge the superincumbent weight will be taken off the crown of the arch, and the necessary steps adopted for the safety of the structure.

On Tuesday morning an accident of a most frightful character took place on the premises of Mr. Keatley, soap manufacturer, Bermondsey, to a man named John Murphy. The unfortunate man was engaged, with the other workmen in the manufactory, in preparing a large quantity of boiling ley, and whilst he was passing a plank on the side of the copper he slipped, and fell into the boiling liquid. His screams soon brought his companions to his assistance, and with considerable difficulty he was extricated in a most shocking condition, being scalded to a fearful extent. He was seen by a surgeon, who immediately ordered his removal to Guy's Hospital, where he lies in a precarious state.

DESTRUCTIVE FIRE.—FIVE LIVES SAVED.—An alarming fire broke out on Monday morning, at two o'clock, at 10, Great Prescott-street, occupied by Mr. Lucas. The family, which consisted of five persons, retired to rest at about eleven o'clock. Mr. Henry Russell, the celebrated vocalist, who had arrived from the country on a visit to the family on Sunday evening, retired to rest also about the above hour; but was suddenly awakened by hearing a crash in the kitchen, as of falling wood. Suspecting that thieves were in the house, he cautiously opened his bed-room door, when, to his horror, he perceived that the house was on fire. A dense smoke filled the staircase. Mr. Russell lost not a moment in deliberation, but rushed up-stairs with much coolness and intrepidity, and aroused the inmates. He went into every room one after the other and succeeded, at the risk of his life, in rescuing Mr. Lucas, her daughter and son, and two servants, from destruction.

BIRTHS AND DEATHS.—Births registered in the week ending Saturday, July 26—males, 709; females, 674; total, 1383. Deaths during the same period—males, 473; females, 483; total, 956. The official report says:—The deaths in the metropolitan districts, which in either of the two previous weeks hardly exceeded 870, again show an increase; for in the week ending last Saturday they rose to 989. In the same week in 1849 cholera was rapidly spreading, and swelled the amount to 1931; but setting aside that year, and taking the corresponding weeks of other years in the series of 1841-50, it appears that the lowest number was 749 in 1843, and the highest 1201 in 1848, and within the weeks subject to comparison the amount did not in general exceed 900. Of the 956 deaths of last week, 282 are attributed to diseases of the zymotic or epidemic order, showing a sudden and remarkable increase on the 224 and 209 cases of the same description registered respectively in the two previous week. On the other hand, persons who died from affections of the respiratory (or organs connected with breathing and consumption) in the previous week were 112, in the last week only 85; but within the same period phthisis has risen from 110 to 141. Among epidemics, which have become more fatal, may be mentioned scarlatina, which numbered 6 in the preceding return, and 18 in the present; typhus, which has risen from 32 to 59, and diarrhœa, almost exclusively confined to children not older than one year, whose progress is marked by the numbers of four successive weeks, viz. 33, 53, 64, and in the last week 83. In the sub-district of Sydenham, in Jew's-walk, a gentleman died after suffering 24 hours from diarrhœa. The medical attendant states that "within one hundred yards of the residence of deceased, and on its own property, there is, and has been for a considerable period, upwards of 20 square yards of surface overflowed with sewage emptying itself into a ditch of about 30 yards long, which has no outlet, and it is constantly stirred up with rain, and exposed to the rays of the sun, emitting at all times the most pestilential effluvium. The immediate neighbourhood is thickly populated, and the health of the inhabitants much endangered. Cholera and other zymotic-typhoid cases are constantly occurring. The evil is referrible to the adjacent property; it does not come under local jurisdiction, and the deceased had no redress." The two cases of diarrhœa, one of which has been fatal



THE PEACE CONGRESS IN EXETER HALL.—SIR DAVID BREWSTER, THE PRESIDENT, READING THE INAUGURAL ADDRESS. (SEE PRECEDING PAGE.)

GRAND FEDERAL RIFLE MATCH.—THE SHOOTING COURT AT GENEVA.

GRAND FEDERAL RIFLE MATCH AT GENEVA.

One of the most popular festivals in Switzerland is the grand Rifle shooting, or *Tir Federal*, for training carabineers in the use of their arms, and at which all the best shots meet to contend for prizes. These federal meetings date but from the year 1824, when the first was held at Aarau. The locality is, however, changed at each festival, held every two years. The last meeting was in 1849, at Aarau. This year it has been held at Geneva, with a splendour far exceeding previous meetings. This success was unexpected; for several mighty interests, political influences, and the common hate between rich and poor, have not only been directed towards the support of the Democratic Government at Geneva, but have thrown several other difficulties in the way.

The shooting extends to a week; but this year, in consequence of the unlooked-for amount of presents and money, for prizes, the exercise was prolonged to ten days. The total sum collected was 198,480 francs: hitherto, it had not exceeded 60,000 francs. The city of Geneva paid, besides this sum, for the construction of temporary buildings, about 60,000 francs; without calculating the several other ornamental structures and triumphal arches in the interior of the town, military arrangements, music, general illuminations, &c. More than 15,000 spectators and their families are stated to have been present.

The accompanying View of the *Emplacement de Tir Federal* represents the several buildings, sketched at the opening of the festival, with the solemn entrance of the carabineer deputations. The procession consisted of the local military body, *shot-signers* and shot observers—both in uniform. The procession surrounded the central building, the "Temple of Honour," from the stairs of which the presidents of the present and of the former committees saluted them, and several orators addressed the crowd. The banners of the canton were then deposited; and, next day, those of the other cantons.

The buildings are designed in the Norman and Byzantine styles, painted in a light manner, with white, black, and red ornaments, and surmounted with red and white flags, the federal colours. The structures consist of the entrance arch and the five following:—The *Pavillon de Prix*, the central tower, surrounded with large windows, in which were exhibited the prizes, mostly silver and gold pieces, services, medals, trophies, watches, and *bijouterie* of the renowned Genevan artists all arranged so as to be seen by the spectators out-doors.

On the left is seen the great Refreshment Pavilion, with tables and seats for 400 guests; a full orchestra for vocal and instrumental performances, and a tribune for the orators. The Shooting-house itself, the long lower building, is situated behind the Temple of Honour, towards the entrance: it is surmounted by a large gallery for spectators wishing to command the whole emplacement. This gallery afforded a most charming prospect over the country, the city, part of Lac de Leman Voirons, Salève, Mole, the high Alps, and Mont Blanc; on the other side extending towards France and the long line of Jura Mountains. At the right hand from the entrance is seen the Coffee-house and the Armoury. In the latter building are the arms, ammunition, &c. The committee has also its offices, where are lists of the sports, the different shots, and comparative results.

The Shooting-house itself contains places for 1000 carabineers; and here fifty-eight may shoot at once without danger. It is calculated that 35,000 shots were thus fired in one day: the distance is 540 Swiss feet. The great skill of the Swiss carabineers, and their contributions towards the exercises, are evidences of the excellence of the sport

PORT LYTTELTON, NEW ZEALAND. (SEE NEXT PAGE)

A list of the various prizes contested for would occupy more space than we can devote to the matter: their amount was 170,928 francs. We should add, that this beautiful *fête* was, from first to last, a very brilliant affair.

THE CANTERBURY COLONISTS—PORT LYTTELTON.

THE proceedings of the Canterbury Colonists have, from time to time, found place in our Journal as a portion of a system of Christian civilization which is entitled to the highest consideration and regard. Their vessels, their commemorative festivals, and their farewell entertainments, have been pictured in our pages; and now we have the gratification to illustrate the "local habitation" of the settlers, from a pen-and-ink sketch, which we have just received from an Antipodean correspondent. We append a portion of a very interesting letter from Mr.——, an officer employed in the survey office in Lyttelton:—

Lyttelton, Port Victoria, 29th July, 1850.

We are now in the depth of winter, with just sufficient frost to temper the soil, with a cap of snow on the hills on the south side of the harbour. We had one heavy fall, but it disappeared as fast as it came, except on the hills. It is, without exception, the finest climate we have ever heard of or enjoyed, and quite realises that elasticity of climate so well described by the writers upon New Zealand. Cattle run over the hills all the winter, and to provide either shelter or food would appear quite ridiculous. We do feed some of our horses, but they are constantly working, and require more stamina than grass affords. The hills are coated with grass; and some quite resemble our English downs, and would feed very large quantities of sheep, and produce heavy crops year in quality, by being fed off and manured. Our harbour is inferior to none other in New Zealand. About midway between the town and the heads, the *Woodbridge*, of 800 tons, is now discharging a large cargo of sheep, cattle, and horses. In bad weather, a vessel of any burden can find shelter close under the land; and in light weather they would either have a favourable breeze, or beat in with plenty of room to tack. Our little town presents quite a pretty appearance. The Association have finished four very commodious and neat barracks for the reception of emigrants, a very pretty house in the Elizabethan style for the agent, a suite of offices, two good stables, a temporary store and powder-magazine, a good house for the boat's crew, and a large boat-shed for the boats, besides several buildings of a temporary character. There is a substantial jetty thrown out, on which a vessel of 100 tons burthen has just landed her cargo; she being moored at the end of the jetty. Wellington, though established ten years, cannot make a similar boast, nor any other port in New Zealand. We are now putting up a breakwork along the beach, which when finished will form a good esplanade. Including this, there are now four streets, forming a square, near y finished, with bridges over the gullies, and everything prepared for the settlers. There is also a convenient yard for timber, &c., and all the buildings are inclosed with fences. Such preparations have never been made in any other settlement, and visitors from other places are quite astonished. Private individuals have built on several of the sections; and Germans, Swedes, amongst the number, so that a town is fully commenced, without one real settler in it. From the town commences the Christchurch-road, intended to connect the sea-port with the capital, which is named Christchurch.

THE CENSUS.

A very interesting and important return has just been made to Parliament comprising a series of tables compiled from the summaries of the 40,000 enumerators employed on the recent census of the population. These returns show the amount of the population and houses in the divisions, registration counties and districts of England and Wales, in the counties, cities, and burghs of Scotland, and the islands in the British seas.

The accounts have yet to be submitted to final revision, but it has been ascertained that nothing but the keenest scrutiny can detect the smallest inaccuracies. The result may be, therefore, regarded as complete.

It appears, then, that the population of Great Britain and of the islands in the British seas, as enumerated on March 31st, 1851, was 20,936,468; and that the part of the army, navy, and merchant service belonging to Great Britain, but out of the country when the census was taken, has been estimated from returns to have been 167,804; that of the total number of these persons, 21,104,272, 10,360,325 (including the 167,804 absent soldiers and sailors) were males, the remaining 10,743,747 females; and the preponderance of females over males 383,422.

The actual increase in the intervals of the censuses between 1801 and the present year has been steady, and, on the last interval, progressive. The total increase in Great Britain and the Islands in the British Seas, for these fifty years, has been 10,317,917—that from 1841-51 being 2,227,438; for 1831-41, 2,260,749; for 1821-31, 2,184,049; for 1811-21, 2,132,892; for 1801-11, 1,512,789. The population (thus nearly doubled) numbered, therefore, in 1801, it will be seen, 10,567,893 souls, whereas it now counts 20,936,468. This result is somewhat, but not materially, disturbed, by some variations at the different periods in the mode of enumerating the army and navy. Females, of course, such circumstances do not affect, and the actual increase in their number during the fifty years under review is said to be about 5,198,653, whilst that of males is computed at 5,119,854. The proportion maintained between the sexes has fluctuated considerably at the different periods quoted; from 1801-11, for instance, the ratio of increase was 50,922, that of females, 758,040. In the next period the scale is turned, and against an increase of males of 1,137,804 we have that of females, 995,092. There were in 1801 in Great Britain and the islands in the Britain seas 5,525,935 males and 5,849,836 females. There were of these, in 1851, excluding the absent soldiers mentioned above, 10,192,721 males and 10,743,747 females. The rate of increase per cent. for the entire population for 50 years has therefore been 98 per cent.; the annual rate of increase per cent. 1·9 per cent.

Of the whole number (20,936,468) thus enumerated on 31st March last, England and Wales contained 17,927,768 persons; Scotland, 2,870,784; and the islands in the British seas, 142,916. The males in Scotland exceed the females by more than that of males. In England and Wales there were, at the enumeration, houses inhabited, 3,280,961; in Scotland, 366,650; in islands in the British seas, 21,426; uninhabited in England and Wales, 153,876; in Scotland, 13,366; islands in the British seas, 1077: building in England and Wales, 26,534; Scotland, 2378; islands in the British seas, 202.

The metropolis forms a division, including parts of Middlesex, Surrey, and Kent, and in it we have enumerated, for 1851, 2,361,640 persons, 1,103,730 of them males, and 1,257,910 females. Of this total, male and female, Middlesex (part of) supplies the largest proportion, 1,745,093; Surrey (part of) the next, 483,310; and Kent (part of) the third, 134,938. The London division, in 1801, contained 958,863 souls, and there has been an increase of 1,394,963 between that time and the present. The rate of increase during the two decennial periods which it includes has not fluctuated to any remarkable extent. For the half-century it has been 145·51; annual, 1·81.

SCOTLAND, the population of which, in 1801, numbered 1,608,420 souls, has, in the fifty years following, increased to 2,865,421, the difference being 1,257,001. In 1801 the females were in the majority 869,329 to 739,091; their increase has been greater than that of the males—1,257,079 to 619,322; and consequently, in 1851, the proportion maintained is 1,597,008 females to 1,268,413 males, 75 is the rate of increase per cent. in the fifty years for the whole population—84 per cent. for the males, and 73 per cent. for the females.

The ISLANDS in the BRITISH SEAS have a population, as enumerated on March 31, 1851, of 142,916—66,511 males, and 76,405 females. The increase here in the thirty years, from 1821 to 1851, is 53,408, 89,508 having risen to 142,916. The number of males was, in 1821, 41,234; that of females, 48,274. By an addition of 24,778 in the former case, and of 28,130 in the latter, the figures are now—females, 76,405; males, 66,511. The population of the islands is respectively Jersey, 57,155, instead of 29,509; Guernsey, 41,241, instead of 20,377; Man, 52,116, instead of 40,081. The general rate of increase, therefore, in the 30 years has been 60 per cent., whilst several by the rate of the three islands has been—Jersey, 100 per cent.; Guernsey, 61 per cent.; and Man, 29 per cent.

IRELAND, according to the census, of which, as yet, but an abstract is given, presents a startling contrast to the foregoing. The comparison instituted is between the population of 1851 and that of 1841, and the result is to prove that there has been, in the ten years, a total decrease in the number of persons in Ireland of 1,659,320, the population having been, in 1841, 8,175,124, and being now only 6,515,794. Moreover, the date of the present census being 68 days earlier than that of the preceding, 5841 persons should be added to the gross population of 1841, that being the number of harvest labourers who "was ascertained," had left Ireland previous to the 7th of June in the year. In the absence, however, of a general system of registration of births and deaths in Ireland, the necessary adjustment, in consequence of the change of period at which the two censuses were taken, cannot be arrived at

It would seem, from the document before us, that the population has now sunk below what it was in 1821, for Ireland had then 6,801,827 inhabitants, whereas she has at present only 6,515,794. In 1821 she had 2,767,401. Her next rate, was, in then years, to 8,178,125, and by which descent she has gone back to 6,515 794. Unfortunately, the return of emigration from the United Kingdom suspended to the census not closing on the 7th of June in Great Britain as from those born in Ireland. The statistics show the decrease, but do not account for it.

The Berlin papers have the following on the subject of the proposed German navy:—A Board of Admiralty is to be established at Treves, under the presidency of Field-Marshal Wimpffen. The Austrian fleet is to be composed of ten frigates, eight corvettes, six brigs, and two vessels, besides transport vessels. The Germanic Diet will receive an official communication of the subject, and be invited to place the German navy under a central authority. It will also be recommended to adopt a common German flag.

The Corporation of the Printers of Berlin, which has been suspended by order of the Government during thirteen months, came together again for the first time on the 19th ult., in a grand meeting.

The first stone of a new Roman Catholic church of St. Michael was laid on the 14th ult. at Berlin. It is to be in the form of a Latin cross, in a mixed Byzantine and Florentine style, to be finished in five years, and to cost £30,000. It is to have a dome.

MUSIC.

SACRED HARMONIC SOCIETY.

A remarkably fine performance of Mendelssohn's "Elijah" took place at Exeter Hall, on the 25th ult., on the occasion of Mdme Clara Novello's singing the soprano part the first time. Adhering rigidly to the composer's text, this great vocalist conveyed the declamation and fervent aspiration from the classical music with a sensation she produced on the immense audtiory was, therefore, unanimous. A more magnificent reading of the "Hear ye, Israel," we have never heard; and her share of the "Holy, holy," has never been surpassed. Miss Dolby, Miss Williams, Miss Eliza Birch, Mr. Sims Reeves, Mr. Benson, Mr. A. Novello, and Herr Formès, were the other vocalists.

The travellers on the Rhine during the summer season may recollect hearing some fine chorus singing from steamboats between Dusseldorff and Mayence. The rich strains of harmony thus heard emanated from *Liedertafel* and choral societies, in the towns on the banks of that noble river, who were making day excursions, for the purpose of social enjoyment. On Wednesday, the Sacred Harmonic Society, for the first time, organised a similar undertaking; and, from its great success, even under the most unpropitious sky, the experiment is likely to be repeated. Upwards of 600 persons connected with the society embarked in the *Sons of the Thames* and *Meteor* steamboats at Dyer's Wharf, and landed at Rosherville Gardens, where a cold collation was served in the Baronial Hall at two o'clock, John Newman Harrison, the President, in the chair, supported by the Honorary Secretary, Mr. T. Brewer; the Treasurer, Mr. J. Taylor; the Librarian, Mr. R. Rowley; the Conductor, M. Costa, Esq.; and the members of the Committee, Messrs. Carmichael, Cohen, Peacock, Winsor, Whitehorn, Stewart, Sherrard, Mitchell, Husk, Eden, Hill, and Sims. There were also present at the festival Miss Birch, Miss Eliza Birch, Miss Rainforth, Miss Dolby, Miss W. Williams, Messrs. Benson, W. and T. Chappell, Bartholomew, Baumann, Barrett, H. Hill, Joel Gas, Doyle, Chorley, Hogarth, Grunesen, Westrope, Anderson, Prospere, Harper, Stockhausen, Cusins, Brownsmith, Hatton, W. H. Calcraft, Anfossi, Chipp, Nicholson, Cord, Dando, Cooper, Miller, &c. "Non nobis Domine" was finely rendered after the banquet, and the National Anthem after the toast of the "Queen," which, with that of Prince Albert, was received with great loyalty. The Rev. Mr. Lane proposed, in a neat address, "Continued prosperity to the Sacred Harmonic Society." Mr. Bowley, after warmly eulogising the exertions of Mr. Costa, gave his health, which was received with tremendous applause. The conductor briefly returned his acknowledgements, and proposed the "President and the Officers of the Society," responded to by Mr. Harrison: and then the company broke up to amuse themselves in the beautiful grounds as well as the spacious Gothic Hall, in the best manner. At five o'clock tea and coffee were served; and at six the excursionists returned by the two steam-boats, not a small portion, however, taking advantage of the railroad to wend the way to the metropolis. Altogether, the event at this agreeable meeting were animated with the best spirit, and harmony reigned throughout the whole proceedings. The expenses of this festive gathering were defrayed out of the profits of the performances of the "Messiah" and "Elijah," on the 18th and 25th ult; and the whole arrangements reflected the highest credit on the committee. Mr. Bowley, &c.

Last evening Haydn's "Creation" was performed, under Costa's direction, with Madame Clara Novello, Mr. Sims Reeves, and Herr Formbs.

MUSICAL EVENTS

The Distins, with their sax horns, terminated their series of concerts at the Apollonicon Rooms, Adelaide-street, last evening.

Mr. Henry Phillips has been giving his entertainment, "The Songs of Dibdin," at the Adelaide-street Music Hall, on Tuesday, Thursday, and Saturday.

Messrs. H. and R Blagrove gave their fifth quartet concert, at the Mortimer-street Rooms, on Thursday morning, aided by Miss Poole, Miss Goddard, and Mr. C. Salaman (piano), Mr. J. B. Chatterton (harp), Messrs. Clementi, Westlake, and W. F. Reed.

Mr. Henry Russell has taken the Soho Theatre for his musical, dramatic, and pictorial entertainments, "The Far West" and "Negro Life in Freedom and in Slavery," every evening in the ensuing week.

Mr. John Parry has announced another farewell performance of his "Notes," at the Music Hall, next Monday.

A fine meeting of the Musical Union took place on the 25th, at Willis's Rooms, the Earl of Westmoreland, the Vice-President, Sir George Clerk, and other members being present. Quartets and solos were played by Sainton, Sainton, Laub, Deloffre, Hill, Piatti, and Goffrie. Mr. Richard and H. Hiller (the pianist and composer) were elected honorary members. Proofs of M. Baugnet's clever lithographic print, commemorative of the past season, with eighteen portraits, were exhibited and were admired.

The third series of English Glees and Madrigals, under her Majesty's patronage, was commenced on Wednesday, at Willis's Rooms, St. James's, and will be continued every Wednesday evening until further notice. The selection on the 30th ult. comprised Ford's madrigal, "Since first I saw your face," and the glees, by Webbe, "Thy voice, O harmony;" by Lord Mornington, "When for the world repose;" by Callcott, "Hail, smiling morn;" by Calcott, "Come, snatch me swift;" by Cifton, "Under the greenwood tree;" by Horsley, "See the chariot at hand;" and by Bishop, "Hart and hind are in their lair." The singers were Mrs. Endersohn, Messrs. Francis, Lockey, Hobbs, Land, and Phillips.

Mr. Frank Mori's cantata, "Pridolin," was rehearsed last Saturday, at the Hanover Rooms, under the immediate superior to be performed in Coblenz at the approaching Musical Festival at Worcester, in the last week of this month.

FOREIGN MUSICAL NEWS.

The receipts for one hundred representations of Meyerbeer's "Prophète," in Paris, amounted to £31,520—about £315 per night: this is a very large taking for the Grand Opera. The "Huguenots" had been given 206 times, and "Robert le Diable" 332 (recorded in the receipts) before the 26th ult. The 331. The "Prophète," since its production, on the 16th of April, 1849, has been brought out in London, Marseilles, Amsterdam, the Hague, Hamburgh, Dresden, Vienna, Frankfort, Berlin, New York, Mexico, Rio Janeiro, Turin, Genoa, Leghorn, Sondershausen, Lisbon, Berlin, Gratz, New Orleans, Hanover, Brunswick, Pesth, Rostock, Aix-la-Chapelle, Cassel, Brussels, Bremen, Breslau, Ulm, Griefswald, Munich, Coburg, Augsburgh, Mainz, Gottingen, Zurich, Munster, Stuttgart, Utrecht, Wurtzburgh, Carlsruhe, Mannheim, Milan, Gotha, Dessau, Luneburg, Linz, Wiesbaden, Fribury, Grenoble, Limoges, Stuttgardt, Metz, Mayence, Dantzic, Toulouse, Elbing, Nancy, Besançon. The opening of the *Italian* National Opera House in Paris, as at the Théâtre Historique, in September. The opening of the *first* National Opera House in London is fixed for no date. Paris has 900,000 inhabitants, and sustains three opera-houses; London has 2,600,000 for its population, and cannot or will not support one single musical establishment. The Mecklenburgh-Schwerin Theatre, one of the handsomest in Germany, has been burnt to the ground, on the very day after the reopening, supposed by the work of an incendiary. The Swiss Musical festival at Berne was sustained by 200 vocalists and 200 instrumentalists; the "Messiah" of Handel and the "Eroica" Symphony of Beethoven were performed.

MR. BALFE'S BENEFIT.—This interesting event has been unavoidably postponed from the 4th, to Monday, the 11th instant, when "I Quatro Fratelli" (Les Quatre Fils Aymon") will be produced the four brothers are named by Gautier), and Balaclal. Odell will be Charlemagne, Sondershausen, Lisbon, Berlin, Gratz, New Orleans, Hanover, Brunswick, Pesth, Rostock, Aix-la-Chapelle, Cassel, Brussels, Bremen, Breslau, Ulm, Griefswald, Munich, Coburg, Augsburgh, Mainz, Gottingen, Zurich, Munster, Stuttgardt, Utrecht, Wurtzburgh, Carlsruhe, Mannheim, Milan, Gotha, Dessau, Luneburg, Linz, Wiesbaden, Fribury, Grenoble, Limoges, Stuttgardt, Metz, Mayence, Dantzic, Toulouse, Elbing, Nancy, Besançon. The opening of the *third* National Opera House in Paris, as at the Théâtre Historique, in September. The opening of the *first* National Opera House in London is fixed for no date. Paris has 900,000 inhabitants, and sustains three opera-houses; London has 2,600,000 for its population, and cannot or will not support one single musical establishment. The Mecklenburgh-Schwerin Theatre, one of the handsomest in Germany, has been burnt to the ground, on the very day after the reopening, supposed by the work of an incendiary. The Swiss Musical festival at Berne was sustained by 200 vocalists and 200 instrumentalists; the "Messiah" of Handel and the "Eroica" Symphony of Beethoven were performed.

STATE CURRICLE AND HARNESS.—MESSRS. Hallmarke, Aldridge, and Hallmarke, of Long-acre, have just completed for his Highness, Said Pasha, a superb carriage, the body of which has the appearance of a shell carved in ivory. It is lined with the richest *moire antique*, trimmed with bullion lace; the floorcloth represents a beautifully painted pic ure of the *Victoria regia*; the lamps are cups of the flower, with ruby glass, with richly chased tops, surmounted with silver eagles. In the front of the body, in a carved scroll-work frame, is a medallion, bearing the arms of the Pasha. The harness is very richly ornamented; between the ears and chased silver eagles, which are repeated on the saddles, the cloths of which are scarlet, bound with silver lace.

IMPORTATION OF WHEAT, BARLEY, AND OATS.—A Parliamentary paper has been issued, showing the importation of wheat, barley, and oats into the United Kingdom in the second quarter of the present year. Of wheat, the importations numbered 1,097,859 quarters; of wheat flour, 1,339 400 cwt.; of wheat flour, in quarters, 368,400. The aggregate of wheat and wheat flour was 1,485,959 quarters. Of barley, 314,878 quarters; and of oats, 359,853 quarters. Large quantities came from France.

THE WINES OF XERES.—We perceive by the *Heraldo* and *Espana* Madrid papers, that "the Royal Society of Madrid have awarded to Messrs. Gonzalez and Dub z, the first two prizes for the great improvements made in al es of the districts of Xerez de la Frontera. It would seem that the first grades coincide in this country with the second of sepecia. A royal, too, Queen of Spain has conferred upon this house an appointment of high honour and some unseen in connexion with their pursuits."

In the year 1847 the sum of £20,047 was paid to the gas Company for gas used in lighting the Genera. Post-office. In every year since 1847 there has been a decrease in this expense, and last year the sum paid for gas was only £1485, being considerably less than one-half of the sum paid in 1847.

It appears from an official report, that during the six months, from January to June inclusive, there were 996 fires in Paris, namely, 133 of buildings, and 843 of chimneys. Several of the *sapeurs-pompiers* (firemen) were severely injured in their efforts to extinguish the fires. Two of them have received the decoration of the Legion of Honour for their exemplary conduct, and several have received medals of honour.

THE THEATRES.

HER MAJESTY'S.

The sixth representation of "Norma" took place last Saturday, followed by the *divertissement* "Les Graces."

On Tuesday night, Mdlle. Cruvelli appeared for the first time in Donizetti's semi-serious opera "Lucia di Lammermoor." That the character is not adapted to the melodramatic style of acting of Mdlle Cruvelli; and the music of the part, being of the Scotsg-Persatani-Lind school of vocalisation—exact ng great finish and refinement—is still less suited to Cruvelli's operatic vocal bursts. The delineation produced little effect on the auditory. Mdme. Marie Cruvelli's *Parotito* will not advance her reputation. The *Adalone* of Colleti was the great feature of the night: it was excellently acted and sung, particularly in the mad-scene. The *Viscount* of Mr. Sims Reeves was energetically rendered. The amusing ballet "Le Diable à Quatre" terminated the enterta inment.

On Wednesday night, Madame Fiorentini appeared as *Rosra*, in the first act of "Masaniello," as *Jefalde* in the second and third acts of Auber's "Il Prodigo," and sang the grand scena of *Agatha* from Weber's "Der Freyschütz." Madame Fiorentini has such a low, y voice, that it is to be regretted she has not been more often before the public, in order that she may acquire dramatic intensity in her style, the more especially as her vocalisation is decidedly improved.

On Thursday night Mdlle. Alboni performed the part of *Rosetta* in Rossini's "Gazza Ladra." Mdlle. Ida Bertrand being the *Pippo*, Signor Calzolari *Gianetto*, Coletti *Fernando*, Casanova *Fabrizo*, Mercurial *Isaaco*, and Lablache the *Podesta*. Charming as is the interpretation of the "Di piacer," by Mdlle. Alboni, the fine concerted pieces in this opera suffer so much, from the soprano part being sung as contralto, that it is to be regretted Alboni did not retain her original character of *Pippo*, in which she is inimitable. Her reappearance in *Arsace* will be an unalloyed treat. One of the greatest pieces of acting on the lyric stage are the serious portions of Lablache's *Podesta*. Coletti's old soldier is replete with pathos. Calzolari's artistic abilities are always ably developed in Rossinian operas. The *divertissement*, "Les Graces," and the Watteau ballet, "L'ile des Amours," were included in the evening's attractive programme.

Beethoven's "Fidelio," for the tenth time; the second act of Auber's "Il Prodigo"; a violin solo, by Sivori, and "Les Graces," were included in last night's extraordinary representation.

ROYAL ITALIAN OPERA.

Donizetti's "Elisir d'Amore," revived on Saturday night, introduced a new tenor—Signor Ciaffa, from Milan, in the part of *Nemorino*. His performance must be dismissed with the remark, that he has not voice enough for such a large theatre, and that he has been withdrawn. Why Mario did not appear in this, one of his best characters, is a real matter of regret. Mdme. Viardot's captivating *Adina*, Tamburini's vivacious *Sergeant*, and Ronconi's intensely droll *Dulcamara*, are well known to the musical public.

On Monday, there was an extraordinary representation, including the subscription night due Saturday, September 13th. Meyerbeer's "Prophète" was given for the sixth time, the house being a complete overflow. Viardot and Mario were in excellent voice, and the audience were off magnificently.

On Tuesday, Rossini's "Semiramide" with Grisi and Angri, was performed for the fifth time, Tamburini resuming his part of *Assur*.

On Thursday night "Lucrezia Borgia," with Grisi and Angri, Tagliafico, and Mario, was played for the third time, Ronconi assuming the part of the vindictive *Duke*, for the first time in this country. *Alfonso* was regarded in Paris as one of Ronconi's most delineations, and his histrionic genius will not be less estimated here in this subtle creation; the mixture of pointe irony with the malignant nature of the *Duke* is an admirable conception, carried out with the utmost skill and finish. The return of Mdlle. Angri this week, in two of her best parts, after a cessation of some weeks in her performances, has been appreciated by the amateurs, was announced for *Germano*, but, owing to a cold, Tamberlik undertook the part at a day's notice, and was received and applauded by a crowded house. The comic duo from "La Prova" was to have been sung by Viardot and Tamburini; but Mdme. Castellan was substituted for the former, Mr. W. West claiming the indulgence of the audience for her in consequence of Viardot's indisposition.

This night (Saturday) Rossini's "Gazza Ladra" will be revived, with Grisi and Angri, Tamburini, Tagliafico, Bonetti, and Marco. Next Monday will be another subscription night, in lieu of Tuesday, September 9th, when Bellini's "Puritani," with Grisi, Mario, Tamburini, and Ronconi, will be executed for the second time.

M. Gounod's "Sappho," with Viardot, Mdme. Castellan, Tamberlik, Tamburini, and Stigelli, will be produced next Saturday.

ST. JAMES'.

A rather singular incident occurred at this theatre on Monday. Mdlle. Rachel fainted away in the last act of "Adrienne Lecouvreur." Just at the moment that was expected the performance would terminate the theatre began to back, and the offended *tragédienne* tottered and fell. The shock upon her nerves, in a state of unusual excitement, was too much. Had this accident happened in the earlier scenes, it would have been attributed to temperance. On Tuesday, Rachel's engagement terminated with the character of *Camilla*. The house was crowded, and the pa udits universal.

HAYMARKET.

The continuance of Mr. Hackett at this theatre, still engaged in performing *Sir John Falstaff* to crowded houses, is a noteworthy incident. Good and reliable as will ever command attention, the performance of Shakspeare's farce, also, of "Grimshaw, Bagshaw, and Bradshaw," brings out Mr. Buckstone in great force; and between the American artist and the British *mime*, an evening's entertainment is produced, skilfully varied and strikingly contrasted.

SADLER'S WELLS.

Mr. Warner's series of a limited number of nights previous to her intended departure for North America, commenced on Saturday, with *Queen Katharine*, in "Henry the Eighth." On Monday she performed *Hermione*, in "The Winter's Tale." Both performances were well attended. *Anne Bullen* in the first, and *Perdita* in the second drama, were pleasingly performed by Miss Jenny Marsh. A new actor has also appeared in the character of *Cromwell* and *Florizel*, a Mr. F. Robinson—a young man handsome in person and intelligent in manner. Mr. Phelps is also engaged, and performed *Autolycus* in a truly artistic manner; but, nevertheless, we regret to announce that Mr. Youngs. Mrs. Marston has, however, returned, which is a great gain. No actress, since Mrs Glover, is equal to her in such characters as the nurse to *Juliet*, or the mad-wife to *Hermione*. But, more than all, Mr. J. W. Ray, an actor of undoubted genius, has been added to the company; and, in the old Bohemian shepherd, presented the judicious with an histrionic gem.

DRURY-LANE.

This theatre opened on Monday, with an American and French equestrian *troupe*, the leading *artistes* being distinguished in the bills as "star riders." The entertainment is divided into three parts, and the riders of most distinction are Madame Caroline, Mr. M'Cullum, M. Loiset, Mr. Stone, and M. Clive. Daring and ingenuity are the characteristics of the performance, which, however, was not entirely satisfactory to the crowded audience, who attributed on more than one occasion. An American *Clown*, in particular, came in for this expression of disappointment or impatience. The acting manager of the theatre is Mr. Lee; and, to judge from the patronage of the public, one would be apt to form the opinion that this theatre, with its enormous expenses behind the scenes, is best fitted for exhibitions of the kind, the other houses not being so expensive in the *artistes* employed in the actual amusement of the spectators, and not of carpenters and scene shifters, rendered needful in great numbers by cumbrous machinery in the rear of the stage.

PUNCH'S PLAYHOUSE.

Mr. Augustus Mayhew and Mr. Sutherland Edwards have adapted from the French a new piece for this theatre, under the title of "My Wife's Future Husband." The piece is extravagant in its conception and treatment. Two conceits forth, the "future husband" is an object of dread, and the "present husband" is in a high fever of terror as the fatal day comes round. But his rival has in the interval fortunately contracted another attachment, and so all ends happily.

BURGESSES AND FREEMEN'S PARLIAMENTARY FRANCHISE.—By an act, which received the Royal assent on Thursday week (14 and 15 Vic., c. 39), burgesses and freemen are exempted from the operation of an act for the better assessing and collecting the poor-rates and highways in respect of small tenements. It is now provided that the right of voting reserved by the 2 and 3 Will 4, c. 45, to persons then entitled, is not to be affected by the change of rating under the 41 and 42 Vict., cap. 99. The word "tenement" is to include apartment, cottage, or building, or land, in the same parish.

PACKET-SHIP TO CALCUTTA.—It is said that Mr. Lindsay, the eminent shipbuilder, contemplates running two packet-ships between Birkenhead and Calcutta, and expects to convey the mails and goods cheaper than they are now conveyed to India from Lancashire and London. When cargoes from Manchester are not forthcoming he will fill up with sand, and that way the passage money will be made remunerative.

EXPLOSION OF FORTY MILES RANGE.—A number of gentlemen assembled at the Gaits Percha Works on Monday afternoon, to witness experiments with a new description of explosive compound by the electric spark, conveyed a considerable distance under water by means of a copper wire covered with a coating of gutta percha, and in every instance the ignition and explosion of the gunpowder contained in the several gutta percha cases of the size of a large egg was instantaneous, on a wire from the electric battery being placed in contact with the insulated wire sunk in the canal in coils of an entire length of forty miles. Captain Addison, of the Bombay army, has strongly recommended the adoption of this discovery to the prevention of accidents in coal mines, which would be most completely effected by having wire, covered with gutta percha, placed in the chambers of the mines, or where the fire-damp was supposed to exist, and by this means explode a small quantity of gunpowder every morning before the men went down to work, which would ignite the fire-damp, and render the working in the mines perfectly safe during the day.

THE SOLAR ECLIPSE.

THE weather on Monday was most unfavourable for observing the Eclipse. The sky during the day was mostly cloudy, and a thin rain fell occasionally; at the time of the beginning of the Eclipse the sun was obscured by a dense mass of cirrostratus cloud, and at the instant of its commencement rain began to fall. At 2h. 20m. a glance of the sun was obtained. At 2h. 30m. the sun was seen for a moment. At no time could observation with the telescope be taken, owing to the want of definition of the sun's limb; consequently, the observations, which were taken by Hugh Gordon, Esq., were by estimation, and the times noted are those of whole minutes only, owing to the necessary uncertainty of such hurried observations.

The meteorological observations were also taken by the same gentleman. The dry and wet bulb thermometer in the shade are those usually in use in his observatory, and those exposed were placed so as to be in the full rays of the sun, but protected from currents of air. Arrangements had been made for the observation of the effect of the diminution of light upon sensitive plants, but none could be taken.

Towards the middle of the Eclipse the gloom was very sensible; the amount of light about this time was about equal to that of sunset, but it was very differently affected, and the general appearance of objects was widely different from that of sunset.

JAMES GLAISHER.

Connaught-square, Monday Evening, July 28.

Notwithstanding the unfavourable weather prevented my observing the commencement and disappearance of the Eclipse of the Sun this day, I saw part of it with a three-feet telescope of Cary's, that does not invert, and nearly as clear as with the naked eye, at intervals, and particularly at the times described in the *Illustrated London Almanack* for this year, and your Paper of last Saturday. At 3h. 10 m. there was a darkness perceptible for about two minutes; and immediately afterwards it brightened almost instantaneously, and continued lighter than before the Eclipse commenced, although it rained small rain nearly throughout the Eclipse. The sun this morning, between 8 and 10 o'clock, was very clear; but, being free from spots on the disc (which has not been the case since December 5, 1850), prevented any opportunity I might have had of making observations of them during the Eclipse. The barometer and thermometer had been stationary, though low, all last night; but, immediately after the Eclipse was over, they began to fall, and continue to do so—from which I conclude that, the wind being from the S.W., though close and warm, we shall have more rain for a day or two.

C. S.

The following observations are by the Frankfort correspondent of the *Morning Chronicle*:—

FRANKFORT, July 28, half-past five p.m.

The weather was altogether propitious, saving the appearance here and there, at all points of the compass, of white clouds of the class called cumulus. The heat was rather great than otherwise, the thermometer standing at three p.m. at 84 out in the shade. Wind there was scarcely any when the observation commenced, *i. e.* at 2.48 p.m. The shadow of the moon appeared to be very perceptibly advancing some minutes past three, the half of the disc rapidly upon the sun's disc. By twenty minutes more the eclipse had reached its height, at which time the sun's disc was visible as might be compared to the crisis only as much of the sun was visible as might be compared to the blade of a common reaping sickle. This bright remnant was on the left, and the moon progressed, the attenuated crescent thus remaining might be seen gradually widening and shifting round beneath the moon, towards the right, on which side the sun eventually emerged in his full magnitude. The warmth of the daylight seemed to have no effect on the animal world. The dogs neither which side the sun eventually emerged in his full magnitude. The warmth of barked more, nor did the birds retire to their roosting places. At the moment that the eclipse had reached its utmost, swallows flew about as usual as in search of food, and pigeons were on the wing. The diminution of light was certainly perceptible in half an hour or less from the commencement of the eclipse; but even at 2.52 p.m., when the obscuration culminated, the shade cast upon surrounding objects, or rather this reduction of light, did not seem to me to be nearly so great as in London during the remarkable annular eclipse of the year 1836.

EXTRAORDINARY FALL OF METEORS.—On the 22nd of May an extraordinary fall of ice occurred near Bancalore (India), during a storm of thunder, lightning, and rain; the hailstones which at first made their appearance were about the size of limes and oranges, but broke through the tiled roofs of houses, and destroyed gardens and plantations. Some of the hailstones found were as large as goose eggs, some as big as pumpkins; one block, next morning were as large as goose eggs, some as big as pumpkins; one block, found in a dry well, measured four feet and a half in length, three in breadth, and one and a half in thickness. It was probably the result of the cementation of several of the smaller pieces into one lump, although the fall of pieces of ice of this size is not unfrequent in India. In the reign of Tippoo Sultan there was found of the size of an elephant's head. The block several days to melt; in 1826, a piece of similar size fell in Candelah; in 1838, a block of ice, apparently a mass of cemented hailstones, was found near Dharwar, measuring 20 feet in circumference.

Letters from Adelaide, South Australia, bring intelligence of considerable importance to the shipping frequenting that place. A patent slip has at last been completed at Port Adelaide, and is capable of taking up vessels of 600 tons for repair. The *Panama*, a vessel of 522 tons, had lately been taken upon the slip, which is laid down on the property of the South Australian Company, and is undergoing repairs likely to be completed in a few weeks, which, but for this, could not have been accomplished in double the time, and then imperfectly.

PATENT LAW AMENDMENT.—The following are the resolutions agreed to in committee of the House of Commons on Friday:—

1 Resolved, That there shall be paid to her Majesty, her heirs and successors, for or in respect of the several instruments, matters, and things hereafter specified, made, or issued in pur-suance of any act of the present session of Parliament for the amendment of the law touching matters patent for inventions, the several stamp duties following, that is to say—

On warrant of law officer for letters patent	..	..	£5 0 0
On certificate of clerk of the patents of payment of the fee payable at or before the expiration of the third year	..	..	10 0 0
On certificate of clerk of the patents of payment of the fee payable at or before the expiration of the seventh year	..	..	20 0 0
On warrant of law officer for the sealing of letters patent	..	..	5 0 0
On filing specification	..	..	2 0 0
At or before the expiration of the third year	..	..	50 0 0
At or before the expiration of the seventh years	..	..	100 0 0
On extension of period of provisional protection	..	..	5 0 0
On hearing objections to granting of letters patent	..	..	5 0 0
Every search and inspection	..	..	0 5 0
On entry of assignment or license	..	..	0 5 0
Certificate of assignment or license	..	..	0 5 0
Filing application for disclaimer	..	..	1 0 0
Caveat against disclaimer	..	..	2 0 0

STAMP DUTIES TO BE PAID.

On warrant of law officer for [illegible]	..	..	3 0 0
On certificate of clerk of the patents of payments of the fee payable on or before the expiration of the third year	..	..	10 0 0
On certificate of clerk of the patents of payment of the fee payable at or before the expiration of the seventh year	..	..	20 0 0

2 Resolved—That compensation be made, out of the Consolidated Fund of the United Kingdom, to such persons entitled to fees and charges payable in respect to stamp duties for any loss they may sustain in consequence of any act which may be passed for the further amendment of the law touching letters patent for inventions.

CHESS.

TO CORRESPONDENTS.

H B, Edgbaston—"B" is bound either to play the game out by correspondence, or resign the match.

W R, Glasgow—You have not taken the position down correctly, as you may see from the solution given in our last.

JEDY. Very acceptable, as the communications of our fair correspondent have always proved.

W T W—Stalemate is a drawn game

J L, Trinity College, Dublin—The first is correct, but we do not see how mate can be effected in the other by your mode of operating.

R B, of Ashford—The best plan is to number the problems you send. It is somewhat difficult for us, with so many communications on hand, to know what position you sent on the 14th inst. The three solutions you send are not those of the authors, although two of them seem to effect mate.

AN ENGLISHMAN—We have certainly heard such a report, but can hardly believe it possible that any body of British chess-players, but more especially those of the London Chess Club, would professedly hold aloof from the Tourney of the St George's Club, because, bond fide, it was all the world. It was not sufficiently "national," could be guilty of such an outrage upon common decency as to carry chess amateurs to the land—as to offer a prize of 100 guineas in value, from the competition for which "*British chess-players are excluded!*"

R B W, Enigma 691. The slight emendation you suggest in this pretty enigma, of placing the Black Bishop at K Kt 6th, s—ms to make a right. Thanks for the other Problem, which shall be inserted as speedily

J S B, Birmingham—See our notice to O H in the last Number. The game shall be inserted.

FAIRPLAY, MILKSIAN.—See our notice above to "An Englishman." The thing is almost incredible, and we must be fully assured of the fact before we can insert any communications regarding it.

SOLUTIONS of PROBLEM No. 291, by Anapest, P S, Spaniard, Milo, Jack of Shrewsbury, Ke ipso, Rymer, Scer, are correct.

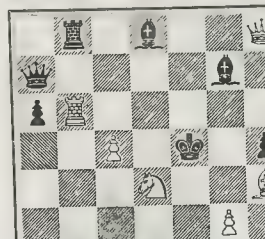
SOLUTIONS of PROBLEM No. 292, by Ernest, Midge, P S S, L L D, O, An Amateur, Manchester, Rufus, M S B, Jack of Shrewsbury, Zag 61, Scer, Dercvon, Sheffield Grinder's Apprentice, St Edmund, Stevens, B W F, are correct

SOLUTIONS of ENIGMAS by S S, Derevon, Scer, Simple Simon, St Edmund, C J D, Norwich, Stevens, B F S, B W F, are correct

PROBLEM No. 293.

This difficult and beautiful position we owe to F. DEACON, Esq., of Bruges.

BLACK.



WHITE.

White playing first, gives mate in five moves.

GAME IN THE CHESS TOURNAMENT.

BETWEEN MESSRS. HORWITZ AND BIRD.

(Sicilian opening.)

WHITE (Mr. B.).	BLACK (Mr. H.)	WHITE (Mr. B.)	BLACK (Mr. H.)
1. P to K 4th	P to Q B 4th	17 P to K Kt 3d	Kt to Q 4th
2. Kt to K B 3d	Kt to Q B 3d	18. K R to K sq	B to Q 3d
3 B to Q Kt 5th	Q to Q B 2d	19. P to Q B 4th	Kt to K B 3d
4. Castles	P to K 3d	20. R to K 3d	B to K sq
5. Kt to Q B 3d	P to Q R 3d	21. Kt takes Kt (ch)	Q takes Kt
6. K B takes Kt	Kt P takes B	22. Q to Q 2d	P to K 5th (b)
7. P to K 5th	Kt to K 2d	23. Q R to K sq	P takes Kt
8. P to Q 3d	Kt to Kt 3d	24. R to K 4th	P to K 4th
9. R to K sq	B to Kt 2	25. K to R sq	B to Q 2d
10. P to Q Kt 3d	P to K B 3d	26. P to K Kt 4th	Q to K Kt 4th
11. Kt to K 4th	B P takes P	27 Q to Q R 5th	B takes Kt P
12. B to K Kt 5th	P to Q 3d	28 Q R to K Kt	P to K R 4th
13. B takes B	Q takes B	29. Q to Q B 7th	Q to Q 7th
14. Q Kt to K 4th	(a)	30. Q takes Q P	Q takes K B P
	P to K R 3d	31. R takes K P	Q takes Q R (ch)
15. Kt to K 4th	Castles		(c)
16. R to K 3d	Kt to K B 5th	32. R takes Q	P to K B 7th (ch)
	And White resigns		

(a) This is lost time.
(b) The winning move, and one it is surprising so sharp-sighted a player as White did not foresee.
(c) A beautiful termination.

THE CHESS TOURNAMENT.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

SIR,—As the national entertainment which we have provided for the world is drawing to a close, our foreign visitors are likely to leave us shortly, and some, perhaps, are already on the wing. Allow me, as one who has subscribed to that part of the entertainment which has largely supplied at, I fear, too ill part of the entertainment which has largely supplied at, I fear, too ill-heral an expenditure of time and health, to thank them for their share in the Great Chess Tournament. Their games will long survive the Crystal Palace, and be studied with interest by the contents shall have crumbled into dust, and the innumerable hosts that have inspected them with delight shall all have been gathered to their fathers. It may be too much to say that the world has been brought to bear on this great contest with focal power; and what human ability can do, has been done to develope the force of combination and position in our warfare of peace." Our foreign friends have fraternised with us, as they ought to do, on this occasion; it is a hackneyed word, but it is literally the only one. They have fought with us as brothers, not as foes, and we honour them for it; nor is it any detraction from that honour that we have conquered, it has been by efforts such as have proved to them that English skill, when backed by fortune—that is, when sustained by health and strength—need not shrink from encounter with the world. They have also, if report speaks truth, enjoyed the advantage of seeing the play of some of our second-rate men at the London Club. I do not regret this: I trust that these minor games will be duly reported; and as it was probably with that object that they were invited, no doubt they will be. I am but a weak player myself, and, therefore, I am likely to derive much instruction and amusement from seeing the scientific way in which inferior players are handled. At all events, it was desirable for those who personally know the difficulties with which they had to contend—those who personally know the difficulties with which they had to contend—difficulties, no doubt, cruelly enhanced by the unworthy manœuvres to which some resented who became inimical to the scheme, because self-excluded by their own vanity, timidity, and coarseness.

Yet more do I feel that a heavy debt of gratitude is due to Mr. Staunton, not only for the scheme itself—nor yet for the perseverance and indefatigable resolution with which he has triumphantly carried it through and watched over all its manifold details—nor even for the pre-eminent skill with which he has in the conflict has been distinguished: these merits are common to all men of energy; but for the self-denial with which he consented to play under circumstances of annoyance and accumulated labour, for the moral courage with which he risked the first reputation in the world, when a less generous mind would rather have endangered the interest of the Tournament by taking no part in it, for the high spirit which set illness and medical prohibition at defiance rather than even appear wanting, we owe him thanks indeed; it is chess fame remains as high as ever, for what is a momentary defeat when suffering from disease?

—Vasne committere venis,
Nil nisi bene decet.

He has won for himself a wreath on this occasion far more honourable than the Olympic olive, even if Chess was known in Elis.

July 23, 1851. A CANTAB.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

It is understood that her Majesty, in person, will prorogue Parliament on Friday next, the 8th inst.

The select committee of the House of Commons, to which the subject was referred, has reported in favour of the abolition of the stamp duty on newspapers, and the granting to the leading daily papers of the metropolis and other places the protection of a copyright of limited duration in the articles of news.

The Hon. and Rev. Henry Bertie, son of the Earl of Abingdon, and a fellow of Trinity College, Cambridge, was among the passengers for Lyttelton, Canterbury, New Zealand, at the sailing of the last body of colonists.

The Rev. Mr. Oakley, head of St. John's Roman Catholic church, Islington, has written to the morning papers denying that the schoolmaster who was brought up at the Clerkenwell Police-court, a day or two ago, charged with cruelty to a child, is a priest or ecclesiastic of any kind, as stated erroneously in the police report.

The anniversary *soirée* of the members of the Printers' Dramatic Society took place at Anderton's Hotel, Fleet-street, on Saturday evening. The entertainments were on the most liberal scale, and the result, so far as the number of visitors was concerned, proved that the persevering efforts of the society to establish for themselves a permanent position are amply responded to by all members and friends of the trade. The room was crowded with people, the entertainments were warmly applauded, and the evening passed off altogether most satisfactorily.

A company of 15 persons, Lebanese, from Syria, have arrived in London for the purpose of giving theatrical representations of the manners and customs of Syria. The company have travelled through France, giving similar representations.

It is understood that the Rev. Mr Manning, late Archdeacon Manning, who recently seceded from the Established Church, is to be appointed to the church at Gravesend, which has been purchased from Mr. Blew by Cardinal Wiseman, for the celebration of divine service according to the forms of the Roman Catholic church, assisted by another minister of that church.

Mr. C. S. Denison is appointed Deputy Judge Advocate to the Queen, in the place of Mr. F. Newman Rogers, Q C., deceased, and Mr. Serjeant Kinglake is appointed Recorder of Exeter.

The High Sheriffs of Cumberland have been accustomed to contribute £10 to the Carlisle races fund, but the present sheriff, being a member of the Society of Friends, has sent a donation of equal amount to the Cumberland Infirmary, in lieu of a subscription to the Carlisle races.

On Sunday morning the Catholic church of St. George's-fields was the scene of a ceremony which has not been performed in the metropolis for more than 300 years, viz. the consecration of two Roman Catholic prelates with English territorial titles; viz. the Rev. Dr. Barnes, nominated to the Bishopric of Clifton, *nee* Dr. Hendren, translated; and the Rev. Dr. Brown, nominated to the Bishopric of Shrewsbury. Amongst those who took part in the proceedings were his Eminence Cardinal Wiseman, the Right Rev. Dr. Morris, Bishop of Troy; the Right Rev. Dr. Ullathorne, Bishop of Birmingham; the Right Rev. Dr. Briggs, Bishop of Beverley; the Right Rev. Dr. Brown, Bishop of Newport; the Right Rev. Dr. Waring, Bishop of Northampton; the Bishop of Texas, &c. On the previous Friday, the Right Rev. Dr. Turner, Bishop elect of Salford, and the Right Rev. Dr. Errington, Bishop elect of Pyrmouth, were consecrated at Manchester.

In Berlin, the closing of the shops on the Sabbath, which has lately been commenced there, is to be put a stop to. Last week it was strictly carried out, but caused much dissatisfaction to buyers and sellers, that it was deemed expedient to yield to the strong popular feeling on the subject.

Prince de Metternich has been elected burgomaster of the town of Plass, in Upper Austria; and in order to perpetuate the remembrance of that election, he has founded in the town a house of refuge for aged persons of both sexes.

Russia and Austria are coming to an arrangement for renewing the contract of navigation of the Danube. The latter has also come to an agreement with Bavaria, and pledges itself to construct, with as little loss of time as possible, a railroad from Salzburg to Brück, in Styria, and to have complete with its five years a railway from Innspruck to Kufstein and Salzburg; further, to have finished before the expiration of 1858 the lines extending from Batzen to Verona, and from Linz to Vienna. Bavaria on its part lays down at once a line from Munich to Salzburg, and engages to have complete within eight years a railroad from the frontier of Austria to Nuremburg.

The French tariff on the importation into France of sand to be used in the manufacture of glass and earthenware has been modified, and fixed at 1c. per 100 kilogrammes.

The Senate of Hamburgh has placed severe and most prohibitive restrictions on the transport of emigrants by the agents of British shipowners. The Senate has also requested the Prussian Government to adopt similar restrictions and hostile measures, and it is stated that the city of Bremen proposes to follow up the example set by the city of Hamburg.

An Industrial Exhibition, under the patronage of his Excellency Sir Edmund Head, is to be held in the city of St. John's, New Brunswick, on the 9th September next.

Two Englishmen, Messrs. Sheppard and Botton, have received a charter for the construction of a submarine telegraph between Le Danish Islands and the Duchy of Schleswig.

On Monday a parliamentary paper was printed, containing a copy of the royal warrant to enter on the ground in Hyde Park for the Great Exhibition, and a copy of the deed of covenant from the Commissioners to her Majesty, by which they undertake that the said Exhibition "shall be closed and concluded on or before the 1st November, 1851." In pursuance to this agreement, all things are to be removed and carried away at the expense of the Commissioners by the 1st of June, 1852, and they will be—if the public do not interfere.

Workmen are employed at present in repairing the cases containing the orange trees of the Tuileries garden at Paris. The trees are of great age, some count back as far as 700 years, and the youngest 300. Every 20 years the earth in each case is changed, and during the three following years they appear sickly. They then acquire fresh strength, and throw out an enormous quantity of blossoms. It is this periodical change of nourishment which has led to their longevity.

The *Journal de Marennes* (Charente-Inférieure) states that the question of determining whether the Seudre is to be considered a river or a branch of the sea, has just been decided by a commission named by the Minister of the Interior to inquire into the matter. This body has declared that the term of "branch of the Seudre," set down in so many different maps of France, is an error, as the expanse of water in question is an arm of the sea.

On last Saturday morning, between twelve and one o'clock, a policeman on duty near London-bridge discovered smoke issuing through the rat-light over the shop-door of one of the large houses in Duke-street, immediately at the rear of Tooley-street, belonging to Mr. Alderman Humphrey, whose premises in a locality abutting were wholly burnt down. The house is occupied by Messrs. J. Wynn and Co., boot and shoe makers. The policeman immediately sent for the engines. Several quickly arrived on the spot, and in a very short time the fire was extinguished, before any material damage was done. The origin of the outbreak is unknown.

The bill brought into the House of Commons by the Chancellor of Exchequer and Mr. Bouverie, to amend and continue the Metropolitan Sewers Acts, provides for the appointment of a chairman and deputy chairman of Commissioners of Sewers by warrant under the sign manual the former to receive a salary not exceeding £1000 a year. The chairman or deputy chairman will preside at Courts of Sewers, and two commissioners (one being the chairman or deputy chairman) will form a quorum, except when rates are to be made and mortgages authorised, when six commissioners must be present. The act will continue in force for one year.

The Propaganda publishes, that in the capital of the Republic of the Equator, Quito, by a decree of 25th March, 1851, the "Holy Order of Jesus" (the Jesuits) is restored to its rights and to the property belonging to it in that land. The congregation of King Charles III. of Spain was, through this decree, set aside "to all eternity."

The *Lloyd* of Vienna publishes a statistical account of the Russian empire, Poland not included; from which it appears that it contains 661 towns, viz. 185 in European Russia, and 176 in Siberia, including 44 fortresses. There are in Russia 291,371 agricultural colonies, including 6934 in Siberia: there are also 321 foreign colonies.

By a letter from Athens we learn that workmen employed four miles from the city in draining the fields of Marathon, found the place of sepulture of the warriors who fell there in the memorable battle 490 years before the birth of Christ.

The report of the Inspector of Factories, for the six months ended the 30th April, 1851, has just been published. It appears that the total number of informations for infractions of the factory acts sworn within the six months was 648, and of these 312 informations were convictions, 193 were withdrawn on payment of costs, 10 withdrawn before heard, and 31 dismissed. In 229 cases, penalties were inflicted of £1; in 62 cases, of £2; in 21 cases, of £3; in 1 case, of £4; and in 1 case, of £10. The total account of fines inflicted was £436, and the costs, £234 16s. 11d.

The formal opening of Venice as a free port took place on the 29th ult.

A dinner was given on Saturday, at M. Soyer's Symposium, to a body of French mechanics, who have been sent over to this country by the Commissioners for France to visit the Great Exhibition. Among the English guests who were present were Mr. Fox, of the firm of Messrs. Fox and Henderson, who, in reply to the toast of his health, which was eloquently proposed by one of the *ouvriers*, expressed the satisfaction with which he viewed such a demonstrat on of friendship and good-will. The Exhibition, he remarked, would be a great instrument in the promotion of the peace of the world: a sentiment which obtained the cordial assent of the meeting.

The Pope was so gratified with the reception his Nuncio and suite met from the Prussian Government, when they lately brought cardinals' hats for the Archbishop of Cologne and the Bishop of Breslau, who met in Berlin for the ceremony, that he has bestowed the order of Pio Nono upon the Prussian Chargé d'Affaires, M. Von Reumont, and accompanied it with a most flattering epistle.

THE CHINESE JUNK ILLUMINATED.—THE ASSAULT OF ARMS.

CHINESE PERFORMANCE ON BOARD THE JUNK.

THE Chinese Junk being now, by permission of the civic authorities (the conservators of the river), firmly established on the mud-bank at the end of Essex-street, Strand, close to the outfall of the main sewer of St. Clement's parish, is thrown open daily—morning and evening—with a variety of entertainments *à la Chinoise*, including a vocal and instrumental concert, a grand assault of arms, Chinese conjuring tricks, &c. The native crew, who, of course, never contemplate going to sea again, are the performers, and acquit themselves in an artistic manner worthy of the "supers" of the Victoria or Astley's. At the evening performances the queer old craft is lighted up with festoons of coloured lamps—a sort of miniature Vauxhall, and in the midst stands an open orchestra, in which four or five instrumentalists ("Barbarians," not Chinese) prepare the ear for the extraordinary combination of sounds which is to follow. Nothing can exceed the gravity of the "celestials," as they take their position in the midst of the assembly on the main-deck, and proceed to fright the ear with gong and drum, and cymbal, and agonising cat-gut; the leader beating time with a stake upon a sort of tin saucepan-lid supported on three legs. Then the vocalisation! The extraordinary squeaking duet, half plaintive, half comic, between the said leader (who is a sort of Costa and Mario rolled into one) and a younger aspirant in the background—what can possibly exceed its harrowing and ludicrous effect? Nothing except that impromptu feline discourse which we sometimes hear on house-tops at dead of night. The concert being concluded amidst the breathless silence of an astonished auditory, the war demonstrations and feats of arms then commence; and these are certainly no less extraordinary than what has gone before. The first act consists of a set of grotesque posturings, in which the performers disport themselves severally one after the other, each succeeding one striving to outdo the other in the wildness and extravagance of his gestures—flying and leaping round the deck, thrusting out the arms right and left, threatening, retreating, &c., the musicians all the time keeping up a terrific clang. Next come a series of somewhat similar performances, with long poles or lances; this scene closing with a set-to between two performers, which we have endeavoured to embody in our Engraving. Swords are also introduced, and brandished about in the same manner, which, if intended to give any idea of the military science of the Chinese, shows them to be very far behind any other known nation in the world in that respect. One young hero, in the course of his "war demonstrations," afforded great amusement every now and then, particularly after some very startling efforts at cut and thrust, by throwing himself down, and turning a somerset over his shield. When we left, the "barbarian" orchestra was about to strike up again, and dancing, it was said, was about to commence, but we did not wait for it.

THE RANELAGH CLUB, PIMLICO.

IN our Journal for April 12 we noticed the organisation of a "Mechanics' Home," at Thames Bank, near Vauxhall-bridge, for the reception of visitors to the Great Exhibition. This establishment is now in full operation, offering accommodation for 1000 persons. The premises are situated in Ranelagh-road, and cover an area of upwards of two acres. The arrangements combine comfort with economy for mechanics and others desirous of securing comfortable accommodation at a trifling cost; the dormitories provide a separate bed for each individual, with soap, towels, and every convenience for ablution; the rooms are lit with gas at night, and watched by efficient warders. The proper ventilation of the various apartments has received the approval of the authorities appointed for their inspection. A culinary department is attached to the establishment, to furnish visitors with provisions at a moderate and fixed price; the dining-room is large and well ventilated; there is also a separate smoking-room, detached from the main building.

A news-room, plentifully supplied with newspapers, magazines, and various publications relating to the Exhibition and other sights of London, has been provided. Altogether, we cannot conceive anything in the shape of accommodation for large numbers of persons better calculated to ensure comfort, enjoyment, morality, and social order, than the arrangements of this establishment; and Mr. Harrisson, the proprietor, is entitled to the thanks and support of the public for his foresight in providing so important an element of the enjoyment of thousands who visit the Exhibition, as a well appointed home.

THE RANELAGH CLUB (MECHANICS' HOME), THAMES BANK, PIMLICO.

GOODWOOD GROUP.—"CONFLICT BETWEEN RODERICK DHU AND FITZJAMES."

GOODWOOD GROUP.—"DEATH OF LORD FRANCIS VILLIERS."

THE GOODWOOD RACE PLATES.

The three prizes contested for at Goodwood during the past week are elegant specimens of the goldsmith's art; their ornamentation is poetic in design, whilst they present masterly examples of working in metal, which challenge comparison with the finest productions of their kind in the Great Exhibition.

One of the pieces of plate is a vase for holding flowers, and is elegantly modelled in the *cinque-cento* manner, from a design by Mr. Alfred Brown, whose works we have repeatedly had occasion to commend. On the most prominent parts of the bowl of the vase are high reliefs representing the death of Hippolytus, and the carrying of Hippodamia by Pelops; in each of which *tableaux* the artist has adhered closely to the description of the events by the classic poets; in each, the narrative of the design is admirable. Around the foot of the stem which supports the vase is a group of statuettes, illustrating Virgil's account of the death of Camilla: the Amazon and her attendants are elaborately executed; and high praise is due to Messrs. Hunt and Roskell, Bond-street, for the translation of the entire design into silver.

The second prize is a very clever group from a design modelled by Mr. Cotterill, and manufactured in silver by Messrs. Garrard, of the Haymarket. The subject is the close of the contest between *Roderick Dhu* and *Fitzjames*, in Scott's "Lady of the Lake." The Highland chieftain lies wounded on the ground, and the knight directs his attendants to place him on his horse and convey him to Stirling. The composition of this group is highly characteristic in spirit; the horse is excellent, and the work altogether maintains Mr. Cotterill's reputation.

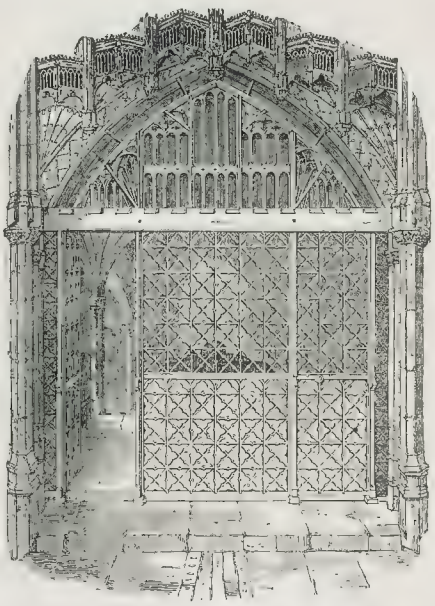
The third group has been executed in silver by Mr. C. F. Hancock, of 39, Bruton-street, from a model by Marochetti: the subject, taken from the picturesque period of the Civil Wars—an incident in the history of Lord Jersey's family—having been suggested by Mr. Hancock to the artist. The scene is the death of the young and accomplished Lord Francis Villiers, who got up a plot to proclaim Charles II., when he and his party were surprised by Cromwell's soldiers, under Colonel Rich, at Kingston, in a lane leading from which place to Surbiton the young nobleman was slain, after a gallant defence. The actual circumstances are thus related by Clarendon. After describing

THE GOODWOOD (CINQUE-CENTO) CUP.

RESTORED IRONWORK IN WESTMINSTER ABBEY.

At the time of the coronation of George IV. a general removal took place of most of the ornamental wrought ironwork which enclosed the numerous kingly memorials within the chapels attached to the Abbey of Westminster. This was a desecration greatly to be lamented, as the distinctive features of such workmanship were, until then, progressively illustrated by the specimens of the skill of the early and mediæval fashioners of metals, then contemporary with the monuments themselves. This bad taste is, however, now being slowly retrieved, by the restoration of the designs then displaced to their original positions. That attached to the tomb of Queen Eleanor was replaced, it will be remembered, about two years since: we have now to record a similar procedure in respect to the screen here engraved, and which appertains the chantry and tomb of King Henry V. It is of the time of King Henry VI.; and in the ten volumes of Rymer's "Fœdera" is an argument for the fabrication of the ironwork round the tomb of Henry V by Roger Johnson (Smith), copied from the Patent Rolls of the 9th of King Henry VI. (1431). Doubtless, this is the same which, for the second time, has just been completed nearly in accordance with the original models.

The general pattern of the gates may be described as composed of small-sized squares, each containing trefoils, and the groining of the recess enriched with fan-work tracery springing from side piers, including trefoils and quatrefoils among the ornaments. It is, however, proper to state that the impost or frieze was formerly divided into thirteen compartments, painted alternately blue and red, on each blue space being placed three gilded fleurs de lis, and on each red space three gilded lions, whilst near the middle of the gates were fixed alternately a row of swans and antelopes, all armorial insignia of Henry V.



RESTORED IRONWORK OF THE CHANTRY AND TOMB OF HENRY V., IN WESTMINSTER ABBEY.

the discomfiture of the Royalists, the historian says:—"In this confusion, the Lord Francis Villiers, a youth of rare beauty and comliness of person, endeavouring to make resistance, was unfortunately killed in a lane between Kingston and Southbyton (Surbiton) Common. The young Lord, having had his horse killed under him, turned his back upon an old oak-tree in the hedge on the west side of the lane, and fought most valiantly with half-a-dozen assailants, two of whom he had killed; when a third coming up on the other side of the hedge, killed him with a dagger. This happened between six and seven of the clock in the evening of July, 1648."

This group, in company with works of its class, may be termed colossal; so that the artist has had ample scope for his fine subject. It consists of three erect figures, and the body of a Cavalier who has been slain. At the feet of Lord Villiers—who, with his back to the oak, is striking a Parliamentary soldier—lies his dead charger; and immediately behind the tree is seen the assassin, with uplifted arm, about to stab the loyal Cavalier. The figures of this group are full of character—the rugged Parliamentary soldiers contrasting well with the graceful bearing of Lord Villiers. The dying horse in the foreground is a masterly performance. The silver-work of this group is beautifully executed throughout.

Messrs Hunt and Roskell had most generously prepared for the Goodwood Races a magnificent piece of plate, as an ornament for the centre of the table, of an entirely novel description, and which they had intended as their gift to the meeting, and to be called the "Goldsmiths' Cup;" but, in consequence of the difficulty of getting up a race of sufficient importance, it has been deferred for the ensuing year, when it will be competed for by two-year-olds, and for which a very numerous entry is anticipated.

NATIONAL SPORTS.

The calendar for next week supplies us with a total of seven race meetings, which severally announce as follows:—Monday: Alton and North Staffordshire. Tuesday: Leith and Rainford. Wednesday: Brighton, Leominster, and Alcechurch. Of these Brighton pre-eminently takes the lead; and with its two days of professional, and one of general racing, will fully maintain its popularity. The new Grand Stand is rapidly approaching completion.

The aquatic fixtures for Monday embrace Regattas at Deptford; Coldham Hall, near Norwich; St. George's, Hanover-square; and St. Peter's, Pimlico; Mersey, Liverpool; Poplar, Surrey Canal; and Tyne. Tuesday: Chatham, Royal Southern Yacht Club, and Yarmouth. Thursday: Irongate, St. Katherine's.

CRICKET.—Monday: Hill Hall, Essex (Zingari); Hereford, Sheffield, Shrewsbury. Tuesday: Wickham and Shacklewell. Wednesday: at Liverpool. Thursday: at Woolwich, Newark, Canterbury.

GOODWOOD RACES.

THE recurrence of the princely festival of Goodwood has assembled, under the hospitable roof of the noble Duke and Duchess of Richmond, a very large party of the English aristocracy.

The following are the details of the sport:—

The racing was admirable, and the success of Colonel Anson's horse in the first great race was hailed with satisfaction on all sides. A heavy thunder shower succeeded, after which the Duke's party were again gratified by Lord Clifden's acquisition of Mr. Hancock's beautiful group of the "Death of Lord Francis Villiers," which the good old Goodwood horse, Loadstone, bravely carried off from upwards of 30 competitors.

The party at Goodwood House includes the following titled and distinguished personages:—Prince Edward of Saxe-Weimar, the Duke and Duchess of Bedford, Earl and Countess of Chesterfield, Earl and Countess of Besborough, Earl and Countess of Strathmore, Earl of Zetland, Earl of Jersey, Earl of Glasgow, Earl of Airlie, Earl of Uxbridge, Lord Enfield, Lord Maidstone, Lord Burleigh, Lord Clifton, Lord George Manners, Lord Dunkellin, Lord Canterbury, Lord H. G Lennox, Lord W. Lennox, Lord Arthur Lennox, Lord Alexander Lennox, Baron Brunnow, Hon. Colonel and Mrs. Anson, Hon. Captain Rous, Hon. F. Villiers, Mr. and Lady Sophia de Vaux, Mr. C. Greville, Mr Payne, Mr P. William, Captain Petiat, Mr. Gerard Smit, Mr. and Mrs. John Stanley, Mr. Lawley, &c.

The Earl of March's party at Molecomb consists of Miss A. Greville, Colonel Cav. Colonel Newdegate, and Mr Milner.

There were also on the course, the Marquis of Waterford, Marquis of Drogheda, Baron Maltzahn, Lord and Lady Newport, Lord Stanhope, Lord E. Russell, Earl of Euston, Lord Exmouth, Lord John Fitzroy, Lord Adolphus Fitzclarence, Lord De Lisle, Lord Macdonald, Sir G. H. Boswell, Sir W. Codrington, Sir G. Armytage, Sir C. Rushout Sir Hugh Campbell, Hon. Major Needham, Colonel Wyndham, Hon. Major Pitt, Major Pearson, Count Batthyany, Captain Seymour, Captain Carleton, Mr. Shelley, Mr. Gratwicke, Mr. Balfour, Mr. Bastard, Mr. Mayrick, Mr. Delme Radcliffe, Mr. Standish, Mr. S. Graham, Mr. Wigram, Mr. Gregory, Mr. S. Stanley, Mr. Archdall, &c.

The racing was the details of the sport:—

TUESDAY.

THE CRAVEN STAKES of 5 sovs. each, with 50 added. Sir R. Pigot's Runnymede (Cowley). 1. Mr. Gratwick's Cheerful (Kitchener), 2.

FIFTY POUNDS, added to a Sweepstakes of 50 sovs. each. Mr. Bickham's No Change (H. Gooch), 1. Mr. Greville's Constance (Flatman), 2.

THE HAM STAKES of 100 sovs each.—Lord Eglinton's Claverhouse (Marlow), 1. A dead heat between Glanlace and Harbinger for second.

SWEEPSTAKES of 200 sovs each.—Lord Exeter's Notabell (Norman), 1. Lord Enfield's William the Conqueror (Flatman), 2

The GRATWICKE STAKES of 100 sovs.—Lord Enfield's Hernandez (Eatman), 1. Mr. Greville's Sarcelline (F. Butler), 2.

The LAVANT STAKES of 50 sovs each.—Duke of Richmond's Homebrewed (Flatman), 1. Mr. Farrance's b. by Merry Monarch out of Cestus (W. Day), 2.

FIFTY POUNDS.—Mr. Burgess's Chatterer (A. Day), 1. Mr. Bloomfield's Simplicity (Charlton), 2.

SWEEPSTAKES of 50 sovs each.—Lord Exeter's Midas walked over.

WEDNESDAY

The attendance was moderate, and the weather, after three o'clock, wretched, destroying the interest of several of the races, and causing such a rush for shelter to the piazza of the stand and into the weighing-room as to render it difficult to get through business of any kind. The retreat from the course at the conclusion of the racing was most disastrous.

SWEEPSTAKES of 300 sovs each, h ft, for three-year-old fillies.—Lord Enfield's Anspach (Flatman) walked over

SWEEPSTAKES of 300 sovs each, h ft, for colts.—Lord Enfield's Hernandez (Flatman) walked over.

THE GOODWOOD STAKES of 25 sovs each.

Col. Anson's Backbiter	..	..	..	(Flatman)	1
Mr. S Herbert's Grand Duke	..	..	..	(Wells)	2
Lord Clifden's Stronghow	..	..	..	(J. Marson)	3

At starting Hurry-Scurry took the lead, closely followed by Windschgratz, Duc-an-Dhurras, Narcissus, and several of the light weights, Pitsford, Champion, and Backbiter bringing up the rear. They ran in this order until near the top round the clump, when Duc-an-Dhurras and Narcissus were in advance, the latter unluckily taking the turn into the Queen's Plate Course instead of continuing in the proper one. The leash followed here, and Lima both went *post haste to combat*. Windschegratz now took up the running, attended by Hurry-Scurry, Bacton, and Grand Duke, Pitsford, and Backbiter still lying in the rear. The race proceeded thus to half-way up the hill, when Pitsford went up, caught Windschgratz near the top, and headed him round the turn; but a few strides further gave way, the front rank being left in possession of Bacton, Grand Duke, and Windschgratz, Bacton leading. On this old Backbiter waited to the distance, where he closed, ran with them until within sixty or seventy yards of home, and won very cleverly by a length. Strongbow, who had off until near the stand, obtaining the third place, finishing a length from Grand Duke; Bacton was fourth, and Windschgratz fifth. Run in 4 min. 8½ sec.

SWEEPSTAKES of 10 sovs. each, with 50 added.—Mr. T. Stevens's Britannia (Kendall), 1. Mr. Gratwicke's Cheerful (Flatman), 2.

The DRAWINGROOM STAKES of 25 sovs each, with a bonus of 10 sovs. each.—Mr R. E Oliver's Sir Rowland Trenchard (J. Marson), 1. Mr. Gratwicke's Hesse Homburch (Flatman), 2

The SCRAMBLE CUP.—Lord Clifden's Loadstone (G. E. Sharp), 1. Duke of Bedford's Newsport (J Mann). 2

SWEEPSTAKES of 10 sovs each. Lord Exeter's Turtle (Norman), 1. Duke of Richmond's Ploughboy (Flatman), 2.

HANDICAP PLATE of £50. Mr. Blyth's Julia (Charlton), 1. Mr Beckham's No Chance (H Gooter), 2

The COWDRAY STAKES of 10 sovs each, with £40 added.—Mr. Gratwicke's Maria (Gafney), 1. Mr. Gulliver's Lady Blanche (Hiett), 2.

THURSDAY.

SWEEPSTAKES.—The Squaw walked over.

THE SUSSEX STAKES.—Canterbury walked over.

THE GOODWOOD STAKES.—Fillus, 1. Houlakin, 2.

GOODWOOD CUP.

Nan-y	..	..	..	..	..	1
Cossack	..	..	..	..	..	2
Cimus	..	..	..	..	..	3

THE RACING STAKES.—Confessor, 1. Hippolyta, 2

THE SENTINEL MEMORIAL STAKES. Day Rosalind, 1. Red Hind, 2.

GRAND MARINE REGATTA AT LOWESTOFT.

On Tuesday the grand annual marine regatta took place at Lowestoft, under the patronage of Sir Thomas Maryon Wilson, Bart; S. M Peto, Esq., M.P., and a large body of members of the Eastern Yacht Club, and was most numerously and fashionably attended

From an early hour in the morning trains continued to pour in visitors from London, Norwich, and Yarmouth, until mid day several vessels in the harbour were gaily dressed in the colours of all nations, and the pier and esplanade were crowded with elegantly dressed ladies and their families. A considerable number of persons took advantage of the steamers lying in the harbour, and accompanied the different matches round the course. The course for yachts, yawls and boats, was from the moorings laid down abreast of the New South Pier head, thence to the south buoy of Newcombe, thence through the Stamford Channel, round the light-ship, and under the shoal-buoys, thence to the starting-place, passing between the pier and the cutter anchored abreast. Twice round the course, passing all the buoys on the port. The distance sailed was about 20 miles

The first match of the day was sailed by yawls, for a purse of 30 sovereigns. At half-past eleven the following yawls left the starting vessel off the South Pier head:—

Vessels.	Feet.	Port.	Colours.
Eclipse	54	Lowestoft	White.
Greyhound	44	Lowestoft	White, black, and yellow.
Royal Victoria ..	61	Yarmouth	Red and white.
Queen Victoria ..	64	Yarmouth	Blue and red.
Reindeer ..	69	Yarmouth	Blue and red.

These vessels got away well together; the *Royal Victoria*, however, slightly taking the lead, followed closely by the *Queen Victoria*—which positions were nearly maintained throughout.

In the second and concluding round, the vessels, after a very animated race, came in in the following order:—

	h.	m.	s.
Reindeer	3	30	23
Royal Victoria	3	37	30
Queen Victoria	3	37	50

A Purse of Ten Sovereigns, for lattoen boats, belonging to Norfolk and Suffolk ports. The following vessels, which appeared to be excellently assorted, started for this prize, at 1h. 8m. 30 sec.:—

Names.	Feet.	Owners.	Colours.
Maria ..	20	Sir J. Preston, Bart.	White, with red cross.
Widgeon	16	Henry Green, Esq.	Blue and white.
Kathleen	19	— Lound, Esq.	Blue, white, and red.
Zephyr	19	Henry Downes, Esq.	Blue and white.
Osprey ..	20	E. Matman, Esq.	Red.

The result was as follows:—

		h.	m.	s.			h.	m.	s.
Maria	..	2	7	3	Zephyr	..	2	16	30
Widgeon	..	2	14	20	Kathleen	..	2	20	16

The great match of the day was for a purse of 20 sovereigns, to be sailed for by yachts not exceeding 50 tons; three to start, or no race. Half a minute per ton allowed for difference of tonnage. The following yachts were entered, and started at 1h. 30m.:—

Names.	Tons.	Owner.	Colours.
Fanny ..	20	W. Clay, Esq.	Red.
Waverley ..	15	E. Bacon, Esq.	Blue.
Little Eastern	10	Captain Andrews.	White.
Iris	10	R. A. Reeve, Esq.	White, with blue square.
Pearl	12	Sir W. B. Proctor, Bart.	White, with red cross.
Red Rover ..	14	Thomas Palmer.	Red, white, and red.
Kestrel ..	10	Charles Crawshay, Esq.	Red cross, white ground.
Saints ..	12	T. Cardinal, Esq.	Stag's head.

The foremost yachts in the second and concluding round came in at the following times respectively; viz.—

	h.	m.	s.
Pearl	5	23	34
Kestrel	5	28	0
Red Rover	5	0	0

A match took place between ships' boats for prizes, the successful boats being—

Fruiterer	1
Sidney Packet	2
John and Sarah	3

These prizes were well contested, and afforded great amusement.

The match for a purse of fifty sovereigns for yachts not exceeding 50 tons, half a minute time, did not fill.

There were also rowing matches for 6-oared beach gigs, and a match for sailing punts, for a prize of £10.

The parties in the harbour and on the pier were enlivened during the day by several bands, who performed some very choice music at intervals.

The sports were brought to a close soon after six o'clock in the evening.

The regatta dinner took place at the Royal Hotel, on the Esplanade, at which about 150 gentlemen sat down. The chair was taken by S. M. Peto, Esq., M.P., supported by Lord A. Paget, Sir E. Lake, Captain Gooch, D. Waddington, Esq., Chairman of the Eastern Counties Railway Company, and the members of the Eastern Yacht Club. The usual toasts were made, and the evening was passed off with satisfaction at the present success and future prospects of the harbour of Lowestoft.

In the evening the front of the Royal Hotel was brilliantly illuminated with appropriate and complimentary devices; and at night the inhabitants and numerous visitors were gratified by a splendid display of fireworks from the Esplanade, with which the amusements of the most successful regatta ever witnessed at this place were brought to a close.

Not less than 20,000 persons were among the visitors from Norwich and Yarmouth alone, to witness which every possible vehicle was brought into requisition, in addition to the frequent trains on the railway, varying from 36 to 40 carriages each.

On Tuesday afternoon, a number of men were engaged loading a waggon with heavy slabs of slate, at Freeman's Wharf, Millbank, each weighing several hundredweight. The horse suddenly made a start forward, and the slabs, not being secured, fell on one of the labourers, named John Carthy, who was crushed beneath them. The poor fellow was extricated as quickly as possible, and, while being carried, he was conveyed without loss of time to Westminster Hospital; but, from the complicated nature of the injuries sustained, he is not expected to survive.

CUSTOMS.—The Customs authorities have arranged for inspectors of the gauging department to be stationed at the several great dock establishments and quays for the ensuing twelve months, to inspect and supervise the gauging of all foreign wines and spirits imported into and delivered from those places, and on other matters immediately connected with that department of trade—one for the East and West India Docks, one for the London Docks, except the Crescent, West, and South Quays, which are to be included in the duties of the inspector of the St. Katherine's Docks; and also one for the legal quays on the river side.

REMOVED CHANGES ON THE BENCH.—There is a rumour in the courts of law that the health of Sir John Jervis requires an immediate resignation of office, and that he proceeds at once to Madeira. According to the same rumour he is to be succeeded by Lord Cranworth, who has not, as an Equity judge, fulfilled the expectations he raised as Baron of the Exchequer. It is also said that Sir John Romilly will leave the Rolls to act as one of the assessors in the new Court of Appeal, and that he is to be succeeded by the Vice-Chancellor Knight Bruce

JOURNEYMAN TAILORS' BENEVOLENT INSTITUTION.—The annual general meeting of this society was held on Monday at the London Tavern, for the purpose of electing three pensioners from the list of 61 candidates. This society has for its object the aged and infirm members of the trade, and their widows, the benefits of which are available to the journeyman tailor of every nation, incapacitated from labour, and who has subscribed for a given period. The funds, 113 pounds per annum, are raised on the funds of the institution, and 61 were remaining, each pensioner being allowed £20 16s. a year, with coals, medicine, and medical attendance. It is connected with the Commercial Travellers' Schools, the children of the National Debt on behalf of this institution. The secretary read a short report, which was generally satisfactory. It stated that it was the intention of the committee to obtain a charter of incorporation, but that step was delayed from an unwillingness to trench upon the funded property. It also alluded to the great benefits the institution had conferred upon so large a number of decayed members, enabling them to end the evening of their life in comparative comfort, instead of being confined within the walls of a union workhouse. A ballot for the election of three pensioners closed the proceedings.

PROTESTS AGAINST THE ECCLESIASTICAL TITLES BILL.—Ten peers, Lord Montague, Lord Yarne of Harrowden, Lord Loval, Lord Camoys, the Marquis of Sligo, Lord Kinnaird, the Earl of Fingall, the Earl of Charlemont, the Earl of Leitrim, and Lord Monteagle, of Brandon. It embodies fourteen reasons against the bill, and thus concludes:—"Because the bill, besides being unjust in principle, greatly endangers the peace and harmony of the realm, and causes of her Majesty's subjects in the United Kingdom, and especially in Ireland. Should the measures be carried into actual operation, it may engender the most serious political and social evils; while, if it should not be put in force against the use of titles openly assumed, its introduction into the statute-book will have tended to disparage the dignity of Parliament, and the authority of the law."

The Bill to Amend the Law of Evidence has had one clause added to it in committee, which provides that, in order to reduce the expenses attendant upon the proof of criminal convictions, certificates will be received in evidence, in lieu of record of conviction or acquittal.

The bill brought into the House of Commons by Mr. Bouverie and the Lord Advocate, to authorise the application of advances (out of money now authorised to be advanced for the improvement of landed property) to facilitate emigration from certain distressed districts of Scotland, proposes that landlords on the Highlands and islands of Scotland may make application for loans for defraying expenses of emigration of the poor; and after inquiries have been made by the Inclosure Commissioners and the Colonial Land and Emigration Commissioners, the Treasury may direct the issue of a provisional certificate.

THE GREAT EXHIBITION.

THE number of "encurseionists" who have visited the Crystal Palace during the past week is really astonishing, and the wonder is where they all come from—how they got there and how they get away again. Red ribbons at buttonholes, blue ribbons round hats, medals, and even plaited straw, are the badges by which the various parties are distinguished from each other. Several bold and original-minded individuals made their appearance in connexion with one of these excursion parties, most probably from Luton, in Bedfordshire, attired entirely in straw suits, of a very unique appearance, and similar to those used as walking advertisements of some enterprising bonnet maker, but more tasteful in its making up. Probably this same bonnet maker had an eye to trade, and sent them down to the Exhibition.

The great fact of the week is the resolution of the House of Commons to memorialise her Majesty to allow the Building to remain in the Park until the 1st of May next. This will give ample time for the removal and restoration of the whole question as to what is to be done with it; for, in spite of all current propositions, there does not appear to be any very clear or definite idea upon the subject. Mr Paxton is doubtlessly engaged on a design for a Winter Garden, but then the public are not. Under any circumstances, the question can now be fairly considered, and the proposition was wisely made and acceded to; inasmuch as there can be little doubt that it will take up until the beginning of February, at least, to pack up and clear away the mass of articles displayed.

We regret to say that several mishaps have lately occurred to some of the objects, and that in the Medieval Court the fountain above the altar on the ecclesiastical side of the court fell down the other day with great force; and that Mr. Thomas' model for a fountain has so crumbled, by the action of the water on the central vase supporting the figure, that it has been given way and fallen, thus destroying the effect of an interesting feature of the Grand Avenue.

The season tickets are to be at once reduced in price from £3 to £2, and the issue to cease altogether after the 31st August. The five-shilling fee, too, is to be brought down to half-a-crown, after the prorogation of Parliament. It has been a matter, too, of anxious consideration, as to whether a reduction of the one-shilling fee may not be made, in order to admit great numbers of the very poor classes, for whom even this is a great object. The loss of a day's work, the admissions for himself, his wife, and say three children, is a serious matter to a working man, and would probably take near one-half of his week's income. The refund would shrink from such a sacrifice, if they had to make it in proportion to their means. The great influx of visitors, however, seems, at present, to render any plan for reducing the shilling fee impossible of realisation.

The *Times* are now the advertising organ in connexion with the Exhibition; and our French neighbours seem determined not to be behind in their demonstrations of satisfaction on this occasion. The Royal Commissioners, Executive Committee, and the various officials connected with the Exhibition have a special conveyance provided for them, with a free pass to return when they think fit. Altogether this affair promises to be a very brilliant and satisfactory one.

THE EXHIBITION FETE AT PARIS.

The programme of the *fêtes* proposed to be given by the city of Paris in celebration of the Exhibition of All Nations is as follows:

On Saturday, August 2 (this day) A grand dinner to 500 visitors at the Hôtel de Ville; to be followed by a concert, to which all the visitors will be invited, and at which the celebrated orchestra of the Conservatoire will exhibit its remarkable talent.

On Sunday, August 3—The National Museum and Palace of Versailles will be opened to the visitors, and the celebrated water-works and fountains will be in full activity.

On Monday, August 4.—The President of the Republic will give a grand *fête* at the Palace of St. Cloud.

On Tuesday, August 5.—There will be a grand ball at the Hôtel de Ville, for which it is said 8000 invitations will be issued.

On Wednesday, August 6. There will be a review and sham fight in the Champ de Mars, and the evening a grand *representation* at the Opera.

The Préfet de la Seine, and the municipal council of Paris, have issued for this country upwards of 1000 formal invitations to the Royal commissioners, the foreign commissioners, the members of the various juries, the executive and special commissioners, the mayors of the principal towns of the kingdom, the presidents and secretaries of the leading scientific societies, and a large number of the nobility and other distinguished patrons of art and science.

An especial invitation has also been forwarded to the Lord Mayor of London and the Lady Mayoress, for whom a suite of apartments has been prepared at the Hôtel de Ville by the Préfet de la Seine, whose guests they will be during the period of the *fêtes*.

It is understood that about 250 of those who have been most intimately and actively engaged in the direction of the Exhibition had received for their use a special train, leaving the London terminus yesterday (Friday) morning. The party proceeded ed Boulogne, and arrived in Paris at seven o'clock the same evening.

It is understood that every kind of facility will be afforded for visiting all that is curious and interesting at Paris and the neighbourhood, both in public and in private establishments; and, no doubt, the city of Paris will nobly vindicate its well-known character for liberality and hospitality on this auspicious occasion.

TAXIDERMY IN THE GREAT EXHIBITION.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

Walton Hall, near Wakefield, Feb. 28, 1851.

SIR,—Your Weekly Publication is always read at Walton Hall with pleasure and with profit.

As you have done me the honour to place my name there, in so advantageous a position in the Exhibition, I trust that you will kindly allow me to draw your attention to the few following remarks.

I had been requested to send specimens to the Great Exhibition, but I declined to do so.

Nevertheless, in order to show the lovers of natural history what can be effected in taxidermy, when true principles are called into action, I have sent specimens in the four departments of quadrupeds, birds, reptiles, and insects to the Royal College of Surgeons.

When I had examined the natural history in the Exhibition, I went away dissatisfied. The mode of preparation universally followed in taxidermy is so defective, and so repulsive, that he who practises it, be he ever so clever and intelligent, will never succeed in producing an exact copy of nature's true form and appearance.—I have the honour to be, Sir, your obedient and humble servant,

CHARLES WATERTON.

A MERCHANT VESSEL SEIZED BY MILITARY PASSENGERS.

A St. Helena paper gives us an account (apparently neither a very perfect or impartial one) of some extraordinary occurrences that took place on board a vessel called the *Lowenside*, and which were being investigated by the authorities of the island. The vessel had on board Captain Vessey, of the Royal Artillery, in command of a detachment of the same corps, and Captain Neill, aide-de-camp to the expected governor, Sir Emerson Tennent. She arrived on the 20th of May; and it appeared that on the 18th of that month, while at sea, Captain Campbell, the master, ordered the booby-hatch to be closed. This was done, and immediately afterwards Captain Vessey summoned the troops under his charge to take off the hatch in defiance of the master's order, which was immediately carried into effect. On the 19th, two days after this, a squabble appears to have taken place between one of the soldiers and the ship's carpenter. Captain Vessey insisted that the carpenter should be punished, but Captain Campbell would not punish the man. This led to some angry words, and Captain Vessey and it is asserted by Captain Vessey said he had a superior force on board, and should not hesitate to use it when he thought requisite. This language appears to have excited Captain Campbell. The next night (the eighth night) the Captain ordered the booby-hatch to be put on; but no sooner was the order given than Captain Vessey, in charge of the troops, said it should not be done Captain Campbell then pulled out a pistol, and declared that if any one attempted to interfere with the lawful management of the ship he would shoot him through the heart. Upon this qualified threat being uttered, Captain Vessey immediately called on his men to fall in round the hatchway, and ordered the bugler to sound the pelaton exercise. This order was instantly obeyed, and as soon as Captain Campbell saw the arms being handed up the hatchway, he went forward, seized hold of one of the muskets, and commanded the soldier to give it up, saying, "Put that down, it does not belong to you—it belongs to the ship. The soldier refused, whereupon a struggle took place for the gun, when some one called out "seize him," on which several soldiers seized the captain, and threw him down. He then ordered the ship's papers, and the vessel was navigated by the mates, by direction of Captain Vessey, and on its arrival at St. Helena, on the 29th, he went on shore, and obtained a warrant against the master, on the charge of assault and attempted murder. Captain Vessey's alleged reason for not allowing the booby-hatch to be closed is, that the weather was hot, and that it would endanger the health of the men—about 13 in number.

After four days' investigation, Captain Campbell was committed for trial, on the charge of assault with intent to murder. Information was then laid by Captain Campbell against Captain Vessey and the others of his passengers, for piracy, and illegal seizure of the ship, which information was taken and signed by the magistrate

MALE CONVICTS.—On Wednesday some returns were printed by order of the House of Commons respecting male convicts of Great Britain. The largest number sentenced to transportation in the last 13 years (1839 to 1851 inclusive) was in 1842, when the number was 3921. In 1842, as many as 4085 were sent abroad. On the 1st of January last, 6191 were detained in Great Britain, in which year not one was sentenced. Last year 29 escaped, 108 were pardoned on the expiration of a moiety of the sentence, or on special grounds, and 64 on medical grounds.

CHURCH, UNIVERSITIES, &c.

OXFORD.

In a convocation held on Monday morning especially for that purpose, the honorary degree of Doctor of Divinity was conferred on the Rev. John Harding, of Worcester College, late rector of St. Anne, Blackfriars, London, the Bishop designate of Bombay.

ELECTION OF A RECTOR FOR ST. ANDREW'S BY THE WARDROBE WITH ST. ANNE, BLACKFRIARS.—Tuesday having been appointed to take the poll of the parishioners of the united parishes of St. Andrew by the Wardrobe and St. Anne, Blackfriars, for the election of a rector in the room of the late incumbent, the Rev. J. Harding, promoted to the see of Bombay, at nine o'clock Mr. Hyrne, the senior churchwarden, took the chair in the large parochial school, Church-entry, Shoemaker-row, Blackfriars. The polling for some time ran in favour of Mr. Wilkinson, chief secretary of the Irish Church Missions; but at the close the number were—For the Rev. Mr. Webster, of King's College, 195; Mr. Wilkinson, 139; majority, 20. Consequently the Rev. Mr. Webster succeeds to the rectory, which is valued at £483 per annum, with residence. It was resolved to institute a scrutiny, but Mr. Wilkinson was averse to such a proceeding.

ELECTION SATURDAY AT ETON.—On Saturday morning last, the Rev. Dr. Okes, Provost of King's College, Cambridge; the Rev. Dr. Hodgson, Provost of Eton College; the Rev. Dr. Hawtrey, Head Master; the two pesers, the Rev. Mr. Wilts and the Rev. Mr. Thring, and other eminent personages connected with the College, having taken their seats in the Upper School, surrounded by a large and brilliant company, the election speeches were proceeded with. After the delivery of the speeches, a large party of the nobility, clergy, and gentry dined with the provost, fellows, masters, and King'sscholars in the College hall. The school at the present time numbers 604. Green is captain of the next year. The regatta took place in the evening, and the day's proceedings concluded with a display of fireworks. The election for boys on the foundation succeeded on Tuesday morning, when the following 70 boys—Graham, Gibson, Chute, Churton, Isacke, Sperling, Mosley, Baker, Carter, Whitting, Stone, Berrot, Dawson, (G. F.), Boys, Nesfield, Armstrong, Clarke, Gopp, Tarver, Hawtrey, were elected out of 90 candidates took. Of the above, five were from Eton, ten from one private school, and the remaining five from various other schools.

LLANDOVERY WELSH EDUCATIONAL INSTITUTION.—The munificent founder of the Llandovery Welsh Educational Institute has by his will devised the following two handsome bequests, in addition to the very liberal original endowment of £4600: viz. the sum of £1000 to Saint Colleen, and a similar sum to Jesus College, for the foundation of two scholarships, to be exclusively confined to pupils of the Llandovery Institute. Personal property to the annual value of between £400 and £500 has likewise been left by Mr. Phillips to the trustees for the purpose of founding professorships of geology, chemistry, botany, and the sciences

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently been announced:—The Rev. Benjamin Hall Kennedy, D.D., to the Rectory of Kelnton Mandeville, Somerset; the Rev. J. N. Spicer to the Rectory of Byfleet, Surrey; the Rev. Henry Ayling, to the rectory of Frampton-Cotterell, Gloucestershire; the Rev. Thomas Dawes, to the rectory of Trawsyrnyd, Merionethshire, and to be a surrogate. *Vicarages:* The Rev. A W. Noel, to the vicarage of Cropredy, Oxfordshire; the Rev. J. Wheeler, to the vicarage of Minster, in Thanet; the Rev. Alexander Watson, to the vicarage of St. Mary's, near Scarpay

TESTIMONIALS.—The following clergymen have lately received testimonials of esteem and affection:—The Rev. J. Tod Brown, curate of St. Martin's, Ludrige (a wrought plate, and a purse containing £150), from the principal inhabitants of the town and neighbourhood; the Rev. George Read, from a few juvenile members of St. Pan.'s Church, Liverpool: the Rev. Harry Wright, curate of Shurdington, from the females of his congregation; the Rev. John Gorell Haworth, by the Sunday-school teachers, by the Sunday scholars, and by the members of the congregation, on his retiring from the curacy of All Saints, Liverpool; the Rev. Thos. Troughton, by the inhabitants of the chapelry of Haverthwaite, Lancashire.

COUNTRY NEWS.

COMPENSATION FOR RAILWAY ACCIDENTS.

On Monday, the action of Blake (Administratrix) v. the Midland Railway Company was tried at the Derby Assizes, before Mr. Baron Parke and a special Jury. The case was brought by the widow of John Blake for the injury which she had sustained by the death of her husband, through the negligence of the servants of the defendants, and in the declaration the damage was laid at £5,0,000. The only p'ea was "Not guilty."

The claim arose out of the fatal accident at Clay-cross, the circumstances of which have been already fully before the public. It occurred on the evening of the 6th of May last, and on that occasion Mr. Meynell, one of the magistrates of the county, as well as Mr. Blake, met with his death. The train by which the deceased travelled was a quarter of an hour behind its time in starting from Derby. It started at twenty minutes, instead of ten minutes, past nine, and in five minutes after it a luggage train. That train travelled at a speed much greater than that allowed for it, and the passenger train was delayed near Clay-cross station and turned, which is between Derby and Chesterfield, by something happening to the engine. The consequence was that the luggage train ran into the passenger train, and broke to pieces the carriages at the back of the latter, latticeing some of the passengers for life and killing others.

The facts proved with reference to the pecuniary injury sustained by the plaintiff were principally these. The deceased, who had been married to the plaintiff in 1846, was a widower when the plaintiff became his wife, and at the time she was h.s second wife, and had no fortune of her own. The match was one of affection, and the deceased and the plaintiff had lived most happily together in very comfortable circumstances. They lived in a very good house at Chesterfield, which was the property of the deceased, and worth £2000, the furniture in it being worth £500. He was a manufacturer of steel files, saws, and springs, as well as a mer hant in the articles made in partnership with a Mr. Parkins from that trade he had derived a net income for the last six years of £554 a year. He had a.s; some shares in a joint-stock bank, and also an interest in a forge, which brought up his income to about £800 a year. By the articles of partnership, upon the death of either partner, the capital was to remain in the business for five years at five per cent. interest.

The learned judge, in summing up, told the jury that if they could see their way clearly to the assessment of pecuniary compensation for the affliction and bereavement which such a loss must have occasioned to the plaintiff, they were at liberty to do so; but that, for his own part, he thought it impossible. The maxim of the common law was, *damnatio nolle est*; and upon that ground it was that by the common law no action would lie by the personal representative to recover damages for the injury sustained by the death of a relative. By a recent act of Parliament (Lord Campbell's act), however, the law had been altered; and now, in this country, as well as France, such an action was maintainable, and the amount of damages was entirely for the jury. His Lordship then ex mined in detail the evidence which had been given as to the pecuniary circumstances of the deceased, and left the question of amount entirely to the jury.

The jury retired for some time, and upon their return into court found a verdict for the plaintiff.—Damages £4000.

With reference to the other parties injured by the accident, it may be mentioned that, at the York Assizes, amongst the civil business, was an action brought by Mr Broadhurst, of Sheffield, against the Midland Railway Company, to obtain compensation for injury sustained by the collision; but the case did not come on for trial, a compromise having been effected, the plaintiff receiving, his understood, £400.

Mr. and Mrs. Tennant, the American lady and gentleman who were compelled by their injuries to stay at Captain Salmond's cottage at Aukerbold, have so far recovered as to be enabled to travel, but in progressing avoyshby. Mr J B. Fox is unable to walk without crutches; the shock to his nervous system has also been very great.

ARCHÆOLOGICAL SOCIETY.—The anniversary meeting of the Archæological Institute commenced on Tuesday, at the Guildhall, British. Lord Talbot de Malahide was in the chair. Mr. J. S. Harford, the local pres.dent, delivered an able address, in which a warm tribute was paid to the memory of the late Marquis of Northampton. Mr. Tucker, one of the secretaries, read an anonymous paper, prepared by an antiquary of Bristol, descriptive of the regalia, muniments, and other matters connected with the civic history of the city. The objects of interest in the neighbourhood were visited during the week.

FATAL BOILER EXPLOSION.—About nine o'clock on Tuesday morning the boiler belonging to the mill of Messrs. Rhodes and Co., cotton-spinners, at Didin, near Wigan, exploded with tremendous violence, and the steam and water rushed fiercely out. The force of the explosion was such as to remove a portion of the floor of a willow-room over the boiler. Three men who were working in the willow-room, named Samuel Lord, Jonah Briery, and James Winterbottom, hearing the noise, ran towards the door, but the escape of steam had from view the opening in the floor, and they unfortunately fell through it into the boiler-house. After the steam had somewhat cleared away the three men were found in the firing-hole. Winterbottom was quite dead, and the other two expired almost immediately. No further damage was done, except that a wall in front of the fire-place was thrown down. The boiler was a new one, and of the power.

A CHURCH BELL 700 YEARS OLD.—The following is a copy of the inscription upon an ancient bell which hangs in the tower of Leake Church, near Northallerton. The bell is supposed to have been brought from the dissolved monastery of Rievaulx, near Dancombe-park.

"O pater sancte, gerardo, precibus nos juvato
Sobre a Grenlade's
who rede was the third abbot of R— the noted chronicler of that
age and was the author of "Historia de Bel.) Standards," or "The History of
the Battle of the Standard," a contemporary battle fought near Northallerton, in
August, 1138. He lived to a far o.d age, and died in the year 11—.

THE REGISTRAR-GENERAL'S QUARTERLY RETURN OF MARRIAGES, BIRTHS, AND DEATHS.

THIS return comprises the births and deaths registered by 2189 registrars, in all the districts of England, during the spring quarter ending June 30th, 1851; and the marriages in more than 12,000 churches or chapels, 2869 registered places of worship unconnected with the Established Church, and 623 superintendent registrars' offices, in the quarter that ended March 31st, 1851.

The return of marriages is not complete; but the defects are inconsiderable, and approximative numbers have been supplied from the records of previous years.

The returns still show a great increase of marriages and births. The mortality is nearthe average.

MARRIAGES.

The winter quarter, including the months of January, February, and March, has always fewer marriages in its records than any other quarter of the year. The marriages in the winter quarter of 1851 were, however, 32,619, which is the largest number ever yet registered in the winter season of any year; it exceeds by 2174 (one-third) the marriages in the winter quarter of 1846, and by 2194 the marriages in the winter quarter of 1850. An increase in the marriages almost invariably accompanies a prosperous state of the country; and it is gratifying, in this sense, to see that the increase now extends over eight out of the eleven divisions. While the marriages in London have increased, a stationary or declining rate of marriage is remarked in the three divisions round London, comprising the parts of Surrey and Middlesex out of London, Hampshire, Berkshire, Hertfordshire, Oxfordshire, Northamptonshire, Cambridgeshire, Suffolk, and Norfolk. An increase in some of the towns of Kent and Sussex gives those counties a character which is exceptional in the south-eastern division, but is quite in accordance with the results of the returns for the south-western division, where the marriages were evidently on the increase in Wiltshire, Dorsetshire, Devonshire, and Cornwall, and only slightly declined in Somersetshire. In Exeter, Plymouth, Tiverton, Barnstaple, Liskeard, St. Austell, Redruth, and Penzance, marriages in unusual numbers were celebrated The West Midland division exhibits a considerable increase, particularly in the seats of the iron, coal, and other manufactures—Birmingham, Newcastle-under-Lyme, Wolstanton, Stoke-upon-Trent, Wolverhampton, Walsall, Dudley, Worcester, King's Norton, Birmingham, Aston, as well as in Coventry, one of the seats of the silk trade. The marriages decreased in Lincoln; in Leicester, the two last winters show an increase; in Basford, Nottingham, and Derby the increase was greater than in the other districts of the North Midland division. In Cheshire and Lancashire the marriages increased most in Stockport, Macclesfield, Congleton and Nantwich; Liverpool, West Derby, Ashton-under-Lyne, Oldham, and Blackburn Huddersfield, Bradford, Leeds, Sheffield, and York were the chief contributors to the increase of marriages in Yorkshire: Durham, Sunderland, South Shields, Newcastle-upon-Tyne, and Kendal to the increase in the northern counties. The marriages in Wales during the last two winters exceeded the marriages in the three winters preceding. Monmouth and Carmarthen exhibit a decrease; Cardiff, Merthyr Tydvil and Swansea, Brecknock, Prestatyne, Holywell, and Wrexham, a decided increase.

BIRTHS

The number of births registered in the quarter ending June 30th amounted to 141,138; which is more than the births registered in any preceding quarter. It exceeds by nearly 30,000 the births registered in the corresponding quarter of 1841, when the number was 129,184. The births in the year 1851 already amount to 276,512. The increase is distributed over nearly all the divisions of England, but is greatest in London, in Yorkshire, and in the northern counties.

DEATHS.

99,639 deaths were registered in the quarter ending June 30, 1851; the deaths in the corresponding quarter of 1850 were 93,005; and 202,148 in the corresponding quarter of 1849, when cholera was in the kingdom. The table shows that the annual rate of mortality in the spring quarter (April, May, June) was very uniform in the years 1841-46, or 2·141 per cent. on an average, 2·174 when highest (1841), and 2·077 when lowest (1844); in the spring of 1847, after the potato failure, the mortality rose to 2·606, and remained 2·314 and 2·241 in the springs of 1848 and 1849; in 1850 it fell to 2·106. In the spring quarter of 1851 the mortality was at the rate of 2·228 per cent. per annum, which is lower than the mortality of the three bad seasons (1847-49), but considerably higher than the mortality in the corresponding quarter of the seven years 1841-46, and 1850. Measles, scarlatina, small-pox, and hooping-cough were epidemic in many districts, and the chief causes of the high mortality.

The *Cumberland Pacquet* states that the sheep-shearings in the fell districts are generally completed, and that the yield of wool will not only fall short of an average crop, but it is said to be inferior in quality, owing to the cold and wet spring

COLONELCY OF THE 96TH REGIMENT.—It is now decided that Major-General Lord F. Fitzclarence succeeds to this colonelcy.

The late Mr. B. Brame, of Ipswich, has, by his will, devised to trustees the large sum of £50,000, the interest of which is to be annually expended for charitable purposes in that town.

BENEVOLENCE.—The British Medical Fund, which was instituted in 1830 to serve the purposes of a provident and relief society for medical men, their widows and orphans, held its annual general meeting on Wednesday, at the offices in Bloomsbury-square. The report and balance-sheet have been added to the society during the past year. The property of originating local committees had been suggested, and the subject was to receive early attention. In the various branches of the society's operation, a moderate extent of business had been done, and the affairs were expressed to be, when the principles of the institution became better known, they would be more extensive.y appreciated and embraced. The Chairman remarked that Rome had not been built in a day, and that although their progress might be slow, he hoped it would be sure; and that the institution would be all the more firmly consolidated. From the abstract of accounts, we observed that the expenditure during the past year has been £567 17s. 11d. The life subscriptions have amounted to £199 10s.; the annual subscriptions to £176 8s.; and the donations to £4 4s. The sum invested in the funds has been £121 5s. 6d.

An accident of an extraordinary character happened on Monday night on the south-west Railway, near Bishopstoke. It appears that a man named William Friswell had charge of a luggage-train, and, together with his fireman and a guard, proceeded along the line; but, after some time, both the engine-driver and the fireman left their seats, and left to proceed on its journey without any one to take care of it beyond the guard, who, not knowing what had befallen the two others, made no attempt to get towards them. The train, which was proceeding at a considerable rate, was left to itself, and went out, which, of course, prevented the steam from keeping up. Upon arriving near Bishopstoke, however, Friswell, the engine-driver, fell off the engine. A portion of the train consequently left the rails, and both the break were broken. The guard, on witnessing the occurrence, applied the breaks, and, owing to the steam being so low, fortunately succeeded in bringing the train to a standstill before the descended, and, on getting to the tender, found the fireman so fast asleep that before he could wake him he was obliged to take him by the shoulders and shake him violently. The injured driver was picked up and removed to private apartments, assistance. The fire in the furnace having been made up, the train was at length removed to its destination. Both men were perfectly sober when they started with the train, but they were greatly fatigued, having been up, they stated, for two days and nights.

MONETARY TRANSACTIONS FOR THE WEEK.

(From our City Correspondent.)

An Austrian loan for £8,000,000 has been announced in the commercial capitals of Europe, though at present the exact conditions have not transpired here. From the best information procurable, it is understood to be payable in twelve instalments, the leaning price being 93, equivalent to £18 sterling. The deposit money is to be 10 per cent; and to those who prefer receiving bonds to scrip, such a privilege will be accorded by paying about 4 per cent additiona.. making the issuing price 97¼. The dividends are to be payable in Paris, Frankfort, Amsterdam, and Vienna.

The English Market opened with increased firmness on Monday, Consols quoting during the day 96⅞ to ⅞ for money and account, maintaining these quotations until the news of an Austrian loan for £8,000,000 sterling was announced. A decline of ⅜ then occurred, and continued until near the close of business on Wednesday, when greater firmness prevailed, and the last quotations were 96⅞ for Money and 96⅞ for Account. This trifling profit realised by the buyer, unattended, as the market closing less buoyant as the week's business advanced, with a close, final quotations being For Bank Stock, 215; Reduced, 97⅛; Consols, 96⅞; New 3½ per Cent. Annu., 98¾; Long Annuities, Exp. Jan. 1860, 7⅞; Ditto, Exp. 20 Years, Exp. Jan. 1860, 7⅛; India Bonds under £1000, 56 p; South Sea Stock, Old Annuities, 96⅞; Consols for Account, 96⅞; Exchequer Bills, 1¼ d.; Ditto, £1000, 45 p.; Ditto, Small, 45 p.

The Foreign Market has been more buoyant, and on Monday Brazilian advanced to 90¾, 92, 91; Mexican also improving to 30⅜, with a firmer market. Sardinian scrip advanced a point on Tuesday, and Spanish Five per Cents improved to 21⅛ ⅜. More activity prevailed on Wednesday, and extensive dealings in Sardinian scrip improved the value to ½ pm. to ¾ dis., after touching par. Thursday's market was dull; Sardinian scrip, however, improving ½ dis. to ¾ pm., and Sardinian 5 per Cents to 86⅞ 87. Business at the close of the week was very limited. In the last official quotations annexed Indents: Mexican Bonds, 1846 x div. 5, 31; Russian Bonds, 18.. Five per Cent 1.., Sardinian 5 per Cents, 86⅞ 87. Two and-a-Half per Cent, 12 Gulld, 59⅝; Ditto, Four per Cent. Certificates, 91

There has been a decided improvement in the Railway Market this week, quotations not only being higher, but well maintained. At the setting there was considerably less stock thrown on the Market; consequently, the demand for money was scarcely appreciable, and continuations, where required, were proportionately easy. Midland stock was in demand, it proving scarce when the Account was closing. At the close of the week prices again improved, as the following list will demonstrate:—Aberdeen, ½; Caledonia, 10⅝; Chester and Holyhead, 10½; East Anglian (£35.), 1; and E. and L. and D) 3½; Eastern Counties, 6½; East Lancashire,, 14; Great Northern, 17½. Ditto, Halves, A, Deferred, 6; Ditto, Halves, B, Six per Cent., 12; Great Western, 85; Lancashire and Yorkshire, 11½; Ditto, Fifths, 3, London and Blackwall, 6; London, Brighton, and South Coast, 9¼ x d; London and North-Western, 124½; Ditto, ditto, New Quarters, 26; London and South-Western, 83; Midland, 44½; Ditto, £50 Shares, 13½; Newmarket, 7½; Newport, Abergavenny, and Hereford, ½; North Britush, ½; North Staffordshire, 7½; Oxford, Worcester, and Wolverhampton, 14½; Scottish Central, 15½; South-Eastern, 23; York, Newcastle, and Berwick, 19½; Ditto and Newcastle Extension, 14½; York and North Midland, 19½.

LINES LEASED AT FIXED RENTALS.—Reading, Guildford, and Reigate, 21½.

PREFERENCE SHARES.—Caledonian, £10, 7½; Chester and Holyhead, 15; Eastern Counties Extension, 9 per Cent., No. 1, ½ prem.; ditto, New 6 per Cent. Stock, 10½; Eastern Union, Scrip Guaranteed 6 per Cent., 12½; Great Northern, 5 per Cent., 13½; Oxford, Worcester, and Wolverhampton, £15, 6 per Cent., 5; Shrewsbury and Chester (N. W. Min.), 8 per Cent., 14; Dutch Rhenish, 3½ ex div.; Northern of France, 14½; Sambre and Meuse, 3½.

THE MARKETS.

CORN EXCHANGE.—During the present week, the arrivals of English wheat up to our market, coastwise as well as by land carriage and sample, have been on a very moderate scale; nevertheless, the demand for all descriptions has ruled extremely heavy, at barely stationary prices. The supplies of foreign wheat have sold without difficulty, at extreme quotations, but low and middling kinds have met a dull inquiry. No English barley has reached us, but the imports from abroad continue extensive. The demand has been less active, yet we have no decline to notice in the quotations. Malt, the supply of which has been reasonably large, has moved off heavily, at late rates. Owing to the large imports of oats from abroad, the oat trade has ruled heavy, at a fall in value of 6d per quarter. No change in beans, peas, or Indian corn. Flour has ruled freely, at full currencies.

English.—Wheat, Essex and Kent, red, 33s to 42s; ditto, white, 37s to 43s; Norfolk and Suffolk, red, 32s to 37s; ditto, white, 37s to 44s; rye, 3s to 27s; grinding barley, 21s to 24s; distilling ditto, 25s to 26s; malting ditto, 24s to 31s; Norfolk and Lincoln malt, 42s to 51s; brown ditto, 44s to 46s; Kingston and Ware, 30s to 54s. Chevalier, 54s to 56s; Yorkshire and Lincolnshire ditto, 50s to 52s; potato ditto, 26s to 30s; Youghal and Cork, black, 18s to 21s; ditto, white, 20s to 23s; Sligo, ditto, new, 20s to 30s; ditto, old, 29s to 30s; grey peas, 27s to 28s; maple, 28s to 31s; white, 32s to 35s; blue, 28s to 31s per quarter. Town-made flour, 32s to 36s; Suffolk, 29s to 31s; Stockton and Yorkshire, 27s to 31s per sack. *Scotch.*—Wheat, red wheat,—s to —s; white, s to —s; barley, —s to —s; oats, —s to —s; beans, —s to —s, peas, —s to —s, per quarter. *Flour, American,* 20s to 23s per barrel; Canada, 24s to 25s per barrel; fresh ground, 27s per sack.

The Seed Market.—A though the supplies of most seeds on offer are very moderate, the general demand is heavy, at barely stationary prices

Linseed.—Baltic, crushing, 46s to 48s; Mediterranean and Odessa, 46s to 50s; bamgseed, 34s to 36s per quarter. Coriander, 16s to 18s per cwt. Brown mustard, 8s to 12s, white ditto, 6s to 8s, and tares, 3s to 4s 3d per bushel. Rapeseed, fair rape-seed, new, £22 to £24 per last of ten quarters. Linseed cakes, English, £8 10s to £9 0s, ditto, foreign, £7 10s to £8 0s per ton. Rapeseed cakes, 5½d to 6d 10s per cwt. Canary, 40s to 43s per quarter. English clover-seed, red, —s to —s; extra, —s to —s; white, —s to —s; extra, —s to —s. Foreign, red, —s to —s; extra, —s; white, —s to —s; extra, —s per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 6d to 6½d; of household ditto, 4½d to 5½d per 4lb loaf.

Imperial Weekly Average.—Wheat, 42s 6d; barley, 25s 7d; oats, 22s 0d; rye, 32s 6d; beans, 37s 3d; peas, 35s 7d.

The Six Weeks' Average.—Wheat, 42s 6d; barley, 25s 5d; oats, 22s 0d; rye, 32s 6d; beans, 37s 3d; peas, 35s 6d.

Duties.—Wheat, 1s; barley, 1s; oats, 1s; rye, 1s; beans, 1s; peas, 1s.

Potatoes.—Although the supply of common sound potatoes on offer is extensively large, the demand for it is steady, at from 100 to 105d per lb; green qualities are a.s.w inquiry, but not active. *Covent* The clearances continue extensive

Sugar.—Most colonial sugars have met a very moderate demand this week, and in some instances the quotations have further receded 6d per cwt. Fine yellow Barbadoes has sold at 39s to 40s 6d; good yellow Antigua, 37s 6d to 38s; good middling yellow Jamaican 36s 6d to 37s; fine Mauritius, 36s to 39 6d; very fine grainy white Benal, 47s 6d to 48s; and middling 37s; fine Manilla, 36s to 39 6d; very fine grainy white Bengal, 47s 6d to 48s; and middling 37s; fine Manilla, 36s to 39 6d; very fine grainy white Ben

NEW BOOKS, &c.

NEW EDITION OF LIVES OF THE QUEENS.
Now ready in 8vo. (size of Macaulay's History), price 12s elegantly bound,

VOL I. of the LIVES of QUEENS of ENGLAND.
By AGNES STRICKLAND.
A New, Revised, and greatly augmented Edition.
Embellished with Portraits of every Queen.
To be completed in Eight Monthly Volumes.
N.B.—The First Volume contains the Lives and Portraits of Thirteen Queens, and a Portrait of the Author.
"The announcement of this new, revised, and cheaper edition of Miss Strickland's truly historical work, will be received with satisfaction by thousands who desire to possess it."—Critic.
"The republication of the 'Lives of the Queens of England' in the more compact and accessible shape, announced in the present eighth volume edition. In a circumstance to be hailed with no common expression of satisfaction. As the title imports, this edition, besides being more condensed in point of space, is still more abundant in point of matter than the twelve volume edition; it is also, as a matter of course, cheaper—a fact which must still further widen its circle of readers and admirers."—Observer.
COLBURN and Co., Publishers, 13, Great Marlborough-street.

Now ready in 3 vols, 31s. bound,
THE ENGLISH in AMERICA.
By the Author of "SAM SLICK," &c.
"Invaluable for its accuracy and impartiality."—Herald.
"We have no doubt these volumes will be considered the cleverest Judge Haliburton has ever produced."—Messenger.
II.
Also, Just published, in 3 vols,
THE LADY and the PRIEST. By Mrs. MABERLEY.
"We can hardly indicate to the reading public a work more fitted to interest and delight. With deep pathos power and high artistic ability, Mrs Maberly has worked out her original fancy of the timid and awe-stricken lady, hounded to despair by the unscrupulous and remorseless priest."—Post.
III

NOW READY FOR AMATEURS Price 10s 6d.
THE ART of ETCHING. By ALFRED ASHLEY. Illustrated with 14 Etchings, by the Author Elegantly bound in a Cover, printed in Gold and Colours, designed by OWEN JONES
Any person who can draw, may etch With the requisite materials, which are comparatively few and simple, and a little experience, that can be easily self-acquired amateurs may multiply their drawings for distribution among their friends, or authors may be enabled to illustrate their own works, thereby getting rid of one of the most prominent items in the expense of publishing The simplicity of the art only requires to be more generally known, to be more extensive y practised. The publishers have every confidence in stating that the present is the best work on the subject, and refer with pride to the Noblos appended to which many have been received, while it has been universally acknowledged as first-class authorities on all matters relating to the fine arts At the same time, apart from its intrinsic merits, the beauty of the plates and the elegance of the binding render it a fit ornament for the drawing room table.
"The work of Mr. Ashley is chiefly addressed to the amateur. The text is accompanied by some beautiful examples, etched with great delicacy, but very clearly."—Art Journal
"This is a very interesting little publication, containing instructions on the use of the etching needle and the biting liquids. As it takes its origin, the preface informs us, in the prevailing fashion for ladies, from the investigation of the numerous facsimiles in the conception of etching The author has defined the processes with much clearness The etchings which accompany his observations possess great merit. They are a variety of specimens, and comprehend landscape, marine subjects, and figures, many executed wi h much bravery The trees in the Frontispiece are bordered with great spirit; so are the pollard willows in Plate III. The ruins in Plate V. are effective. The second subject in Plate VII. is very elegant the distances in Plate IX. excellent. The anatomy of the trees in Plate X. is given with great feeling and care; and a very effective subject of landscape and animals in Plate XII "—Athenæum
"This series unquestionably comprises some of the most brilliant, the most exquisitely rendered, and by far the most effective modern productions of this interesting branch of art we have ever had an opportunity of examining. The interpreas truction is conveyed clearly and agreeably, and the getting-up of the volume is perfection itself, whilst the binding is at once rich and daintily plaguat."—Magazine of Science.
London: J. and D. A. DARLING, 156, Bishopsgate-stre t.

Just ready, price 10s 6d, cloth lettered.

BAGNI PUBBLICI e LAVATORI.—Il Comitato Esecutivo, incaricato di stabilimenti consimili aperti in Londra, a vantaggio del STABILIMENTO MODELLO di BAGNI PUBBLICI e LAVATORI, in PRINCE'S-STREET, HANOVER-SQUARE, WHITECHAPEL il quale sarà aperto per luco vaito (Gratis) ogni giorno, eccettuata la Domenica, dalle dieci della mattina fino alle quattro della sera

Benevolenti, ingeniati ed altre persone a cui tali Segni e Lavatori non sono conosciuti fino ad ora che di meno, potranno così farsi una idea per poi giudicare di se stessi quale o quanto sia il bene che ripulsa dall' estendere simili stabilimenti, ed al tempo stesso osservare il meccanismo e lo dispositivi richiesti perchè così possano essere regolati con semplicità, e stanno efficaci, i poco dispendiosi

1. Comitato prega i Signori visitanti di non dare mancia di sorta a chicchessia, e specialmente a' servi della custodia.
Stanza del Comitato, 5, Exeter Hall, Londra, Luglio, 1851.

NEW MUSIC.

NEW VOCAL MUSIC.—"The Sea Bird Sying island," "Hast thou a sleepless pillow press'd?" "I've watched the trees in the forest glade." Composed by RICHARD SUTTON, price 2s.—Published by ADDISON and HOLLIER, 210, Regentstreet; Brewer and Co., 23, Bishopsgate-street Within.

NEW BALLAD.—"HAPPINESS."—Just published, THOMAS BAKER'S last new Ballad, entitled "HAPPINESS." Price 2s, postage free.
DILLON and Co, 244, Regent-street.

New ready, second edition, price 2s 6d, with Dedication to Joseph PAXTON, Esq,
SOVEREIGN OF ALL! Hymn for the Queen and Welcome to All Nations. A Contribution to the Great Exhibition of 1851. By an EXHIBITOR. Music by H. LAVENU.
Published by CRAMER, BEALE, and Co., Regent-street.
HYMN and DEDICATION, without the Music, handsomely printed in gold and colours, price 6d
Published by NESBIT and Co, Berners street.
Profits devoted to the aid of Ragged School, Exeter Hall

NEW SONG.—THE YOUNG LADY'S SONG.—Composed by the Author of "Will you love me then as now?" "The Queen of Man's Bride," "The Secret," "Yes, I have dared to love thee," &c. Price 2s (post postage free). This song, from its pleasing ballad, just introduced most successfully by Miss Poole, is likely to become one of the most popular songs of the day: both words and music possess that polish which will ensure favour.
DUFF and HODGSON, 65, Oxford-street.

WILSON'S SONGS of SCOTLAND.—The late Mr. JOHN WILSON'S EDITION of the melodies of SCOTLAND, in seven books, with Symphonies and Accompaniments (dedicated, by permission, to her Majesty the Queen), may be had of the proprietors, G. Gowans and Son, and of all musicsellers in town and country, in eight books, 1s 6d each; or neatly bound in two volumes, 4s 6d. The songs are printed separately, 1d each. Song 1 is now, on completion of the work, "Young Lochinvar." "Tell me how to Woo Thee," "The Skylark," and "Jessie's favourite song have been published. The book is the entertainment of "The Lady of the Lake." 2s each, or handsomely bound in one volume, 4s 6d. The songs to the "Lady of the Lake," "Harp of Scotland," &c. are published separately, at 1s 6d. Catalogues may be had at 47, Gower street.

GREAT EXHIBITION MUSIC. The 2d publication is the SONETA CIRCLE, 67, Paternoster-row, City, and 16A, Argyl-street; having at last discovered that the Music Publishers have determined to do all they can, and allowing the Music sellers 3s out of every 5s profit. The following Music from the 24 Pianists, at the Great Exhibition, is now ready, each 2s. Song 3.—"This music—so excellent, yet so cheap, so correct, and so beautifully engraved and printed—surpasses that of any publisher."—The Globe.—Sold wholesale and retail at the Pianists Office 67, Paternoster-row, and 16A, Argyll-street, Regent-street. Catalogues and proofs gratis.

PEACHEY'S NEW and SUPERIOR PIANOFORTES for HIRE, with the option of purchase in town or country (packed free). The most extensive assortment in London of warranted first-class Pianofortes by Collard, Broadwood, Exchange, or Exposition.—G. PEACHEY (Maker to the Queen), 104, New Bond-street, and 72, BISHOPSGATE-STREET WITHIN, opposite the Marine Society.—N.B. Specimens at Great Exhibition, Class 10, No 509

PIANOFORTES.—PAPE'S PATENT CONSOLE, SQUARE, GRAND, and OBLIQUE PIANOFORTES. These very elegant newly invented Pianofortes have been lately brought to the highest perfection by the adoption of many of the makers, those new instruments are unequalled for power and brilliancy of tone, elasticity, and delicacy of touch. The Patent Oblique is the most elegant Boudoir Piano ever made; and the interior construction being of cast iron, renders it very firm and capable of retaining its tuning a long time. The above Instruments may be seen and tried at No. 104, New Bond-street, Manufactory, Ebury, 210, REGENT-STREET, where, also, Pianos by other makers are to be had at the lowest manufacturing prices for sale or hire. Pianos exchanged, repaired, and tuned.

TOLKIEN'S 25-GUINEA ROYAL MINUTO PIANOFORTES, nearly 7 octaves, O G fall. metallic plate, with all late improvements, in mahogany, rose, and maple, with fret or plain front. Being of great sweetness and power of tone, and so small they will stand any climate without injuring the delicacy of their mechanical beauties. Manufactory and Warerooms, 27, Great Castle-st, and 29, King William-street, London-bridge.—Drawings post-free.

PIANOFORTES at Manufacturing Prices.—Messrs. HOLDERNESSE and CO., 444, New Oxford-street, London, Nos. 39, 40, and 41, Charles-street, Middlesex Hospital, have reduced the price of their Piccolo Pianofortes, in rosewood, zebra, or walnut cases, to 20 guineas. Their Cabinet Grands, Semi-Grands, instruments are 63 octaves (C to A) in compass, combine all the latest improvements, and possess great brilliancy and power of tone, and extreme of tone, and finished with the same care and attention that has hitherto distinguished their manufactures. Warranted for five years, and exchanged if not approved of.—A variety of secondhand by Broadwood, Collard, Erard, and other makers, from £16. Old pianos taken in exchange or Exchanged for Erard's patent. A full description of musical instrument taned, repaired, and taken in exchange.

OUTFITS for INDIA and the COLONIES. —Writers, Cadets, Assistant-Surgeons, and others appointed to India, Officers joining their Regiments, and all those who have or who are about to proceed to India, Canada, or any part of the Colonies, may obtain detailed lists of the necessary Outfits for every requirement, from the Warehouse of the Patentees, at a rate of passage money, allowance of baggage, &c., on application to Messrs. THRESHER and GLENNY, 152, Strand, London.

BOND'S PERMANENT MARKING INK.—The original, and by far the best, requiring no preparation, offers the surest means of protection for every variety of household linen and wearing-apparel against the loss of marks, for which reason be careful to ask for the genuine article, prepared by the inventor, JOHN BOND, 26, Long-acre, Wood Bricklayers' Arms, Hoxton, and by most Chemists, Stationers, and Medicine-vendors. Price 1s a Bottle.

HEDGES and BUTLER, Wine-merchants, &c., 155, Regent-street.—Gordon's Golden Sherry, 30s per dozen; superior, 36s; of soft and full flavour, highly approved: Amontillado Sherry (a delicious pale dry wine for invalids), 42s and 60s: old Port from the vintages of 1820, 30s, 36s, and 42s; Claret, 18s, 24s, fashionod dry Port, 24s; Hock and Moselle, 36s to 60s. St. Julien Claret, 36s; rich sparkling Champagne, 42s, 48s, and 54s; Pale and Sherries, 36s to 54s; Sparkling Champagne, 42s, 60s, and 72s; Pints, 24s and 42s.—N.B. Old Pale Cognac Brandy, 60s per doz.—Maraschino, Curaçoa, Noyeau, Kirschwasser, and Ratafia.

COTTERELL BROTHERS' large collection of PAPER-HANGINGS, at 500, New Oxford-street, will be found to be a combination of all that is novel in the trade. The manufacture Purchasers will not be annoyed with turning over a heap of worthless patterns, all such are rejected, but the choicest specimens of upwards of 100 firms (and 20 from 2d. per yard. COTTERELL BROTHERS' paper decorations for rooms are superior to any extant, and moreover in price. Observe the address, 500, New Oxford-street: also at Bristol and Bath

THOMAS BOULTON'S NEEDLES.—These [illegible] have been [illegible] [illegible] [illegible]

EXHIBITION SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS

No. 507.—VOL. XIX.] SATURDAY, AUGUST 2, 1851. { TWO NUMBERS, 1s. WITH HALF-SHEET SUPPLEMENT GRATIS.

THE GREAT EXHIBITION.

THE FINE ARTS DEPARTMENT.

THE exclusion of the painter's art from participation in the scheme of the Great Exhibition was an error of judgment on the part of the Commissioners, which is forced upon the attention more and more forcibly every time one visits the Crystal Palace, and which it seems utterly impossible to account for. At a time when the application of decoration upon the true principles of design is being attempted, under the auspices of Government committees, not only in the palaces of the nation and the houses of the great, but also in the more humble abodes of the middle classes (through the operation of Schools of Design)—at a time when furniture, dress, and utensils for the table all come in for a share of the improved taste of an age ambitious in art, it seems an act of fatuity, when preparing a Grand Exposition of the Works of Industry of all Nations, to exclude from the lists that very branch of art which affords the highest resources for decoration, as well as the most abundant and varied examples both of composition and colouring. The assiduity and interest with which the thousands who throng to the Exhibition in Hyde-park examine the miscellaneous contributions of sculpture from all nations, must assure us that the masses are susceptible of enjoyment from the contemplation of works of fine art; and although the specimens here presented to them fall far short of the standard of excellence, and although the impromptu criticisms of the multitude by no means evince an advanced taste, yet we feel so much confidence in the ultimate triumph of truth, which in art is beauty, that we are inclined to look for practical good results even from this scrambling course of self-education, amid a sort of wilderness of wild flowers.

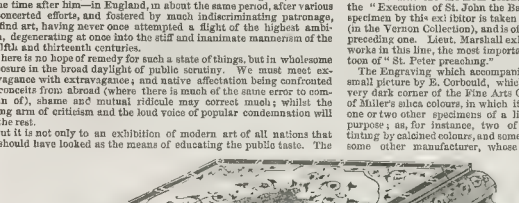
And if good so result from observations on sculpture obtained in this way, by millions who never saw a work of sculpture before, how much more useful to them would be some notion of the principles and practice of painting, involving both composition and colouring—an art much more intimately and generally applicable to the purposes and requirements of social life;—and if a comparison by the more critical portion of the community of the works, we can hardly venture to say the schools, of sculpture of various nations, be interesting and instructive, would not a similar comparison of works of painting be at least equally so? The importance of such a *concourse* to English art it would be impossible to overrate, when we reflect upon the comparatively short and chequered career which art, since its revival, has had in this country. It is scarcely more than a century and a half that art has held any position amongst us; since Sir James Thornhill, starting in rivalry to La Guerre, the favourite decorator of the mansions of the nobility of that day, received a commission from the State to paint the interior of St. Paul's Cathedral and the hall of Greenwich Hospital, in which he was assisted by a German named André, and which he contracted to do at the rate of £3 per square yard! It is not a century since the first attempt to establish an Academy of art was made, inaugurated by the learned and admirable Discourses of Sir Joshua Reynolds; and in the course of that period, what have we done towards the formation of a school of art? what definite purpose or rules of

"BRITONS LAMENTING THE DEPARTURE OF THE ROMANS."—BY E. CORBOULD.

taste have we arrived at? The answer to these questions must be given by a silent and significant pointing to the walls of the various exhibition rooms in Trafalgar-square, Suffolk-street, and Pall-Mall, where all has long been caprice, and glitter, and wild confusion, and where now a portion of our exhibitants seem to seek for unity of purpose, by devoting their pencils to a miserable copyism of the poorest mediæval models. Thus, whilst in little more than two centuries (Giotto died in 1336, Raffaelle in 1520), revived art in Italy arrived at its highest point of excellence and power under a Raffaelle, who founded a school which, in the persons of a Correggio, a Giulio Romano, and a Parmegiano, survived some time after him—in England, in about the same period, after various uncounted efforts, fostered by much indiscriminating patronage, we find art, having never once attempted a flight of the highest ambition, degenerating at once into the stiff and inanimate mannerism of the twelfth and thirteenth centuries.

There is no hope for such a state of things, but in wholesome exposure in the broad daylight of public scrutiny. We must meet extravagance with extravagance; and native affectation being confronted by conceits from abroad (where there is much of the same error to complain of), shame and mutual ridicule may correct much; whilst the strong arm of criticism and the loud voice of popular condemnation will do the rest.

But it is not only to an exhibition of modern art of all nations that we should have looked as the means of educating the public taste. The



COLOUR-BOX — BY MESSRS. ACKERMANN.

vast avenues of the Crystal Palace, which might, without much trouble, have been prepared for the purpose, would have afforded an admirable opportunity for forming an exhibition of by-gone art, arranged in order of schools; an exhibition of the highest interest and utility, which, from the nature of circumstances, has never yet been carried into effect, and for which the spacious resources of the World's Fair in Hyde-park afforded the first, and perhaps the last, opportunity. Of the necessary materials for furnishing forth such an exhibition, we cannot entertain a doubt, had the opportunity been afforded, seeing the alacrity with which foreign potentates, and our own most gracious Sovereign and her Consort, have freely sent in the costliest articles of jewelery and mere in their possession, to enhance the attraction of the Exhibition; and how their example has been followed by wealthy public companies, by noblemen and private gentlemen, each anxious to contribute their or his mite to the general splendour, but who, we are convinced, would have been far more proud to have shown a Raffaelle or a Rembrandt, than a "jewelled hawk" or a necklace once the property of the poor KING of ARCET; and the public—the more intellectual portion of it—would have been much more obliged to them for such contributions, and the men of art, and the men of taste of all Europe, would have thanked them for helping to make up a show of precious worth while enduring interest, the recollection of which would have served to light their paths during a life of toil and study in the pursuit of excellence and beauty in art.

It is useless to enlarge upon the practical advantages and the intellectual charm of such an Exhibition; it has been denied us: and although a department in the Crystal Palace has been named the "Fine Art Court," the very existence of such a compartment is a mockery when coupled with the announcement that

"Oil paintings and water-colour paintings, frescoes, drawings, and engravings, are not to be admitted, except as illustrations or examples of materials and processes; and portrait busts are not to be admitted.

"No single artist will be allowed to exhibits more than three works."

It is true that this regulation is not very clearly worded, and that it might be evaded, as all ill-advised and purposeless laws may be; almost every oil or water colour painting, or engraving, or sculptured bust or vase is "illustrations of materials or processes employed." Indeed, we could name several publishing houses who have managed to gain admission for a variety of engravings, either published or in progress, and water-coloured pieces destined in due course to be the hands of their engravers. And as to "fresco" painting; why should that be excluded, if distemper and other like processes be admitted, in which we have abundant examples of wall decoration? We have abundant evidence on every side, moreover, that the rule has been relaxed as regards the number of works to which each exhibitor was to be restricted. But still the general object of the rule, whatever that object was, has been effected; and the "Fine Arts Court" is crowded with very ordinary terra cotta casts, including brick-coloured and by no means delicately treated nymphs of heavy proportions, wax models, wax flowers, nick-nackeries in colour printing, and fancy stationery, card models of houses and gardens, dolls dressed in court and other costume, egg shells carved and engraved with fancy views, models in willow-wood, models in paper, and every conceivable absurdity which could enter into the concoction of such a collection, and which neither this department, as far as it goes, a positive blot upon the otherwise fair face of the Great Industrial Exhibition of all Nations. And it is really curious to see the shifts which poor Art, being excluded under its ordinary forms, yet manages to represent herself in the Crystal Palace in her industry, and what inconsistencies and waste of space this leads to. Although "oil painting and water-colour painting, fresco, drawing, and engraving" have been declared inadmissible in their general sense—that is in their best and noblest performance—the natural genius of Europe still manifests itself abundantly on all sides in almost every conceivable material but the prohibited canvas; upon porcelains, from France, from Vienna, from Milan, from Dresden; upon glass from Berlin and other parts of Germany; upon tin from Wirtemburg; upon plate-iron from Thuringia: then we have mosaics from Rome not a few, and very beautiful of their kind; and from Munich we have a collection of "stereochromic" pictures, executed upon wood covered with mortar, "a process intended as a substitute for (the prohibited) fresco-painting." Sir William Newton has been allowed wall-room for several pictures upon ivory, representing the "Homage at the Coronation," the "Marriage of her Majesty," and the "Christening of the Prince of Wales," &c.; but their reception in his case may perhaps be explained by the announcement that the ivory in these works is "joined together by a process of his own invention." Mr. Haslem and Mr. Bone have some enamel pictures on gold—many of them Royal portraits, others copies from old masters; and Mr. Essex shows "an extensive collection of enamel paintings," copies from Royal and noble collections. In short, where High Art has been rigorously excluded, Little Art has been greatly favoured. As to the prohibition of engravings, it has been found impossible to carry it out; and accordingly we find whole shop-loads of them in various styles in different parts of the building, some framed, others loose. In addition, we are startled here and there with some wonderful imitations of engravings, and pen and ink drawings, in silk, in human hair, in crape, &c.; which, as soon as the first impulse of curiosity is over, only leave upon the mind of the spectator a feeling of disappointment and irritation.

Whilst upon the subject of simulative processes, we may refer to some "poker drawings," upon wood, by the Rev. W. Calvert, and some specimens of the art of "autopyrography," or charred wood engraving, exhibited by Lieut. C. Marshall and Mr. J. T. Mitchell, and which are entitled to rank in a higher category than the contrivances named at the close of the preceding paragraph. The latter productions are somewhat similar in appearance to old sepia drawings, and in their process of working have something in common with poker drawings. The difference between charred wood carvings, or engravings, and the said "poker drawings," is that the formeare cut from the surface of hard and white wood, which has been previously completely charred over, the lights and shadows being effected by scraping gradually away the black surface to the necessary depth, according to the shade required, going below where the burning extends for the absolute lights; whereas "poker drawings" are burnt on the surface of white wood, the lights being left and the shades burnt in. One of Mr. Mitchell's specimens is taken from a rare mezzotinto engraving by Prince Rupert, who, by the way, was long supposed to have been the inventor of the last-named process, though of this we have some doubt, it being probable that he learnt the art from Colonel Louis Von Siegan. The subject is the "Execution of St. John the Baptist," after Spagnoletti. The other specimen by this exhibitor is taken from Uwins' "Chapeau de Brigand" (in the Vernon Collection), and is of more minute workmanship than the preceding one. Lieut. Marshall exhibits, we think, three or more of his works in this line, the most important of which is after Raffaelle's cartoon of "St. Peter preaching."

The Engraving which accompanies the present article is taken from a small picture by E. Corbould, which has been admitted to decorate a very dark corner of the Fine Arts Court, not as a specimen of art, but of Miller's silica colours, in which it is painted. Besides this, we have one or two other specimens of a like kind, and exhibited for a like purpose; as, for instance, two of Concannon's new method of painting by calcined colours, and some designs in the crayons and chalks of some other manufacturer, whose name we have forgotten. Beneath these, and some other gaudier displays of colours, rainbow or grass fashion, are ranged the brushes, palettes, and other implements necessary for using them; and so complete and instructive is this exposition of art-requirements considered by Mr. Rowney, one of the exhibitors, that he places a little plaster group, entitled "Letting the Cat out of the Bag" in the midst of his compartment, as much as to say that the mysteries of the craft exist now no longer, and that amateurs may all be artists if they please to lay in a stock of the necessary materials. In Mr. Ackermann's department we were agreeably struck with a very elegant colour-box, of which we give an Engraving.

The above flying notes, though unimportant in themselves, may be interesting some future day, as affording a notion of the position held by the Fine Arts in the Great Exhibition of Industry of All Nations of 1851.

THE DINNER-TABLE AND ITS ACCESSORIES.

SEVERAL articles have already been devoted to the food of man, and more than one have treated of the *rationale* of its preparation, generally by means of heat. There is still, however, a phase of the general subject left untouched. The moment of projection was the culminating period of the old alchemist's labours; the moment of consumption is the all-important point to which the toils of producer and preparer of food are directed. Then it is that the delicacies and refinements of many collateral crafts meet and are tested—then it is that taste, mental and physical, the taste of the brain and the taste of the palate, join their forces, and, on happy occasions, rejoice in the achievement of a consummate dinner consummately served—harmony in the meats and drinks—harmony in their relation and their order—harmony in the adornments of the table—that united harmony which satisfies the eye loving to look on symmetry, and the mind loving to look on well-arranged and well-adapted utility. Englishwomen, said the *Quarterly*, very rudely clothe themselves; French women dress. Of course, as far as we ought to be from giving in to such a dictum; but as to this proposition there can be no doubt. Uncivilised man eats, stuffs, crams, feasts, gorges—what you will. Civilised man dines. The one process is the rude satisfying of a natural need; the other a refined ministering to the same want, and also the exercise and enjoyment of an acquired and elaborately tutored taste for the mentally and physically harmonious. To furnish forth a dinner for uncultivated man, you want nothing but succulent meats. Give a cannibal a slice of his neighbour, or a City gourmand turtle, and you do all that is requisite—they only think of the mere food. But take a man who understands wines and cookery, and the food shrinks, not to a secondary, but to a co-ordinate rank with other matters. He thinks of the bill of guests as well as the bill of fare—of the harmony and propriety of all the appointments of the table. He will have all the appetite if the decorations of the porcelain be in the purest taste, if the structure of the dishes be such as to preserve the meats in their highest perfection until the last moment, if the drinks sparkle in classically moulded crystal, and if the central *épergne* rise a gem of floral beauty in the midst. This refinement and delicacy in the serving forth of a dinner must always be a token of a high and elaborate civilisation. "To eat" is a sort of raw material verb; "to dine," is that raw material wrought up after the usages and modes of life of artificial and polished society. Our articles upon the food of man, and the employment, in its simpler and more fundamental methods, of heat to cook it, applied, therefore, simply to eating; we wish to devote this paper upon the table, and its appurtenances and accessories, to dining

Before the guests assemble, the cook must have been at work. Beginning, then, with the beginning, a glance into his regions may not be without its propriety. Both the metropolis and the hardware manufacturing northern and midland counties send an infinity of cooking apparatus—ran, ovens, stoves, and roasting grates. These, in their more scientific and mechanical qualities, have been noticed; but we think it would pause to congratulate society in general upon the great ingenuity and energy which have of late been evidently applied to the apparatus of the kitchen. The antiquated imbecility about what was called "plain wholesome English fare"—plain roast and boiled—is now happily disappearing as fast as it can go, and we are beginning to recognise the truth, that, in despising the "foreign messes" and "French kickshaws," which our worthy ancestors so valiantly condemned, we were simply cutting ourselves off from all the delicacies and refinements of cookery confining ourselves to those rude methods of dressing food which savages practise wasting an unconscionable quantity both of fuel and of meat, and laying a worthy foundation for all that mass of stomach and nervous complaints which has made England, certainly, the most indigestive nation on the face of the earth. Occasionally, indeed, we hear of the brutal barbarism of roasting an ox whole; the expenditure of fuel, of course, enormous; and the result, half cinders, half red flesh; but, generally, we would hope, that, as enlightenment and common sense make their way amongst us, bearing with them seas of good and cheap cookery books, the reign of skilful little made dishes—of combinations of vegetable and animal food—of pleasantly piquant sauces, is making head, and that at last an Englishman's dinner is beginning to be characterised by something like variety; that it will not to all time alternate between beefsteaks to-day and mutton chops to-morrow; boiled mutton this time, and roast beef that. There was deep truth in that thoroughly English proverb, "That God sends meat, but the devil sends cooks." In France the arrangement was and is the converse. Stuffed with half-roasted meat and greasy plum-pudding—a compound suited only to the stomachs and the palates of the admirers of Gibraltar rock and treacle—it was all very well for us to sneer at Vatel and his *cardon bleu*, or to laugh out at the ingenuity of the French *artiste* who worked a dinner of three courses and a dessert out of a pair of old boots. The time, however, for [illegible] ying in the species of ignorance in question is gone by. For generations and generations every little wayside inn through France possessed infinitely better and more scientific cooking apparatus than our great establishments, where a huge open fire-place, surmounted, perhaps, by a clumsy smoke-jack—the maximum of fuel, of course, supplying the available minimum of heat—was the all in all destined for roasting, boiling, and broiling. A walk through the kitchen furniture of the Exhibition will show that we are making advances to more sensible arrangements. In the construction of the grates, the greatest attention is being paid to the obtainment of the largest amount of heat from the smallest amount of fuel. This heat is frequently so managed as to be capable of ingenious application to the very many various operations of which civilised cookery consists, and the economy of space obtained in these arrangements is, in almost all cases, well worthy of notice. According to the good old plan, dressing a dinner, if we exclude chops and steaks, meant the roasting or the boiling of a huge mountain of meat; and, accordingly, hours elapsed at any hotel at which you might be quartered, that is, if you did not chance to hit the canonical meal hours, ere you had a chance of obtaining beyond cold, or partially cold, meat. Not so in a French house. There, in a quarter of an hour, thanks to their superior cooking apparatus, and their disabusal from the superstition that there cannot be a dinner without a joint, you had and still have a snug little meal tossed up; the half-a-dozen or even perhaps greater number of tasty savoury dishes of which it is composed, prepared, and served hissing hot, before greasy Betty would have had the huge unportable kitchen fire raked up and glowing, for the Mont Blanc of beef which formed her notion of a dinner. It is gratifying to observe among the large ranges and the apparatus for great kitchens shown at the Exhibition, that a number of cooking-stoves for cottages, possessing in miniature nearly all the requisites of the more extensive machines, are also exposed. The economy of fuel attained by these is very remarkable, and it is none of the least recommendations of the new style of cooking apparatus in general, that by means of it a dinner can be dressed up, as it were, in a corner of the kitchen, without fuss or mess, or the necessity for a red-faced and perspiring cook toiling like a salamander over a blazing fire. All sorts of savoury stews and fricassees, all sorts of generous and esculent soups, all sorts in fact of what are called "made" dishes, can be prepared by these new cooking machines, with far less expenditure of time and trouble than one solitary joint would demand underthe old "plain cook" *régime*. It was absolutely quite comforting to those who, like sensible Doctor Johnson, mind their stomachs very studiously, to compare the immense collection of ingenious ranges for roasting, boiling, broiling, stoving, stewing, baking, and so forth—all compacted with the most [illegible] ingenuity—and mentally to compare them with the old open kitchen grate; the two styles of thing being the same resemblance to each other as the modern lighthouse, with its reflectors, bears to the ancient beacon of a cresset of burning coals.

So much for the kitchen. Let us ascend to the dining-room. Here the table first claims consideration. The article being one of those not destined or available for show, there are but a few exhibited, and we have one fault to find with them all. They are circular—certainly the best shape for a small, or even a moderately large dinner party; but the feet, when there are more than one, or the central claw and its appurtenances, are almost invariably arranged so as to prevent toe guests, or, at all events, one portion of them, from stretching their legs under the mahogany with anything like comfort. This is a serious fault. Our great upholsterers are so given up to the charms of carving, and what we may call *flamboyant* wood-work, that, in the greater number of the dining-tables, the space which should be sacred to the feet of the guests is trenched upon by all sorts of humbugs of graven images, very well executed in their way, but quite out of place beneath the hospitable board. A dining-table ought to be supported by a firm central claw, symmetrical, of course, but aiming rather at strength than beauty. It is not expected that the guests will pry beneath the table-cloth; and, if they did, it would be in very bad taste to be gratified by wreaths of carved flowers and cornucopiæs of mahogany fruit piled in such a position. There is one circular dining-table, or, if not quite circular, polygonal, which, by an ingenious contrivance, can be, as it were, magnified to, we believe, double its primary surface, the pieces of which it is composed being capable of extensive sliding out, while fresh leaves are introduced in the centre. The cleverness of this contrivance appears to be the exact proportion which can be instituted by a mathematical book between the size of his board and the number of his guests; the table, indeed, being to some extent the converse of the Oriental carpet, which was filled comfortably by four persons, and not a bit more crowded by four score or four thousand. The workmanship of this, as of all the other tables which came under our notice, is perfect; but we repeat, that the central support is by no means well managed. The expanding table is exhibited by Mr. Taddy. Another very ingenious, and we believe novel, dining table is shown by Mr. Calder, of Bath. It is circular and circulating—in other words, about fifteen inches of edge or margin are immovable, as in the case of an ordinary table. The inner circle revolves on its table axis, two or four polished pegs giving the *point d'appui*—so effective a one, that there glittered a goodly display of decanters and magnums on the board, the countenance would no doubt be felt convenient, and would have the effect of preventing unnecessary agitation of the wine. Altogether, there is ingenuity and cleverness in the table.

Side tables or *buffets* certainly form appurtenances to the dining table. They have, as articles of furniture, been already described; and if we were to hint at a pervading fault, it would be that the side table available space is often too narrow for the size and importance of the article. This is especially absurdly the case in the present French *buffet*, and that this side is not always placed high enough, considering that the persons making use of a sideboard do so upon their legs, and not seated.

Closely connected with the table, comes the table-cloth One can hardly, indeed, conceive dinner without the accompanying damask. A meal without a table-cloth, might be a meal, a consumption of food, a guzzling of fish, flesh, and fowl; but one could hardly term it a dinner. A book without boards, a picture without a frame, a man without a suit, is hardly a more unfinished and pitiable object than a dinner table without a table-cloth, or even a dinner table with a dirty one. As nothing is more appetising and agreeable to the eye than what the French call the *éclatante* whiteness of silvery damask, glittering with its well-arranged masses of silver, steel, and porcelain, so nothing more hideously overthrows all one's anticipations and associations of dinner than the cloths too often to be seen in our ordinary taverns—yellow with splatches of mustard, ringed by the wet bottoms of pint-pots, and emblazoned by dashes of the richest brown gravy. In France they manage these things better. The linen, table and bed, is perfection—white as unsullied snow—stunning and gleaming like ice in its glossy purity of brightness. The peculiar and peculiarly glazed effect of fine damask is strikingly perceptible as you enter the regions apportioned to the specimens sent from the north of Ireland, and the banks and braes of the Firth of Forth, and its dim greyness in the hue of the stuffs, which, of course, will wear out with wonderful but their fabric and texture are exceedingly fine, and, what is of importance for a table-cloth, stout and strong. Almost all are worked with appropriate patterns. Some have been made for Royalty, with suitable devices, armorial and otherwise. Others have been decorated with adornments in harmony with the general purpose of their manufacture, and more or less representing and developing the idea of good cheer. The general and the prevailing form of these embellishments is that of a grand circular or polygonal ornament for the centre, and a broad frieze of similar device work, extending, as it were in pinnacles, towards the middle emblazonment. A Dunfermline firm exhibits a satin damask, as a dessert-cloth. The texture is fine and glossy, and the article will commend itself to the purveyors of the new practice of not bearing the table after dinner. Napkins are displayed in considerable variety. These articles, universal in France, are hardly yet sufficiently naturalised amongst us Over the channel they would as soon think of giving you dinner without a plate as without the artfully folded diaper. In France, unless the occasion or the establishment be one of some pretension, you are not left to wipe your fingers where and how you can. The napkins exhibited in the Crystal Palace are so arranged that a set generally goes with each large table-cloth, bearing devices, armorial or emblematic, corresponding with those in the larger article.

Our table being now prepared, and the cloth laid over it, we proceed to what is usually laid upon that. And, first, the article of plates and dishes. For how many many years, we wonder, did that abominable willow pattern rule it with a despotic sway over breakfast and dinner services? For how many years did people puzzle themselves over those inevitable joss-houses, that eternal bridge, with its eternal three passengers, bearing three eternal burdens on their backs? How long did that Noah's ark-like boat keep upon that painted ocean, with its chinese fisherman, bending over the bow? How many generations and children have puzzled themselves as to what might be the probable taste of those preposterous fruits, growing out of those preposterous trees, and as to what might be the nature and name of those monstrous birds, bigger than Sinbad's roc, kissing each other in the clouds. For how many cycles, indeed, was that preposterous gem of Chinese art—that ineffable climax of no meaning, no judgment, no taste, and no sense—associated with the roast beef, the boiled mutton, and the plum-pudding of old England. The willow pattern was inevitable—unavoidable. It was like the Irish-

man's lark, it was everywhere It stared up at you from every good man's coat; it dotted with hideous circular pictures every good man's table. There was a spell upon the people they were slaves to the willow. The pattern appeared to be what the British Constitution was declared to be, unimprovable and impregnable. People took it as a matter ordained by the Fates and confirmed by the stars. The other decorations and appointments of the table underwent gradual improvement. Silver forks displaced steel prongs, dishes and dish-covers were made at once more elegant and more convenient, but for a greater number of years than we care to confess, the willow pattern stood staunchly out. People thought beef would not taste like beef, or mutton like mutton, unless devoured under the sanction of the joss-houses and the big birds, and hallowed by the fisherman in the Noah's ark, and the three everlasting traversers of the bridge. Happily, the spell is now burst, and the willow pattern is departing to the limbo of all the humbugs. For some time a series of designs took its place, which were only one degree removed from the art of John Chinaman. We ladled our soup or placed our chops upon representations of a brave meadow, with a brave gentleman in a long-tailed blue coat, and trousers very wide about the legs, accompanied by a lady with a parasol, and a little girl, Sarah, or a little boy, Bill, taking a wholesome, constitutional, and domestic walk. Contemporaneously with this brilliant effort of art were manufactured those ugly large white plates with blue wavy lines round the edges, which were common in all country places, and hawked about by all the wandering emissaries of the ragmen, whose business it was to exchange coarse crockery against fragments of old linen and woollen. A still purer taste is now happily in the ascendant—the porcelain and stoneware department of the Exhibition displaying a series of handsomely designed and richly coloured plates—the patterns not, indeed, quite reaching to perfection, but an enormous improvement over the ancient style.

In dishes, too, we are making progress, particularly in all that relates to the important matter of gravy. The old affair was a mere clumsy oblong plate, which the carver tilted up at one end so as to get a temporary pond of gravy in the other. The first improvement was to construct well at one extremity of the dish in which the savoury liquid collected. Then little channels or ditches were made in the stoneware or porcelain to conduct the liquid more readily to its destination. Then came a recent and an ingenious device for separating the pure, legitimate, and orthodox gravy, from the impure, illegitimate, and heterodox fat. Two wells were formed side by side. Into one, the shallowest, fat and gravy ran as of yore. The edge of the other was defended by a raised ledge or rampart, which prevented any unauthorised incomings, while a small hole of communication between the two wells allowed all the pure and really liquid gravy to flow from the unguarded shallow to the guarded deep receptacle Specimens of this simple and ingenious contrivance are to be found in the Exhibition, both in metal and stone-ware. Metal, indeed, since the invention of those cheap substitutes for silver which Birmingham and Sheffield now pour so freely forth, and which really, with ordinary care, will long look just as like the real thing as Mr. Apsley Pellatt's Koh-i-noor is like the old original stone—metal dishes are coming greatly into fashion, particularly for serving up the smaller class of made meats, stews, *fricassees*, and so forth; and a common arrangement is, by making the handles of the covers removeable, to allow of the latter being converted into smaller dishes themselves. The covers in question, not having to adapt their proportions to the unwieldy masses of meat which form the *pièces de resistance* of our dinners, are far more elegant in form than the covers adapted to the larger "ashets," as the Scotch call them, on which we enthrone our joints and sirloins. No great improvement, indeed, is to be expected in the latter; but the tendency is to an approach to the conical shape, a more elegant and gracious one than the huge ugly bulge which dish-covers too often display. The French exhibit some metallic dishes for fish, adapted to the size of a salmon or large pike—an arrangement which seems sensible enough; but we were disappointed in not observing dishes of this kind with perforated slabs for the fish to lie upon. Fish ought never, except when dried, to be served without them. Germany has sent some specimens of her peculiar fish dishes, with uncouth representations in the brownish stoneware of the creatures destined to lie above them. These affairs are rank monstrosities. We have seen a fish "ashet" in Germany, heaped, as it were, with a mass of sick and mangy-looking pikes and perch, which was enough to have ruined the most promising appetite which ever nursed itself for dinner. Tureens afford great opportunities for improvement in form. Most of those now in use are no better than stoneware or porcelain tubs or pails: but we noticed some handsome and symmetrical shapes, both in ware and metal, out of which we trust, will be distributed many a spoonful of rich and highly-flavoured vegetable soup—the only species which, west of Temple-bar, or east of Aldgate-pump, ought to be admitted as beginning a dinner, in civilised society. While talking of the shape of dishes and dish-covers, we may pause a moment to express our regret that the display of jelly and other moulds should be so poor, and apparently so stationary in taste and invention as it is. In the hard ware department are whole ranges of the dreary old shapes, associated for the last score of years with creams, blanc-manges, and calfsfoot jellies. The same antiquated imitations of elephants, the same dumpy mounds with buttons all round the summits, the same old piles of angles and knobs and shapeless pinnacles which gave their shape and symmetry to the masses of amber-like jelly or stiff white cream so dear to our childhood's unsophisticated, or, to speak more sensibly, uneducated taste, again greeted our eyes—not a step in advance, not an atom of taste or invention. We do not say that the pastry-cooks and confectioners have not improved in this respect very notably, but the makers of the metallic moulds in general use, for the ordinary purposes of the kitchen, have certainly not extricated the wheels of their chariots from the old ruts

We looked in vain, also, for some novelties or improvements in the metallic drinking-cup and tankard way. One rather ingenious measuring quart there certainly was for frothy porter. The walls of the vessel extend considerably higher than the line which marks the boundaries of the imperial quart—boundaries which are, however, signalised by a hole, out of which the beer runs when the proper quantity has been introduced, the froth having nothing to do with the matter. "The method," says the exhibitor—and we agree with him "is better than blowing." But why not have some handsome pewter mugs or tankards for malt liquor? The fact is undoubted, that porter and pewter go excellently together, and that there is a certain smack and flavour in the liquid, when imbibed from the metal, which does not follow the process of drinking from glass. All our pewter goblets, however, are mere public-house measures, and their appearance, when they do appear—generally battered, scratched, and dirty—is reckoned to be anything but complimentary to the style of living of the house. Whether pewter or silver, however, the tankard is the natural receptacle for beer. The froth looks noble, curling up the glancing metal; and in these days of Britannia silver, nickel silver, and the scores of silvers which are declared by their inventors to be little, if at all, behind the real thing in any one of its qualities, we should expect to see some taste and ingenuity lavished in the construction of suitable, characteristic, and elegant vessels, to be devoted to the consumption of our national *vin du pays*.

Knives and forks are important appurtenances of the table, and one in which the last few years have seen marked improvements. We looked attentively for that absurdity—ancestrally of tolerably common occurrence—a two-pronged fork, and only discovered one set, in Austria, and abundantly rude and coarsely made they were. The black wooden-handled abominations have also been tolerably well routed out of the land; but we are no friends to the rough, knobby, and prickly horn, which, to some extent, seems to have superseded them. The plainer and smoother a knife handle lies for the grasp, the better. The elaborate silver gilt dessert knives, shown in the trophy of the Messrs. Rogers, are over ornamented to an uncomfortable degree. A plain fruit-knife, excellent for some purposes, is one in the Crystal Gallery, made, blade and handle, of blue glass. Rogers exhibits several specimens of the new fish-slice, somewhat like a large butter-knife, and, in our opinion, not half so good or so elegant as the broad old one, by means of which the largest flakes of the largest cod, or a sufficient extent of surface of any thin flat fish, could be conveniently peeled off and deposited on the plate. The old fish-slice with the new fork might be advantageously introduced together. The French show some sensible trowel-like fish-slices, well adapted for the purpose. The dessert knives most to our taste in Rogers' trophy are the plain mother-of-pearl handled ones. They look well balanced, clean, and highly-finished. In the ordinary knives and forks, the productions of Sheffield, Birmingham, and London, there is no very decided feature of novelty. Carving-knives, with a crook in the blade, close to the handle, are useful for cutting slices from a round of meat. They are, however, more common in cook-shops than in private houses. The carving knives with round points are one and all mistakes, and so, we take it, is the convex curve imparted to the blade of ordinary knives. There are several specimens of these last, the most exaggerated curves occurring in the German knives, wherewith we have often and often been puzzled, while dining in other respects as comfortably as a copious *table d'hôte* and abundance of bright *rudesheimer* could make us. Among the exceptional articles of table cutlery displayed, we may mention knives and forks for very young children, about half the size of ordinary dessert articles, and carving utensils, with handles of deer horn and roe legs—apparently for the use of shooting lodges, and for sylvan entertainments. Then there are bread knives, with broad convex blades, and knives for operating upon various small dishes, vegetables, and fruit—not forgetting pickle knives and onion knives. Most of the steel forks now made are four-pronged, and, of course, the greater the number the better; but silver, or imitation silver, will soon carry all before them. These have already spread rapidly into ranks who never before aspired above steel; and certainly the Ettrick Shepherd—if his lot had been cast half a century later—would never have mistaken the first silver fork he saw for a split spoon. The French cutlers, aware of the principle that knives only cut by imperfectly sawing, have sent some carving-knives which are, literally, very minute saws, and which are said to retain their edge better than the ordinary knife. They have also despatched an oyster opening tool, in which a squeeze given to a pair of pincers drives—without remedy and without risk a guillotine-looking knife between the valves and cartilages at the back of the shell of the astonished native. The third novelty in cutlery from beyond the water is a carving-knife to be used for the dissection of fowls, and which is furnished with a sort of shorter supplementary blade, which, when the joint is not happily hit, can be brought to the rescue, and the bone snapped through by both blades acting in the fashion of a powerful scissor. The superiority of our table cutlery over that of our neighbours is, however, very marked; and the Germans, although they certainly often play a good knife and fork, have as assuredly very little skill or knowledge in the theory and the art of making them.

In the matter of ornamental centre-pieces for dining tables, we are decidedly improving, and we are inclined to think that the extended use of crystal a more beautiful material than even silver—will not be without its effects in this respect. It is not every body who has the taste to wish for a stately central *épergne* to his table, who can coolly give the silversmith an order; but crystal, at a tithe of the price, will be very handsome, and—rising among the glasses and decanters around—perfectly in harmony with the furnishings of the board. One elaborate piece of table adornment of this description, however, deserves some notice. It is called a dessert plateau, and consists of an elaborate piece of branching silver plate. Each branch supports a crystal dish for the dessert; and after the cloth has been removed the branches in question lengthen out nearly to the extent of the circumference of the table, and can then be whirled round and round, carrying their burdens of dry fruit or preserves to each successive guest. In the Glass Gallery there are many very handsome massive and brightly sparkling crystal vases, *épergnes*, and chandelier-like structures, which would make cheap and beautiful dinner-table ornaments. Wreaths and clusters of flowers look just as well, if not better, blooming over crystal than silver. Our glass manufacturers have made immense advances within the last few years. We may not be yet up with our Bohemian neighbours in forming the requisite curve of a vase, or in blending with the glass those exquisite colours by means of which they make their urns and amphore look like vast precious stones cut out and scooped; but, in the art of piling up symmetric structures of purest crystal, glistening like so many masses of congulated diamonds, we may safely back our own artisans against the world. We shall be much disappointed if crystal centre-pieces do not speedily come into vogue at the tables of all who love their eyes, and their sense of the beautiful as well as their palates and their sense of the comfortable, duly gratified.

Our few remaining notes may be condensed into a sentence or two. Tea-urns, except in very large families, have of late become somewhat *rococo*; but, to judge from the number exhibited in the Crystal Palace, the taste is coming up again. Some of the articles in question are shaped with really classic grace and symmetry, and there is a general advance over the old bulky globular form. Tea and coffee-pots offer, so far as we observed, no very material feature of change. The little silver strainer hung by the French from the spout of the teapot to intercept any stray leaves in their passage into the cup is hardly requisite in well and deliberately made tea. *Papier maché* has it all its own way as far as regards tea-trays and teaboards—a result with which we shall be the better satisfied when we see something like taste introduced into the glaring and starling designs at present most in favour, and something like a more subdued and less meretricious style adopted in the colouring. Still, however, with all our remaining faults, we have got rid of more and less pardonable ones. Our table services are daily improving, daily becoming better adapted to their uses, and more agreeable and harmonious to the canons of taste and art. Steel forks, willow-pattern plates, crockery ladles, and wandering vessels from the crust stand, are daily becoming less common. Dish-covers are becoming more artistic in shape; dishes themselves are being adapted to other purposes than being mere platters for lumps of meat; the whole paraphernalia of glass is advancing with giant strides; and the result is, that a "laid out" table is now, in the majority of cases, infinitely more creditable to national taste and national industry than it was a score of years ago.

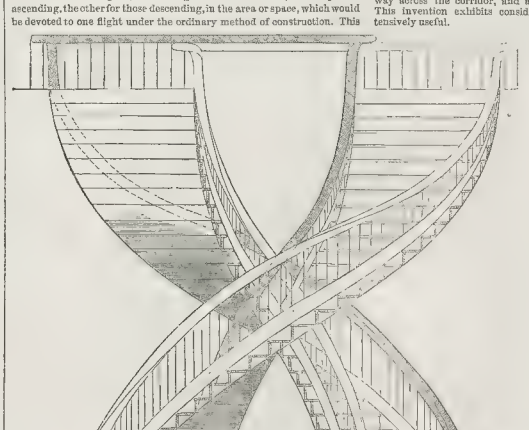
GOTHIC TEA-SERVICE. BY MESSRS. LIAS AND SON.

GOTHIC TEA SERVICE. BY LIAS.

The silver Tea Service, by Lias, which we engrave, is a capital specimen of sensible, serviceable plate. The pattern, which is of Gothic style, is pleasing, gratifying the eye more by the judicious variety of the outline and surfaces, than by a resort to appended decoration. This is the style of art in which our manufacturers should strive to excel in objects of daily use, rather than in the loading of ugly or commonplace foundations with unmeaning frippery.

BANKS' TWIN STAIRCASE.

Mr. Banks has erected in one of the north-west avenues of the Nave, a double or twin staircase, which, communicating with the gallery above, is daily made use of by the public. It is placed here as a specimen of what may be done in a small space, there being here two staircases, one for parties ascending, the other for those descending, in the area or space, which would be devoted to one flight under the ordinary method of construction. This contrivance is considered particularly adapted for cabins of ships, picture galleries, show-rooms, and temporary erections, where a great influx of visitors is likely to attend; being capable of being put up at short notice, and at comparatively small expense. The principle of construction is very simple, being merely an adaptation in extreme limits of the well-known properties of the spiral curve, or springing arch. The ascent is necessarily steep, there being no less than thirty-eight steps in each semicircular flight, the diameter of the plans of which, probably, does not exceed 12 or 13 feet, whilst the height is 23 feet. The length of the step is four feet, and the length of the outer string-board, 37 feet. Each flight lands on a circular corridor, which intersects two of the galleries of the building at right angles with each other. The rails are continuous ones, so that a person ascending and placing either hand on the rail may continue with the same on the rail during the ascent, all the way across the corridor, and all the way down by the opposite flight. This invention exhibits considerable ingenuity, and is likely to be extensively useful.



BANKS' TWIN STAIRCASE.

BARRETT AND CO.'S BISCUIT MACHINES.

Messrs. Barrett, Exall, and Andrewes, of Reading, contribute numerous machines to the Agricultural Section of the World's Great Fair: but their productions are not confined to that section only, for we find some contributions from their works placed among the Machinery in Motion: the principal of these is a set of machines for performing the various processes of biscuit-making, which are chiefly kept in motion by a very small Brunel steam engine, having two inclined cylinders, the pistons of which are connected with one crank. The small engine stands on a table, and by a gut-line from a wooden drum attached to the fly-wheel, motion is communicated to a metallic pulley placed below the table. From this pulley a band passes to another pulley, on the axle of which is a small bevelled wheel rotating in a vertical plane, the teeth of which work into the teeth of a horizontal wheel placed centrally below the kneading trough; the vertical shaft of the propelled wheel is attached to the trough, and causes it to rotate with it. The flour, water, and other materials having been placed in the trough, the mixing is performed by the whole mass passing under a grooved roller of great power, which is attached to a beam running above the trough. When sufficiently mixed, the lump is transferred to a hand-break roller, or crushing machine, which consists of a flat table with an inclined back-board, having rollers between which the dough is passed until the kneading process is entirely completed. By adjusting rollers, it is reduced to the required width and thickness, and is then pressed in a continuous sheet by means of an endless canvass, to be cut out by a hand-press into the required number of properly-shaped biscuits, and also to receive the proper affix or stamp to show that they are Reading made biscuits.

NEW PATTERN FOR DINNER PLATE. BY FELL AND CO.

The first Illustration on the present page is a pattern of a new Dinner Plate, of common earthenware, contributed by Messrs. Fell and Co., St. Peter's Pottery, Newcastle-upon-Tyne. It was devised at the Newcastle School of Design, and is called "the cinque-cento Queen and Prince Albert pattern." The ornamentation is very beautiful *per se*, Italian in style, the scroll-work of the rim being extremely light and graceful. The decorations of the centre are highly ambitious, and are finished with care; but we doubt if they will ever become so popular as many old patterns. The eye should not be tasked to a too critical observation of details, in a vessel of daily requirement, more particularly when its use is to minister to the craving of another organ of sense, whose claims for the moment should be paramount. Nevertheless, we would by no means discourage the enterprising spirit which has led to the production of this very elaborate piece of composition; the same industry and expense applied upon a simpler subject may be happier in its results. It remains to be added of the colouring, that the ground of the circular parts is vermilion, and painted by hand; in other respects it would not be a costly article.

NEW PATTERN FOR DINNER PLATE.—BY J. FELL AND CO., NEWCASTLE-UPON-TYNE.

PORCELAIN AND EARTHENWARE FLOWER-STANDS.—BY SMALL AND MALING, NEWCASTLE-UPON-TYNE

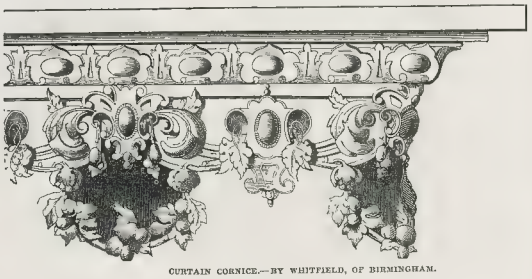
KNIFE, FORK, AND SPOON. BY LAMBERT AND RAWLINGS.

Whilst Messrs. Fell and Co. try to improve our appetite for dinner by the introduction of a new plate, Messrs. Lambert and Rawlings present us with a knife, fork, and spoon, of novel and fanciful device, emblematic respectively of fish, flesh, and fowl, three out of the "four elements" (vegetable alone being unrepresented) of which the humblest repast and the most *recherché* combinations of the *cuisine* consist. They will bear and repay inspection—between the courses. Messrs. Lias also exhibit a specimen of table plate of a simpler fashion, ornamented with a handsome scroll, and which they consider may form an acceptable substitute for the old "fiddle" pattern.

BRASS CURTAIN CORNICE.—BY WHITFIELD, OF BIRMINGHAM.

BRASS CURTAIN CORNICE. BY WHITFIELD.

Messrs. Whitfield, of Birmingham, have carried the art of stamping brass for curtain cornices to a very high point of excellence, and exhibit great taste and fertility of invention in the designs which they apply to it. We give two very elegant samples, one of grapes and vine-leaves, the other a handsome scroll pattern, with fruit and foliage introduced.



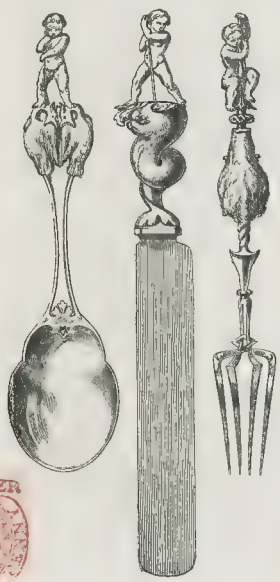
CURTAIN CORNICE.—BY WHITFIELD, OF BIRMINGHAM.

PRIEST'S COPE. BY VAN HALLE.

The sixth Illustration in this page is one of numerous specimens of lace and gold embroidery, for church ornaments, manufactured by Van Halle, of Brussels, which we insert as a curiosity of patient labour; the cope in question, with two other articles, which with it form a complete set of vestments, having been, we are informed, seven years in the workmen's hands. The whole of the embroidery is first completed on separate pieces of cloth, which are then sown upon the different vestments, whereby the work is rendered much more solid and durable.

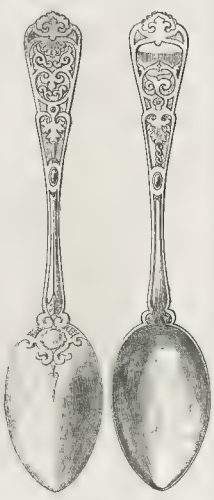
PORCELAIN AND EARTHENWARE FLOWER-STANDS. BY SMALL AND MALING.

Two very creditable specimens of British manufacture. They are both designed by Mr. T. Small. That on the right is in biscuit ware, and was produced at Mr. Maling's pottery; the other is in fire-clay, manufactured by Mr. Addison, potter, of Wellington Quay, Newcastle-upon-Tyne. The former material, although beautifully white, is not serviceable, except for articles of luxury of which great care can be taken; fire-clay, on the other hand, is a substitute for stone, and will stand the same rough usage. These productions are about three feet and a half high, and have a very handsome appearance.



KNIFE, FORK, AND SPOON.—BY LAMBERT AND RAWLINGS.

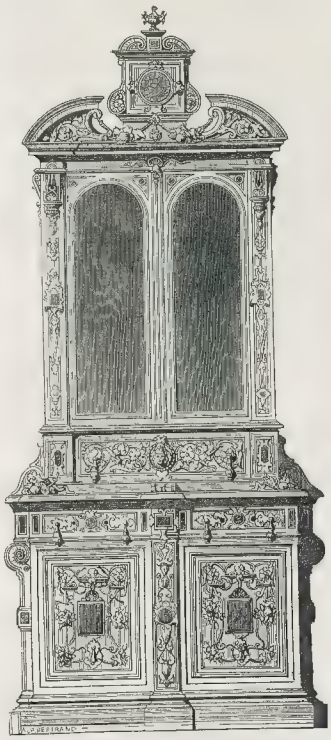
PRIEST'S COPE.—BY VAN HALLE, OF BRUSSELS.



SPOONS.—BY LIAS.

WALNUT-WOOD CABINET. BY JEANSELME.

First is a very elegant Cabinet, by M. Jeanselmé, of Paris. It is in walnut wood, richly ornamented, but not overloaded with decorative effects. The general style is based upon the *Renaissance* period—a school very much followed, with some modifications, in France at present.



WALNUT-WOOD CABINET. BY JEANSELME.

PRIE DIEU. BY LEISTLER.

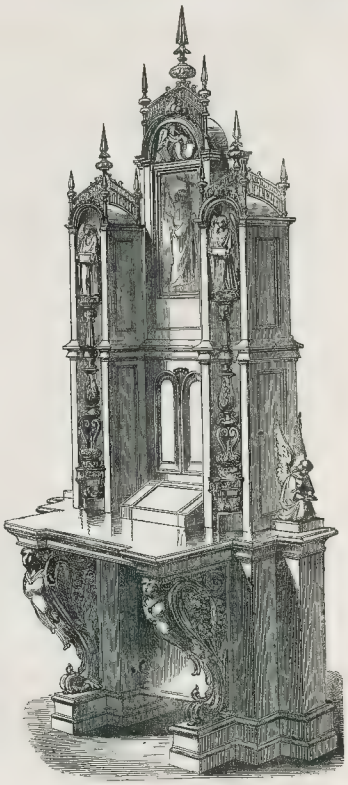
At the opposite side stands a Prie Dieu, by Leistler, which attracts much attention in the Austrian bed-room. It is very richly carved, and in the central panel is a painting of Christ bearing the cross; on either side are angels holding tablets, on which are inscribed the date, "Anno 1851."

At the bottom of the page is a Corner Pedestal, by the same, handsomely carved, though not quite to our taste in the design.

BRACKET IN CARTON PIERRE. BY GROPIUS.

Between these two articles is a bracket in *carton pierre*, or "stone paste," one of many works for decoration of apartments, churches, &c., exhibited by Paul Gropius, of Berlin. These specimens are in great variety of subject and treatment, and are very satisfactory in matters of purely decorative character. With the subjects of a higher class, as statuettes, the producer is not so successful; the style of moulding being somewhat hard and clumsy, and the edges wanting that lightness and sharpness which are the beauty of sculpture. In the specimens here produced, we have a group of heads, a deer and dogs, &c., and it would have been better if it had been kept of the colour of the material, instead of painted to imitate wood.

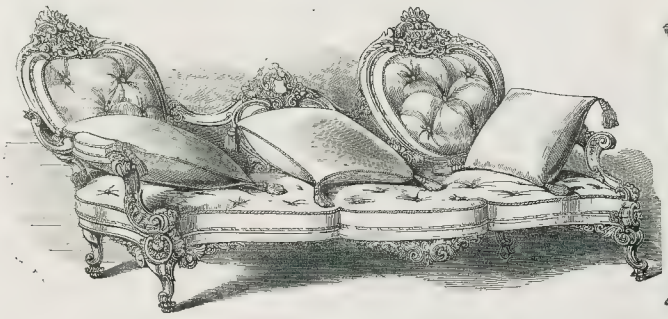
BRACKET.—CARTON PIERRE.—GROPIUS.



PRIE DIEU.—BY LEISTLER.

WALNUT-TREE COUCH. BY JACKSON.

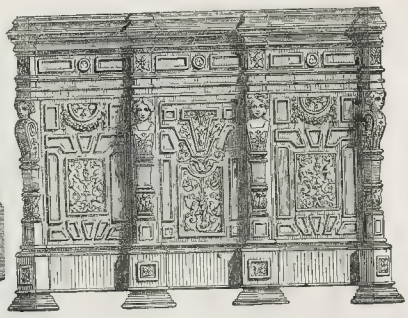
The Couch by R. Jackson is a piece of furniture, with some originality of design. The back, of walnut-wood, is divided into three portions, each richly carved, and upon which the three national emblems, the rose, the thistle, and the shamrock, are represented.



WALNUT-TREE COUCH.—BY JACKSON.

COMMODE. BY VAN BALTHOVEN.

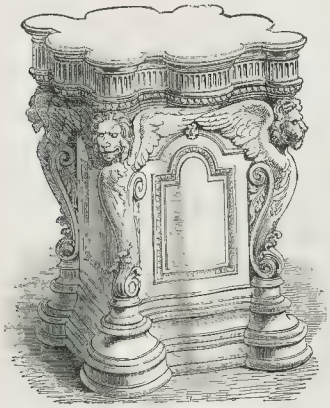
The Commode by Van Balthoven is a very chaste specimen of carving and ornamentation somewhat of the Romanesque style.



COMMODE.—BY VAN BALTHOVEN.

SILVER CASSEROLE. BY GUYTON.

The Silver *entrée* Casserole, by M. Guyton, is of quaint design, and thoroughly French. The workmanship is very beautiful.



CORNER PEDESTAL.—BY LEISTLER.

INLAID TABLE. CEYLON.

The last illustration in this page is a Table from Ceylon, of ingenious manufacture, being elaborately inlaid with upwards of fifty different coloured woods, ivory, tortoiseshell, &c., and has a very pretty effect.

SILVER CASSEROLE.—BY GUYTON.

INLAID TABLE, FROM CEYLON.

ARMS AND ARMOUR.

THE proximity of the Crystal Palace to the barracks over the way has furnished to more than one lover of the human race abundant scope for peaceful expatiation, a fertile theme of edifying comparison.

The sombre, ugly parallelogram of brick, with black dismal walls and rooty front, and little pigeon-hole windows, through which peer, with melancholy glance, a row of disconsolate-looking warriors, *en dishabille*—tall men of iron frame, strong of muscle, hale of limb, torn from the peaceful labours of the factory or field—toiling in profitless evolutions and senseless drills—pipeclaying of leather straps and polishing of guns: living in continued exposure to the military dangers of blank cartridge popped off in Hyde Park reviews—dying, at last, from sheer *ennui* of their melancholy lot. The prison-like court-yard, which reverberates all day long with clattering hoofs and trumpet calls, rattling of carbines and words of command; these, and many other accessories of military life—true or false, real or feigned not omitting vague shadowings forth of triangles and the lash, have been invoked, conjured up, ranged in order, marshalled all of a row for the purpose of illustrating, by vivid contrast, the hideous aspect of cruel war with the peace-breathing attributes of the crystal fane hard by!

At least a hundred sermons have been preached to this theme in the metropolis alone; and peace promulgators have lectured upon it to exhaustion. Let us, then, see to what extent these utopian lucubrations are based upon truth.

We need not wander far within the circuit of the crystal walls, to be convinced how absolutely devoid of truth is the contrast in a warlike sense, which the friends of peace would so beneficently draw.

No sooner, entering by the eastern portal, do we stand under the banner of stars and stripes, than a whole galaxy of patent revolvers meets our view. Then there is the wounded Indian, with arrow-mark in his breast; and there are India-rubber pontoons for floating munitions of war across rivers and creeks; and a little way further on, in the region of the Zollverein, is the magnificent steel cannon of Herr Krupp, polished to the very last shade of art—brilliant as a mirror, the very coxcomb of great guns. Yet a little way further on, and you see another emblem of peace and quiet, in the shape of the celebrated Prussian needle guns; and French *á bascule* muskets, with their steel-tipped bullets, and perforated iron plates through which bullets have crashed; *pistolets d'honneur*, to go off without powder; *pistolets de salon*, by aid of which, in rainy weather, the young Parisian idea may be taught to shoot without the necessity of exposure to wet. Then, in Spain, we see the destructive element well represented by a goodly array of trenchant Toledo blades; and a modelled bull-fight, true to the life, displays to us the gentle pastime so dear to the Madrilenes, and sets us speculating on the reason why ladies, whose eyes sparkle and whose bosoms heave with savage joy at the mingling of human with brutish blood, in the bull circus of Madrid, will weep their lustrous eyes dim over the casualty of a stranger gored in the streets by an ox! There are guns mounted in the Spanish fashion, too, with locks on the outside—and pistols richly decorated with arabesques.

Well, the destructive tendencies of our species are tolerably represented in this Palace of Peace; and not least of all in a display of goodly weapons of war, serviceable life-dissipating agents, worthy the inventive genius of man.

But these are emblems of a transition state of mortal affairs, the peace-makers will say; "base, foul, dishonourable engines, to be banished from the world as education extends and man grows wise." Indeed, we doubt it much, and are disposed to think that destructiveness is a sentiment deeply grafted in mortality not to be banished, but refined.

Glance yonder at that magnificent creation of the Berlin sculptor. Mark that fierce and truculent wild beast, with jaws wide-spread and glaring eyes, tearing with grim jaws the wounded steed! The lion revels with savage pleasure in *his* work of death—the lust of destruction is strong in *him*. Mark, too, the Amazon with high uplifted hand and trembling spear, aiming her fatal thrust: the savage pleasure of destruction is strong in *her*. Why, the group breathes with death—destruction—the very elements of war, yet we would lay a Colt's revolver against a pop-gun, or any other unequal wager you like, that the veriest man of peace who ever lived would not fail to recognise a something in that group, a sentiment—he knows not what—making his pulse beat quick, his heart grow turbulent. Yes, well as you will, it is that luxurious sentiment of destruction—the grim exutement of killing—the pleasure of inflicting death! Ay, there it is, deep grafted in our natures, and displayed in various ways, from the urchin who strips butterflies of their wings to test their pedestrian powers, and the Cockney who shoots sparrows on Hampstead Heath, to Captain Gordon Cumming, who wages war against elephants and hippopotami, beards lions in their dens, ties knots in boa constrictors against their will, runs down buffaloes on foot, and glues fathoms of cork to their tails; it is the excitement of destruction all; which proposition if granted, it will be conceded, we presume, that the culminating point of this tendency—the point at which the luxury attains its maximum development—must be the killing of one's fellow-men. Let mothers yet shall send their sons to be killed for their country's sake—wives their husbands, sisters their brothers. Damsels shall still admire the panoply of scarlet coats; and country bumpkins shall stand erect, prick their ears, and grow valiant at the dull vibrations of a strained donkey's skin. War, depend upon it, will go on!

Thus, man being demonstrated a fighting animal, we trust it is quite unnecessary to point out the great privilege conceded to him of fighting his battles in civilized style. For the brute, there are only teeth, and claws, and hoofs; but man accomplishes his work of destruction by resources the most scientific and refined. These, so far as they are illustrated by the Glass Palace, we will now proceed to describe.

The *genus loci* of the Exhibition is inimical to any kind of accurate classification. People don't go there to study, but to be amused. If amusement brings instruction, all the better; if not—why instruction may wait until another day. Do you require proof of this proposition? Look into the lecturing theatre, and see how many people are there.

All accurate classification of arms and armour, then, we mean to avoid; but one classification of a rude kind, familiar to the meanest capacity, as the spelling-books say, is this: arms we shall call offensive, armour defensive; although both are sometimes designated under the general name of arms. As regards arms, the vague but useful division exists of arms used for close quarters and arms employed at a distance—the latter being usually denominated projectiles. Now the subject of arms to be employed at close quarters is far less interesting than the subject of projectiles, as indicative of a less refined, less intellectual condition of man.

Treating the subject according to its development, we have first to direct the inquirer's attention to the carved clubs presented to the exhibition from Australia, New Zealand, and the islands equally civilised lands. Clubs are, perhaps, the simplest form of all offensive arms, and one might suppose they would have vanished from the equipment of warriors who had the means of acquiring cutting and stabbing weapons. We find, however, the reverse to be the case; war maces continued to be used by knights and their men-at-arms up to the very last days of chivalry, and their disuse may be said to be coeval with the general introduction of fire-arms and the abandonment of coats of mail. Indeed, mere cutting and stabbing weapons were of but little use against the defensive armour of men-at-arms. The lance—the favourite weapon of Norman chivalry—should rather be regarded as an instrument for unhorsing a rider than for penetrating the well-tempered metal of his poitrinal; against such defence the battle-mace was possibly the best weapon of attack that could be used, though, generally speaking, the death stroke was usually given by the dagger, or *misericorde*, which, so soon as the knight was unhorsed, and sprawling on the ground—being gently insinuated into the undefended space in the neck, where the helmet and the corselet joined, completed the work of death.

The use of the battle-mace was extended, too, by reasons of a religious kind. The clergy were not limited in times of chivalry, as now, to do battle with their tongues. They turned manfully out in field of battle to fight like other men. They were permitted, however, to shed no blood, and so the lance, and sword, and dagger, or *misericorde*, were to them unholy weapons. They were limited to the use of the battle-mace—an instrument which, we have not the least difficulty in understanding, dealt, when wielded by their brawny arms, blows of a truly orthodox kind.

Whilst on the subject of defensive armour, we are sorry to destroy the romantic idea of danger which ladies are so wont to associate with the idea of the ancient knights. But the heavy defensive armour of those warriors reduced their immediate chances of death far below the limits of probability; and no sooner was gunpowder applied to the purposes of warfare, than those brave men turned themselves into human tortoises of steel and brass, so great was their fear. In several battles about this time not a single knight was slain. When unhorsed it was difficult to penetrate the joints of their armour by the *misericorde*, and at the battle of Fournoué, under Charles VIII., a number of Italian knights having been unhorsed, could only be killed after they had been broken up like so many lobsters with woodcutters' axes. This circumstance justifies the remark of James I., that defensive armour was a double protection, preventing the bearer at the same time from being injured, and from injuring others.

It is curious to mark the effect which the general introduction of fire-arms produced on the system of defensive armour. At first, protection was sought in increased thickness of metal plates—but the force of bullets being so great in comparison with the power of metals to resist, defensive armour was at length thrown away altogether, until re-introduced by Napoleon in the organisation of his celebrated cuirassiers. Our heavy troops, at the period of the battle of Waterloo, had no defensive armour, as is well known; nevertheless, they proved more than a match for their breastplated antagonists; and when subsequently the addition of breastplates was proposed, and a guardsman being questioned concerning his notions on the improvement before a committee of the Lower House, was asked, "How he should like to be clothed if he had to do another day's work of the same kind," very naïvely answered, "That he thought he should prefer being in his shirt sleeves."

Defensive armour has, however, become pretty general for all European heavy cavalry. That it proves a defence against sword and lance, there can be no doubt; but against the modern improvements in fire-arms, concerning which we shall have to treat by-and-by, it will be henceforth totally unavailing. If any one doubts this fact, let him wander into the French compartment of the Exhibition, and regard the effect of the steel-tipped conical rifle balls on a sheet of iron nearly an inch thick.

Diverging from our primary notice of New Zealand clubs, we have found ourselves wandering through many centuries, mixing up traits of men-at-arms with sketches of the warlike customs of present times. Crowds of phantom-like visions of war and strife present themselves to our notice, and lay claim to be chronicled by our pen. Time and space, however, debar us from the pleasing occupation; and so we must limit ourselves to two further remarks suggested by our present theme, and then, as Sergeant B. is used to say, "Pass on." *Apropos* of Sergeant B. is our remark, that the walking instrument of terror and force which he carries in a secret pocket of his nether garb, is the direct descendant of the ancient war mace. Like the ancient clerical warriors, the trained bands of Commissioner Mayne are forbidden to draw blood; which injunction, however, they manage to contravene sometimes. Sundry murmurings of discontent were heard when the honour of the Bath was conferred upon some leading functionaries of the celebrated legion; but even according to heralds' philosophy, the grumblers were wrong. The metropolitan police are, properly considered, our pretorian guards, to whom has been delegated the use of the consecrated battle-mace. What greater proof can there be of the gentle antecedents of this celebrated corps? Then, according to proper heraldry, members of the police force, being *ex officio* sworn constables, take precedence of the household troops. What greater proof could we adduce of their high social position?

Having expatiated thus far, it may be as well to supersede, that, according to the vulgar nomenclature of modern times, the representative of the ancient war mace is termed a "crusher" which term, by the figure of the part used for the whole, is sometimes applied to a policeman himself. The method of using this weapon is peculiar. Being blunt, one would have imagined its employment limited to cuffs and blows. Not so. The assault consists of two movements, the first being a quick thrust about an inch under the sternum, or breast-bone; the second, a crash on the head. Nothing so simple, so philosophic, in the whole art of warlike attack exists as this. Whilst the antagonist stands erect, it would be difficult to administer a good blow on the head; but the preliminary thrust has the important effect of making him bend instantaneously, and present his pate in a most convenient position to be crushed.

So much for the weapon of the police; and thus we conclude our first supplementary remark. Our second, in connexion with the present division of our subject, is to the effect of pointing out the curious transposition of ideas—mutability of the notions of the fitness of things, by which in ancient times lance was exclusively employed by cavalry, and not the lance; whereas, in modern days, this is the favourite weapon of light troops alone. Comparatively speaking, we have no heavy cavalry now, if we regard the nature of equipment of knights and men-at-arms of olden times. Each man-at-arms had two horses, one of which he rode to the charge, and hence was called a charger. The others were used to carry his trappings, and to bear him on the march. Some attempt was made in Germany to diminish this unwieldy retinue, by allowing each man-at-arms only one horse; but, in compensation, a waggon to every twenty men.

Whilst on the subject of weapons employed by the chivalry of ancient times, we must not forget to mention the battle-axe and the double-handed sword. The battle-axe still lingers in the East, and specimens of it may be observed amongst the Indian contributions to our Exhibition; but the two-handed sword is now quite obsolete—banished from the list of weapons of war in favour of swords of lighter make.

The Exhibition is exceedingly rich in the department of swords. Beautiful specimens in the form of scimitars are displayed by India, Turkey, France, and Spain, in addition to those of more barbarous make.

No one now thinks of making a sword of any other material than steel; but a great deal of sanguinary work has been done by swords of copper, bronze, iron, and even gold. Copper swords were used by Ireland, and bronze swords were almost exclusively employed by the Greeks during what is called the heroic age. Homer rarely mentions iron; he calls the Greeks by the general epithet, "brass-coated;" and the word translated by Pope "smith," is in the original χαλκεὺς, worker in bronze; and even when the metal employed was iron (σίδηρος), the artificer is still called the same, a brazier, proving that the two trades were then identical. Nevertheless, iron, and even steel, were known to the Greeks in Homer's time, for he describes the method of tempering a hatchet by dipping it when hot into cold water. This plan of tempering only applies to iron and steel.

Nine hundred years after the epoch of the siege of Troy, steel must have been exceedingly rare amongst the Greeks, as is evidenced by the fact of the Indian chief giving, as a valuable present to Alexander, about thirty pounds weight of fine steel. We have no evidence that the Romans, even at the earliest periods of their history, ever used any other metal than iron or steel for their cutting weapons; and the materials for fabricating which they probably derived from Elba or Spain. Nevertheless, for some reason or other, bronze was commonly used by the Romans for non-warlike cutting instruments, up, at least, to the period of the first century of the Christian era. In Herculaneum and Pompeii, those tomb-like records of ancient arts and manners, even surgical instruments have been discovered, formed of bronze.

Turning our attention to Asiatic nations, we do not find any record of the employment of bronze for the manufacture of cutting instruments. Wootz, or Indian steel, having been there employed from the most remote period.

Some of the semi-barbarous tribes, who so frequently did battle with the Roman troops, must have been provided with weapons of a very rude description. The Gauls used iron swords of such bad temper, that, according to Polybius, they had to be straightened under the foot after the exchange of every three or four blows; and in the 222 B.C. an army of Insubrian Gauls having entered the north of Italy, were defeated by the Romans chiefly from this circumstance.

The sword is now, amongst all civilized nations, restricted to the use of cavalry; being found incompatible with the close order in which infantry should march to the attack. The Roman legionary soldiers fought with the sword, as is well known, but their weapon was very short—more like a heavy dagger than a sword, and required no great space for the performance of their evolutions. Among modern tribes, the Highlanders relied greatly upon the sword as an infantry weapon; and a great deal has been said about the good service done by our allies, the Ghoorkas in northern India, with their diminutive swords. Properly speaking, however, these latter weapons are not such swords as billhooks, and there can be no question, that, viewed in all its bearings, the sword is only adapted as a cavalry weapon.

If the observer direct his attention to many of the swords and daggers in the Oriental department of the Exhibition, he will observe that their blades are covered with curious wavy patterns, very similar to those frequently to be seen on the barrels of fowling-pieces, and which, in the latter position, is denominated the Damascus twist. These wavy patterns on Asiatic swords are not so much sought as beauty, and are indicative of so fine a steel, that many endeavours to successfully imitate the appearance have been made both in England and abroad. Hitherto, however, these attempts have been unsuccessful, and the prevailing idea seems now to be, that the Damascus sword pattern is a casualty altogether due to that mottled appearance of the Wootz iron, from which the steel that entered into these swords was prepared, and to the imperfect means of hammering which the sword artificers possessed.

Everybody has heard of the famed blades of Toledo. There exist some remarkably beautiful specimens of this manufacture in the Spanish division of the Exhibition. Unlike many other branches of industrial art in Spain, the manufacture of sword-blades has not languished. At the present day weapons are turned out of the arsenal of Toledo as good as, if not better, than at any former period. The two specimens of Toledo blades now in the Exhibition, which roll up in a circular coil within their serpent-like sheath, are models of fine tempered shoot steel, and artistic skill, and the cavalry swords are beyond all praise. We wonder that there is not exhibited amongst the Toledo blades an example of the bull-fighting sword, which is peculiar in its form and general make, being slightly curved on the flat, and altogether without a guard.

Whilst on the subject of swords, it will be as well to remark, that steel, of which such frequent mention has been made, is merely a compound of iron with carbon, usually about the proportion of one to one and a half per cent. Certain specimens of steel contain, moreover, a notable portion of alumina and of silica.

Carbon and the diamond are, so far as chemical composition goes, one and the same; and hence it is, that if a hole be drilled in a rod of iron, a diamond inserted, plugged up with another bit of iron, and the whole exposed to fire, the diamond will disappear, and the iron will come out steel. We make our steel by the far less expensive mode of heating iron bars with charcoal; but the celebrated Polish traveller, Count Wonsowitzki, informs us that he has seen an Arabic MS. in which it was stated that the Turks in ancient times improved their sword blades by sprinkling them while red hot with diamond and ruby dust, and beating them with a mallet. The diamond would yield carbon, and the ruby alumina, and thus the blades would acquire the properties of very good steel; but people are less extravagant in these calculating days.

The method of forming sword blades, as at present followed in England, is very simple. The manufacture is almost exclusively confined to Birmingham; and the steel of which the swords are made comes from Sheffield. Each steel is the quarter of a ton, and each piece is sufficient to make two blades. The operation is commenced by drawing out each end, by forging, to about half the thickness of the bar, leaving a few inches in the centre the original size, each end in its turn serving as a handle to hold it by while forging the other. Eventually the centre part if cut through and fastened, by welding, to the piece of soft iron which enters the sword hilt, and which is called the tang. The blade is now raised to a bright red heat, and plunged into cold water edge foremost, by a sinking movement, which is immediately changed to a perpendicular one. In this state the blade is quite brittle, and very often bent. It has now to be passed through the forge again until a certain colour is acquired, with practice alone can indicate; and in this state of the operation it is set straight by the eye. Lastly, it is ground, polished, and embossed.

This slight sketch will suffice for our notice of swords, and now, before proceeding to the subject of projectile arms, it remains to pass a few remarks on the bayonet. This weapon, by which the musket is connected with the pike, was of French origin, having been originally manufactured at Bayonne, and hence its name. At first it was merely a dagger with a handle made to fit into the musket barrel when discharged. Eventually the present fashion of attaching it by a socket on one side of the muzzle was adopted, the great advantage of which it is unnecessary to point out.

Thus much, then, on the subject of arms used at close quarters. Our next communication will be on projectile arms.

HOROLOGICAL SECTION.

(FIFTH NOTICE.)

Against the western boundary "wall" of the British Horological Section we first discover a clock whose dial is covered up with paper; the sole object of Mr. Loseby, the exhibitor, being to show his arc compensation and improved form of movement pendulum. The compensation for the change of arc is effected by a fine hair spring.

129. The turret clock, manufactured and exhibited by Smith and Sons, in the Middle Gallery South of the Great Exhibition Building, is one of the most striking features of the Horological Section. The improvements consist, first, in making studs in the frame, whereby the wheels and pinions can be set to their true pitch with the greatest accuracy: if any part requires to be cleaned or repaired, it can be removed without taking the clock to pieces; and the metallic bushes being fastened with bolts and steady pins in the slots, the bolts have only to be unscrewed and the part requiring repair removed, repaired, and afterwards replaced without disturbing any other part of the clock. Secondly, this clock has a half dead beat escapement, which is considered safer than one of a dead beat on account of its having a slight recoil; and having a flange to the escapement, a much stronger impetus is given to the pendulum. Thirdly, the arrangement, and size of the wheels are such that equal power is given proportionately to each; thus, less weight is required to keep the clock going, and the wear of the machinery is much economised. In the fourth place, the barrels are made of iron instead of wood, the material usually used; the objection to which latter material is, that, after being exposed in a tower for some time to the alternations of heat and damp, the barrel becomes warped, and, therefore, subjected to unequal pressure on opposite sides. Another advantage of the cast-iron barrel is, that the clicks and ratchets are secured by a safety cap, and arranged in such a manner as to prevent the lines coming into contact with the clock-work. In the striking part of this clock, the hammer is raised by an eccentric lever fixed on the second wheel: at the end of the hammer tail is a small steel roller, which, running on the eccentric, causes the "lift" to be uniform. As by each blow of the hammer the fly makes only four turns, so is the oil better preserved about the pivots The exhibitors of this clock, who object to the use of cast iron for wheels, though Mr. Roberts has successfully applied it for the wheels of his "Alpha clock," recommend either yellow hammer-hardened brass, properly amalgamated, or gun metal. The chief objections to the use of cast iron for wheels are the chances of fractures from flaws in the castings, and the difficulty of repairs thereto in case of accident.

Messrs. Smith and Sons also exhibit a turret quarter clock, a detector clock or watchman's timepiece, a 400-day timepiece, an eight-day dial, clocks for China and Turkey, and a regulator. These are placed in a glass case close to Mr. Loseby's clock, and in front of the western wall of the Horological department.

The turret quarter clock chimes the quarters. The wheels are of gun-metal, and the pinions of hardened and well tempered steel. The works of this clock may also be removed for repair, without taking the whole to pieces.

The detector clock, or watchman's timepiece, is similar to one which has been successfully used at the Coldbath-fields Prison for the last five years, and presents a complete check to irregularity and neglect of duty on the part of the night warders or watchmen, as their absence is correctly registered on the dial. The registering apparatus consists of a revolving circular frame, fitted with springs and steel pins; and its general appearance is that of an ordinary sized bracket clock.

Many of the clocks exhibited in the Foreign department, in addition to the hour, minute, and seconds hands, have also the means of indicating the days of the week and month. In Messrs. Smith's 400-day clock, which is worked by a spring, and has a mercurial pendulum, we find the same useful additions, which, with the advantage of having to wind it up only once in 400 days, and its elegant appearance, from the works being visible under a glass case, render it not only a useful, but also a very ornamental, appendage to a drawingroom mantel-piece.

The frame of the eight-day dial is made of solid Spanish mahogany, handsomely carved with the rose, shamrock, and thistle, conspicuous, as also flowers of various nations of the earth.

In the clocks for Turkey and China, by the same firm, it has been found necessary to substitute brass chains for gut lines or steel chains, as ordinarily used, in order to counteract the injurious effects of the climate of those distant lands. The figures on the dials of the last-named clocks are those of the countries for which they are specially constructed.

The principal feature of the regulator is a new self-adjusting pendulum, invented by the exhibitors, which is far more certain in its operation than the ordinary compensating pendulum, and far more economical, being less than one-sixth the price of the commonest mercurial pendulum. Instead of the ordinary rod by which the ball is suspended being attached to its centre, a bar is secured to the side of the ball, and a wooden rod fixed thereto; so that the elongation or shortening of the rod by change of temperature turns the ball on its axis, and thus preserves accurately the distance between the points of suspension and oscillation respectively.

In addition to the above, Messrs. Smith also exhibit the "Uniformity of Time Clock and Telegraph," invented by Mr. Francis Whishaw, C. E., one of the uses of which is to regulate time between distant places to

the hundredth part of a minute, by means of sounds transmitted by electrical agency. It also forms a very powerful telegraph, as the four distinct alphabets and numerous signs and signals distinctly marked in red and black on the annular movable plate which surrounds the dial. There are four hands, which rotate together: one of these is distinguished from the others by being of a light colour, and is called the *index hand*, as upon it the class of signals to be used is indicated; the other hands are used for pointing to the signals, which are thus more quickly given than if only one hand were used. By two electrical bells, of dissimilar sound, the particular quarter of the dial on which the signals are to be read off is readily understood. Besides the telegraph dial and regulator, there is a second face with the ordinary hands, so that one side may be in the telegraph-room of the railway station, while the other faces the booking-office.

"*Tempus rerum imperator*" is appropriately painted on the dial of Lovelace's unique astronomical clock, known as the "Exeter Clock," which is placed in the West Gallery, not far from Willis's large organ, and on the south side thereof. This extraordinary example of patient industry and consummate skill on the part of poor Lovelace, who after spending thirty-four years of his life in accomplishing his task, died in great poverty, should be carefully examined, as one of the curiosities of the Exhibition. It is 3 feet in width, 10 feet in height, and weighs something like half a ton. Two sets of figures in the hour circle surround the dial, viz. from 12 at noon till 12 at night, and from 12 at night to 12 at noon. The shape and size of the moon are very cleverly shewn, as well as her age, &c., the month and the day of the month are also indicated. It requires to be regulated only once in 130 years, strikes the hours, and chimes the quarters. The times of sunrise and sunset respectively are also shown, by means of an horizon, receding or advancing according to the season of the year. Once in every four hours a psalm tune is played, an index at the same time pointing to the number of the tune, during the playing of the organ, two moving figures, Fame and Terpsichore, are seen in motion, keeping proper time.

130. Roberts' Alpha Clock. We have already stated that this clock is one of the greatest novelties in the Horological Section of the Exhibition, and forms a conspicuous object in the Western Gallery.

It differs in many particulars from the church clocks as ordinarily constructed, in which the works are generally arranged between long parallel bars of iron, united together by stretchers, to constitute the framing, and placed on a table, usually of wood, which, in the framing in some cases, is not very substantial. The framing of the "Alpha Clock" is of pyramidal form resembling the letter A (hence its name) As the framing extends to the floor, it requires no other support; thus greater stability is attained—a circumstance of the utmost importance, especially when, as in the present instance, the pendulum is suspended from the clock frame itself. Another advantage to be noticed is, its superior adaptation to the decreasing sizes of the wheels in the respective trains, the largest wheels occupying the lowest place in the framing (which, by the old arrangement, is lost room), and considerable economy of room resulting from the wheels being placed in vertical, instead of horizontal series. The journals of the iron shafts in this clock are case-hardened, and these of steel are hardened and tempered, and the holes subsequently made perfectly true by the process of "lapping" in the lathe. The bearings are of cast iron, fitted to their respective places with bolts and steady-pins, in such a manner as to admit of being readily taken out and replaced by one man. The wheels and pinions, except those in the escapement, are of iron, with the teeth cast on them, which, having the scale or crust unremoved, causes their work to be done without much friction, as the scale or crust is very hard. The barrels are entirely dispensed with, being superseded by pulleys, from each of which the endless chain is passed over a pulley to the weight, and also over another pulley to a counter weight, by which arrangement one weight is made to actuate both the going and striking trains; and, consequently, any mechanism for "maintaining power" whilst the clock is being wound up is rendered unnecessary. In the accompanying Illustration are shown the arrangements by which one weight is made to actuate a third train for striking the quarters. The same object may be effected by using a rope instead of a chain.

By dispensing with the barrel, Mr. Roberts has obviated the difficulty which has hitherto existed of placing the clock in the best position in reference to the room and the dials—a desideratum which none but those who have had experience in fixing church or turret clocks can properly appreciate. The pendulum is made compensating, and it will be believed that the arrangement for counteracting the injurious effects of change of temperature upon it will prove very nearly an approximation to complete compensation. The experiments for ascertaining the effects of similar temperature upon the different metals usually employed for the purpose were made by Mr. Roberts himself. The pendulum bob is in form a circular segment, whose centre is the point of suspension. In plan it resembles a boat constructed to pass through the water in either direction, with the least possible resistance. As, however, that in the direction of the plane of oscillation is considerable, and, consequently, its weight is distributed less over the rod than usual. The escapement sets upon the pendulum only once during every double oscillation, and then leaves it to vibrate as independently of the train as can possibly be done to advantage: and the escape-wheel being allowed to act on the pendulum for a portion only of the time it occupies in ascending from the vertical, such arrangement, it is presumed, cannot interfere injuriously with the effect of the momentum of the pendulum. The escape-wheel impels the pendulum by means of a spring, adjustable by a screw to regulate the necessary amount of oscillation which shall be given to the pendulum: this spring prevents injury being done to the escape-wheel, should the pendulum be drawn towards the side wheel in not in the proper position; the spring also prevents the action of the escape-wheel from materially interfering with the smoothness of the oscillations of the pendulum. The detents for locking the escape-wheel are upon a spring attached to the pendulum, so the pendulum is independent of them during a considerable portion of its oscillation, while the pallet-levers are considerably longer than the radius of the locking-pinion; consequently the power required to unlock is so small as not to interfere materially with the correct performance of the pendulum. The remontoire is of a simple and inexpensive kind, and admits of great latitude in its adaptation to the pendulum when suspended from a wall. In order to render the entire clock viable at a distance, the hands are made broader than is usual in public clocks generally. The shafts of the clock-hands are made of gun-metal, to avoid the injurious effects of oxidation, and are of extra strength, so as to prevent being strained by gales of wind. The wheels of the "dial-work" are made of cast-iron, and sufficiently large in diameter to keep the hands steady. The "striking" apparatus is, we believe, new as respects the use of gutta-percha for the hammer; and the mode of regulating the interval of time between the blows is also new, and effects that object more perfectly than is done by the fan (the velocity of which is sensibly accelerated while 19 strokes are being given by the hammer with the fan which ordinarily requires more power to work it than the hammer), and using a small hammer whose velocity is greater than usual, Mr. Roberts produces as full a tone from a given bell with only one-fifth the power required by the old mode of striking. This clock has been sent to the Exhibition without any other adornment than that of paint, which is quite necessary for the prevention of oxidation; and the parts of wrought and cast-iron respectively are distinguished from each other, the former being coated with blue and the latter with bronze colour.

Mr. Bennett, in addition to the articles already mentioned, exhibits in the Western Gallery, and not far from the "Exeter clock," his improved turret clock, which forms a sort of companion to Mr. Roberts' "Alpha" on the other side. Shepherd's electric clock having three faces, one on the exterior of the south side of the Transept, one in front of the South Transept Gallery, and the third in front of the Western Gallery, has already been described and pictorially represented in the ILLUSTRATED LONDON NEWS.

419. Whishaw's centimetral chronometer, or velocentimeter, is exhibited with that gentleman's telegraph and telegraphic apparatus in the Middle Gallery North, chiefly on account of the very imperfect arrangement of the Catalogue, giving only one number to each exhibitor, notwithstanding the articles exhibited are for totally different purposes. The centimetral chronometer is for ascertaining most accurately, merely by observation, the velocities of railway engines and railway trains. A moveable rim revolves on the dial, containing 1000 divisions, and with the standard of 1320 feet, or a quarter of a mile. It is furnished with a central dead hand, and this hand, by moving *Zero* on the ring in a line with the central hand, at the instant of passing one of the quarter of a mile standards, and then reading off the marginal figures at the instant of passing the next quarter of a mile standard, the velocity due to the quarter of a mile passed is accurately given. The ring is movable, so that for taking velocities on foreign railways a kilometral or other scale may be substituted at pleasure.

424. Among the electric and other telegraphs, Mr. Bain, so well known to the scientific world, exhibits his electric clocks, to which we alluded on a former occasion; and notwithstanding the vibration of the gallery floor, which renders the exhibition of pendulum clocks under such circumstances most unsatisfactory, those of Mr. Bain appear to keep a tolerably good time.

We omitted to notice Mr. James Lamb's 400-day skeleton timepiece, which is not only a very useful, but likewise a very ornamental, production, and is to be found on the third counter of the British Horological Department.

ON MATTERS STRUCTURAL, AS CONNECTED WITH THE GREAT EXHIBITION.

AMONGST the necessaries of life, it will hardly be denied that a healthy and secure habitation may fairly be classed, or that it should take, as an essential, a high place in our consideration. Long before the fine art architecture comes into play, constructive science has had ample scope in producing a wholesome and safe abode; yet, if we examine into the condition of buildings as to choice of site, treatment of the soil, selection of materials, modes of construction, adaptation of style to purpose and form to climate, and, in fact, their general propriety, we shall most commonly find that the substantial utilities have been much sacrificed at the shrine of superficial show. This, it appears to us, holds good most strongly in the humbler grades of structures; for, in the employment of established architectural forms, in decorating, exteriorly, the mansions of the wealthy, the artist's exuberance of fancy must ever be chastened by the refinements of classical taste; the genius of invention, thus overstrained to seek its channels in enhanced materials and workmanship; while, in the dwellings of the poorer orders of society, architectural display is not always the last thing aimed at, but often the substance is pinched for the purposes of ostentation. This style is an evil so flagrant, that when cities advance to importance, municipal laws are called into existence for its suppression; yet such is the perversity inherent in human constitutions, that these statutes, say more than others, are never sound or thoroughly practical adaptations of the means to the end. So the combination of artistic skill with practical experience what it may, still some causes—interests—will operate to deform the banting. Unfortunately, too, it does not follow that the successive improvement of our appliances which daily discoveries and inventions produce, results in a corresponding advancement in the accurate progress towards perfection. For the counteracting influence of competition is ever at work, deteriorating the manufacture as fast as ingenious minds can devise the object. A new raw material is hardly before the public before the worthless traders in spurious compounds—men whose part in society is to say its foul dream with their frauds—exert themselves, though indirectly, to drive it from the market, and leave you poorer than before, in the possession of a counterfeit. Nor is it different with those contrivances which are of a mechanical nature; for this same incubus now basking for you such "improved patents"—such "economical" imitations, that should you recognise in them the features of the respectable original, you find them so degraded that it is not to be wondered at if you dread and altogether eschew the quasi-substance.

Such considerations as these press upon our attention the importance, may, the necessity, of obtaining the establishment of a permanent Museum of Indu-try, wherein the first and best fruits of national or international skill should be accumulated, at all times ready for convenient inspection: and it is to be hoped, therefore, that the Crystal Palace and its wealth of science and art, forming a collection such as never could before, and most likely never would again, be gathered together, will not rashly be demolished under the supposition that it has fulfilled its part. That great practical cyclopædia is, no more than a written one, to be read through and laid aside; but should be kept for reference when occasion requires. As *a depôt* for the display of new inventions, no advertising medium could surpass it; and hence, probably, our best chance for its permanency being eventually resolved on. In architectural and building matters, we should not have to ransack a series of museums for what we want, but should find the whole in one: thus the Museum of Practical Geology, while it offers to the inspection of the architect and the builder a most interesting collection of stones, as well as of other materials, can never, if its integrity be preserved, present all that they have occasion to take cognizance of. And to the architect, how few of the branches of science or art illustrated in the Palace of Industry are not necessary, or deeply interesting.

If inventions suffer through the agency of competition in the way we have indicated, happily our scientific literature is not capable of similar obliteration; and thus our store of available knowledge is ever on the increase: our facts keep taking themselves up and connecting one fact on to each other; our principles gain in perspicuity and precision. Trifling causes bring above-board neglected things; men wonder why everybody did not think of them before; they choose sides, and dispute with the most unreasonable antagonistic arguments; and thus the truth is usually evolved somewhere between. In structural things, how much has been brought out within a few years! As regards passages or fluids, for example, whether sewers or smoke-flues, our knowledge—for, supposing them before or not ignorance—by our own experience is now very clear compared with what they formerly were, we do not expect either liquid or vaporous bodies to flow through angular so readily as through curvilinear passages, or through rough so readily as through smooth ones; and we also pay greater regard to the proportion which the internal space has to the body which it conveys. Of ventilation, we have at least become familiar with the principles, so that we are enabled to weigh the respective claims of the upward and the downward modes; and have become chary in believing in its spontaneous or natural action in cases which are not natural, but altogether artificial things. The chemist has helped us to a knowledge of the properties and comparative values of waters, and we make our hydraulic arrangements accordingly; but when we mention him, we shrink from the attempt to indicate the various services, which range round the whole cycle of our materials. Even our smoky chimneys we have learnt to cope with, having discovered that our curative efforts formerly were usually applied at the wrong end, and that a fire has to be fed with air as well as fuel: yet not necessarily from doors and windows, to chill our backs while we are warming our faces. In the use of heated air for warming, we guard against undue dessication, or the impregnation of it with sulphurous products. In foundations we are well nigh as adroit as the ancient Romans in the formation of artificial rock; and we have also now to defend the walls of our superstructure against the insidious operation of capillary attraction. Our experimental researches have taught us how to obtain the maximum of duty from the minimum of material; so that we do not, like our ancestors, load our walls with a worse than useless weight. In these matters we but resolve to build in the best way, so much light is there diffused around us, that we should have no difficulty in eclipsing what the wisdom of those same ancestors has achieved and bequeathed to us.

In the Crystal Palace we shall not look in vain for instruction on almost any point, whether it belong to the province of the artist or the artisan; and, as so much of human welfare, physical and moral, is involved in the question of its dwellings, the opportunity should not be lost of bringing together the scattered elements there to be found, not merely into juxtaposition, but, as far as may be, into relative and philosophical connexion. That great structure, apart from the rich grain to which it is the mere haulm, is a fertile source of study in itself, in design, construction, decoration, adaptation: and what we regard it as at once a thing in great measure unprecedented, and as the production of a few brief months, its deficiencies, if there are such, claim our utmost consideration. In its lightness we see the triumphant application of iron, which the architects of the middle ages elaborated into such elegant forms without dreaming of its constructive capabilities. In the multiple system of its plan we see the adjustment of the arrangement to the material, the rendering sufficient the smallest variety, not merely of drawings, but of patterns, moulds, and castings. In the discussions which arose respecting the glass, we are warned that it is not sufficient that a certain thickness be stipulated for, if "the trade" are in a position to prove that the furnishing a supply which averages such thickness is esteemed a fulfilment of that condition; for if such gauge is enough for the purpose, it will be no compensation for a quantity under it being destroyed, that the remainder contains a corresponding difference in excess: thus the builder will see that some division is wanted in the mode of assorting that article, to obviate disappointment. In like manner, various opinions were elicited from decorative artists of eminence on the subject of the colouring, which, apart from the work as executed, are calculated to suggest caution against the too common practice of hastily adopting what may appear to be an appropriate mode of treatment, without first considering the case in all its bearings: for a north room, for example, will want a different tone of colour from one whose aspect is southern; and if it have faults of proportion, much may be effected in the decoration to mitigate them; while, independently of these considerations, the objects—furniture, paintings, &c.—which are to occupy it must be held in view, to obtain a satisfactory result. Thus it appears, that, in things architectural, the great Industrial Conservatory, like all unwonted cases, has produced much that is novel, and is likely to prove highly suggestive; and we may adopt it as a safe postulate, that it will prove the germ from which will spring up a style rationally adapted, in whole or in part, to structures of many kinds. In its contents it offers every variety of material—complete series of such as we have been accustomed to the use of, in their old or in improved forms, and many varieties which are almost or are altogether new to us: in models, it presents to us executed works, the originals of which we might never have had the opportunity to examine, and this not in design only, but in construction; and it also lays before us ingenious conceptions not yet practically realised, which only this friendly contention of all nations could induce their projectors to put into the tangible form in which we behold them: in design, the examples range through every style, period, country, and object, and evince in their genius and their most ornate pieces, while, in construction, they embrace the peculiarities appropriate to every variety of purpose, and not merely to generalities, but to minute details. The result is, that we are enabled to consider class objects in relation together, discover their redundancies, and study them in their unembellished principles.

MR. FOX, CONTRACTOR FOR THE CRYSTAL PALACE.

MR. CHARLES FOX (whose Portrait appeared in the ILLUSTRATED LONDON NEWS of July 5, page 21) is the senior partner in the eminent firm of FOX, Henderson, and Co., constructors of the Crystal Palace, and is a remarkable instance of the power of natural genius when combined with great energy. At an early age he was articled to his brother, Mr. Douglas Fox, the present Mayor of Derby, with a view to entering the medical profession; but a taste for engineering studies led him to devote to mechanical science every leisure moment; his endeavours were cancelled, and he was allowed to follow the bent of his inclination. The immediate causes of this determination appear to have been a visit to the manufactories of Birmingham, and the impression produced upon his mind by the opening of the Liverpool and Manchester Railway. Captain Ericsson, who was fortunate enough to be Mr. Fox's first employer, speedily appreciated his remarkable mechanical talent, and rapidly increased the small emoluments on which the young aspirant to engineering eminence had been obliged to commence his career. But this beginning of prosperity did not last long. Captain Ericsson was compelled by adverse circumstances to relinquish business, and Mr. Fox lost at that time all his savings as well as his situation, and was by an accident deprived for three months of the use of his arm. He did not, however, lose courage, but, struggling on as a lecturer, as a scientific assistant, and even occasionally as a practical mechanic, he at length attracted the attention of Mr. Robert Stephenson, and was appointed one of the assistant engineers to the London and Birmingham Railway Company, at the commencement of the construction of that line. In this post he had only to profit by the admirable opportunity afforded him by the great works with which he was brought in contact, under the eminent engineer whom we have mentioned. Refusing every offer of pecuniary advantage, however tempting (and such were not wanting), to leave the position, he remained with the London and Birmingham Railway Company until a year after the opening of the line; and then only left their employment in order to join the late Mr. Bramah in forming the large engineering business which is now so well known as the great firm of Fox, Henderson, and Co.

Mr. Fox is a man of good family, and is highly connected. His father was the late Francis Fox, Esq., of Derby, and his venerable mother, who has lived to see her son's admirable success, is a daughter of the late Archibald Douglass, Esq.

Of Mr. Fox's personal qualities we cannot do better than quote the words of a daily contemporary, the *Morning Chronicle*:—"He is, individually, a fine specimen of the frank, large, capacious mind; and had we to search for one who could perseveringly and with dignity sustain the open, energetic English character, with all the world as witnesses of its struggles against difficulties, there are few heads of more solid power, and few wills of more untiring grasp, with which we could entrust the representation of the national intellect and temper.

THE CRYSTAL PALACE.—MUNDAY'S REFERENCE.

The following is a copy of the operative part of the award made by Mr. Stephenson, of the sum due to the Messrs. Munday, for the determination of the contract entered into by them for undertaking the Great Exhibition:

"Now know ye, that I, the said Robert Stephenson, having taken upon me the burthen of the said reference, and having duly and in accordance with the powers and provisions of the said first-mentioned indenture, enlarged the time for making my award until the first day of September, one thousand eight hundred and fifty-one; and having been attended by the counsel and agents of the said parties respectively; and having heard and considered the several statements, arguments, and evidence made, delivered, and given before me on the matters so referred to me; and having also taken into consideration all the circumstances which I was required to take into consideration, do make this my award of and concerning the said matters so referred to me as follows:—I award and determine that the amount of compensation to be made and paid to the said James Munday and George Munday, for the outlay, risk, liability, anxiety, trouble, and loss incurred in the matter aforesaid, and in relation thereto, and on account of the said agreement being determined and put an end to, is the sum of five thousand one hundred and twenty pounds. And I further award and determine, that all the costs, charges, and expenses of and attending and used in anywise relating to this reference and arbitration, shall be borne and paid by the said Society; and that the said costs, charges, and expenses of the said James Munday and George Munday, and of and in relation thereto, which I have settled and ascertained at the sum of five hundred and eighty-seven pounds one shilling and fourpence, shall be reimbursed and paid to them by the said Society within ten days after service to the said Society of this my award. And I declare, that I make no claim or charge for any compensation to me for my trouble in the matter of this reference; but, inasmuch as I have incurred certain charges and expenses in the payment of fees and compensation to counsel and other persons whose advice and aid I have required in the premises, the amount of which is not included in the said sum of five hundred and eighty-seven pounds one shilling and fourpence, I order and direct, that the amount of such last-mentioned fees and compensation, and the costs and expenses of this my award, shall be borne by the said Society; and that, if the said James Munday and George Munday shall pay the same, on taking up this award, the same shall be repaid to them by the said Society within the period last aforesaid. In witness whereof, I have hereunto set my hand and seal this twenty-first day of July, one thousand eight hundred and fifty one

Signed, sealed, and delivered by the said
Robert Stephenson, in the presence of
W. Meyrick, 6, Parliament-street. ROB. STEPHENSON.

EXHIBITION TRAINS.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

Sir, I take the liberty of addressing these few lines to you, from a conviction that anything relating to the Great Exhibition will attain the greatest publicity by appearing in the columns of your paper, it being generally considered as the only journal of the Exhibition

In last Saturday's Number (page 86), you express an opinion that the great majority of the mechanics from Lancashire and Yorkshire have yet to visit the Great Exhibition; much I believe to be the case. Now, there are many who condemn the present arrangement of the railway companies from those two counties, and with good reason. Why compel a poor man to stop seven, fourteen, or twenty-one days in London? Of course, a moneyed man can return when he likes by paying the ordinary fare. If the railway companies would allow the option of returning on alternate days (if not daily), it would be a great accommodation, not only to those whose business might call them back within a week, but also to those who might wish to stay a day or two beyond it. The Yorkshire line adopted it in the month of June; why not in July and August? If the Yorkshire company would return to their former arrangements, or the Lancaster and Carlisle Company adopt a similar one, I am convinced the increased traffic on the accommodating line would soon shew how much it was appreciated.

By inserting the above, you will confer a favour on many of your admiring readers.

I am, Sir, yours respectfully,
Lancaster, July 21, 1851. A LANCASTRIAN SUBSCRIBER.

FIRE-ESCAPES IN THE GREAT EXHIBITION.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

Sir,—In your notice of Jack-on and Clay's fire-escape, in the ILLUSTRATED LONDON NEWS of the 19th, you say, "We could not make out how the inventor proposed to regulate the rapidity of the descent;" and as I have found it frequently the case that the action of the apparatus is very imperfectly understood, I shall feel favoured if you will allow me space in your excellent Journal to explain the same.

This Escape (Class 7, No. 75) is in form of an ordinary bed-room table, with a top which folds over so as to project partly out of the window, and among accept for a person to sit upon while backing the belt round the waist. The copper wire cord to which the belt is attached, is wound round a drum inside the table, and passes over a pulley in the end of an iron arm or lever, which is made to fold into the table when out of use. This lever is divided at the inner end into two arms, which press upon the axle of the drum, and so form a break, whereby its movement is retarded to nearly the extent of the weight hanging upon the cord; and, as will probably now be evident when a heavy weight is going down, there will be a corresponding pressure upon the break, and consequently, making the escape completely self-acting, without alteration for any weight, from the child to the heaviest adult.

I may say I am of the same opinion as yourself, that the best fire-escape is a trap-door in the roof, where it is practicable, but it is not always so; and where there is no parapet would be extremely dangerous.

I am, Sir, yours, &c.,
21, Horner-street, Lambeth, July 21. CHAS. W. JACKSON.

THE CRYSTAL PAL

E S T E R N E N T R A N C E.

CHEMISTRY.

(SECOND NOTICE).

WE return once more to the Great Exhibition for the purpose of making another chemical sketch, and resume the thread of our description at the point where we left off.

We find that, according to our chemical classification, the next subjects to be described are the metals copper and tin. They are the chief, if not the only metals used in the manufacture of statuary bronzes, although some bronzes also contain an admixture of lead and zinc. The physical appearance of copper is well known to all. Whilst bright and clean, the beauty of its surface is only inferior to that of gold; but it speedily tarnishes, as all know who have handled our copper coin, and, when tarnished, its beauty is gone. Copper is very prone to ally itself with other metals, and form alloys, and is not very particular about the number of alliances it forms at the same time. The alchemists, who assimilated every thing known metal to the qualities of some deity, whose name it was made to bear, and under whose protection it was thought to be, dedicated copper to Venus; and when in old alchemical writings the word Venus occurs, we may always understand it to mean copper. The term copper is derived from Cyprium (cyprus), the locality in which it was first discovered, or at least from which it was most largely obtained by the ancient Greeks. Few metals have a larger sphere of utility than copper. We have seen it entering into the composition of a statuary bronze—gold metal and bell-metal pinchbeck, tombac, bronze, and many other fancy alloys, the names of which it would be useless to write, have all copper for their basis. In its pure or unalloyed state it is rolled out sheets for our kettles, and formed into vessels of a thousand shapes. Perhaps the most striking example of the perfection of copper-smith work may be seen in the sugar-boiling vacuum pan in the Great Exhibition, and also an apparatus for obtaining a supply of fresh water from the ocean, designed for the use of ships, and shown in the French department of machinery.

Copper, like iron, is considerably softened by the application of fire, which sometimes remains until it has been exposed to the operation of beating or hammering. Unlike iron, however, it does not weld that is to say, two pieces, at an elevated temperature, cannot be made to adhere by hammering; indeed, thick copper-plate cannot be hammered into thin copper-plate whilst red hot, but must be made red hot and allowed to cool, then the hammering may take place. Each of the two pigments of the copper vacuum pan in the Great Exhibition was first cast in a flat piece, then by alternate heatings and hammerings was brought into its present deeply convex form. The dull hammering noise of a coppersmith's shop must be heard to be imagined. Unlike the clear ringing of a blacksmith's hammer and anvil, the stroke of the coppersmith's hammer gives forth a dead, hollow, painful sound, which in a short time not materially injures the hearing faculty, that very few working coppersmiths exist who are not more or less deaf.

Although copper be so useful a metal in a domestic point of view, yet few are so prone to be productive of dangerous consequences. The action of most acids, air, moisture, and greasy bodies on copper surfaces produces a green coating, known in common language a verdigris: this is a most virulent poison, and has occasionally been the cause of fatal accidents, hence the usual custom of preserving the interior of copper country vessels by a coating of tin. Whilst the coating lasts it is an effectual safeguard, but when once an abrasion of the tinned surface occurs, then the exposed copper is dissolved with increased rapidity, because in this case the two metals (copper and tin) and the contained liquid form together a galvanic battery. All the solutions of copper are green or blue, and may be easily recognised by their taste, the only other metal which forms green or blue solutions almost exclusively is nickel. Occasionally the makers of pickles have had recourse to copper vessels for the purpose of imparting a fine colour to their goods, and much has been said about the turpitude of the celestials in imparting by similar means the distinctive colour to green tea. It has, however, been satisfactorily proved by Mr. Warington, of the Apothecaries' Hall, that our march of chemical intellect extended to the flowery land of long nasus, and that the celestials now make their own Prussian blue. Now, Prussian blue can be made with prussic acid, and prussic acid can be got out of Prussian blue; still the cui bono does not happen to be passman, and so our remarks need not be frightened by a name.

In the department of the Exhibition specially dedicated to compounds of chemistry and pharmacy, may be seen some magnificent samples of crystallised sulphate of copper, a substance which, when exposed to the action of galvanic electricity, deposits its copper in an absolutely pure form on any desired surface, constituting the process of electrotype, and which under that name we shall have to speak of by and by.

We now come to speak of tin. This is one of the classic metals, and was obtained from the British Islands at an early date, long centuries before the presence of copper in that region was known or suspected. Before the working of iron became general, bronze was, as we have already seen, the material of which the ancient implements of war and husbandry were made, and the tin entering into the composition of the bronze was doubtless obtained chiefly, if not exclusively, from our Cornish mines; whither, stealing along the Mediterranean shores, boldly sailing past the pillared Herculis, and leaving the Eastern world behind, the adventurous navigators of the Phœnician coasts periodically arrived.

In assuming that to Cornwall the exclusive honour belongs of yielding the first tin for the bronze weapons of Homeric times, we cannot be far wrong. Tin is a metal tolerably plentiful in the localities where it is found; but these localities are very few; indeed, with the exception of the west of England and the Malayan Archipelago, the presence of tin naturally may be almost considered as a geological phenomenon. It is a remarkable contrast to most other metals; to iron, for example, which is found everywhere in one of various conditions; thus, wherever there is a warm-blooded animal there is iron, for iron enters into the composition of the blood. This presence of metallic iodine in animals and vegetables is a most elaborate subject for philosophical enquiry, and none in the development of which many secrets have yet, by philosophic sagacity, to be revealed. Hitherto it has been the fashion to regard tartar for the moist potassa extracted from plants, but double may have to be turned as to the propriety of this idea. The presence of the various metals in organic beings is much more general than people usually suppose: coffee shall be used both gold traces of copper; many vegetables contain the metal iron; and gold and tin have been discovered in the ashes of the weed and the vine. Some years ago, the medical jurists were all on the qui vive in consequence of the announcement by M. Orfila that arsenic existed as an ordinary constituent of human bones. Had this been a fact, there would have been an end to all chemical evidence of a positive character in cases of murder by poisoning. But, fortunately for the interests of humanity, M. Orfila has since, by repeated experiments, determined that his first notions on this matter were incorrect.

Tin, the metal on which we were passing our remarks, is one that never yet has been found as a constituent in an animal or vegetable body.

This metal admits of a very useful application, with which almost every one is familiar. Under the name of tin-plate, how numerous are the instruments formed, how great their utility, how moderate their cost, how wide the sphere of their application! This tin-plate is made by dipping iron sheets into molten tin. It is necessary that the iron sheet be quite free from adherent impurities, and their preliminary cleansing is a delicate and obnoxious matter, when we need not now here to describe. The important discovery of the method of forming tin-plate was of French birth, but ultimately naturalised in the land, which now, we believe, supplies with the material by far the greatest part of the world.

Tin-plate, as it is called, presents the important advantages of working upon its instruments by the mere aid of soft-subduing, of never tarnishing whilst the tin coating remains sound, and of presenting, when considerably abraded, a totally innocuous surface to the agency of chemical solvents. In this respect it is as far superior to copper, as copper is superior to it in durability and permanent value in the shape of old metal. Tin-plate, when worn out, is absolutely worthless; and for this reason the most patient of chemists and metallurgists was directed for a long period to the problem of scavenging an efficient substitute. At last this was achieved in a direction where least expected. The metal zinc, of which we have already treated under the head of certain large castings in the Exhibition, and as a constituent of brass, is now, when rolled into tin plates, made very extensively to supply the place of tin, and even of lead.

Of all metals zinc is the one which at first presented fewest probabilities of forming plates. Under all common circumstances it is a very brittle metal, and at certain temperatures as great as to be fearfully inflammable, and actually to powder in a mortar: at a certain other temperature, however, it can be and is rolled into plates, in which the crystalline brittle qualities of the zinc seem quite gone. The zinc-plate can be worked into form just after the manner of tin-plate, the same forming instruments which effect the latter readily work out zinc, can be melted down into a mass of good marketable zinc. Zinc-plate, however, unlike tin-plate, rapidly tarnishes, and the tarnished surface imparts poisonous, or at least, injurious properties to the liquid contained. This subject was long in debate, but may be considered as now settled, the attention of French, English, and Germans having been turned almost simultaneously to the investigation of this subject, and having arrived at similar conclusions. In France the question of the novelty or innocuity of zinc was first agitated in connexion with a proposition to substitute, for motives of economy, zinc for tin-plate, in the manufacture of soldiers' canteens. In England, if we mistake not, the same question was mooted in reference to the increasing employment of zinc-plate in the construction of culinary purposes. It is certain, that tin-plate will maintain its place, whilst in other applications of the material the cheapness and the size of zinc-plate will cause the preference to be on its side.

Tin is found in a native state—like other metals, it is dug out of mines, where it exists under the form of ore, usually being the oxide or combination of it in with oxygen; it is also found in large superficial alluvial deposits called streams, in a condition of very pure oxide, easily converted into tin by heating with charcoal or coal. Into the subject of the history of tin and of gold present a very striking point of resemblance; and, indeed, it is curious, that gold generally exists associated with stream tin in the same beds, but in portions so insignificant, that its extraction has never been made remunerative on a large scale. Tin ores, however, from the west of England, usually provide themselves with a goose quill, into which they put any little fragments of gold that may happen to come in their way. It is, doubtless, to the circumstance, that tin, like gold, presents itself so frequently in the alluvial state, and in a condition of easy manipulation, that we are to attribute the early discovery and application of both these metals.

Wandering into the French department, with our mental faculties still attuned to the contemplation of metals, we view under a glass case, securely locked, an assemblage of what to the ordinary observer would seem a collection of tin-plate vessels of different kinds. A label, however, affixed to the glass case, informs us that the pieces of the contents within—and very nearly one acting as a then-of pounds. These instruments of torture are composed of the metal platinum, and are worthy of our special attention. Few chemical substances present such an interesting field for reflection as platinum. Liebig, in one of his familiar works, traces the development of modern chemistry to the application of platinum, cork, and India rubber. These are, apparently, most dissimilar substances, but a slight reflection will prove the terms philosophic to be correct. Without platinum apparatus we could not have oil of vitriol turned into common salt, and the imaginary price of three farthings per pound. Without oil of vitriol, large and small manufactures, since it adds of our chemical manufactures would languish and die, without cork and India-rubber, the delicate manipulations of modern organic chemistry could not take place. In short, view the proposition as we will, the result of our investigation will prove the intimate connexion between the three substances mentioned by Liebig and the development of chemistry.

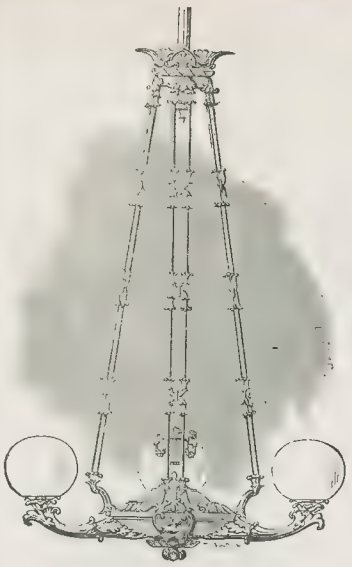
Platinum was formerly called platina, the Spanish diminutive for plate, or silver, to which metal platina offers a certain similarity of appearance. The word platina is not what name has been given to it in reference to the nomenclature of modern chemists, who, finding it necessary to cultivate some sort of precision in terms, have decided that all metallic bodies shall receive a name terminating in the letter um, by which means the name of platinum is one of perpetuity, but the old classic rule of termination is not violated.

Platinum is an exceedingly rare metal. Hitherto our only supply of it has been from Peru and Brazil. It exists more plentifully in the Uralian range, but the Russian Government with extreme jealousy guards, none of it being allowed to be exported. Platinum generally occurs in grains which have the appearance of iron filings, and is occasionally found embedded in silver, and when thus combined is generally associated with gold. Under the glass case which contains the platinum vessels of French manufacture are several little bottles which the inquirer will do well not to disregard: they contain specimens of the metals with which platinum is usually found associated, and of which we may say no more than that iridium, palladium, and rhodium are the chief. The last is familiar by name, at least, to most people in connexion with the famed rhodium pens, the nibs of which are formed of this metal, celebrated for its extreme hardness. The leading quality of metal, celebrated for its extreme hardness. The leading quality of platinum is its excessive infusibility. The finest wire of it, if exposed for hours together to the most violent furnace heat, does not melt; surfaces of platinum never tarnish by exposure to the air, neither is this metal affected by the strongest acid. Oil of vitriol, for example, may be boiled in it with perfect impunity; and hence the great employment of platinum vessels for the preparation of this liquid.

But the circumstance which renders platinum so valuable, namely, its great infusibility, imposes difficulties in the way of its extraction from the ore and manufacture, which only the most refined powers of chemistry have been able to surmount.

The usual means of obtaining metals from their ores, on the large scale, is by the agency of smelting or the application of heat, although there are other methods for effecting the same, in the case of a metal that will not melt. Since it follows that metallic platinum is obtained by the chemical process of solution, and every particle of those shining vessels was at one period dissolved by means of chemistry into a fluid, the parent as water itself, and of a dark colour—very much in appearance like a glass of celery. If a common one be projected into this amber-coloured liquid, the metal unites with the sal-ammoniac, and falls down as a yellow powder. The course of manufacture now proceeds smoothly enough.

The powder is placed in a metal cylinder, and by the agency of heat and pressure is formed into a solid piece of platinum in a condition of purity. Though pure, however, it is pulverulent, resembling very much in appearance powdered charcoal. At this stage of manufacture advantage is taken of the welding property which platinum possesses. The powder being heated to whiteness in a metallic mass, is first exposed to pressure in order to effect primary cohesion, and is next plunged very hot into water to test its soundness. Lastly, however, comes the final operation by further heating and hammering, the metal is now, however



GAS CHANDELIER.—BY W. POTTS

GAS CHANDELIERS. POTTS

These Gas Chandeliers, by Potts, of Birmingham, are remarkable for their simplicity and elegance; and will prove far more serviceable, and obtain far higher favour with the judicious, than many more elaborate and ambitious productions for a similar purpose.

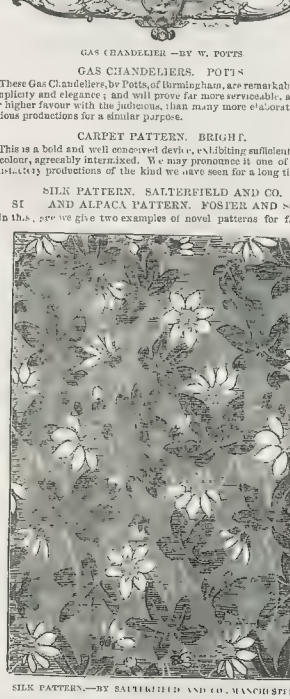
CARPET PATTERN. BRIGHT.

This is a bold and well conceived device, exhibiting sufficient diversity of colour, agreeably intermixed. We may pronounce it one of the most satisfactory productions of the kind we have seen for a long time

SILK PATTERN. SALTERFIELD AND CO.

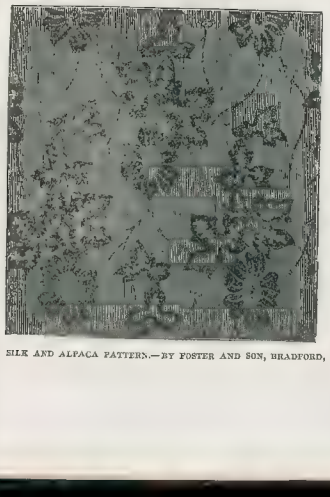
SILK AND ALPACA PATTERN. FOSTER AND SON

In this page we give two examples of novel patterns for fabrics for



SILK PATTERN.—BY SALTERFIELD AND CO., MANCHESTER

ladies' dresses, which the present Exhibition has educed. They are both creditable; the figures being moderate in size, and well blended.



SILK AND ALPACA PATTERN.—BY FOSTER AND SON, BRADFORD,

BRITISH INDIA.

The vast tract of country comprised within the limits of the East India Company's territory contains upwards of 150,000,000 of inhabitants, with a revenue of £18,000,000 per annum: its climate varies from 120° Fahrenheit to 400°, with every possible kind of soil and cultivation. Looking at this immense region in what light we may, it cannot fail to attract our interest.

Here are endless fields and valleys, capable of producing all that is required amongst civilised nations—silk, and cotton, and sugar. The Indian continent might be made to yield enough cotton, wool, and silk to give employment to all the steam-looms of Great Britain, and to all the inhabitants of Europe, rendering our manufacturers independent of foreign cultivators. It is in this light that our Indian and Colonial possessions assume an importance, which cannot be tested by the mere contribution of raw produce from them to the Great Exhibition. Our Leeds, Manchester, Bradford, Coventry, and other manufacturers derive some of their more useful fabrics from this part of the world, and are enabled by the aid of Bengal dyes to produce the more lasting and beautiful colours at moderate prices.

Commencing, then, with silk, which is the most prominent of the fibrous substances of India, we find a great variety of filatures, such as those known as the Cossimbazar, the Sardah, the Baleahs, and Soogoopore, varying much in fineness, and running up in value from 7s. 6d. per pound to 18s. These we find in various stages of preparation, from the raw skeins to the coloured thread. They are not, however, to be compared with the produce of Italy or the south of France; but, on the other hand, they are produced at a little more than one half the price, and are therefore capable of being worked up for common useful articles, to which the Italian and French silks are not, of course, adapted by their price. The trade in this article from Calcutta amounts to about £700,000 a year, nearly the whole of which comes to Great Britain.

Of the Indian wools little can be said, unless it be of the beautiful Cashmerian fleeces, brought from the loftiest peaks of those snow-capped mountains: these are exquisite goods, looking more like piles of driven snow than vegetable substances.

Cotton is not a heavy article of export from Bengal, though in the Madras presidency it forms a considerable branch of trade, growing in vast quantities in the Tinnevelly district.

Besides these, there are Indian hemp, sunn, pine-apple fibre, and the fibre of the plantain. The first is a most useful article, producing a very strong kind of cordage for ships' use. The jute fibre is also used in large quantities for inferior kinds of cordage for country use, and is also shipped in large quantities. The plantain and pine-apple fibres are pretty, and appear capable of being worked up into useful fabrics, and merit attention, especially as they can be produced at a very low rate.

Coming to the collection of dyeing substances, we find foremost amongst them the "lac dye," so necessary to our cotton and silk manufacturers. This is prepared from a substance called "stick lac," which is a concretion formed by the lac insect, on boughs of trees, to protect its eggs. It is melted, and the colouring matter being removed, the residue is clarified and forms the shell-lac of commerce, so useful as forming the basis of sealing-wax and some varnishes.

Skins form a large item in this collection; some of them are very fine and very well prepared: the finest amongst them are the tiger skins.

Bengal sugar, as exhibited, appears to be a beautifully fine article, clear and bright as crystal, and is now beginning to be well thought of in our market, proving very acceptable since the falling off in the production of the West India Islands. Rice and saltpetre do not afford so much room for ornament, beyond remarking that they are leading articles of export to this country.

The collection of medicinal substances appears to be a large one, though hardly of sufficient interest to general observers. Amongst them we find castor oil, opium, rhubarb, and senna, from the Company's dispensary at Calcutta; these are too well known to require any comment at our hands. There are are also gums in great variety and of many qualities, used in medicine, manufactures, dyeing, and the fine arts. In addition to these, there are some score or two of strange looking substances, with unpronounceable names, packed in finnily-shaped jars and bottles, said to be very efficacious in the cure of sundry local disorders, but not very attractive to European eyes. They are mostly from the vicinity of Calcutta and the Arracan country.

We have also delicately scented oils, made from the flowers or the root of the jasmine, the aloe plant, and the sandal tree, besides some oils of commerce of less attractive character.

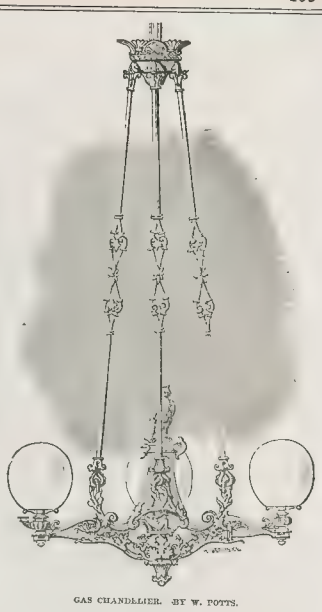
Aromatic spices and condiments are there, too, in great variety, including the black and white peppers, ginger, and cinnamon, from Rohilcund and Assam; the wild nutmeg from Nagpore and Agrum, and cinnamon from the Lower Bengal provinces.

The woods are very numerous, comprising all sorts of specimens from various districts of Central and Southern India, they are nearly all unknown in this country, and very many of little ability save for the dyer's purposes. There are some, however, very valuable for house building, furniture, boat-building, machinery, general carpentry, &c. The most serviceable are the teak, ebony, and black-wood, which are found in the forests of Tenasserim, Moulmein, and Rohilcund.

The ivory which we find here is of good quality, coming from the Nepaul and Tenasserim states, but is scarcely equal to the tusks of the African elephants. The buffalo and deer horns from the Neilgherries are as fine specimens as we remember to have seen.

Besides these there are a great number of other raw productions, useful enough, no doubt, in their proper place, but scarcely possessing general interest. The edible birds' nests and moss of the Tenasserim district, and the sharks' fins and fish maws of Arracan will hardly attract the passer by, from their singular appearance.

Having thus briefly treated of the principal raw productions of this vast portion of our Eastern empire, we will proceed to notice the objects which are the result of labour applied to those natural products, and which may be comprised under the head of manufactured articles from the vegetable, animal, and mineral kingdoms. It is true, we may not meet with so much of the really beautiful, useful, and economical as are to be met with in the products from our highly-perfected manufactories



GAS CHANDELIER. BY W. POTTS.

where art and science are brought equally to bear; at the same time, there is much to admire in those Indian fabrics; and we should also bear in mind that some of our own staple cotton and silk goods are but copies of those originally woven in the "far land of sun-rise."

It is much to be doubted if we in England have any more delicate and beautiful goods than the muslins of Dacca. By the skill and machinery here in vain essayed to rival them, the finest shawls of Cashmere, and though, by the aid of steam, and modern loom power, our silk manufacturers can undersell the handlooms, the cordahs, and choppahs of British India, it has yet to be seen if their goods will bear comparison as regards quality.

Taking the lead amongst textile fabrics, we have assuredly Cashmere shawls, well known, no doubt to our fair readers, who, if they have not yet seen anything beyond a mere Manchester imitation, may view at any rate satisfy their curiosity, although not their hands, by the sight of the glass-covered case contributed by Mr. Cheape, of the Bengal service, and Mr. Emerson, of the Peninsular and Oriental Steam Navigation Company. These are both splendid specimens of the kind, excelling in all the most brilliant tints of the rainbow. Some of these shawls are very expensive, and generally made to order, costing from £10 to £200. The Rohilcund and Rajpootnah shawls do not equal the above, nevertheless, they are tasty goods, and much prized in India by native and European ladies. The export trade in these goods amounts to about £500,000 per annum, almost entirely to Great Britain, a very few going to France and Russia.

Not really such wares as the shawls, but of far more commercial value,

CARPET PATTERN.—BY MESSRS. BRIGHT.

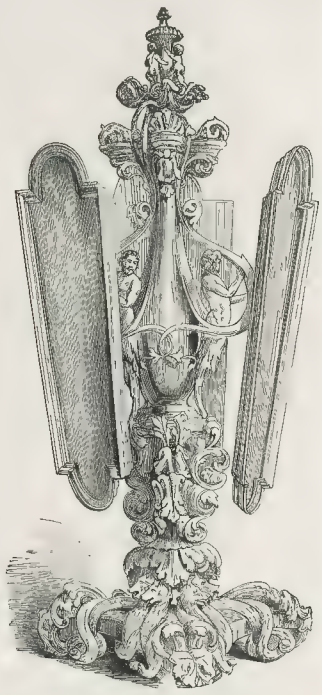
are the silk fabrics of India. Many of them are very delicate and rich, but not much known in this country, and indeed hardly calculated for other than tropical use. Moorshedabad has contributed some beautiful and highly ornamented flower-pieces of silk gauze, some cloths in figures called sohans, and also rich and massive specimens of purdahs, worked with gold and silken thread, made for Durbar purposes. These fabrics are to be seen amongst the natives, are mostahs pookrees, mushroos, and other cloths; but those which are necessarily the more interesting to us are the well known goods called bandannas, coorahs, and choppahs. These articles are made in various districts of the Bengal Presidency; the specimens sent, however, are of Calcutta make, and are contributed by Mr. Jardine, the eminent merchant of that city. The value of the export trade in plain and figured silk goods from the port of Calcutta alone amounts to the yearly sum of £450,000; of these Great Britain takes £350,000 of corahs, and £40,000 of bandannas and choppahs. France and America take between them about £4000 of mixed goods; and the balance, chiefly of low quality articles, are shipped to the coasts of Southern India, the Mauritius, Pegu, and the Maldive Islands.

The embroidered goods in silk and cotton are extensively used by the more wealthy inhabitants of Hindostan. They are very costly and showy, and are interesting, if only as proofs of the manual skill and patient industry of the Indian workmen. Delhi, the once celebrated capital of the world-famed conqueror of India, the city of the Great Mogul, has designed to furnish its quota to the World's Fair. The articles from this part of India consist of rich and gorgeous apparel adapted to Oriental customs, such as head coverings and caps, fans, scarfs of silk and gold, shawls, &c. Dacca has not omitted to send a fair specimen of its handiwork, in the shape of embroidered shawls, scarfs, and body-pieces, richly worked in gold, silver, and many-coloured silks.

CHANDELIER. HANOVER.

STAND FOR PICTURES. LEISTLER.

A very convenient article for a studio or *boudoir*, for the display of a favourite gem or two in painting, family portraits, &c. It is handsomely carved.



STAND FOR PICTURES.—BY LEISTLER.

There are also some gay-looking trappings for horses and elephants, almost as richly inlaid and embroidered as articles for the use of princes: we have velvet and gold awnings for tents and howdahs done in many colours; hookah carpets, elephant trappings, waistbelts and turbans from Lucknow, Benares, Rajpootna, and Moorshedabad. All these articles are rich in the extreme, and, no doubt, have a beautiful effect when properly displayed in Eastern countries.

The Nawab of Jesselmeer has contributed from his own dominions sundry rather tasty dress pieces called "purgrees." The Maharajah Rao Scindia has also contributed magnificent Gwalior manufactured dress pieces, besides some very finely figured cloths "doputta" and 'patuls," worn generally by the fair sex of his dominions instead of shawls. The natives of high rank esteem much these goods, especially the "dhoties," two-striped muslins, and "purgrees," which certainly even to our eyes appeared both exceedingly rich and tasty, and by them are preferred greatly to our finest European productions. These goods, though so valuable, are entirely useless to Europeans; but have a most extensive sale in Bengal, and are mostly manufactured in the Nagpore districts.

The gurahs, which resemble much our cheapest long cloth, and were manufactured in immense quantities some years ago in Bengal, are now gone greatly out of use, being entirely superseded by the introduction of our Manchester and Glasgow cloths, to such an extent that the trade has decreased fully one tenth. There are many other cotton goods, but plainer—amongst others, the saries, bangomie chowkeedars, karolie jerrees, lerne kontas, doorsootees, lall chundras—which present little or no interest to the majority of Europeans. The Lessore, Rajpootna, and Benares states have contributed sundry ginghams, jallahs, coonvhs, palempores, and chintzes, which cannot in any way be compared with our own fabrics, and of which we have little to say.

The Indian leather, although not to be compared with European goods, is by no means of low quality, and we believe it to be well adapted to the trying climate of the East.

In pottery and glass ware the Orientals are not behind us very far, though their wares lack the artistic finish imparted to our goods during the last ten years. There is a graceful, pleasing lightness about the porcelain ware of the Azimgurh pottery, which cannot fail to strike the beholder not less than the singular simplicity of the make. The Mirzapore glass ornaments are, perhaps, well calculated to adorn the arms of dark beauties, but they do not strike us as being very graceful or ornamental.

In gold and silver ware the workmen of Hindostan are pre-eminent, whether it be for chains, necklaces, bangles, bracelets, or rings. Some of the light filigree silver wares of Cuttack, in Lower Bengal, are strikingly beautiful and Oriental in their style. The Delhi ornaments are much in use, and highly reputed by the rich natives on all festive occasions; and when we state that the dress and jewellery of a temple Nautch girl, or dancer, will sometimes be worth from £10,000 to £15,000, some idea may be formed of the lavish expenditure of Orientals in this manner and on these occasions

CHANDELIER. BERNSTORFF AND CO.

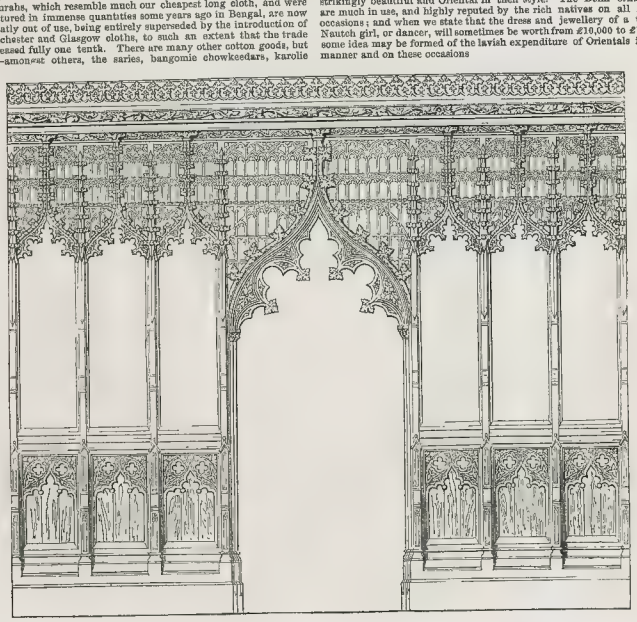
This chandelier is very stately in aspect, but very heavy, and very ungracefully shaped—being of the good old German school, of the early part of the present century. It combines every possible variety of style, is of bronze gilt, and will hold sixty lights. Messrs. Bernstorff and Co. are the bronze manufacturers to the Court of Hanover.

ROOD SCREEN.—DESIGNED BY J. CLARKE.

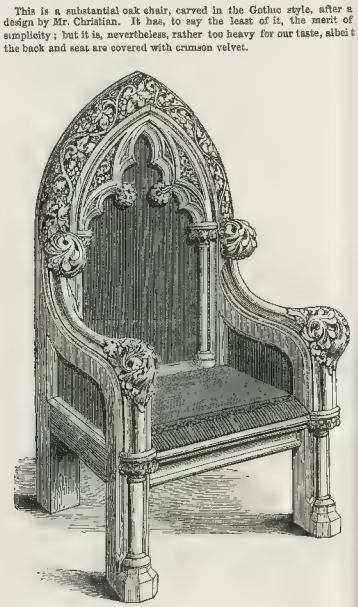
The rood screen, carved in oak by Ringham for a church in Surrey, is a fair specimen of the taste and talent displayed in these matters at the present day. It is in the Perpendicular style, and was designed by Mr. J. Clarke. The decorative details are extremely well executed. It may be observed, however, that the door has a dwarfish appearance, and would probably have been improved if the spring of its arch had been carried up to the same point as that of the windows.

GOTHIC CHAIR. WILLIAMS AND LUMSDEN.

This is a substantial oak chair, carved in the Gothic style, after a design by Mr. Christian. It has, to say the least of it, the merit of simplicity; but it is, nevertheless, rather too heavy for our taste, albeit the back and seat are covered with crimson velvet.



GOTHIC SCREEN.—BY RINGHAM, IPSWICH.—DESIGNED BY MR. J. CLARKE.



GOTHIC CHAIR.—BY WILLIAMS AND LUMSDEN.—DESIGNED BY MR. CHRISTIAN.

"HAGAR AND ISHMAEL."—TUSCANY.

MARBLE CHIMNEY-PIECE AND MIRROR-FRAME, FROM MILAN.

In the vestibule to the Austrian sculpture are two or three very showy marble chimney-pieces, some surmounted with mirror frames, which it is impossible to pass unnoticed, but which it is impossible to admire. Never, perhaps, was high art more misapplied; never was common sense, in the selection of decorative subjects, more lost sight of than in these notable productions. In any case over ornamentation of chimney-pieces should be avoided; and in all cases the ornamentation should be of an architectural character, in harmony with that of the rest of the apartment. The introduction, in sculpture, of subjects of vegetable or animal life, is of more than questionable propriety; the human figure, unless conventionally, should never be attempted. In the Austrian fire-places, however, all these enormities have been perpetrated, and with a lavish hand. In one we have full-grown urchins of Cupids carrying fish, flesh, fowl, and game, all executed in the round, with other intruders of the same family, all scorching their naked legs over the fire, and encroaching upon the fire-side circle; in another a nest of loves protrudes from the midst of the mantel-piece, various other devices being crowded in in all directions; in the third, which we have engraved, the artist's fancy revels, perhaps, in more elaborate absurdities than in any of the preceding two. On one side stands a full-grown Cupid, with his bow and arrow pointed at a young nymph on the opposite side, who seems to treat his power with levity; beneath are two female figures, who seem to acknowledge themselves as vanquished by the lady-killer; and above, in the midst, is a circular compartment, in which are the heads of two persons in close conference. All sorts of birds and flowers complete the *décoration* for this marble mystery; but they are not very successfully carved, and have a rough surface, which the dust will soon take advantage of. The ornamental parts of this affair have been executed by Giuseppe Bottinelli; the figures by Dominico Gandolfi.

"HAGAR AND ISHMAEL." BY VILLA.

In his small marble group of "Hagar and Ishmael," Signor Villa, of Florence, seizes a different moment from that selected in the same story by Max, of Prague, noticed in a previous article on Sculpture. In the latter the mother beholds the sufferings of her child, and appeals to Heaven for relief; an incident, the proper expression of which was admirably realized. In the work now before us Hagar is applying the bowl of water to the parched lips of her son. There is not the same amount of poetic interest patent in the one case as in the other; but what the subject afforded, Signor Villa has done justice to in this very pleasing and carefully executed composition.

"CUPID SHARPENING HIS ARROWS." LEEB

This little marble figure, executed by Leeb, of Munich, stands in the Zollverein Court, where, attractive at a distance, it disappoints upon a careful inspection. The figure is not that of a Cupid, neither are the wings, neither is the expression and the attitude; the limbs being all straight lines and angles, is inelegant.

CRYSTAL CANDELABRA. BY OSTLERS.

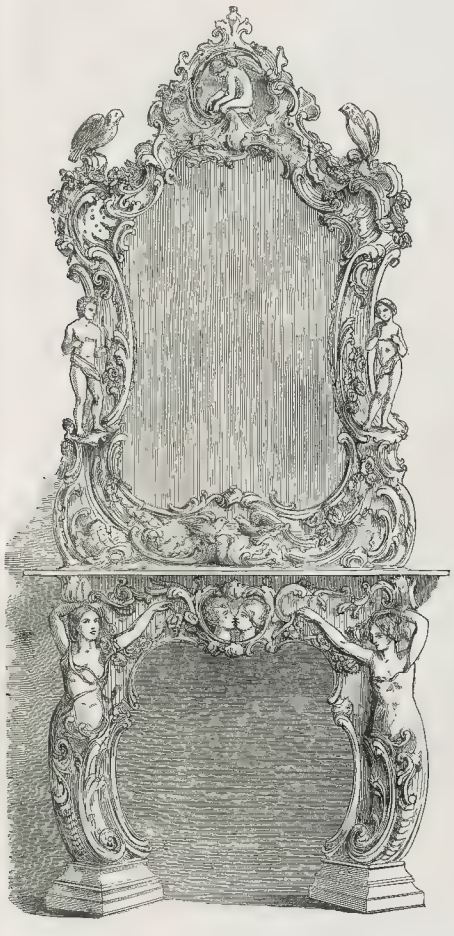
The magnificent crystal candelabra by Messrs. Ostler, the property of her Majesty, are only second in importance, as specimens of glass manufacture, to the far-famed crystal fountain, which adds a fairy-like charm to the Transept. They stand eight feet high, and will carry fifteen lights each; the glass being of the finest quality and colour, and being richly cut in prisms, will diffuse the varied colours of the rainbow on all sides around.

"CUPID SHARPENING HIS ARROWS."—ZOLLVEREIN

ZOLLVEREIN.

(SECOND NOTICE.)

Before entering the centre hall of the Zollverein, let us direct the attention of our readers to a somewhat elegant pillar which stands on the western side. It represents a group of Amazons, they being apparently great favourites with the Berlin artists, the great Amazon in the nave being only one of many in the Exhibition, made of cast-iron, at the foundry of Berlin, but curiously inlaid with silver. It is remarkable for the simplicity of its form and the beauty of its workmanship. The striking characteristic, indeed, of most of the productions in the centre hall, where are collected the gems of the Verein, is, we think, beauty of form. The



MARBLE CHIMNEY-PIECE.—MILAN.

GLASS CANDELABRA.—BY MESSRS. E. AND C. OSTLER.

principal contents of the hall are statues, statuettes, painted glass ornaments, pictures, one or two cabinets or ladies' desks, porcelain, &c., all belonging to the fine arts, and all in general distinguished by this characteristic. Even the Berlin porcelain, which occupies a large space in the room, and part of which is copied from renowned works of antiquity, such as the Warwick vase, is as beautiful in form as it is for its ornament, though the designs on it, after Mieris, Vischer, and others, are as fine as art can produce. Less meretricious in ornament than the productions of Paris, and less encumbered with it than those of London, the artistic productions of Berlin, and, indeed, of all Germany, are chiefly agreeable from the beauty of their forms. Even the elaborate carvings in ivory from Darmstadt, particularly the large goblet, on which the great victory of Hermann or Arminius, from a picture in the possession of the Grand Duke of Baden, is carved in alto relievo, is almost as remarkable for a graceful shape as for admirable carving. By crowding their finest room with almost innumerable articles of *vertu*, puzzling us to distinguish between them, and losing admiration for individual specimens in multiplicity, the Germans inform us that they set a high value on these comparatively trivial things. The production of them is what the influential government have chiefly encouraged: they have implied the skill of the people in this direction, and we may expect, therefore, to receive soon the benefit of the study of Royal and noble patronage? That the arts which spring from them, or grow up under their encouragement, shall be marked by superior taste. Amongst the ancient Greeks, and amongst the inhabitants of India, a keen perception of beauty of form seems to have been universal, and is found almost equally in some of their earliest productions, which have descended to us as in their latest. But, amongst the Saxon and Scandinavian tribes, judging from the rude figures of their old idols and earliest heroes yet extant, a perception of fine forms was not so highly required cultivation, and has been cultivated by studying the examples of the people who were endowed with these perceptions. The high-born and well educated, the opulent and the ruling classes, have been the means of extending that cultivation. They are the conduits through the which the old Greek perceptions have been conveyed to their unendowed and uncultivated countrymen. Thus we find their influence and the influence of courts more beneficial in these arts than in any others. Painting cannot boast of much novelty of conception. Their finest works, whether of sculpture, painting, or architecture, are generally imitations of the ancients. Nature is as pure and as free as in the times of the Greeks: but man's present perceptions are so much mixed with ancient and derived knowledge, that they are confused; and artists are often the most graceful when they return to the original forms. For many years, even for centuries, European artists and their patrons have aimed at little more than at diffusing amongst the rude people of the North a knowledge of the forms that were created by, in the minds of the Greeks, and that they have only acquired by a laborious process. By the Exhibition this species of cultivation is rapidly extended, and it seems likely to do more, in a few weeks or months, to diffuse amongst our people a knowledge of graceful and elegant forms than has before been done in ages. For the first time almost in our history the common people of England are brought familiarly into contact with, and derive instruction from, the clear, definite, and brilliant conceptions of the Greeks, embodied into forms that have been preserved and spread by the influence of artists and courts through all Europe. Of our people, too, we are happy to say that the females share largely in the enjoyment and improvement. They are as numerous in the Exhibition as the males, they are much attracted by the articles of *Vertu*, and they observe and appreciate their charms. By these means and a friendly intercourse, establishing a moral relation between the most ancient and most modern nations, the keen powers of perception of the beautiful in nature with which the old Greeks were endowed, and which are peculiar to the ancestors of our race, causing a great moral difference between them, are now made to subserve to the improvement of the English. By the Exhibition the bulk of our people will be made familiar with forms derived from antiquity, and of which they could otherwise never have attained a conception.

We confess, however, to be puzzled, amidst the mass of articles exhibited by the Zollverein, most of which are not above mediocrity, in choosing some for illustration. Leaving the articles of *vertu*, are more particularly belonging to other departments of our Journal—except to say that the [illegible] particularly worthy of attention, and perhaps the statuette of Beethoven, one of the most remarkable men of the last age, will not be overlooked—we must also mention, that, in the centre hall, a desk and a writing-table for ladies, manufactured by the Messrs. Baruch Brothers, of Wurtzburg, in Bavaria, one in the rococo and the other in the *Renaissance* style, are remarkable for the good taste they evince. In this room, too, a large collection of miniatures, painted on ivory, by a new method, by a Wurtemburg artist named Hilder, deserve notice for their boldness, though the artist does not inform the public what his new method consists in. We will not say more of the centre hall but to add, that the mass of things, many of them trifling, and some of them incongruous, which are here crowded together, many of which decidedly attract attention, is most unfavourable to a due appreciation of the separate articles. The inhabitants of the Zollverein have been ill-served by their Commissioners

Among the articles of utility, the cloths, which are very abundant, take the first place in the Zollverein; and remembering that the manufacture of fine cloth is rather modern in Germany, and that homespun woollens, till very recently, formed the staple dresses of the bulk of the peasantry, the progress of the Germans in making fine cloth does them great credit. For some of that they may thank our restrictive laws, which partly force their industry into that channel, and compel them to grow wool and weave it, instead of growing corn and exchanging it for woollens. The damasks of Saxony and the linens of Silesia, the latter now not so highly honoured as they were wont to be, also occupy a large space in the halls and in the galleries, and they are very old and very favourite productions of Germany. In damask linens they excel; and the productions of Messrs. Proels, senior, and Sons, of Leipsic, in the Saxon department, may be mentioned as an excellent example of the produce of the German looms. Many of the woollens that come from Prussia are as remarkable as the celebrated Berlin wool for the richness of their dyes; and there are some common enough cloths at the end of the gallery of the Zollverein, of the south side, that deserve notice on account of the boldness and distinctness, and the meaning—for many of our patterns are utterly destitute of any meaning—of the designs which ornament them. We discovered, on referring to the Catalogue, that the designs are copied from Albert Durer, and that is true; and we do not see why such things should not generally be reproduced, rather than unmeaning scrolls. We need say nothing of the patterns and the wools profusely displayed throughout the Prussian department, which has acquired a world-wide reputation as Berlin work, the delight of our wives, daughters, and mothers, and very often of no little comfort to ourselves in its results, if we are occasionally annoyed by it in its progress. Numerous patterns, as well as the materials for embodying them in the canvass, will attract the attention of the ladies in almost every part of the Zollverein, with many carpets, rugs, table-covers, &c., most of which are superior in their designs. In fact, the two circumstances of the splendid dyes and the excellent designs, for which Prussian workmen and artists are famous, have enabled it to make Berlin work so general a favourite. In damask linens, in fine cloths of various kinds, and in woollens of every description and for every use, the Zollverein is particularly rich. Taken as a whole, articles are not only the most useful but the most conspicuous production of German industry, and those in which they have attained the greatest excellence and are making the most rapid advances. Connected, too, with them, we must add that there are numerous specimens of very fine wool, the produce of the German provinces and other flock.

Berlin has been famous, at least since the time of Diesbach, 1710, when Prussian blue was discovered, for its chemical products; and all through the 18th century, as well as before it commenced, some of the most distinguished names in the annals of chemistry were those of Germany. After the woollens, the chemical productions of the Zollverein in the Exhibition rank high. The specimens of beet root sugar, which are perfect and the product entirely of chemical art, the specimens of perfumery, of various salts and pigments, the crystals of several substances exhibited, all testify to the fact that the Germans continue on this point to deserve their well-acquired reputation

In the vast and very miscellaneous productions which they have sent us we can only particularise a few more. There are numerous specimens of types and of books, ornamented and plain, which do honour to German typography and their skill in illustration. Contrasting some of the books displayed there by Decker and others with the ordinary books and newspapers of Germany, it is impossible not to wish that in the matter of paper at least some of the substantiality of the books exhibited might be imparted to the common productions of the booksellers. But it is probable, after all that is said of the durability of books, that the most flimsy are the best adapted for our transition age, as not likely long to stand in the way, either on our bookshelves or in our minds, of the improved works of which they are to be the parents. Connected with books, are many maps, geological as well as geographical, with a large globe to show the comparative elevation of the mountains of the earth, and other helps to diffuse knowledge. The Germans are not behind in applying *papier maché*, which will take any form, and which, though made from refuse, is one of the products of human skill best adapted, of all those yet acquired, to various figured ornaments, as well as to many useful instruments and utensils. The Germans exhibit many specimens of their success in *papier maché*, the name of which informs us that the art is neither of English nor of German invention. As we have specimens of our coal, so the Germans, particularly in the Hamburgh department, exhibit many specimens of their charcoals, of which they make great use, and which they apply in various forms to various purposes. They show us, also, many of their mineral products, particularly from Nassau, from which little else has been brought than ores of lead, copper, zinc, manganese, iron, &c. Other things in which they excel, or at least make a good show, are philosophical and musical instruments—chronometers of their harmony and their devotion to science. In the Hamburgh department, we find not only some excellent furniture, but veneers fifty-four plates to the inch; or the mahogany is cut into planks, each of which is only the 54th part of an inch thick. Till a recent period, when Sir Robert Peel abolished the duties on furniture woods, the inhabitants of Hamburgh had a considerable advantage over our furniture makers, and they sent great quantities of furniture to various parts of America. They still carry on this profitable and useful business; but our people are now in a better condition to compete with them than they were, and, by the abolition of the duties, a valuable trade has been preserved to our country.

Here we must stop. Though the productions of German industry are by no means so numerous, so rich, nor so varied as those of French industry, with which, excluding Austria, they may be most appropriately compared—though the Germans are in the Exhibition remarkably deficient in machinery their products are numerous and miscellaneous, and we can only, by treating of them under the various classes, refer our readers in which we scholastically examine the different products to be found in the Exhibition, do them justice in detail. In general, except as to cast iron, bronzes, chemicals, dyes, and some woollens, German industry seems a step below that of France and even England. It is, however, plain that the Germans have a great aptitude to improvement: we regard them as only recently aroused to a due sense of their relative position in knowledge, skill, politics, and morals, to the rest of Europe. They occupy a noble country; and as they become sensible of their wants, they cannot fail to ach eve a commanding success. In them we have great reason to be interested, and them we must wish to see strong, prosperous, and united. Let them stand between European civilization and Cossack barbarity; and we hope we have that the latter will not be suffered to advance and prevail westward, rests on the Germans, and rests on the improving people as contradistinguished from their interfering, and, we are afraid, sometimes retrograde rulers.

WARDIAN CASES.

In various parts of the Building the visitor may observe live plants, growing, in some instances, under handsome glass shades, and in other cases in glass frames, of no unprepossessing an appearance that he might naturally be at a loss to account for the reason why so uninteresting an object has been sent to the World's Fair. These contrivances are called Wardian cases; it having been first discovered by Mr. Ward, that by them plants can be transported to and from distant regions of the globe, and also that by their aid the Londoner can succeed in growing a few flowers to cheer his habitat on. Some years ago we remember to have seen the vessel about to start to survey the settlement of Adelaide, in Australia, and we were much delighted to see two or three of these cases filled with small gooseberry and currant trees, in order that the emigrants might enjoy those delicious fruits which we have in such perfection in this country; and now not a week passes but that ships arrive bringing plants from the remotest habitable regions in these Wardian cases, which have thus conferred upon us a power of procuring exotic vegetable productions, which before their introduction was never possessed.

Those more unprepossessing cases which may be seen in the East Gallery are the first cases which Mr. Ward made; and though, at the present time, their design has been much improved, yet it is interesting to have the first example of the invention. These cases form, as it were, a little world of themselves, in which plants live and grow, and produce many peculiarities. From being closed, the heat of the sun bestows upon them a very high temperature at times, and the hygrometric state of the atmosphere within varies according to circumstances, in a manner which gives interest the cultivation of plants, and give him ample means to exercise his observation and talent.

In London but very few plants will thrive. The Oriental plane rears its head in the heart of the City, in Cheapside, and forms a stately tree. Russelsquare and Euston-square exhibit, also, noble specimens of this beautiful tree; yet by coming into leaf late, and shedding its foliage early, it is not so susceptible of those influences which injure other plants. The lime tree will also partially flourish; and in the very centre of the Bank two noble and ancient lime shade the parlour from the scorching sun of summer, and yearly cast forth delicious perfume from abundant flowers. With these exceptions, flowers and vegetable structures can scarce be cultivated in London, except with the aid of a Ward's case. Residing in the very centre of the metropolis, we can write with the beautiful Ward's cases before us, which exhibit the most luxuriant foliage. In these cases we have at this moment the beautiful wax plant, or *Hoya carnosa*, in abundant flower. We have recently introduced the newly imported and lovely *Hoya bella*, which is also now in flower; and the beautiful *Erica* or *Heath* of *Portugal* is always ready to refresh us by its fragrance on opening the door of the case. We have five species of Lycopodia, which gratify the eye by their luxuriant green: and no less than fifteen or sixteen species of exotic ferns gladden the eye by their charming forms, their verdant foliage, and their elegance. The fern *Adiantum cuneatum bicolor*, never soiled by wet, are of surpassing beauty; and several species of *Achemenes* are rapidly growing to display their brilliant colours in the latter part of summer. Many of our plants have been in their present situation for years, and the delight which we have had in the observation and cultivation of them in the Wardian case, makes us look with increased interest upon those first examples of construction which Mr. Ward has contributed to the Exhibition. In one of those cases the observer may witness the celebrated Irish fern to be growing in full health, and the lovely little Tunbridge Wells filmy fern is also luxuriating. Our country friends will, doubtless, be much surprised when they are told that a small plant of the former fern, which grows wild in the Irish lakes, costs from five to thirty shillings in London. The sale of ferns and native orchids has become a trade in London; and the most successful collector, Mr. Potter, readily obtained a large sale in the neighbourhood of the Stock Exchange. As we have but few mountains and rivulets in our metropolis, there is now an opening for any equally spirited collector to come forward and supply the Londoners with the objects of the vegetable kingdom which are now so extensively cultivated and admired.

Mr. Marshall has lately constructed a Wardian aquatic case, wherein he grows many curious plants, and the miniature pond is overhung by ferns, which, doubtless, will thrive well in that situation. By simply preventing the access of the London smoke to injure the leaves, we have this year succeeded in growing cucumbers in the very centre of the metropolis, showing what may be effected when the deleterious gases which emanate from the combustion of coal are prevented from exercising their baneful influence.

We take this opportunity of calling attention to the Wardian cases, because, much as their use has increased, still they are not near so much employed in large towns as they ought to be. The cultivation of plants is an occupation delightful in itself, and one that is calculated to afford intense pleasure to those who follow the amusement. In that gloomy prison of Toteuville, where the inmates are debarred from their cell to seek passing cloud, it is recorded that the only pleasure which a prisoner could find was to watch from day to day the growth and flowering of a few pieces of grass, shepherd purse, chickweed, and groundsel when he took his daily airing in the little space allotted to his walk. Every London child should have his Wardian case, if ever on so small a scale. The love of the cultivation of plants would grow with a knowledge of their perfection, and the mind would be led insensibly by the true and natural process of thought, from a study of Nature's works, to the contemplation of Nature's God

EXHIBITION NOTES.—No 4.

"THERE is nothing new under the sun," except the Crystal Palace, and the pacific industrial union of all the nations of the habitable globe under its transparent canopy. It is curious to speculate upon some of the concurrents to this extraordinary effect, and some of the minor actualities which conspire to render the collection within its walls altogether so marvellous. At a first glance it may not seem strange, that, but for the invention and use of steam, its vessels and its railroads, there could have been no such national Exhibition; and yet it is equally certain, that, but for another small and apparently very remote cause, the design could not have been carried out. Had England not created the new police, England could not have enjoyed her present safe and glorious position within the precincts of Mr. Paxton's magic glass-house! If such widely different things have contributed to the possibility of the universal meeting, it is hardly less remarkable that the very vanities and inutilities so largely mixed up with its important features, must produce consequences almost, if not quite as pregnant, with great moral, political, and commercial results, as the more gigantic materials in manufactures, mechanics, and scientific progress. In fact, there are scarcely any things here that can be considered as trifles. An American president in soap is a stimulus to our Hawes' and Hendries'; a new crochet pattern is enough to set thousands of needles to work in every family where this ornamental and industrious pastime is pursued; models from the pith of rushes offer patterns for interesting and remunerative employment; and, not to multiply examples of this sort, let us only look at the department Class 20, Articles of clothing, &c., to see how curiously our tailors are set to inventions by the novelties exposed in the Central South and South Transept Galleries. In No. 64 we have a "monomeroskilon," which, being translated, means a dress coat of British manufacture from one piece of cloth. Close by it (No. 65) is an "autocromatic" gown and Cossack waistcoat; and near about, the "duplexa," or morning and evening coat; safety pockets that cannot be picked; ladies' dresses with elastic sides; cloaks with capes to prevent drowning; complete coat, trowsers, and gaiters without any seam; and others with no few seams in comparison with what have been, that it appears evident, in a short period, tailors, like *Hamlet*, will know no seams.

In like manner, hair and feathers have assumed valuable functions—far more comprehensive than could have been imagined till witnessed here in such combinations, varieties, new applications, and innumerable embellishments and uses. In Class 28 (furniture), No. 91, there is a screen of red roll silk from Scotland, whereon wreaths and baskets of flowers are wrought in feathers. In the Miscellaneous Class 29, No. 53, is a vase of flowers made from feathers; other vases of artificial flowers all around; and No. 63, the *Pictoria regia* (already noticed by us) in its various stages of development—

> The Queen all flowers among,
> The river's empress, lady of the lake.

Flowers composed of human hair belong to the species of the ingenious, without the prospect of any derivable profit; but the other floral beauties scattered over many departments are not unworthy of a somewhat poetical illustration. In addition to the just praise of their usefulness in regard to costume, their being a branch of the fine arts, and their applicability to the improvement of manufacture, in the hardest of metals as well as in the softest of fabrics. The vases just alluded to in the small wares exhibition, North Transept Gallery, do credit to the taste and execution of the workers in wax, shells, rice-paper, feathers, muslin, velvet, &c. They are mostly British, and range through the seasons. In one group we discover the early Primrose so justly a favourite with our elder bards, who have sung:—

> Pale primroses,
> That die unmarried, ere they can behold
> Bright Phœbus in his strength. SHAKSPERE.
>
> The primrose drop, the spring's own spouse.—BEN JONSON
>
> Primrose, first-born child of Ver,
> Merry spring-time's harbinger,
> With her bells dim. BEAUMONT and FLETCHER.

Her companion in the Crystal Palace, as in nature, is the Snowdrop, which

> First in bright Flora's train galantha glows,
> And paints with frosie step the melting snows;
> Chides with her dulcet voice the tardy spring,
> Bids slumbering zephyr stretch her folded wing.
> Wakes the hoarse cuckoo in his clonmy cave,
> And calls the wondering dormouse from his grave,
> Bids the mute redbreast chase the budding grove,
> And plaintive nightingale to tune to love.—DARWIN.

> Earliest but that decks the garden,
> Fairest of the fragrant race,
> First-born child of vernal Flora,
> Seeking wild thy lowly place.—LANGHORNE.

Congenial is the Crocus—

> In privy young thing
> Of life: then venturous flower,
> Who groweth through the hard cold bower
> Of wintry spring.
> Soft voiceless bell.—PRIOR.

And the Cowslip likewise

> Now ripe in vegetable gold,
> From calyx pale the freckled cowslip born
> Receives in amber cup the fragrant dews of morn

Thus tempted by the "sweet daughters of the earth and sky" as we have been to weave a garland of poetry into the descriptions of the utilitarians, it may not displease thousands of readers to afford them this play of the imaginative in the midst of their acquisition of knowledge in other divisions of this vast and multifarious resort. Well may the Daisy and the Violet follow these lovely harbingers of spring: there are charming models of both in this gallery; and when we recollect the opening by her Majesty, on the 1st of May, we cannot but recal the daisy tribute of Chaucer:—

> They bring in the kalendis of Male,
> * * * *
> An is special one called tye of the dale,
> The daisie, or flower white and rede,
> And in Frenche called la bel Marguerite.
>
> To hem I have as great affection,
> As I said erst, when comen is the Male,
> That in my bedde there dawith me no dale
> That I n'am up and walking in the mede
> To see this floure ayenst the sunne sprede.
>
> So glad am I, that when I have presence
> Of it to done it all reverence,
> As she that is of all floures the floure,
> Fulfilled of all vertue and honoure;
> And ever ylike faire, and fresh of hewe;
> And ever I love it, and ever ylike newe,
> And ever shall til I my life lese,
> Ade swere I not, of this I wool not lie.

To our poetic father we will add two other eulogies:—

> Star of the mead, sweet daughter of the day,
> Whose opening flower invites the morning ray,
> Sweet daisy, flower of love.—LEYDEN.
>
> Thou unassuming common-place
> Of nature, with that homely face,
> And yet with something of a grace
> Which love makes for thee.—WORDSWORTH.

The Violet has been still more deeply prized, and found many a voice to swell its praise:—

> Violets dim.
> But sweeter than the lids of Juno's eyes
> Or Cytherea's breath. SHAKSPEARE.
>
> Sweet violets, Love's paradise, that spread
> Your precious odours, when you couched beare
> Within your pale faces.
> Upon the gentle wing of some coy breathing wind
> That plays amid the plain. MILTON.

And also the Lily of the Valley, of which the Bard of the Seasons sings:—

> Seek the bank where flowering elders crowd,
> Where scattered wild the lily of the vale
> Her balmy essence breathes.

And Shelley :—

The naiad-like lily of the vale,
Whom youth makes so fair, and passion so pale
That the light of her tremulous bells is seen
Through their pavilions of tender green.

The Daffodil makes a very showy flower, to remind us of the true

Daffodils,
That come before the swallow dares, and take
The winds of March with beauty.—SHAKSPEARE.

Also the Lily

Queen of the garden in white mantle drest,
The spotless lily waves her curling crest.

The Water-lily is still more resplendent in its artificial form, and justifies the muse of Shelley :—

And floating water-lillies, broad and bright,
Which lit the oak that overhung the edge
With moonlight beams of their own watery light.

And Moore

Those virgin lilies all the night,
Bathing their beauties in the lake,
That as they may rise more fresh and bright
When their beloved suns awake

Substitute the Crystal Palace for the crystal river or the crystal well!

Others of our homely flowers are copied with a truth which seems almost to seem them! Thus we observe two of our aboriginal favourites—

Oft musing by the greenwood side,
'Mid blue bells deep, and golden broom,
Time's ancient gateway open wide,
And far adown the gathering gloom,
On many a mouldering Saxon tomb
The oldest flowers of England bloom.

But our illustration would be a beggarly account if we neglected the great horticultural rival for beauty and admiration, namely, the Tulip,

Which first
Are flushed with deeper, warmer stains,
Glows in each leaf with more than Nimrod's fires.
Then comes the tulip race, where beauty plays
Her idle freaks.—THOMSON.

And the Rose—

The garden star, the Queen of May,
The rose.—BEN JONSON.

'Tis said, as Cupid danced among
The gods, he down the nectar flung;
Which on the white rose being shed,
Made it for ever after red.—HERRICK.

With this we would close, but for a temptation, not to be withstood, where flowers are embalmed in a perfume of poetry, as sweet as that which makes the rose the sovereign of all the floral tribes. We therefore conclude with Herrick's pretty legend, how and why the Wallflower was so called :

Why this flower is now called so,
List, sweet maid, and you shall know.
Understand, this first-blow was
Once a lover, and a brave one,
(Kept as close as Daphne was),
Who a sprightly springall loved,
And, to have it fully proved,
Up she got upon a wall,
Tempting down to slide withal;
But the silken twist unty'd,
So she fell, and, bruised, she dy'd.
Love (pity of the deed,
As it lay) loving luckless speed,
Changed her to this plant we call,
Now, the Flower of the Wall.

It is to be regretted that the modelling of flowers and fruits in wax is attended with danger, in consequence of the poisonous nature of some of the colouring materials employed, such as white lead, vermilion, coppers, chrome yellow, &c. The handling of these is apt to produce partial paralysis; and, therefore, it is most advisable for our young and fair artists to avoid their mineral infection, and supply their place with vegetable matter, which is adequate to the production of all the required colours. On the arrangement of tints, we may add, much of the effect depends. Without taste in this respect, and even a scientific knowledge of complementary tints, a multitude of performances disagreeable to the eye are produced, instead of those harmonious unions which delight the sense, almost without our being aware of the why or wherefore. And when we consider how essential this intelligence is to the pleasing and beautiful in the manufacture of all coloured articles, we may learn that from the flowers of the field and garden there are lessons to be derived of infinite value to industrial art.

M. Constantin's attractive case, No. 94, of France and Algiers has been twice noticed in the ILLUSTRATED LONDON NEWS (June 7th and July 5th); and as no mechanism has been applied to similar objects with marked success. But in the one instance, we have botany developed to perfection by imitative skill, in the other we have ornithology, the most delicate, faithfully copied in metals the most stubborn. M. Constantin has thus lanched, if we may use the expression, groups of humming-birds little inferior to the real, in the Zoological Gardens; so that in art, as in nature, we get affinities running so closely into each other, that it is sometimes a difficulty to define which are the boundaries of their different kingdoms.

Turn which way you will, on every side there is much to be seen, curious, or amusing, or wonderful, or instructive—of the smallest, and of the greatest intrinsic value: mechanics, which render perceptible in steel the two-millionth part of an inch (Mr. Whitworth's), which the most powerful microscope, if a thousand times more powerful, could not make visible; an admirable front of Ely Cathedral in the pith of the common rush, with its niches filled with saints and apostles; the game of cockamaroo improved; parasols with stiletto, and murderous or defensive umbrellas; the very centerings of stuffed birds and beasts of Wirtemberg —here equal to Snyders, and there comic caricatures of the most diverting kind; cavalry jack-boots and Scotch brogues; a sack sewn and made without hands; hammers that will powder adamant to dust, or fall as softly as a moth alights on a leaf; locomotives and levers beyond the dream of Archimedes as to moving the earth; the wonders of the printing press; smoked hams from Kentucky, and plates and brickets of beef—such and so various are the sights within the compass of the Crystal Palace; and such but faintly indicate the inexpressible and infinite number of other objects with which the genius of man or the bounty of Providence has adorned and enriched the world: but why talk of the sights to be seen, since on our last visit we observed a blind gentleman at hour by a guide, and having the marvels of the place described to him as if he were an actual spectator!!

TOWN TALK AND TABLE TALK.

THE ultimate destination of the Crystal Palace is, I think, becoming the main subject of the town and table talk of the day. There seems likely to be a fierce battle fought upon the question, and, from all appearances, the probably successful party is still doubtful. The agitation in favour of upholding the structure is certainly more lukewarm than might have been anticipated, while the party whose war-cry is "The Park, the whole Park, and nothing but the Park!" is indefatigable in its exertions. Lord Brougham's behaviour in the matter does him infinite credit. He was one of the staunch early opponents of Cubitt in Hyde-Park; but now that the triumph of Mr. Paxton's edifice is so clearly a *fait accompli*—now that the general effect of the entire Exhibition has been undeniably so excellent, his Lordship boldly and manfully came forward, in the face of his old, as he avowed, mistaken opinions, and presented Mr. Paxton's petition. Lord Campbell's speech on the matter was certainly a triumph neither of reason nor jocularity. The grim *facetiæ* wherewith it was studded are very characteristic. Whatever may be "Plain John's" capabilities, joke-making is certainly not amongst them; and his efforts in the way strongly remind one of the worthy Dutchman who half shook a house down by jumping over the chairs, in his anxiety to obtain a character for liveliness. Connected more or less with the Crystal Palace have been the several suggestions which have been circulated for throwing glass roofs over several of the principal thoroughfares, turning them, in fact, into vast arcades; and the still bolder scheme hinted at of arching a square or two with the same transparent covering. Vaux's Inn-fields, for example, converted into a vast glazed flower and winter garden, would hold, at all events, a worthy position, forming, as it does, almost the very heart of London. The smoke, however, would be the great drawback. A fortnight's muggy weather would strew the whole surface of the glass with more "blacks" than there are in Africa, while nothing like the fine fresh air, which ought to breathe among the fruits and flowers of any garden, winter or summer, could, we fear, be entrapped beneath the glass athwart the roofs and chimney-pots.

Many of my readers have probably seen the unique letter of Bendigo, the "fistic" champion of England, an indignant reprobation of the French style of boxing with hands and feet, some specimens of which have lately been exhibited at various metropolitan gymnasia. After all, the professors of the noble art of self-defence have the strangest style of logic, and the most extraordinary notions of chivalry. They call their science "self-defence," whereas it consists just as much, or, perhaps, more, in the art of offending one's adversary punching his head, rather than guarding it from punches. Then again, there always, like Mr. Bendigo, virtuously indignant if the feet be used to help the hands, and suppose, as the French mode of the *savate*, just as an orthodox Churchman would repudiate Mormonism, for instance. To people, however, out of the ring, there does not seem such vast difference in getting one's eye blackened by a blow from a fist, from the same catastrophe taking place thanks to a blow from a foot. Indeed, except when heavy shoes or clogs are used, one would think that the foot is the less formidable weapon of the two. Mr. Bendigo can double up his hands and fingers so as to convert them into two solid lumps, about as hard, we should suppose, as cannon-balls; but he can do nothing of the kind with his feet and toes: so that his pathetic complaint about the bloodthirstiness of the adherents of the *savate*—in which, by the way, there is far more fun than in boxing, produced by the incessant falls of the combatants, as they seize hold of each others uplifted ancles does not appear to be very surely founded. Another curious fallacy of the admirers of the "ring" is, that, as fisticuffs go out, knives necessarily and inevitably come in. These good gentlemen can never conceive the notion of people living together without attempting to do violence to each other in some way. But do not the same influences which are gradually suppressing the boxing as one of our "institutions," naturally tend still further to suppress stabbing, which is certainly more fatal and dangerous than boxing? As to kicking as well as killing, the notion that it is "foul play" is merely founded upon conventional regulations. The "ring," or whoever was the Numa who first drew up its code, might have decreed that boxers should only strike with the right hand—that a blow from the left would be "foul." The left hand was not, however, forbidden. The feet were. But the admirers of the "ring" unless they admit that they have beaten each others brains into a state of softness—ought to try to be more reasonable in their pretences, and more logical in their conclusions.

Talking of boxing, and the good old times when it was in fashion, a novel has just been published by Lord William Lennox, containing what purports to be a true picture of what Westminster school was in the first quarter of the present century. I presume, from the matter-of-fact tone and style of the book, and from the numerous allusions to real personages which it contains, that the delineation is to be accepted as one literally *bond fide* picture. If so, there has been nothing for a long time published more startling. The leading Westminster boys are represented as being in the constant practice of visiting and associating with the celebrated flash thieves, burglars, and horse-dealers who then infested the purlieus of Tothill-fields. The names and history of many of these gentry are given, and their careers traced to the gallows upon which they suffered. One of these, the famous William Habberfield, of the Westminster boy, Percy Hamilton—a mere sobriquet, as most people who read the book will think, for the noble author—states it was his "greatest ambition to be introduced to." Accordingly, his ambition is gratified, and a scene sketched in which the worthy in question, who is said to have been "the safest *fence* on town," that is, the most accommodating and convenient receiver of stolen goods, is represented as, in the full bearing of the young Westminster gentlemen, giving directions to his gang for the commission of certain stolen property, and the baffling of the police. The cool *naiveté* with which all this is told, and the impression so frankly left upon the reader's mind, that the author never had any idea that there was anything in the slightest degree discreditable in the connexion—all this is quite curious in its way, and certainly throws a startling light upon the moral discipline of great schools, at all events, in the period in question.

The scientific debates held by the congress lately assembled at Ipswich were rather sparingly treated by the newspapers, who fought shy of the sections, and laid themselves out more for the sipping and doings of Prince Albert. In the regions of chemistry, however, some noteworthy remarks were made. Alchemy is not a process in which people now-a-days have much faith. They mention with a sort of pitying smile the search after the philosopher's stone, and the mysterious transmuter of metals, poring with white beard and shaking skinny hands over his everlasting crucibles, and think with a chuckle what a shame it is that he must have been to dream that bad pence made of lead and pot-metal could be transmogrified into shining clinking sovereigns. Not so fast, gentlemen, if you please. Chemistry and the cognate sciences are certainly more advanced now than ever they have been. We are in a fair way—we only want a certain number of degrees of heat, or certain combinations of materials, and the electro-gists are boasting that they have produced animal life, and with them, touching the transmutation of metals. Dumas, the great French, and Faraday the, if possible, still greater English chemists, both declared their belief in the possibility of transforming the baser into the more precious sorts. They have based their belief in the doctrine that all metals were formed of the same materials of basis, mixed in different proportions, and added that a change in the mixture of the component parts, which might possibly be accomplished by chemistry, would be nothing more than changing one metals. I believe I am not wrong in adding that Sir Humphry Davy held the same creed; and I lighted the other day upon a very remarkable letter addressed by Sir Isaac Newton, when Master of the Mint, to Boyle, the experimentalist—that Boyle, who will be recognised by many as the "father of chemistry, and the uncle of the Earl of Cork;" the purport of the communication being, that the philosopher, with commendable *co-fervis* exactness for the value of the legal tender, earnestly entreated his fellow-labourer in science, out of regard for public and national interests, not to divulge the great arcana of projection, of which it was rumoured he possessed the knowledge. Sir Isaac's fears were premature; Boyle wrote "meditations," and the Dean of St. Patrick's quizzed them, but he never drenched the world with golden pills, lest the present lord of the establishment on Tower Hill, or any other patron of the present currency, should be troubled with dire visions of a second Calfornia in a workable, I may add that, in the opinion of the Ipswich *savans*, the chemical process of making gold will not, even when achieved, be far more expensive that the commercial process of buying it ready made.

The experiment made by the French philosopher, who coolly dipped his hands into a large crucible of molten iron, red hot, and sparkling and crackling, has simply been mentioned in the columns of nearly all contemporaries. From a gentleman present, I glean the following particulars:—The professor equipped himself in a sort of leathern cuirass, to ward off the heat from the chest, and with what may be described as the top part of gauntlets, fixing round the wrists and extending up to the elbows—of course, leaving the hands bare; ever his mouth he had bandaged a wet cloth. Thus prepared, he smilingly approached the glowing metal, drew deftly off a diamond ring, dipped his right hand into a basin of water, and then deliberately plunged it into the iron bath, keeping it plunged fairly in while you might count tolerably quickly three or four, and, upon plucking out, waving the hand briskly to and fro in token of perfect impunity. The process was repeated first with the other and then with both hands, not a burn or a singe testifying to an unprotected part of the flesh. The explanation of the experimenter was, that the natural state of the skin was his sole shield—that the expansion, on its connexion into steam, of the moisture defended for a moment the flesh from the molten metal. The feeling, however, was general, that to a previous private application of sulphuric acid this modern salamander owed his curious immunity from the terribly condensed form in which he braved the "devouring element"

The wane of the season is beginning to be visible in the decreased number of concerts, and the few new exhibitions now being opened. Parliament seems, however, to be getting thicker and thicker on the day on which the Park guns will sound their prorogation draws near. When the Lords do sit, they go through the thing in style. Generally, indeed, hereditary legislation seldom interferes with dinners, and the hereditary Bellamy cannot expect to make a very rapid fortune. But sometimes the Lords do make up for the usual infinitesimal sittings by a dismally long fit of talk. Bright morning shone through the painted windows the other day before the Chancellor left the woolsack, and the mighty majority upon the Ecclesiastical Duties Bill was secured. Parliament will, as usual, be prorogued more or less about the middle of August, commencement of grouse-shooting. Every session, and this has formed no exception, rumours fly about, prognosticating an early day for "being up," and quoting all manner of authorities for the assertion: the Speaker had said so—an Irish member had been heard to hint so—the people at the Treasury were certain—the committee clerks had managed to find out —Lord John Russell had stated as much in profound confidence to Lady John Russell, and so forth; but always, as July wanes, the mirage of prorogation flies and flickers with it; and nothing, as it would seem, but the smell of the heather and the whirr of the startled grouse can break the spell which binds honourable members to the red cushions beneath them and the glaring Bude light above.

A. B. R.

TO CORRESPONDENTS.

THE IONIAN ISLANDS IN THE EXHIBITION.—In reference to an article on this department of the Great Exhibition, in our Supplement No 699, of July 5th, we are requested to state that not one of the articles exhibited have been contributed from the Islands; but they are a collection of articles of Ionian product and manufacture, in the possession of English gentlemen who have served in the Ionian Islands, brought together from an interest desire on their part and that of an Ionian gentleman long resident in this country, that the *lustre* of the present Lord High Commissioner might not altogether prevent the Ionian Islands from being represented in the admirable congress of the world's industry. Indeed, we learn that the Executive Committee, were the locality was brought to their knowledge, under high auspices, took it up warmly, that they immediately gave the space required by the Ionian gentlemen, and ordered all the necessary fittings to be put up at their own expense

BOOKWORM.—We learn that in the list of Swimming Invasions, published in the ILLUSTRATED LONDON NEWS of the 26th instant, the swimming shoe or boot, with flappers, is the invention of Colonel Macarcon, published in his memoirs, about the year 1817

WE are requested to state, that in the article, "A Lady's Glance at the Exhibition," in our paper of Saturday, the 19th July, the silk, which the writer characterises as the chef d'œuvre of Spitalfields production is not exhibited by Mr Dear, or designed by a pupil from the School of Design, but is exhibited by Messrs Lewis and Allenby, of Regent-street, and designed by Mr S Lewis, Jun

A SUBSCRIBER.—There will not be another State Visit to the Opera this season, which will close next month

P E S, Colchester; and MATHEMATICUS We have not the address

A WORKING MAN.—We have not space for your letter

M B—Your coin is a satirical medal of the sixteenth century, struck in derision of the Roman Catholic faith

A [illegible]-RIDER—See Lords on the "Steam Eagle."

AN [illegible]—See Crunchy's New Picture of London

C W, Great Town-street, is thanked but we have not room for the Portrait

S [illegible]—See John Sebright on "Hawking"

AN [illegible]—Edinburgh (Scandinavian)—See a paper in *Fraser's Magazine* for July, 1851

NO [illegible]—See Marina a Mole. It is the Rue St Honoré. Paris

A SUBSCRIBER.—Is not likely that the National Gallery pictures will be [illegible]

[illegible] Palace

J B E, Twickenham is in error: the portraits are correctly named

A P T, Limerick—See the works on Emigration now publishing by Chambers, Edinburgh

J E F and T Q J, Cheltenham—We do not

J P, Middleton—[illegible] of a printer's imprint is Enable

H R B, Bath—[illegible] but we have not room for the sketches

A [illegible]—See Pepys's "Reminiscences," and Bishop Watson's work

A [illegible]—See the pieces in LOCKHART'S Ballads

ARTHUR'S DEVONIENSIS—The Exhibition Supplements are intended to be bound with the other Numbers

C H—See the work on Wardrobes [illegible] Van Voorst, Paternoster Row

W D [illegible]

J [illegible]

H [illegible]—[illegible] award for his blue diamond £13,000

[illegible]—See the recent Gaudila Bag

[illegible]—It is expected that the Great Exhibition will close about the [illegible]

[illegible] states that in 1849 a pamphlet was published, by Major R Carmichael Smith on the scheme of a railway through British America, as now proposed by Mr Asa Whitney

ALEX. JUN.—We have not time to see to it after review

CHARLES JOHNSON The Patent Swimming Stockings are made by Cox, George Mills, Edgware, N.B

AN OLD SUBSCRIBER.—Cards to view St James's Palace can only be had at the Lord Chamberlain's Office

T J J, Liverpool—We shall be glad to see the Sketches

G N—A Guide to Fort Philip has recently been published

WISDOMSON, Manchester, will receive [illegible]

W L should address his letter to [illegible]—Call the Hon G D Phipps, Buckingham Palace

APOLLO.—We inquire as to the best mode of obtaining a [illegible] in the Bank of England, as [illegible] that his patronage is shared among the Directors, whose names are annually published in the almanacks; the Governor and Deputy-Governor having each a larger share than any other Director

D W E, Dover—The Exhibition Supplements are intended for binding with the other Numbers. The height of the rock of Gibraltar, according to Cuvier, is 1337 English feet

DISCIPLE OF CONSTANT, Galway—Messrs Nenning, Fleet-street

THE AGRICULTURAL DEPARTMENT.

THE AGRICULTURAL DEPARTMENT.—Class IX.

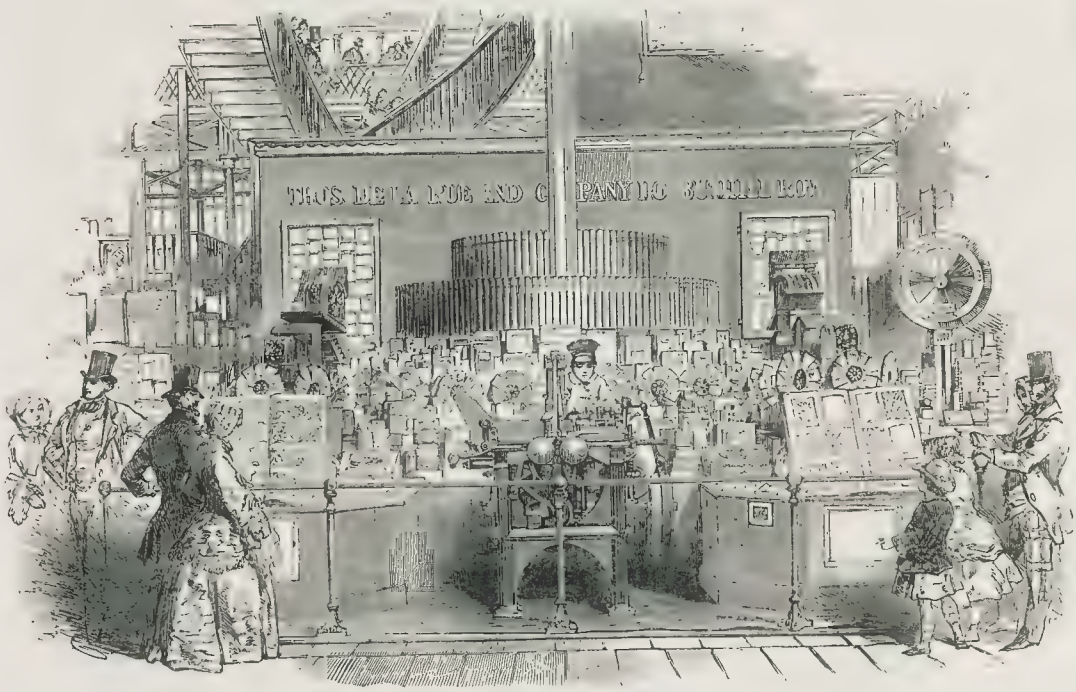
The extra attraction of the Cattle Show at Windsor has brought an immense number of agriculturists from all parts of England, and, as may be expected, Class 9 of the Great Exhibition has been unusually crowded of late; in fact, there has been scarcely room to move, without finding oneself entangled amongst the innumerable prongs, knives, spikes, and other formidable-looking apparatus here offered for the inspection of the farmer, and exciting the wonder of the uninitiated.

Class 9 has received, ever since the opening of the Exhibition, a large amount of attention from all classes, and especially from foreigners, numbers of whom may always be found examining with great interest the details of the various machines, and discussing their numerous advantages. They have also given orders for an immense number of every description. Nor have the English farmers allowed so splendid an opportunity to pass by of setting themselves up with a fresh stock of improved implements, one firm alone having received orders at their factory, since the opening of the Exhibition, for £4000 worth of agricultural implements, to be executed similar to articles exhibited by them in Hyde Park. But perhaps the most gratifying sight in visiting this class is to watch the interest taken by the large number of agricultural labourers in the immense variety of things here exhibited, and upon which they are well able to form opinions. To these men an exhibition of their own everyday working gear, of such variety, beauty, and ingenious design must be a great treat. Their masters have been in the habit of seeing similar collections at the annual agricultural shows; but the labourer, who seldom leaves the land on which he works, can have had but few opportunities of seeing more than the old-fashioned implements of his own locality; hence much of the absurd prejudices so frequently found among this class, but which this Exhibition, more than any other thing of this time, will tend to remove. Of the immense variety in the form of the tools he uses, he could have formed no notion. There are a hundred ploughs in this class, no two of which are precisely alike. That a great change has of late taken place in the opinions and practice of the British farmer, there can be little doubt; for many of the ingenious contrivances (for their advantage as well as that of the public) here exhibited have been many years in forcing their way with these practical men, who invariably have heretofore set their faces against them simply because they were new. This is not now the case; agricultural machinists are well supported by the farmers, who buy immediately anything that is offered as an improvement with a fair chance of success. This is caused by their now being driven to study the principles of the machines they use, and which enables them to form better judgments of what they should purchase.

One may often now observe gaitered gentlemen from the country opening fire-doors of engines, counting tubes, and discussing the relative merits of oscillating trunks or fixed cylinder engines, in the most learned manner, of whose very existence a short time since they were utterly ignorant. Let us hope that these are some of the many benefits we shall receive from the more enlightened policy now pursued in reference to agriculture.

DE LA RUE'S STALL.

The annexed Engraving of the stall of the Messrs. De la Rue will afford perhaps agreeable reminiscences to the thousands who have watched the process of envelope-making by the ingenious machinery here employed, which we described in a previous Number.



DE LA RUE'S STALL.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, August 2, 1851.—Supplement

THE ILLUSTRATED LONDON NEWS

No. 508.—VOL. XIX.] SATURDAY, AUGUST 9, 1851. {TWO NUMBERS, 1s. WITH HALF-SHEET SUPPLEMENT, GRATIS.

THE FESTIVITIES AT PARIS.

THE succession of brilliant scenes which have taken place n Paris during the present week will long be remembered throughout the world. The Prefect of the Seine, in the name of the great city of Paris, and, to some extent, in that of the French nation, has invited the Chief Magistrate and civic dignitaries of London, the Mayors of the English provincial towns that were represented at the Great Exhibition, the Royal Commissioners, the Executive Committee, and all the persons whose names and labours were associated with that work, together with a host of other distinguished Englishmen, to accept the hospitalities of France, upon the French soil. The generous invitation was freely accepted; and for five days Paris and her magistrature, with a profuse expense, with the most excellent judgment, with the most consummate good taste, with the most kindly feeling, and with the most painstaking zeal, have endeavoured to show their English guests that they did not under-rate the importance of the occasion, or the effect it was destined to produce, not only on the public

GREAT EXHIBITION FETES AT PARIS.—COURT YARD OF LOUIS QUATORZE, AT THE HOTEL DE VILLE.—ARRIVAL OF THE LORD MAYOR OF LONDON.

opinion of these two mighty nations, but on that of the whole civilised world.

All the preliminaries, accessories, and accompaniments of the scene have been in harmony with the original idea of the festivities. When France held out the hand of good-fellowship to England, she did so with the full determination that heart should go with hand upon such an occasion. The city of Paris not only gave her guests a free passage by rail and by sea, but for this once abolished the passport system; and, what was perhaps still more agreeable, the inspection of luggage at the Custom-house. France neither examined the Englishman's portmanteau at Boulogne, nor did the city of Paris examine it for her *octroi* at the entrance of her barriers. From first to last there has been nothing but good feeling and polite arrangement; and we are certain that no Englishman who had the privilege of forming one of that distinguished party will ever forget the cordiality of his reception, or fail in his own country to reciprocate it, should opportunity arise, as it certainly must, when Paris shall pay London a return visit.

The year 1851 bids fair to be celebrated in all future times as the Year of Peace. The Great Exhibition first gave it that character, and all the events that from time to time have sprung out of it have confirmed and strengthened that ennobling reputation. It has, in fact, been a year of Peace Congresses, with this difference between its Congresses and all former ones, that, in all its proceedings, Peace was a practical fact, and not a barren idea—a thing done, not a thing spoken of—a living principle, and not a fine-spun theory of Utopians. And certainly it is not a little remarkable, when we consider things in this light, to find that the most warlike nation in the world—the nation amongst whose children military renown is a passion inculcated and instilled into them from the very earliest period of their lives—has enacted Peace in so splendid and successful a manner. When the Mayor and authorities of Boulogne welcomed to the French soil the Mayor and Aldermen of London, and pledged in bumpers of generous wine the future and growing friendship of Great Britain and France, we had a real Peace Congress, not the less remarkable, or the less gratifying, for its being the first of a series. When the municipality of Amiens performed the same functions, in a manner equally cordial, we had Peace Congress the second; when the Prefect of Paris threw open the magnificent hall of the Hôtel de Ville, provided with a banquet as grand as the place and the occasion, we had Peace Congress the third; when the Prefect invited the same circle of guests, and thousands more, to the fairy galleries and sylvan shades of Versailles, and when the waters of innumerable fountains sparkled in the glowing sunshine of as lovely a day as ever dawned, and the crowd shouted with delight at the romantic and almost incredible splendour of the scene—we had Peace Congress the fourth. The gorgeous festival given by the President of the Republic in the galleries and gardens of St. Cloud was an event as worthy to be called a Peace Congress as any of its predecessors; while the ball at the Hôtel de Ville—a spectacle of a magnificence not often witnessed in the sober working world in which we live—might be called the crowning festival of the series. Did we not remember that the spectacle of the great review in the Champ de Mars, and the dramatic representation at the opera, were each, in their own peculiar manner, as splendid and as gratifying as those which preceded them. It is difficult to speak or write of scenes like these, if we express the admiration and approval which they demand, without using language that, to those who were not privileged to be present, may appear exaggerated and hyperbolical; but even the cooler judgment of those who will merely read of these scenes will approve the spirit which dictated them, and look hopefully towards the good results that cannot fail to flow from them.

One other point of view from which these *fêtes* may be regarded is too important to be left entirely unnoticed. What impression with regard to the principles of municipal government will the dignitaries of London and the other Englishmen present carry away from these scenes? and what impression will be produced upon the French, who, for the first time, will have learned to compare Paris as a municipality with London as a municipality? Doubtless, both will have much to learn. The Londoners will see in Paris a real city—one and indivisible like the Republic itself, with a jurisdiction simple and comprehensive, into which no alien interests or monopolies are allowed to thrust themselves, to direct or to impede; a municipality competent to plan, and powerful to execute improvements; and with great wealth, which is employed not only in splendid hospitality, but in making Paris the most beautiful and agreeable city in the world. But they will see at the same time that the chief magistrate of Paris is a political officer, a man over whose appointment the people have neither directly nor indirectly the slightest control; that he holds his place at the commands and exigences of political parties; and that, although Paris is so large, so simply and effectively organised for government, and so rich and powerful, these advantages are purchased at the sacrifice of individual liberty, and the right of popular election, so dear to the English, as well as at the large cost of a tax upon food and drink and other articles entering the city. On the other hand, the Parisian who for the first time in his life shall inquire what sort of a municipality is that of London, will be told that its officers are entirely independent of Government and Government control; that they are the choice of the people—freely elected; and that they have often in times of political difficulty and danger, stood forward successfully as the champion of the popular cause, and braved, like Beckford, the displeasure of the Majesty of England in defence of those principles which they considered to be right. They will learn, however, at the same time that London and its Lord Mayor do not represent, in fact, the great metropolis of Britain—that London (*proper*) is but an insignificant fraction of a still mightier and more modern city—that the real London of the nineteenth century is composed of several distinct cities and boroughs—that the jurisdictions are at times conflicting—and that our chief town is, like our constitution, the result of a piece of patchwork and expediency, with many absurd things about it, yet on the whole in accordance, to a great extent, with the conservative, yet improving, spirit of the people. If London is poorer than Paris in wealth and power, he will see that London is richer than Paris in freedom, and in the inestimable right of self-government. Shall not both cities learn something from each other? We think they ought, with mutual advantage; and that, in point of fact, London has the most to learn of the two. The City of London is not fitted for its time; it needs adaptation to modern circumstances, and requires to imitate, in many things, its more powerful and better organised friend, the City of Paris.

At all events, whether these lessons are to be derived or are derivable from the visit which has just been paid, we most sincerely trust, that they have served, or will serve, to cement the growing friendship between the two countries. A firm and cordial alliance between them, and what perils would menace the liberties of the world? None whatever.

STATUE TO THE LATE SIR R. PEEL.—Mr. Baily, the Royal Academician, has completed the model of his statue of the late Sir R. Peel, which is to be erected in the town of Bury, after it is cast in bronze. In this statue the deceased statesman is represented in an attitude in which he was frequently wont to address the House of Commons. His left hand resting on his hip and his right extended. In expression, figure, and posture, this statue bears a strong resemblance to the late right hon. Baronet. It is 10 feet in height, and stands upon a raised slab measuring 12 feet. The upper part of the pedestal is to be ornamented, with a group, in high relief, of agricultural implements, and on either side are to be placed bas relief figures representing Truth and Justice. In front will be affixed the arms of the town of Bury, and on the sub-plinth a head of Minerva; and at each of the corners, emblematical of arts and science. The pedestal will be composed of granite, and the ornaments will be raised on it in bronze.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Exhibition *Fêtes* (a full account of which is given in another page), and the general apathy and indifference to political questions and Parliamentary business which the near approach of the prorogation of the Assembly has naturally created, have left absolutely nothing of a more serious character to be met out in the news from Paris this week.

Marshal Jerome Bonaparte is seriously indisposed, but hopes are entertained of his recovery. His complaint is cholera and diarrhœa, attended with fever.

Considerable injury has been sustained at Lyons by the rising of the waters of the Rhone, some parts of the city being completely inundated. The waters, however, have begun to subside, and it is believed that the greatest danger is over.

UNITED STATES.

Accounts from New York to the 24th ult. mention a rumour as prevalent in that city of the occurrence of an insurrection in Cuba, which, however, some accounts says is exaggerated. The report is, that there has been a conflict at Principe, in the interior of the island, between 500 and 600 of the people of that place and the troops, in which the latter were defeated; that troops were sent to disperse them, but were repulsed with the loss of their commander, and 28 killed and wounded; the insurgents had retired to the mountains, and fortified themselves; that other towns followed the example at revolt, and that in a few days the whole eastern part of the island was expected to be in a state of revolution. The Havana papers say little on the subject; and it is understood the Government are doing all in their power to prevent the true state of things becoming known.

A banquet was given on the 21st ult. to Dr. Hughes, the Roman Catholic Archbishop of New York, in celebration of his return from Europe. Nearly 200 of the principal gentlemen of New York were present at the Astor House on the occasion. The first toast, as at the entertainment in Liverpool to the same personage, was the health of the Pope. The Hon. Daniel Webster, Secretary of State of the American Government, proposed as a toast, "Religious toleration and charity."

Another fugitive slave case had recently occurred. A Negro, named Daniel Hawkins, was arrested at Lancaster, and, on being taken before the United States Commissioner, he was ordered to be set back to the owner in Maryland. Great excitement existed, but no violence was offered in opposition to the law.

A terrible tornado swept over a portion of Oneida county, New York, on Wednesday, the 16th. It came in a south-west direction from Whitestown, and over that town in a no-thorly direction, sweeping a tract also it half a mile wide; twisting off the largest trees, unroofing buildings, prostrating churches, and for a long distance in its wake.

Jenny Lind was at Rochester, where the feeling was most enthusiastic, and the sale of tickets for her concerts was immense. They were bought up by speculators, and selling in the streets at a large premium.

The cholera is very prevalent in several of the Western states of the Union. A number of fatal cases have occurred in various towns of Illinois, Indiana, Missouri, and Ohio, and the pestilence appears to be spreading with alarming rapidity.

The United States steam-ship *Pacific*, which arrived at New York on Monday night, July 21, sailed from Liverpool on the 10th, when she was eight days out; viz she broke a part of one of her engines, which rendered it necessary to stop and disconnect the two, causing a delay of three hours. The rest of the passage was done with a single engine.

The yellow fever is making havoc at Cuba among the troops recently arrived from Spain.

NAVAL AND MILITARY INTELLIGENCE.

STAFF APPOINTMENTS.—Brevet Major Gilman, 68th Regiment, has been appointed to act as aide-de-camp to the Governor of Malta. Captain Waddell, 3rd West India Regiment, has been appointed aide-de-camp to Major-General Bunbury, commanding at Jamaica. Lieut. Chad, her Majesty's 6th Regiment, has been appointed aide-de-camp to Major-General Godwin, about to proceed to Bengal. Captain Black, half-pay staff corps, has been appointed military secretary to Lieut.-General Wood, commanding in the Windward and Leeward Islands.

THE WAR MEDAL FOR AVA.—The medal lately granted for the war in Ava, from 1824 to 1826, is now in course of distribution to such as have proved their claim thereto.

MILITIA PAY BILL.—This bill has been printed by order of the House of Commons. Its purport is to defray the charge of pay, clothing, and contingent expenses of the disembodied militia in the United Kingdom to grant allowances in certain cases, and to authorise the employment of non-commissioned officers. The rates of pay, &c., will be inserted in the bill in committee.

CHELSEA HOSPITAL.—The grounds of this Institution are about to undergo great alteration. The canals which, until lately, supplied the building with water are to be drained and filled up. This alteration will add much to the improvement and health of the place, and afford additional space to the public.

INSTALLATION OF A MILITARY KNIGHT OF WINDSOR.—Last week, Mr. Scott, who had retired from the 9th Foot, after 50 years service, and been quarter-master of the 1st Royals in 1807, was installed at St. George's Chapel as a military knight. The *United Service Gazette*, in a notice of the ceremony, states—"The Hon. and Very Rev. G. N. Grenville, the Dean, and Rev. Canon Markham, &c., officiated. There were 12 military knights present, including the gallant old veteran, who fought at Trafalgar. The new knight was led to his seat, with the usual ceremonies by Captains Ellison and Kinly, junior knights—all of his pay patent was delivered to him." Mr. Scott has received the silver war medal and clasps for Corunna, in the Peninsular war, where he was present at Vimiera, Vittoria, San Sebastian, Nivelle, and Nivo.

EAST INDIA CADETSHIPS.—The following is a copy of the points upon which candidates for direct appointment will be examined before they are passed as cadets, agreed to in accordance with a resolution come to at a Court of Directors held on the 22nd of January last:—1. Each candidate will be required to write English from dictation. 2. He should possess a competent knowledge of the ordinary rules of arithmetic, including the rule of three, compound proportion, simple and compound interest, vulgar and decimal fractions, and the extraction of the square root. He should also have read the first three books of Euclid. 3. In language he should be able to translate into English passages from Cæsar's "Commentaries," or from the first four books of Virgil's "Æneid;" and he will be further expected to parse, and show his knowledge of grammar and syntax. The candidate will be required to translate from French into English an extract from one of the following works, namely, "Telemachus," "Voltaire's "Charles the Twelfth," and "Peter the Great." He will have the option of being examined in the Hindustani in lieu of the French language; and in that case he will be required to translate from Hindustani into English an extract from one of the following works, viz. "Baghi o Bahar." "Tota-kahanee." In history he should be prepared to pass an examination in Keightley's "Histories of Greece and Rome;" in Gleig's "History of England;" and in the "History of British India," contained in the 3 vols. of the "Edinburgh Cabinet Library." 5. In geography he should possess a competent knowledge of the modern divisions of the world, the principal nations of Europe and Asia, the names of the capitals of each nation in Europe, and of the principal cities in Hindostan; and the names and situations of the principal rivers and mountains in the world. 6. In fortification he should have read some elementary work on the subject (Sir Howard Douglas's "Abridged Treatise," or Macaulay's "Field Fortification"), and have received some instruction in drawing.

FIRE AT THE ROYAL ARTILLERY FORAGE STORE.—WOOLWICH.—About twelve o'clock on Monday an alarm was given that the large forage store for the horses of the mounted men, situated on the north side of the artillery-place, and opposite the north entrance to the barracks, was on fire. The engines of the Royal Artillery, the Royal Sappers and Miners, and Royal Marines were promptly on the spot, but the supply of water was obtained, all attempts to stop the progress of the combustion of the hay, straw, and oats in sheds was ineffectual for upwards of two hours.

THE VELASQUEZ PORTRAIT OF CHARLES I.—An interesting question came before the Jury Court of Scotland last week, in which Mr. Snare was plaintiff, and the Earl of Eglinton was defender, with respect to the celebrated portrait of Charles I., by Velasquez. Mr. Snare, the plaintiff, is an upholsterer and dealer, and purchased the portrait of a Mr. Kent, of Oxford, and afterwards exhibited it in Dowling, London, and Edinburgh. Whne exhibiting it in Edinburgh the trustees of the Earl of Fife claimed it, presented a rule on the north side of the jury-place, and opposite the north entrance to the barracks, was on fire. The engines of the Royal Artillery, the Royal Sappers and Miners, and Royal Marines were promptly on the spot, but the supply of water was obtained, all attempts to stop the progress of the combustion of the hay, straw, and oats in sheds was ineffectual for upwards of two hours.

THE VELASQUEZ PORTRAIT OF CHARLES I.—An interesting question came before the Jury Court of Scotland last week, in which Mr. Snare was plaintiff, and the Earl of Eglinton was defender, with respect to the celebrated portrait of Charles I., by Velasquez. IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—SATURDAY, AUG. 2.

Their Lordships sat for a short time at noon, to forward the bills on the table a stage.

The Metropolitan Sewers Bill was read a second time.

The following bills passed through committee:—The Battersea Park Amendment and Extension; the Sheep and Cattle Contagious Disorders Prevention; the Commissioners of Railway Acts Repeal; the Lands Clauses (Ireland) Consolidation; the Steam Navigation, and the Customs.

The report on the New Forest Deer Removal Bill was received.

The Coal-whippers (port of London) Bill, was read a second time.

The Mercantile Marine Act Amendment Bill, the Grand Jury Cess (Ireland) Bill, and the Medical Charities (Ireland) Bill were each read a third time and passed.

The Lunatics (India) Bill was read a second time.

Adjourned.

HOUSE OF COMMONS.—SATURDAY, AUGUST 2.

The House held a short midday sitting

On the motion of Lord J. RUSSELL, the order of the day upon the Charitable Trusts Bill was read, and discharged, as it was not his intention to proceed further with the measure this session.

OLD HOUSE OF COMMONS.

Sir E. N. BUXTON asked the noble Lord whether it was the intention of the Government to order the present building to be pulled down during the recess?

Lord J. RUSSELL said that when the hon. baronet had first asked him the question, he stated that, in consequence of the uncertainty which existed in respect to the restoration of the New House of Commons, it was not considered prudent to allow the present House to be pulled down. From the experience which they had since had of the new building, they were of opinion that the experiment was so satisfactory that they might feel certain of being able to occupy that house permanently from that session. The Government had therefore come to the decision to allow this but ding to be pulled down in the recess, in order to carry out the architectural arrangements. (Hear, hear.)

CASE OF ROBERT ERSKINE.

Sir E. N. BUXTON wished to ask the right hon. Under-Secretary for the Colonies a question respecting the case of Robert Erskine, on the coast of Africa, towards whom great cruelty had been practised. The young man was accused of robbery, and was most barbarously tortured, as was alleged, by the orders of two officers in her Majesty's service, named Murray and Stewart, for the purpose of making him confess. He wished to ask his hon. friend whether he would inform the House of the nature of the correspondence that had passed between the Colonial Office and the Commander-in-Chief in respect to this matter?

Mr. HAWES said that if the hon. Baronet would move for the correspondence, he would be willing to assent to its production. The case was one, no doubt, of great atrocity; but being committed by individuals not in the service of the local Government, it unfortunately did not come within the operation of the statute for the punishment of offences committed in the colony. The case was brought subsequently under the notice of the Commander-in-Chief, and he (Mr. Hawes) would read to the House the concluding paragraph of a letter which he had received from Lord Stanley Somerset, conveying Sir W. Medhurst's decision on the subject. "In reply, I have to acquaint you that his Grace also feels that imputations of great seriousness are raised, and supported by a considerable body of evidence, against officers in her Majesty's service; but having considered the whole matter with anxious attention, and being advised that the officers in question cannot be tried or punished by court-martial for an offence committed now three years ago, his Grace is at a loss to suggest to Earl Grey what further proceedings could be taken against them."

THIRD READINGS.

The following bills were severally read a third time and passed:—The Metropolitan Interments Bill, the Attorney and Solicitors' Regulation Act Amendment Bill, the General Board of Health (No. 2) Bill, the Church Building Act Amendment Bill, the Petty Sessions (Ireland) Bill, the Summary Jurisdiction (Ireland) Bill, and the Constabulary Force (Ireland) Bill.

The remaining orders on the paper were then advanced a stage.

On the motion of Mr. G. A. HAMILTON, the Lords' amendments to the Churches and Cathedrals (Ireland) Bill, and to the Ecclesiastical Residences (Ireland) Bill, were considered and agreed to.—Adjourned.

HOUSE OF LORDS.—MONDAY.

The General Board of Health (No. 2) Bill, and the Emigration Advances Districts (Scotland) Bill, were severally read a second time.

On the motion for the second reading of the Metropolitan Interments Bill, The Bishop of LONDON complained that the powers that had been assigned to the Board of Health, and the unsatisfactory way in which the commissioners had interfered with many of the existing burial-places in the metropolis, where it seemed they and authority enough to disturb the old system of interment, but not enough to establish a new one.

The Earl of SHAFTESBURY vindicated the Board of Health.

After some further conversation, the bill passed the second reading.

The Coal-whippers (Port of London) Bill went through committee.

The Commissioners of Railways Act Repeal Bill was read a third time and passed, after a short discussion and a division.

The Customs Bill was also read a third time and passed.

Some other bills were forwarded a stage.—Adjourned.

HOUSE OF COMMONS.—MONDAY.

The House had a mid-day sitting.

CRYSTAL PALACE.—ANSWER TO THE ADDRESS OF THE HOUSE OF COMMONS.

Lord J. RUSSELL rose and said that her Majesty had been pleased to give the following gracious answer in reply to the address of the House of Commons respecting the Crystal Palace:—"Her Majesty has received the address of the House of Commons, praying that her Majesty would be pleased to take steps for the preservation of the Crystal Palace until the 1st of May. It may be necessary to consider carefully the engagements of the Royal Commissioners, and her Majesty will direct an inquiry, not only into those engagements, but into the whole question, which must be considered before any decision can be made on this subject." (Hear, hear.)

The General Board of Health (No. 4) Bill was read a third time and passed.

The Canterbury Association Bill was also read a third time.

The Patent Law Amendment Bill passed through committee, after some discussion of the several clauses

In the evening sitting,

NATIONAL GALLERY.

Lord J. RUSSELL brought up the report of the commissioners appointed to inquire into the site of the National Gallery, which was ordered to lie on the table. The noble Lord stated that the commissioners recommended that the National Gallery should not continue in its present situation, and considered it to be desirable that a site should be chosen for it in the immediate neighbourhood of Hyde-park or Kensington-gardens, where it might be bought a site might be obtained on reasonable terms, or, if not, that a site might be provided within the gardens. The subject would be brought forward by the Government for consideration in the next session. (Hear, hear.)

OCCUPATION OF ROME—FOREIGN REFUGEES IN ENGLAND.

Mr. ANSTEY, referring to a report in the Continental newspapers of an instruction from the court of Rome to its representative at the court of Vienna to endeavour to procure the replacing of the French garrison at Rome by a garrison of Austrian and Neapolitan troops, and to object, in doing to prevent the possibility of the re-establishment of a liberal Government in Rome, asked if any communication on the subject had been brought under the notice of her Majesty's Government by the representative of the court of Rome in this city, as had been reported? Also, whether, in the same note, as was also reported, application had been made to the English Government for the expulsion of Hungarian, Italian, and other refugees under the protection of the laws, and for the suppression of the Italian loan said to be negotiating in London?

Lord PALMERSTON.—No communication of the nature of the supposed note had been received by Austria to her Majesty's Government. The second question, whether any application has been made to her Majesty's Government in the spirit of that note. (Cheers.) With regard to the other question, whether any application has been made to her Majesty's Government respecting foreigners resident in this country, it may well be supposed, as my right hon. friend the Secretary of State for the Home Department, who is unfortunately not now in the House, stated on a former occasion, that certain foreign Governments look with concern and anxiety on the proceedings of the foreigners residing here—(Hear)—but nothing has passed which amounts to an application such as the hon. and learned member supposes to have been made. Had such an app ication been made, the answer to it is obvious. That the laws of this country give no power to her Majesty's Government arbitrarily to expel any foreigner who resides here, so long as he does not violate the laws of the land." (Loud cheers)

ECCLESIASTICAL PROPERTY.

The House resolved itself into committee on the Episcopal and Capitular Estates Management (No. 2) Bill.

The SOLICITOR-GENERAL proposed the introduction of certain words in clause 1, by which the existing rights and interests of church property would be protected from sale.

In the course of a somewhat discursive debate which ensued, Col. SIBTHORP and some other members remarked upon the haste with which it was proposed to pass the measure, and insisted upon the propriety of postponing it for the present session.

SIR J. GRAHAM observing that the property involved amounted to millions in value, and adding other considerations relative to the importance and delicacy of the question at issue, concurred in recommending delay.

Lord J. RUSSELL submitted that the only doubts expressed and referred to the interests of the lessees, which were sufficiently protected by the amendment o the Solicitor General

Ultimately the committee divided:—

For reporting progress		90
Against		38—38

The clause as amended by the Solicitor-General was agreed to, and the bill went through committee, several hours being occupied in the discussion of successive amendments respecting its detail's.

KOSSUTH AND HIS COMPANIONS.

Lord D. STUART moved for an address for the list of any addresses to her Majesty, or memorials to the Foreign Office, or petitions to the House of Commons, on the subject of the liberation of Louis Kossuth and his compatriots, with the names of the places from which addressed, and the numbers of signatures attached to each of them, stating also when signed by a chairman on behalf of a meeting. The noble Lord said that Turkey had no right to keep these men in confinement. No person acquainted with the affairs of the East would believe that that imprisonment would not be put an end to before if the noble Lord had used his influence. He did not say that was his opinion, but such an opinion had got abroad He hoped, however, that the influence of his noble friend would prevail over that of Austria. He also hoped that his noble friend would not oppose his motion, but that he would be able to say there was no truth in the report that Turkey would detain the prisoners beyond the 15th of September. It was said that the influence of Austria has been exercised to induce Turkey to do so.

Viscount PALMERSTON had no intention of offering any opposition to the motion of his noble friend. He should not have thought that the Turkish Government would have considered it right or necessary to detain these persons so long, when at the same time assurances of the most complete protection of them had been received from officers high in the Turkish service. The House well knew the circumstances which had led the Turkish Government to swerve from the engagement that had been entered into by their own officers, and the efforts that had been made by the French and English Governments to support Turkey in its independent course. It was notorious that the conduct of Turkey had for a long period been inconsistent with that independent nation. The Government had not ceased to use all the means which friendly influence could afford to induce Austria to put an end to the confinement of those persons. They had received the most forcible assurances that on the 1st of September, which, by the difference of our style, we called the 15th of September, those persons would be set at liberty, and would quit the Turkish territory, and he had no reason to believe or suppose that that assurance would not be fulfilled

The motion was agreed to.—Adjourned at a quarter to one o'clock.

HOUSE OF LORDS.—TUESDAY.

Lord MONTEAGLE moved the second reading of the Removal of Doubts as to Penalties on Assumption of Ecclesiastical Titles Bill. The noble Lord observed upon the many uncertainties and cross interpretations to which the clauses of the Ecclesiastical Titles Act were subject, and insisted on the necessity of providing some further definitions and explanations.

The Marquis of LANSDOWNE and the Lord CHANCELLOR contended that the Ecclesiastical Titles Act as it stood was sufficiently precise and intelligible.

Some conversation followed, after which the motion was negatived by consent.

The bills on the table were advanced a stage, and their Lordships adjourned.

HOUSE OF COMMONS.—TUESDAY.

The House met at noon.

The consideration of the Patent Law Amendment Bill was resumed in committee, and some progress made with the clauses.

The County Courts Further Extension Bill was read a third time.

The Episcopal and Capitular Estates Management (No. 2) Bill, as amended, was considered.

Adjourned at three till five.

At the evening sitting.

MILITARY KNIGHTS OF WINDSOR.

Colonel SALWEY, after an historical statement relative to the institution of the poor or Military Knights of Windsor, complained that the estates out of which these pensions were endowed had fallen into the hands of the Dean and Canons of St. George's, who absorbed large revenues arising from the enhanced value of the property, not only without giving the knights any corresponding share in the advantage, but were encroaching in other ways upon their privileges and perquisites. The hon. and gallant Colonel was proceeding to move the appointment of a select committee to inquire into the subject, when the House was counted out at half-past six o'clock.

HOUSE OF LORDS.—WEDNESDAY.

Their Lordships met at noon, and sat for about an hour.

The following Lords were read a third time and passed:—The Collection of Fines, &c. (Ireland), the Constabulary Force (Ireland), the Summary Jurisdiction (Ireland), the Petty Sessions (Ireland), the Metropolitan Interment, the Kensington Allotments (Distress), the Districts, Scotland), the New Zealand Settlements, the General Board of Health (No. 2), the Canterbury Association, and the Coalwhippers (port of London).

Their Lordships then adjourned.

HOUSE OF COMMONS.—WEDNESDAY.

The Speaker took the chair at twelve o'clock.

NEW MEMBER.

The Earl of ARUNDEL and SURREY took the oaths and his seat for Limerick. The noble Lord was introduced by Mr. Monsell and Mr. Field.

Lord JOHN RUSSELL moved the third reading of the Episcopal Capitular Estates Management Bill.

Mr. HENLEY moved, as an amendment, that the bill be read a third time that day three months. His conviction was, that the measure would prove injurious, not only to the lessees, but to the Church itself.

After a good deal of discussion, the amendment was negatived, and the bill read a third time.

Two new clauses were added to the bill, on the motion of the SOLICITOR-GENERAL, and some verbal amendments made. The bill then passed.

THE PATENT LAWS.

The consideration of the Patent Law Amendment Bill was resumed in committee, and lasted several hours. At the outset a lively conversation occurred as to the propriety of postponing the measure, and withdrawal was threatened to be the result; but a commencement was made, and by five o'clock all the remaining clauses were agreed to.

THE COMMONS AT THE PROROGATION.

Lord J. RUSSELL brought up the report of the select committee to settle the order in which members shall accompany Mr. Speaker on all occasions when her Majesty shall command the House to attend her Majesty in the House of Peers. The committee reported, that, in their opinion, every member desirous of being present on such occasions should intimate his desire to the Clerk of the House before five o'clock of the day preceding—that a ballot of the names should be taken on the day of the ceremony, and arranged accordingly—that members of the Cabinet have precedence, and that after the House being summoned no member should be allowed to remain in the lobby, or to cross it. The noble Lord moved that the report be printed, with the view of asking the House next day to agree to it. He thought it desirable to prevent the scramble that usually took place on such occasions as the opening and prorogation of Parliament.

After a few words from Mr. V. SMITH and Mr. O'CONNELL, the motion was agreed to.

On the motion of Sir F. BARING, leave was given to bring in a bill for the better preservation and regulation of the ports and harbours of the United Kingdom.—Adjourned at twenty minutes to six o'clock.

HOUSE OF LORDS.—THURSDAY.

Their Lordships assembled at five o'clock.

PROTESTANTISM IN ROME.

The Earl of HARROWBY presented a petition, numerously signed by English persons inhabiting the city of Rome, and by heads of families of nearly all the other place of worship in Rome, praying that her Majesty's Government would take measures to secure from the Sovereign of the Roman States permission to erect a Protestant church in the city of Rome

The Marquis of LANSDOWNE said that it would be impossible for her Majesty's Government to interfere so as to secure the erection of a place of Protestant worship in Rome.

The Earl of HARROWBY said that the question was, whether the Court of Rome would or would not give in her states that same liberty to Protestants which she claimed for her own Roman Catholics in Protestant states.

The Marquis of LANSDOWNE was afraid that it was hopeless to attempt to secure from the court of Rome the same degree of toleration for Protestants residing under the Government of Rome that was secured to Roman Catholics in Protestant countries.

The Bishop of LONDON agreed with the noble Marquis that it was hopeless to obtain from Rome the same degree of toleration for Protestants which was accorded by Protestant Government to Roman Catholics; but members of the Church of England were used to worship in buildings which had the outward appearance of splendour, and while the Pope refused permission to erect a Protestant Church in Rome, the Pope was announcing his intention to erect a magnificent cathedral in London. If the Pope would give us permission, we would erect a magnificent Protestant cathedral in Rome, and we would do it without issuing money by the sale of indulgences.

The Earl of HARROWBY complained of the interruption given to Protestant worship in Naples and Florence as proof of the intolerance of the Romish clergy towards the Protestant Church. The Romish clergy were omnipotent in their posts. He wished to know whether there would be any objection to lay before that House copies of the correspondence which had taken place between her Majesty's Government and the Neapolitan and Tuscan authorities on the subject of the closing of certain places of Protestant worship in their states?

The Marquis of LANSDOWNE said he would inquire into the subject.

The Earl of HARROWBY then moved for the papers, and also for an address to her Majesty to exercise her influence to secure the erection of a Protestant place of worship in Rome.

The motion was agreed to.

ROYAL COMMISSION.

The Royal assent was then given by commission to the following bills:—Medical Charities (Ireland), Grand Jury Cess (Ireland); Representation of Peers for Scotland; Law of Evidence Amendment; Administration of Criminal Justice Improvement, and upwards of 60 other public and private bills. The Lord Commissioners were the Lord Chancellor, the Earl of Carlisle, and Lord Broughton.

VENTILATION OF THE HOUSE

Earl ST. GERMANS rose to call the attention of their Lordships to the imperfect ventilation of their Lordships' house. No one who had frequented it could have failed to feel the effects produced by the want of a supply of pure air. He was aware that it was late to bring forward any subject, but still he hoped that something might be done by presenting it to their notice before the close of the session, and, though no grant of money could be obtained to meet the expense of any improvements which might be determined on during the recess, he thought the Treasury might safely venture to grant the money in the certainty of obtaining the sanction of the House of Commons. He had no distinct proposition to make, further than to suggest the expediency of appointing a commission of competent persons to examine the subject during the recess, for the purpose of devising the most efficient means for removing the inconvenience. The system of ventilation by means of the steam jet had been tried with effect in the courts of law, and it might be desirable to place the commission in communication with the inventor of that plan; and it would, probably, be found that by these means the vent ation of the House might be improved at a small expense.

The Marquis of LANSDOWNE said, that the free circulation of air in their Lordships' House had hitherto been impeded by the non-removal of some buildings which could not be pulled down until the completion of the new Houses, but he believed that Mr. Barry had been in communication with the inventor of the system to which allusion had been made, and he hoped that in 1852 the position of their Lordships would be very different in respect to ventilation.

After some further conversation, the subject dropped.

The Earl of KINGSTON, pursuant to notice, moved for affidavits made in the Exchequer and Exchequer Court in Dublin, in the matter of the estate of the late and the Earl of Kingston in the counties of Cork, Limerick, and Tipperary, with reference to the value of the said estates, and the qualification of Mr. Collins as a land surveyor and valuer.

The Marquis of LANSDOWNE said that copies of all affidavits sworn in the court in question might be had upon payment of a trifling expense.

The motion was agreed to.

The Earl of CARLISLE presented a petition, numerously signed by the inhabitants of Hammersmith, in favour of the preservation of the Crystal Palace.

The Consolidated Fund Appropriation Bill was read a third time and passed.

Adjourned.

HOUSE OF COMMONS.—THURSDAY.

The Speaker took the chair at four o'clock.

ECCLESIASTICAL TITLES.

Mr. FREWEN FREWEN wished to ask the Right Hon. the Attorney-General, if his attention had been called to an infraction of the Ecclesiastical Titles Assumption Act which was said to have taken place in Ireland on the part of certain priests and bishops of the Roman Catholic Church?

The ATTORNEY-GENERAL said the matter did not come within his department; the question should have been asked of his hon. and learned friend the Attorney-General for Ireland.

CRYSTAL PALACE.

Colonel SIBTHORP wished to ask the President of the Board of Trade whether certain individuals have not been admitted into the Crystal Palace on the Sabbath day, and whether some of them have not availed themselves of that opportunity to copy certain articles therein deposited?

Mr. LABOUCHERE said the Executive Committee were anxious to preserve a record of all the useful articles exhibited in the Crystal Palace; and, in order to procure illustrations for that record, a gentleman had been allowed admission on Sundays to make some photographic experiments, which could not be effected at any other time.

Col. SIBTHORP asked if it was true, that in consequence of that permission some of the articles had been injured?

Mr. LABOUCHERE said one work of art certainly had been injured in some way, but ample compensation would be made to the exhibitor for the damage.

METROPOLITAN BUILDINGS ACT.

Sir B. HALL wished to ask the noble Lord at the head of the Woods and Forests if he intended to renew the Metropolitan Buildings Act?

Lord SEYMOUR replied in the affirmative.

SINGULAR ERROR.

Captain SCOBELL wished to know from some of the Admiralty authorities, how it was that in the official Navy List he was returned as dead?

Admiral DUNDAS was glad to find that his gallant friend was alive and in his place, but he believed the mistake had arisen from the fact that the gallant gentleman's death had been reported in a local newspaper.

PATENT LAW AMENDMENT BILL.

On the motion for considering this bill, as amended,

Mr. C. LEWIS said Government were not prepared to accede to the proposal made yesterday to establish a separate fee-fund; but they were prepared to make such an alteration in the 49th clause of the bill, as to prevent any compensation being paid under the provisions of the bill without the sanction of Parliament. The probable amount of compensation that would have to be awarded was very trifling, considering the magnitude and nature of the offices abolished by the bill.

The clause was amended, as proposed by the hon. member; and some other addit ons and alterations having been made, the bill, as amended, was considered and agreed to.

On the motion of Mr. LABOUCHERE, the Standing Orders were suspended, so as to admit of the bill being at once advanced through the remaining stages.

The bill was then read a third time and passed.

ATTENDANCE OF MEMBERS IN THE HOUSE OF PEERS.

On the motion of Mr. LABOUCHERE, the report of the committee on this subject, which was presented on the preceding day, was read by the clerk at the table. It was as follows:—"The select committee appointed to settle the order in which members shall accompany Mr. Speaker on all occasions when her Majesty shall command the House to attend her Majesty in the House of Peers, have considered the matter to them referred, and have come to the following resolutions, which they have agreed to report to the House:—'Resolved, that it is the opinion of this committee, that, in order to ensure regularity in order of proceeding from this House to the House of Lords on occasions of opening or proroguing Parliament, every member desirous of attending Mr. Speaker, do communicate his intention in writing to the Clerk of the House, in case the House be not sitting, before the hour of five on the afternoon of the day preceding, and, if the House be sitting, between the hour of three in the afternoon and the rising of the House on the day preceding. That, on the House being summoned to attend her Majesty, the Cabinet Ministers present do immediately follow the Speaker. That, on the day of meeting for prorogation, before any further business be entered upon, the names of the members so sent to the Clerk be put into a glass, and arranged according to the order in which they shall be drawn forth therefrom. When the House is summoned to attend her Majesty, the members so arranged shall be called over by the Clerk, and the members shall proceed in such order to the House of Lords, in ranks of four. That, after the House has been summoned to attend her Majesty, no member shall be permitted to enter, or cross, or pass through any of the lobbies or passages leading from the door of this House to the door of the House of Lords, and the Serjeant-at-Arms attending this House do keep the said passages clear of members."

A lengthened discussion ensued, in which several hon. gentlemen strongly objected to the adoption of the resolution.

Sir B. HALL thought that the mode of proceeding would be to place the names of all hon. members indiscriminately in a glass, and for each hon. member to follow Mr. Speaker in the order in which his name should be drawn out. The hon. Baronet moved an amendment to that effect, which after some further discussion was agreed to, instead of the original resolution.

SARDINIA AND NAPLES.

Sir DE LACY EVANS rose to put two questions to the noble Lord at the head of the Foreign Office, and he hoped in terms of sufficient brevity that the noble Lord would be able to answer them satisfactorily. It was well known, upon the most unexceptionable authority, that, in consequence of the refuge which Piedmont had given to the thousands of Italian refugees driven out from other parts of the Peninsula for political causes, the Austrian Government had seen fit to interfere, and that the constitution of Piedmont was threatened with danger. The object of his question, therefore, was to express a hope that the Governments of England and France would now, as they all possess countenance and support to the Sardinian Government in its efforts to uphold that constitution. (Hear, hear.) His next question was on a more painful subject. It was known to the House and to the country, on the authority of the Right Hon. Member for the University of Oxford, that the present conduct of the Government of Naples towards those prisoners accused of political offences whom it held in its power, was at once an outrage against religion, an outrage against humanity, an outrage against decency, and an outrage against civilisation. (Hear, hear.)

Mr. B. COCHRANE.—Order, order.

Sir DE LACY EVANS. That which he stated was not less the fact. It was in the recollection of hon members that a constitution had been spontaneously granted to Naples by the King of that country in 1848; but that constitution had since been overthrown in the most unwarrantable manner. It was now a common-place matter of boasting with the legislators adopted by the King—namely, that of imprisoning the majority of the representatives of the people under that constitution spontaneously granted. These imprisonments, which comprehended an immense number of the most respectable classes, included also a Prime Minister of Naples.

Mr. B. COCHRANE rose to order. He wished to know how far the rules of the House warranted the hon and gallant member in bringing the whole question of the foreign policy of the country as regarded other countries under notice?

The SPEAKER ruled that the hon. and gallant officer was in order. (Hear.)

Sir DE LACY EVANS had no interest in the question except that of humanity and justice.—(Hear)—and he regretted that he should have had occasion to move in the matter. The hon. and gallant member then put the second question, which was as follows:—From a publication entitled to the highest consideration it appears that there are at present above 20,000 persons confined in the prisons of Naples, for alleged political offences; that these prisoners have, with extremely few exceptions, been thus immured in violation of the existing laws of the country, and without the slightest legal trial or public inquiry into their respective cases; that they include a late prime minister and a majority of the late Neapolitan Parliament, as well as a large proportion of the most respectable and intelligent classes of society; that these prisoners are chained two and two together; that these chains are never undone, day or night, for any purpose whatever, and that they are suffering refinements of barbarity and cruelty unknown in any other civilised country—it is consequently asked if the British Minister at the Court of Naples has been instructed to employ his good offices in the cause of humanity for the diminution of these lamentable severities, and with what result?

Viscount PALMERSTON.—With regard to the first question, I can only say that her Majesty's Government attach very great importance to the maintenance of the independence of the kingdom of Sardinia—(Hear, hear)—and that they look with much anxiety to the working of the constitution of that country. At the same time, I am bound to say that nothing had occurred to lead Her Majesty's Government to suspect that this constitution was in any danger, or that the independence of Sardinia is threatened with the encroachments of any foreign power. (Hear, hear.) The manner in which that constitution has hitherto worked for the benefit of the people and of the Sovereign entitle us to hope that it will continue as it has been and as it is—a model worthy of the imitation of all nations. (Hear, hear.) As Sardinia herself affords an example of good government under its influence, it is highly honourable to the Sovereign as well as the people of that country, and calculated to inspire hopes of its adoption by other nations. (Hear, hear.) With regard to the second question, her Majesty's Government, in common with all intelligent men in this country, have learned with infinite pain, from various quarters, the confirmation of the impression produced by the communications of the Right Hon. Member for the University of Oxford in respect to the unfortunate and calamitous condition of the Neapolitan political prisoners. (Hear.) It has not been any part of the duty of the British Government to make any representation to the Government of Naples on the subject, seeing that it relates to the internal management of the government of that country; but at the same time I think it right to say that Mr. Gladstone has done himself great honour by the course he has pursued in this matter in the first instance, and which he has followed since.—(Hear)—for when we in England turn our attention and position turn his eyes from the enormities which such a city as Naples affords, and, instead of going to see volcanoes or disinterred cities, visiting the courts of justice, visiting the prisons, visiting the dungeons of those prisons, and examining personally into the cases of the unhappy victims of iniquity and injustice there to be found—(Cheers)—with this view of interesting public opinion in Europe to remedy these abuses,

question, and buy everything in creation which they don't want, because they have a notion, a desperate error, that articles are cheaper on the Boulevards than in Regent-street, and because everybody takes something home from Paris, and because they feel in a holyday humour and are generous, and because they have a sufficiency of five-franc pieces in their pocket. The *restaurateurs*, of course, are well frequented; and the *garçons* at Very's, Vefours, and the Trois Frères are in despair at the utterly heterodox and unscientific combinations of dishes ordered by the English customers. It is a grand thing to see a thorough London party puzzling over a dinner *carte*, floundering from *poisson* to *potage*, and from *hors d'œuvres* to *entremets;* turning up pocket dictionaries to find out what a *consommé* is, and dreadfully distressed to translate *vol au vent à la financière*, and find it means literally "fly to the wind like a female banker;" that is, if *vol* signify "fly;" the best Frenchman of the party stoutly offering to bet a glass of brandy and water that it means "theft," he having read the expression in the *Gazette des Tribunaux* that very morning. Generally, our friends fall back upon chops and steaks. They have a wholesome dread of mystic made dishes, and would as soon venture upon senna and salts as command *vins mayennaise de volaille*, or a *cramouski à la Russe*. One gentleman dolefully informed me, that, having seen something to be cooked with *champignons*, he had ordered it instantly, taking *champignons* to mean champagne, and was dreadfully disappointed when he found it practically translated as mushrooms. Long names are also a sad stumbling-block in the culinary way of our worthy countryman. They take a dish denoted by three or four words to be something terribly elaborate, not to say indigestible; and I astonished a party from Islington by expounding an extraordinary mixture, called *purée aux croutons à la Crecy*, as simply meaning carrot soup with crumbs in it. They had imagined some much more profound and complicated mixture. On the whole, however, I doubt whether our friends like the "kickshaws;" I hear continual cries for "Something solid! Confound it! something respectable—some good wholesome meat, and none of this trash of sauces and stews:" while, even in the midst of the flow of Sillery and *eau sewgest*, at St. Cloud, yesterday, I heard a fat gentleman, with great talents for perspiring, pathetically express a wish to "dip his beak into a quart pot of porter." In the matter of meat and drink there are indeed always two classes of Englishmen in Paris. The one affects an exaggerated abhorrence of French dishes and a contempt for French wine. They frequent English taverns, have tea to breakfast, and joints to dinner; never take milkless coffee; pay a ridiculous price for the worst possible port and sherry, and "can't stand these sloppy messes some people are so fond of." This is your untravelled, unsophisticated John Bull, who comes to Paris because everybody else does; who delivers himself over into the hands of a *commissionaire*, who trots him from the Arc de l'Etoile to the Jardin des Plantes, and the Madeleine to the Column of July; and, finally, gives him up after a week's hard work, under the impression that the Panthéon is Notre Dame, the Louvre the Hôtel de Ville, and the Invalides the Bourse. Not so your more experienced and longer travelled Englishman. He is probably young—young Englishmen now-a-days

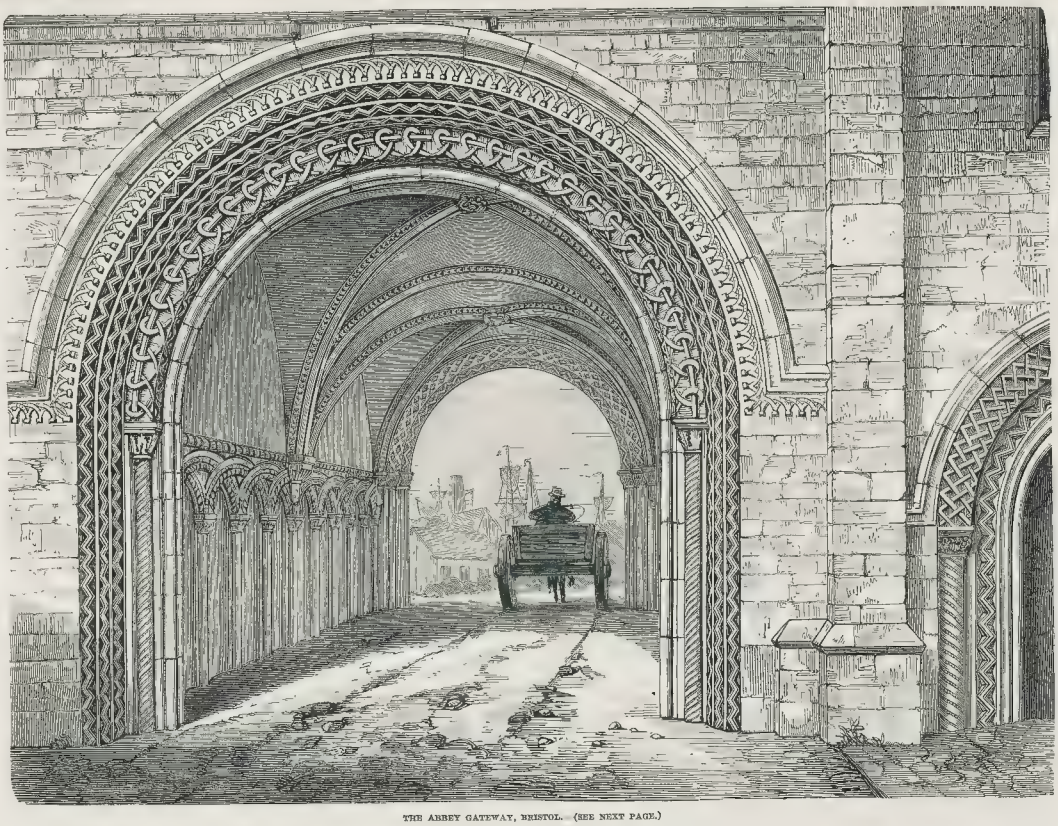
M. BERGER, PREFECT OF THE SEINE.

have generally gone over much more ground than old ones—and his glazed boots have beaten half the stones in Paris. He never thinks of ordinary sights—of churches, museums, institutions, and picture galleries; his hons are particular *cafés* and *restaurants*, where they excel in particular dishes. He knows the dancing gardens which the most famous *lionnes* frequent, and descants upon the style of polking of each. He speaks French boldly, if not successfully, and takes care to be as slangy in his phrases as possible. He is great at ordering dinners, and is profound upon the orthodox order in which wines, red and white, are to be drunk. Furthermore, he is up to the small town talk of the day; bows to Mdlle Bigon, of the Montansier, and leaves his card at Mdlle. Titis, of the Variétés. He is proud of his knowledge of Paris, and speaks disrespectfully of beefsteaks. English cookery he holds to be but one step remote from cannibalism—beneath it; and as for dress, he stoutly maintains that a *grisette* from the Quartier Latin can do more with a five franc shawl than an English Marchioness with a hundred and fifty guinea cachemere! Of course, this latter gentleman holds the former gentleman in contempt as a Goth and a barbarian while the Vandal reciprocates the sentiment, and mentally pronounces his traducer to be a Frenchified jacksnapes and a moustached frog-eater. The class in question—the thorough old John Bulls—are, however, gradually mellowing down. It is upon occasions of this kind, when they cross the Channel, not to see Paris, but to see the *fêtes*, that they come out most strongly, grumble most lustily, drink brandy and water most heartily, and in general make their Anglican peculiarities and singularities most manifest.

Going along the Boulevards, the number of smoothly-shaven Saxon faces is quite remarkable. The proprietors thereof usually keep in clusters; and cluster is continually hailing cluster, delighted to meet each other in a distant and foreign land, the encounter ending by both clusters coalescing and proceeding to the nearest *café*, to compare notes and impressions—to hear how Jones, who is sixteen stone good, fell down as many steps upon the slippery waxed staircase—how Brown has been scratched by the hard sheets, and can't dry his face with the soft towels—how the Smiths, husband and wife, able between them to make five-and-thirty stone kick the beam, have been put into a bed five feet by three—how Johnson can't get anything fit to eat, and longs for joints again—how Jackson can't get anything fit to drink except brandy, and longs for stout again—and how Williams, upon four occasions, took the peculiar 5 with a long tail, used in French caligraphy, for a 9, and paid accordingly, to the intense delight of the *garçon* in attendance. These relations over, the party invariably fall to discussing the number of tickets for the different *fêtes* they have managed to procure. Jones relates how he called fifteen times on M. Sallandrouze in one forenoon, and wrote eight and-thirty letters to the Minister of the Interior. Williams announces with great glee that he secured for his party seven bottles of champagne at St Cloud by stating that he was the Lord Mayor of Leeds; and Robinson trumps them all by announcing that he has a ticket for the review admitting him to the President's tribune. By this time the ladies are getting impatient to be off, and talk confidentially over the little tables about the shops where lace is so ridiculously cheap, and where they have the most beautiful bonnets (without exception) in Paris. At this all the gentlemen indignantly declare that every thing is better and cheaper in London—that all the Mechlin and Valenciennes lace comes from Nottingham, and all the beautiful figured cambric handkerchiefs from Belfast. The ladies repel the insinuation with the contempt and scorn which it deserves, and imagine a number of things absolutely indispensable—for the ball, or the concert, or the review—which they have never thought of until the idea was suggested by some unlucky shop window, and which they cannot by any human possibility do without. Some of the most daring hint even at bracelets, distinctly propose lockets at ridiculous prices, and infinitessimal watches—to be had "almost for next to nothing, comparatively." The unhappy male Joneses, Williamses, Smiths, Browns, Jacksons, and Johnsons are, one after the other, encountered and placed *hors de combat*; and it is needless to say that the bonnet figures at St. Cloud, the lace flutters in the breezes of the Champ de Mars, and the bracelets glance beneath the thousand candles of the Hôtel de Ville.

A. B. R.

RECEPTION OF THE LORD MAYOR OF LONDON, AT THE RAILWAY TERMINUS AT PARIS.—SEE SECOND SUPPLEMENT.



THE ABBEY GATEWAY, BRISTOL.—(SEE NEXT PAGE.)

PARLIAMENTARY PORTRAITS.

THOMAS COLLINS, ESQ., M.P. FOR KNARESBOROUGH.

The family of Collins is of great antiquity in the county of Sussex, and in the reign of Henry VII. was possessed of considerable landed property in and near Barwash, in that county. A branch of this family settled in the neighbourhood of Knaresborough in the latter half of the

T. COLLINS, ESQ., M.P. FOR KNARESBOROUGH. FROM A DAGUERREOTYPE BY CLAUDET

17th century, from whom the present member is descended. He is the second son of the Rev. T. Collins, of Folygote and Knaresborough, formerly rector of Barvingham, in the North Riding of York; and in the commission of the peace for the North and West Ridings of Yorkshire and county of Durham; was born in the Oct. of 1825; educated at the Charterhouse; graduated at Wadham College, Oxford, in 1847, and called to the Bar in 1849 by the Honourable Society of Benchers of the Inner Temple, and is member of the Northern Circuit, and attends the West Riding sessions. A liberal Tory, his political sentiments, as they may be gathered from his first address to the electors of Knaresborough, are as follow. He is for maintaining in all its integrity the Established Church, both in England and Ireland, and opposed to the endowment by the state of the Roman Catholic clergy. He is for concession to Roman Catholic ecclesiastics of territorial titles of precedency. Thinks that the agricultural classes are entirely burdened in respect of local taxation, and ought to have immediate relief accorded to them; is in favour of non-interference in the internal affairs of foreign nations, and of complete self-government for all truly British colonies in all provincial matters as means of securing the real dignity and integrity of the empire, and with, at the same time, obtaining economy in public expenditure, is opposed to secular State education, but would grant to all denominations of religion aid from the national funds in proportion to the monies which they themselves subscribe. On the death of the Right Hon. W. J. Lascelles, he came forward as a candidate for Knaresboro', in opposition to Mr. W. H. Watson, formerly M.P. for Rinsale. Mr. Watson, after presenting a canvass for some days, retired the day previous to the nomination, and Mr. Collins was returned by a majority of 31 the numbers being—Collins, 85; Lawson, 64.

Mr. Collins was introduced into the House by Mr. E. B. Denison, the member for the West Riding of Yorkshire, and Mr. Spencer Walpole, the eminent Queen's counsel and member for Midhurst.

Our portrait is from a Daguerreotype by Claudet.

ARRIVAL OF THE AMERICAN CLIPPER YACHT "AMERICA," OF THE NEW YORK YACHT CLUB.

In the ILLUSTRATED LONDON NEWS of March 15, page 207, we gave an Engraving of the yacht *America*, in frame, as she appeared building at New York, for the purpose of competing with the English yachts at Cowes. We now engrave the vessel from a sketch made on her arrival at the rendezvous of the Royal Yacht Squadron on the 21st ult.

Accustomed as we have been to witness the symmetrical models of our own yacht clubs, we confess our opinion falters when a model of an entirely different construction, so contrary in every respect, both in build and rig, is presented to us. In our former remarks, we termed the *America* to be "rather a violation of the old-established ideas of naval architecture," which all must candidly confess to be the case. In lieu of "straight lines," we have curved and hollow lines; instead of spars loaded with rigging, top hamper, and numberless small sails, we have stately masts with scarcely a rope to support them; the propelling power being in substance, and not in sum. In fact, instead of the "phantom ship," we have before us "a rakish piratical-looking craft," whose appearance in bygone days in the Southern Atlantic would have struck terror into the soul of many a "homeward-bounder." But this yacht has traversed the Atlantic on a different mission; and opportunely in the year 1851, the citizen of the States brings her for fraternal competition with the aristocracy of our own island.

Since her arrival she has been visited by nearly every member of the Squadron, and by several scientific and naval gentlemen, and all appear to be gratified with the inspection. As some discrepancy has already appeared in the accounts of the *America*, we have taken some pains to verify the following.

She was solely designed and constructed by Mr. George Steers, of the firm of Messrs. George and James R. Steers, of New York, who are now on a visit to this country in the yacht. To the talents of the builder the New York Yacht Club is indebted for several of the specimens which

THE UNITED STATES CLIPPER YACHT "AMERICA," OF THE NEW YORK YACHT CLUB.

[illegible] among which we may name the sloop *Syren*, of 85 tons; [illegible] *Cornelia*, 90 tons; *Sybil*, 58 tons; *Cygnet*, 52; *Coquette*, 37; and that of the celebrated New York pilot boats; the *W. G. Waystaff*, 194 tons, designed to be the fastest vessel of her time; and subsequently the well known *Mary Taylor*, of 75 tons, the smartest vessel in the States. As it has been whispered that the yacht, after all, has been designed and constructed by one of our own countrymen, we have authority for stating that Mr George Steers was born in New York, and is the son of the late Mr. Henry Steers, a native of Dartmouth, England, and once connected with our naval establishment at Plymouth, but who emigrated to the United States, and established himself in that country.

The *America* belongs to the New York Yacht Club, and is, according to American register, 171 tons; she is owned by J. C. Stevens, Esq., the Commodore of the N.Y.Y.C., and by Messrs. C. A. Stevens, H. Wilkes, and J. B. Finlay. Her dimensions are:—

	Feet.	In.
Length over all	94	0
Length of keel	82	0
Extreme breadth	23	0
Breadth moulded	22	0

The dimensions of spars—Foremast, 79 ft. 6 in.; mainmast, 81 ft., with 2 in. to a foot rake to both masts; bowsprit (hollow), 32 ft., 17 of which only is outboard; fore gaff, 24 ft.; main gaff, 28 ft.; main boom, 56 ft.

She carries three standing sails, viz. jib, foresail, and mainsail; the foot of the latter as well as of the jib laces to the boom: she also sets a main gaff topsail. Her forestay is very heavy, and is the principal support of the foremast.

The internal arrangements of the *America* are in chaste style, with a due regard to comfort. The fore-cabin is 21 ft. by 8 ft., with 14 berths (seven on either side) for the crew, besides state cabins for the master and mate. The galley, or cook's department, is spart, between the fore and after cabins, a great desideratum in warm climates, which comfort, as regards the men, has been overlooked in our yachts. The fore-cabin is ventilated by a circular skylight, 3 ft. in diameter. Between the galley and main cabin there are two large state-rooms; there are also two other state-rooms, a pantry and wash-room. The cook-pit, as it is termed, is a neat opening shaft, of 30 ft. in circumference, from which is the entrance to the main cabin. On the starboard side is the bath-room, and on the opposite is a clothes and wine room; and under the cook-pit is the sail-room. The main cabin, or saloon, is fitted with sofas, of mahogany and velvet, corresponding furniture, with a splendid carpet. Lockers extend the whole length of the cabin, with plate-glass panels. The internal decorations are Chinese white and gold, with mahogany reliefs. On deck, by the mainmast, there is a break, which gives the appearance of a raised quarter-deck, the bulwarks are only 14 inches. She has plain raking sternpost, and a large gilt eagle, &c. on the stern, which is elliptical. The workmanship of the whole is perfection. She is all smooth outside, and would be taken for an iron vessel for a keen eye. The shrouds under the line, about two-thirds down, are covered with white canvas, which gives her a light appearance.

Her crew consists of seven hands before the mast, two mates, cook, steward, boy, and master—in all, thirteen hands.

Whatever may be the result in her trials with some of our fast yachts, we trust that the introduction of this novel specimen will be the means of cultivating that good feeling which ought to prevail among all who contend for the palm in a fair spirit of rivalry. The owners are far beyond any mercenary ideas or speculative purposes, and, we understand, are ready to allow her sailing qualities to be tested with any yacht that may be selected for the purpose; and, as the gain of "a cup" or a pecuniary prize is not their object, we have no doubt, ere long, we shall be able to record something definite on the subject.

ARCHÆOLOGICAL INSTITUTE OF GREAT BRITAIN AND IRELAND.

The eighth annual meeting of the British Archæological Institute commenced at Bristol, on Tuesday last, under the presidency of John Scandrett Harford, of Blaise Castle, as president of the meeting, in the room of Lord Talbot de Malahide. Although Bristol and the neighbourhood abound with splendid ecclesiastical edifices and objects of archæological interest, the Congress was not very numerously attended, and the local museum was comparatively unattractive.

The business of the Institute was opened by an inaugural meeting at the Guildhall, where the members and their friends were received by the Mayor, Sir John Aerle Haberfield, and the various civic dignitaries. Several ladies honoured the meeting with their company. The general introductory address of the proceedings differed but little from that of former occasions. The president's address was followed by addresses from Chevalier Bunsen, Dr. Whewell, and others. Mr. Tucker, one of the secretaries, then read an interesting account of the proceedings of previous years, and a few remarks on the muniments belonging to the corporation, which, at the close of the meeting, the members were invited to inspect. In the evening, a *conversazione* was held at the Philosophical Institution, Park-street, where a paper, read by Mr. Freeman, of Oxford, on the recent restorations, and the Vandalism of transferring the Elgin marbles from their proper locality to the walls of the British Museum, was replied to by the Keeper of Antiquities at the Museum, who vindicated Lord Elgin and his own office with truth and spirit.

On Wednesday, Professor Willis lectured on Wells Cathedral, in his own able and attractive manner: Mr. Cockerell explaining the statues and sculpture of the west front; and members examining with critical care and occasional approbation the several restorations conducted by Mr. Pevrey, and done by Mr. Salvin.

Thursday's proceedings commenced with the meetings of the different sections, the Architectural Section meeting in the chapter-house, in the Cathedral, and the Historical Section at the theatre of the Bristol Institution. At the latter the chair was taken by Mr. Hallam, F.R.S., F.S.A., when the Rev Mr. Warner read a paper giving an account of Tyndale's New Testament. A discussion followed, and Chevalier Bunsen then read a dissertation on the Lake Manna. In the Architectural Section, Mr. Britton, F.S.A., read a series of notes on the ancient and modern topography and archæology of Bristol and its vicinity, conveying much valuable antiquarian and bibliographical information in a very attractive form. In enumerating the buildings of Bristol, Mr. Britton described the example engraved in the present No. as possessing the Abbey Gatehouse, situated at the south-west corner of [illegible] Bristol, and which originally formed one of the principal entrances to the monastery. The lower story, represented in the Engraving, is a genuine specimen of Norman work of the 12th century, and is remarkable for the soundness and good quality of the stone with which it is built, the arris and mouldings being nearly as square and sharp as at first. The upper story is of Tudor architecture (*temp.* Henry VIII.), with niches and coats of arms indicative of its age; and between the two stories is a fine inscription in black letter. The Tudor story, besides its want of accordance in style, has been much disfigured by the insertion of modern sash-windows; but the Norman work is not surpassed by any other building of its kind in the Kingdom. A paper illustrative of its merits was subsequently read to the Institute meeting by Mr. J. Clayton, architect, from one of whose drawings the accompanying Illustration has been engraved. At the close of his address, Mr. Britton was much cheered by the meeting.

In the afternoon, divine service was performed at St. Mary Redcliffe Church. A very impressive sermon was preached by the Dean of Bristol. At the close of the service an elaborate and very interesting paper was read by Mr. Godwin, the architect who is so successfully conducting the restoration of St. Mary, Redcliffe. The Canynge Society, a club of citizens, has been formed for carrying out this noble work. At the close of his address, Mr. Godwin dwelt upon the present deplorable condition of the building: its falling parapets, its splitting walls, and shattered spirets on the tower, giving sad indications of universal decay. "On the question of *restoration* generally," said Mr. Godwin, "no one would oppose more earnestly than I would the destruct on of an ancient edifice, with all its associations and time-tints, to substitute for it a new copy, however well executed, so long as it could be maintained for its purpose. In the case of St. Mary, Redcliffe, however, no question of this sort arises. If it be not renewed, its character must utterly pass away. There is but little of the exterior of the church that can possibly be maintained. If we would preserve the structure for its sacred purposes, and transmit to posterity the noble specimen of skill and piety which our forefathers gave to us in trust, there is no other course than restoration, conducted with a painstaking and anxious desire to make the building what it originally was. Pride of country, love of beauty, and duty to God, all prompt so strongly to the completion of the restoration, that I have no doubt whatever as to the ultimate result."

Mr. Godwin, at the conclusion of his paper, took the various members and visitors of the Institute present round the edifice, pointing out the various alterations, the character of which called forth highly merited encomiums on Mr. Godwin's taste and skill.

In the evening the dinner took place at the Victoria-rooms. We shall illustrate this banquet next week; but should now add, that the proceedings of the entire meeting have, by aid of supplementary columns, been ably reported in the *Bristol Mirror*.

VOLUME EIGHTEEN of the ILLUSTRATED LONDON NEWS is now ready, bound in cloth gilt, price One Guinea; or in paper covers, 10s. 6d. This volume contains nearly SEVEN HUNDRED ENGRAVINGS, 360 of which are relative to the GREAT EXHIBITION
Cases for Binding Vol. 18, 6d. each.
Orders received by all Booksellers and Newsmen; and may be had at the Office, 198, Strand, London.

NATIONAL ILLUSTRATED LIBRARY.
In Monthly Volumes, copiously Illustrated, price 2s. 6d.
Just published,
THE MORMONS, a Contemporary History; or, Memoirs of the *Life* and Death of JOSEPH SMITH, the American Mahomet. In One Vol. Price 2s 6d.
"The contents of this volume are curious and interesting to the highest degree, containing as they do the first full and fair account which has been given to the world of the new religion called Mormonism, and of Joe Smith, its founder."—*Atlas.*
"One of the most painfully instructive volumes that ever issued from the press."—*Witness.*
"One of the most remarkable events in modern history has been the rise and progress of the Mormonites; it is, perhaps, unparalleled in the history of the world. The author has performed his task with impartiality and care."—*Standard of Freedom*
"An extremely interesting work. The author gives the details of the history of the American Mahomet with the honesty and candour so essential to history and narrative. The incidents are so numerous, exciting, and tragical, that the work has all the fascination of a romance, and cannot fail to attract very general attention."—*Glasgow Examiner.*
Office, 198, Strand.

CALENDAR FOR THE WEEK.

SUNDAY, 10.—Eighth Sunday after Trinity.
MONDAY, 11.—Half-Quarter Day.
TUESDAY, 12.—Grouse Shooting commences.
WEDNESDAY, 13.—Old Lammas Day.
THURSDAY, 14.—Printing invented, 1437.
FRIDAY, 15.—Assumption.
SATURDAY, 16.—The Manchester Massacre.

TIMES OF HIGH WATER AT LONDON BRIDGE, FOR THE WEEK ENDING AUGUST 16, 1851.

Sunday		Monday		Tuesday		Wednesday		Thursday		Friday		Saturday

* No Second Class by Express Trains between Chester, Birmingham, or London.
Tickets can be obtained at the Dublin and Kingstown Railway terminus, or on board the steam-boats.
Through Passengers by these Trains must re-book at Chester.
Superintendent's Office, Chester, 31st July, 1851. J. O. BINGER.

WITH THE PRESENT NUMBER OF
THE ILLUSTRATED LONDON NEWS
IS PUBLISHED
AN EXHIBITION SUPPLEMENT.
PRICE OF THE NUMBER AND SUPPLEMENT, ONE SHILLING;
WITH A HALF-SHEET SUPPLEMENT GRATIS.

GREAT EXHIBITION FÊTES AT PARIS.—Next week we shall complete our Illustrations of the Paris *Fêtes* with two Scenes from the Grand Review at Versailles, the Reception by the President at St. Cloud, &c.

*** For Replies to Correspondents, see page 109 of Supplement published with the present Number.

BOOKS, &c., RECEIVED DURING THE WEEK.
Architectural History of Gloucester — Illustrated Catalogue, Part II — The Ralph Hunters, 3 Vols — Home Truths for Home People. — Canonus Leighton. — The Tutor's Ward, 2 Vols. — Smith's Syria and Palestine, 2 Vols. — Fraser's Map of Ireland. — Greenwood's Cat Guide. — Farmer's Friend, Vols. — London Medical Diary — Key to History of Greece — Pulman's Fly-fishing — Murray's Hand-book to the British Museum — Brighton's Poems
MUSIC.—The Heart that Thou hast Broken — Oh, why art thou so sad, my Love? — The Manchester Polka.

ERRATUM.—In the Memoir of Alderman Salomons (see page 106), for "Bernal," read "Bernard."

TO ADVERTISERS. — ADVERTISEMENTS for the FRENCH EDITION of the ILLUSTRATED LONDON NEWS are RECEIVED up to THURSDAY EVENING, at the OFFICE, 198, STRAND; and may be inserted in any Language.

TO EXHIBITORS IN THE CRYSTAL PALACE.

As we are bringing to a close the weekly Supplements connected with the Great Exhibition, we receive numerous applications daily from Exhibitors and others for the insertion of Illustrations of their articles in the ILLUSTRATED LONDON NEWS. It being quite impossible to comply with these requests in our ordinary space, we beg to inform Exhibitors that we are willing to receive any drawings, with descriptions of articles now in the Crystal Palace, to be PAID for, ADVERTISEMENT PRICE. If this arrangement be satisfactory to Exhibitors, extra sheets will be Presented GRATIS to our Subscribers. Immediate application must be made; and no Drawings or Sketches, &c., can be possibly attended to, unless sent during the present month.

Office, 198, Strand, August 1, 1851.

LE 15me NUMERO de

L'ILLUSTRATED LONDON NEWS en FRANCAIS,

de SAMEDI prochain, contiendra, indépendamment de toutes les Nouvelles de la Semaine, un compte rendu spécial des Fêtes données à Paris.

Tous les Numéros qui ont paru depuis le commencement ont été réimprimés. On peut se les procurer séparément, ou réunis en une brochure, avec une couverture magnifiquement illustré. Prix du Cahier, contenant Douze Numéros et une magnifique Vue du Palais de Cristal brûlé à part, 6 shillings.

NOTA.—Les Propriétaires de l'ILLUSTRATED LONDON NEWS croient devoir faire observer ici, que le Journal Français publié sous le titre ci-dessus n'est point une traduction de l'Edition Anglais, mais bien une publication avec rédaction toute séparée, et dirigée à Londres par des écrivains de la presse Parisienne.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 9, 1851.

THE last days of the Parliament were so wasted, that we could have no hopes of any good to result from a longer continuance of its labours. Twice counted out in a week, leaving business unfinished, and one day employed discussing the question whether there was time to discuss the Patent Law Amendment Bill, must have convinced the public that the members ought now to withdraw to more genial occupations than legislation. If there were a probability, that, by keeping together, they could redeem the lost time, so little have they done that we should wish they might remain. But this is out of the question; nothing more can now be expected of them, and already men begin to speculate on what will be done next session of Parliament. Time brings counsel as well as roses; and when the Houses are about to meet, we may inquire what they ought to do. A session wasted on the Ecclesiastical Titles Bill, on substituting a house-tax for the window duties, on petty reform in Chancery, on a doubtful alteration in the patent laws, and on a few other trivial changes, is a sure indication that by the present Parliament and the present Ministry, both of which are on their last legs, nothing great will in future be achieved. If Lord John Russell were ever so liberally disposed, he could effect nothing good with the present Parliament, in which he has been repeatedly defeated, and of which the large Conservative minority has been gradually gaining an increase to its majority. He might gather new strength by an appeal to the people, and his promised measure of Parliamentary reform may be intended to serve election purposes; but till he, or some other leader enjoying the confidence of the country, interest the people, and till their voice be heard in a general election, nothing decisive can be done. If his schemes are worthy of the support of the whole Liberal party, a great union may be effected, and extensive reforms, after a general election, be carried; if he only place himself in the van of the movement to divert it to his own purposes, he will occasion still further dissensions, and we shall have to go through a period of agitation to obtain the needed reform. The Parliament closes amidst so much uncertainty, its past proceeding and the past proceedings of the Ministers so little justify us in expecting any thing good in future, that it will only be prudent for us all to wait before we form any opinion of what will hereafter be done. They have received so many hopes already—neither seating the Jews, nor re-casting the Property-tax, nor effectually dealing with any species of taxation—that, before forming any opinion of what they will do, we must wait to see what the necessities of the hour will dictate.

ACCORDING to the "Tables" of Criminals in "England and Wales" recently laid before Parliament, the number of persons capitally convicted last year was less than any year, except 1845, since 1841, when the last alteration was made in the law affecting capital punishments. In the last ten years the population in England and Wales has been increasing at the rate of 1·3 per cent. per annum; but the capital convictions, instead of increasing at an equal rate, have decreased. They were in each year, from 1842 to 1850, both inclusive, 57, 97, 57, 49, 56, 51, 60, 66, 49. Thus the number last year was the lowest of the series, except 1845, when the two numbers were equal. The number of persons committed for trial in 1850 was, with three exceptions 1844, 1845, 1846- less than the number committed in any other year since 1840. The series between 1841 and 1850 (both inclusive) was as follows:—27,760, 31,309, 29,591, 26,542, 24,503. 25,107, 28,833, 30,349, 27,816, 26,813. The number for 1850 was 3·7 per cent. less than the average of the last ten years. It will be in the recollection of our readers, that Sir Robert Peel made his first great alteration in our commercial code in 1842, and that 1841 and 1842 were disastrous years: the price of wheat in the autumn of 1841 was 76s., and in the summer of 1842, 65s. 6d. The effects of his alterations and an improved harvest began to show themselves in the autumn of 1842 and in 1843; and our readers will now, by the above series of figures, see that the greatest number of commitments, 31,309, was in 1842, and that it began to decline from that time. It rose again in 1847-48, two years of high prices, commercial failure, and railway speculation; but it has never since 1842 equalled the extraordinary number of that year. Such circumstances confirm in detail the connexion observed at all times, and particularly in our country in the last sixty years, between scanty food, high prices, deficient employment, and a great many crimes on the one hand; and on the other, between plenty, low prices, full employment, and a small number of crimes. The same tables inform us that the number of persons executed in England and Wales in the last ten years was 107, while in the first ten years of the century the number was 802, and in the second ten years 897. In relation to the number of the people, the number of executions between 1801 and 1810, and between 1811 and 1820, was twelve times as great as between 1841 and 1850. In such facts we find the strongest encouragement to pursue the policy of ameliorating our criminal code and abolishing commercial restrictions, and the happiest augury of future success if we continue in the same path. We record this testimony to the national improvement with great satisfaction; and ask our readers to contrast the increasing security they have enjoyed under our ameliorated law, with the anarchic condition of the people of California, as exemplified by the account of the "First Execution at San Francisco," to be found in another part of our Journal.

COURT AND HAUT TON.

THE CO. RT.

Her Majesty and his Royal Highness Prince Albert, and the junior members of the Royal family, continued to enjoy the retirement of their marine retreat at Osborne up to Thursday, when the Court returned to town. The Royal party arrived at Buckingham Palace at one o'clock.

On Saturday, the 2nd inst., Lord Alfred Paget and Lieut.-Colonel the Hon. A. Gordon, relieved Lord Charles Fitzroy and Lieut.-Colonel F. Seymour as Equerries-in-Waiting.

On Tuesday, the 5th, his Excellency the Belgian Minister and Madame Van de Weyer arrived on a visit to her Majesty and the Prince Consort. Lord Cowley also had the honour of joining the Royal circle. Lord Cowley left on Wednesday, and the other visitors on the following morning.

Wednesday being the birth day of his Royal Highness Prince Alfred, the band of the Royal Marines assembled, at seven o'clock, in the gardens at Osborne, and played a serenade in honour of the day.

THE COURT AT BUCKINGHAM PALACE.

Her Majesty, accompanied by Prince Albert, and attended by a numerous suite, left Osborne House, Isle of Wight, at an early hour on Thursday morning; and, having travelled from Gosport by special train on the South-Western Railway, arrived at the Vauxhall station at twenty minutes before one o'clock. Her Majesty was received at the station by the directors and the secretary of the Railway Company, and other official personages. Four of the Royal carriages, with an escort consisting of a detachment of the 8th Light Dragoons (Hussars), being in waiting the signal party immediately proceeded to Buckingham Palace, where her Majesty arrived about ten minutes before one o'clock. A Privy Council was held at Buckingham Palace in the afternoon, at which most of the Cabinet Ministers attended, when the Royal Speech delivered at the prorogation of Parliament was submitted to her Majesty.

The marriage of the Hon. Ernest Duncombe, eldest son of Lord and Lady Feversham, with Miss Mabel Graham, second daughter of Sir James and Lady Graham, took place on Thursday forenoon, at the church of St. George, Hanover-square, in the presence of a brilliant circle of friends. The bride was given away by her distinguished father; and the marriage ceremony was performed by the Rev. W. Graham, uncle to the bride. Among the Duke of Wellington, the Earl and Countess of St. Germans, the Earl and Countess of Galloway, and a distinguished circle, were amongst those assembled.

MUSIC.

The Sacred Harmonic Society performed last night, under the direction of Mr. Costa, Haydn's "Creation," for the second time; the principal singers were Mdme. Clara Novello, Mr. Sims Reeves, and Herr Formes. Mendelssohn's "Paul" will be produced next Friday for the first time here this season, as an additional subscription concert.

The Wednesday English Glee and Madrigal parties at Willis's Rooms, are drawing to a close, after a most successful season.

The Bach Society commenced, last Monday, a series of monthly meetings.

At the Royal Music Hall, Adelaide Gallery, Miss Eyles and Mr. Henry Phillips have been singing this week, with Miss Julia Worman as pianiste, and Master Coles, clarionet.

Herr Borschitzky, violinist, gave a concert last Monday, at Willis's Rooms, assisted by Misses Eyles, Parepa, Lavenu, Bauer; Herr Stigelli, Herr Formes; Miss Thomas (harp), Heinrich Werner (piano), &c.

Mr. John Parry gave his final performance at the Music Hall, Store-street, last Monday.

Mr. Bunn has resumed the lessesship of Drury-Lane Theatre, and will commence with a national opera at Christmas. No manager in this country has done more for our native artists than Mr. Bunn. His long experience will give him advantages in the direction of his new undertaking, and he is too acute an observer not to have watched the signs of the times, and to profit by his past labours. To establish an English opera-house by a committee would be an impossibility; it is evident that the London amateurs are now ashamed that we should be without a school for dramatic singers, and, if Mr. Bunn turns this feeling to the proper account, a good prospect of founding something like a permanent establishment is before him.

THE ORDER OF THE GARTER.—On Tuesday, Sir George Charles Young, Garter-King-at-Arms, superintended the arrangement, in St. George's Chapel, Windsor Castle, of the banners of the Knights of the most Honourable and Noble Order of the Garter, consequent upon the demise of the late Duke of Cambridge, the late Duke of Newcastle, and the late Earl of Derby. The removing those banners, and placing the banner of the Marquis of Normanby over his stall, gives the following order of the stalls:—

SOVEREIGN'S SIDE.	PRINCES' SIDE.
The Sovereign.	King of Hanover.
Prince Albert of Saxe-Coburg.	Duke of Cambridge.
Crown Prince of Hanover.	Emperor of Russia.
King of the Belgians.	King of Prussia.
King of Wurtemberg.	Reigning Duke of Saxe-Meiningen
King of Saxony.	Reigning Duke of Saxe-Coburg and Gotha
Reigning Duke of Brunswick.	Duke of Wellington.
Prince of Leiningen.	Marquis of Exeter.
Duke of St. Albans.	Duke of Buccleuch.
Marquis of Anglesey.	Marquis of Lansdowne.
Duke of Devonshire.	Duke of Sutherland.
Duke of Richmond.	Duke of Buckingham and Chandos.
Duke of Hamilton.	Duke of Cleveland.
Duke of Somerset.	Marquis of Abercorn.
Duke of Beaufort.	Marquis of Hertford.
Marquis of Salisbury.	Duke of Norfolk.
Earl de Grey.	Earl Spencer.
Marquis Cholmondeley.	
Duke of Bedford.	
Earl of Clarendon.	
Marquis of Normanby.	

IRISH TEMPORAL PEER.—Writs have been issued from the Hanaper Office, Dublin, bearing teste the 1st of August, for the election of a temporal peer in the room of the late Charles William Earl of Charleville.

DECLINE OF THE METHODIST BODY.—The returns submitted to the late meeting of the Wesleyan Conference show a defection of nearly 60,000 members of the society.

ACTS OF PARLIAMENT.—The number of public acts which received the Royal assent to the 1st instant was 61.

CHARITABLE BEQUESTS. Joseph Veary, Esq., of Middleton-square, has left To the Baptist Missionary Society in London, £200; Baptist College at Stepney, £100; London Missionary Society, £100; London City Mission, £50; Moravian Society, £50; British and Foreign Bible Society, £50; Baptist College, Pontypool, £50; and the following institutions at High Wycombe, viz. to the British and Foreign School, £50; Auxiliary Tract Society, £20; and the Sick Man's Visiting Society, £50. Mrs. Sheldon, wife of the Rev. J. Sheldon, of Sheffield, has bequeathed to the British and Foreign Bible Society, the Church Missionary Society, and to the Society for Promoting Christianity among the Jews, to each a legacy of £50. Mr. A. T. Crane, of Lloyd-square, has left to the Ragged School Union a legacy of £2:

The wills of the following distinguished individuals have lately been proved:—The late Duchess Strathallan, Viscount de Chaworse, Baron Van Nagel, Don Manoz, Right Hon. W. Sebright Laseelles, Baroness Erskine, Right Hon. Lady Cecilia La Touche, Lady Anne Murray, and the Rev. Sir Henry Rivers, Bart.

The late Louis Lucas, Esq., of Hyde Park-gardens, an eminent merchant, who died on the 3d ult., has left personal property in England, amounting to £230,000, and, by his will, after making a large provision for his wife, bequeaths the residue equally among his children. An estate in Jamaica he has left to his three sons. He has bequeathed to charitable institutions as follows:—To the German Jews' Hospital, Mile-end, £25; German Jews' Free-school, £25; Synagogue and Cubbay of the New Synagogue, Great St. Helen's, £50; Jews' Ladies' Lying-in Charity, £50; and to the London Hospital, £100, which institution he mentions as having selected from its liberal disregard of religious distinctions.

On Saturday evening, a young man named Stone, a seaman, on board a ship just arrived at Sheerness from a foreign station, having got leave of absence to visit his father, who lives in Union-street, Maidstone, was walking from Rochester when he arrived about half way between Bridgewood Gate and the Upper Bell, was assaulted by a fellow who jumped out of the hedge, demanding his money or his life, and at the same time making a blow at his head, which he parried with a stick. Another man then appeared, who discharged a pistol at him, the contents which took effect in his right ear and the palm of his hand, his arm being raised in the attitude of defence. He exclaimed, "You don't mean to murder me?" and began to lay about him most vigorously, when the cowardly villains made off into the wood, which was searched immediately afterwards for them but without effect.

A silver mine has been recently discovered by a German in California, at a point in the mountains about eighty miles in a north-east direction from Los Angeles. The richness and extent is said after having been submitted to a strict assay, to be equal, if not superior, to any silver mine yet discovered. The fortunate German is reported to have sold twenty-seven shares at 5000 dollars each.

CHURCH, UNIVERSITIES, &c.

ADDRESS OF THE SUPREMACY DECLARATION COMMITTEE.—A manifestation of the sentiments of a vast number of the clergy in regard to the "Gorham case" has been made public in the shape of a declaration signed by more than 2300 clergymen of the Established Church, among whom are the Deans of Manchester, Llandaff, Bristol, Ripon, and Carlisle, and many other dignitaries, setting forth their surprise and concern at the attempts made by parties holding office in the Church to invalidate and nullify the judgment recently delivered by the Sovereign, as "supreme governor of this realm, as well in all spiritual or ecclesiastical things or causes as temporal," in the said case; and protesting against any attempt, from whatever quarter it may proceed, to bring into contempt a judgment so issued. The declaration further holds such attempts to be equivalent to the enforcement of a standard of doctrine in the Church by unauthorised individuals, to be irreconcileable with the first principles of all church polity, and necessarily to lead to a state of disorder, strife and confusion in the Church. The committee also request that the names of the clergy who wish to subscribe the declaration be forwarded as early as possible to them, at Messrs. Hatchard, 187, Piccadilly.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently been made:—*Deanery Rural:* the Rev. John Jones Browne, of Llandanwg, Merionethshire, to Ardwdwy. *Rectors:* the Rev. Robert Scarlett Grignon, to St. John (*sub-Castro*), Lewes, Sussex; the Rev. John Robert Pigott, to Ashwellthorpe with Wrentingham, Norfolk; the Rev. Ferdinand Alfred Pynsent, to Bawdeswell: the Rev. Robert Sumner, to Brightwell, Berks; the Rev. John Sutton Utterton, to Calbourn, with Newtown, Isle of Wight; the Rev. William Edward Vicar, to Bonn-Flamber, Cornwall; the Rev. Robert Weatherell, to Elton, Notts; the Rev. William Webster, to St. Andrew-by-the-Wardrobe, with St. Anne's, Blackfriars, London; the Rev. Temple Walter West, to Beaworthy, Devon. *Vicarages:* the Rev. Frederick Woods Mant, to Stanford and Teddington, Norfolk.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection: The Rev. G. Thomas, on leaving the curacy of Thornton, near Bradford, from the inhabitants; the Rev. W. Armine Sipper, curate of Catfield, Norfolk, from the inhabitants; the Rev. Wiltred Hargreaves, late curate, of Catterick, Yorkshire, from the inhabitants; the Rev. J. R. Connor, of St. Simon, Liverpool, from the members of the congregation classes; the Rev. Harry Wright, of Shardington, Gloucestershire, from the females of his congregation; the Rev. John Tonkin and the Rev H. H. Kendle, curates of Hewarth, near Gate head, from a parishioner.

The *Guardian* says there is a well-founded rumour that the Synod of Exeter is to be followed immediately by a similar pronunciation on the part of the diocese of Chichester; while other reports, not yet perhaps clothed with as tangible a form, but still bearing every mark of probability, indicate the cathedral cities of Wells and Oxford as likely to follow in the same path in the course of the present autumn.

UNIVERSITY COLLEGE.—On Tuesday a meeting of the council of University College was held, for the purpose of considering what change in the regulations of the college were requisite to meet cases of insubordination on the part of students, such as occurred some few months ago at the college. It was enacted, that in future, on any occasion, any professor, lecturer, or teacher, may report any student in his class-room guilty of disorderly acts; and, should he decline to pass upon, may require the student to withdraw from the class room. That the secretary shall have charge at all times of all parts of the college, and authority to maintain order thereat. That the dean be authorised to pass sentence, comprehending either admonition from the dean, reprimand from the dean in private or in presence of the faculty, suspension from attendance, which would disqualify the student from receiving his certificate; exclusion from any place of instruction; rustication from the college, and expulsion.

THE ECCLESIASTICAL TITLES ASSUMPTION ACT AND ITS AUTHORS.

This bill received the Royal assent on Friday, last week. It is the joint production of her Majesty's Ministers, Mr. Walpole, Sir Frederick Thesiger, and Mr. Keogh. The portion contributed by each is marked out in the copy of the act which follows. The part which belongs to her Majesty's Ministers is printed in Roman letters; the rest is in italics, with the name of the respective authors appended:—

"Whereas divers of her Majesty's Roman Catholic subjects have assumed to themselves the titles of archbishop and bishops of a pretended province, and of pretended sees or dioceses, within the United Kingdom, under colour of an alleged authority given to them for that purpose *by certain briefs, rescripts, or letters apostolical from the See of Rome, and particularly* [Sir F. Thesiger's] by a certain brief, rescript, or letters apostolical, purporting to have been given at Rome on the 29th of September, 1850; *and whereas, by the act of the 10th year of the reign of King George IV., cap. 1, after reciting that the Protestant Episcopal Church of England and Ireland and the doctrine, discipline, and government thereof, and likewise the Protestant Presbyterian Church of Scotland, and the doctrine, discipline, and government thereof, were, by the respective acts of union for England and Scotland, and of Great Britain and Ireland, established permanently and inviolably, and that the right and title of archbishops to their respective provinces, and of bishops to their sees, and of deans to their deaneries, as well as the rights of England and Ireland, had been settled and established by law it was enacted, that if any person, after the commencement of that act, other than the person thereunto rightfully appointed by law, should assume or use the name, style, or title of archbishop of any province, bishop of any bishopric, or dean of any deanery, in England or Ireland, he should for every such offence, forfeit and pay the sum of £100* [Mr. Walpole]: And whereas it may be doubted whether it is recited enactment extends to the assumption of the title of archbishop or bishop of a pretended province or diocese, or archbishop or bishop of a city, place, or territory, or dean of any pretended deanery in England or Ireland, not being the see, provi ce, or diocese of any archbishop or bishop, or deanery of any dean, recognised by law; but the attempt to establish, under colour of authority from the See of Rome or otherwise, such pretended sees, provinces, dioceses, or deaneries, is illegal and void. And whereas it is expedient to prohibit the assumption of such titles in respect of any places within the United Kingdom: Be it therefore declared and enacted by the Queen's Most excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, that

"1. *All such briefs, rescripts, or letters apostolical, and all and every the jurisdiction, authority pre-eminence, or title conferred, or pretended to be conferred, thereby, are, and shall be and be deemed unlawful and void.* [Mr. Walpole's.]

"2. And be it enacted, that if, after the passing of this act, any person *shall obtain, or cause to be procured, from the Bishop or See of Rome or shall publish or put in use, within any part of the United Kingdom, any such bull, brief, rescript, or letters apostolical or any other instrument of writing, for the purpose of constituting such archbishops or bishops of such pretended provinces, sees, or dioceses within the United Kingdom, or of any person* [Sir F. Thesiger's] other than a person thereunto authorised by law in respect of an archbishopric, bishopric, or deanery, of the United Church of England and Ireland, assume or use the name, style, or title of archbishop, bishop, or dean of any city, town, or place, or any territory or district (under any designation or description whatsoever) in the United Kingdom, whether such city, town or place, or such territory or district, be or be not the see or the province, or co-extensive with the province, of any archbishop, bishop, see or the diocese, or co-extensive with the diocese, of any bishop, or the seat or place of the church of any dean, or co extens ve with any deanery of the said United Church, the person so offending shall for every such offence forfeit and pay the sum of £100, to be recovered as the penalty imposed by the recited act may be recovered under the provisions thereof, *or by action or suit of any person in one of her Majesty's superior courts of law, with the consent of her Majesty's Attorney-General in England and Ireland, or her Majesty's Advocate in Scotland, as the case may be* [Sir F. Thesiger's].

"3. This act shall not extend or apply to the assumption or use by any bishop of the Protestant Episcopal Church in Scotland exercising episcopal functions within some district or place in Scotland of any name, style, or title, in respect of such district or place; but nothing herein contained shall be taken to give any right to any such bishop to assume or use any name, style, or title which he is not now by law entitled to assume or use.

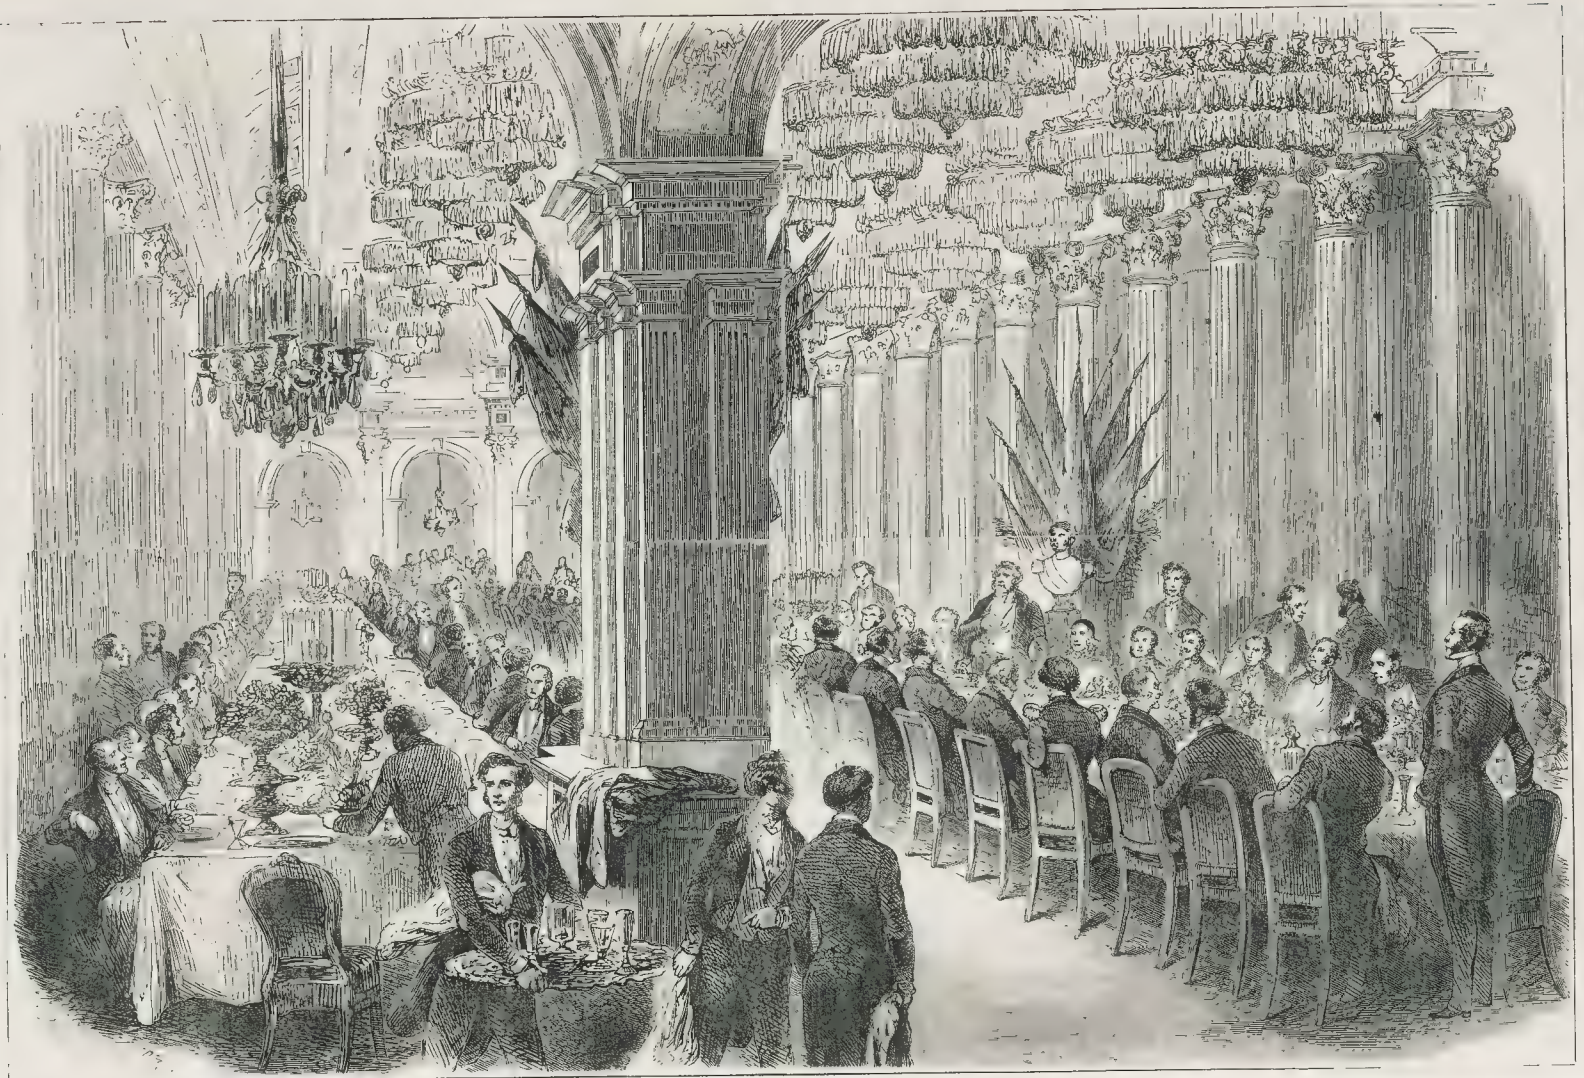
"4. *Be it enacted, that nothing herein contained shall be construed to annul, repeal, or in any manner affect any provision contained in an act passed in the session of parliament held in the reign of her present Majesty, entitled "An act for more effectual Application of Charitable Donations and Bequests in Ireland."* [Mr. Keogh's.]

KNOWSLEY AVIARY.—It prove to be an unfounded rumour that this unrivalled and costly aviary was wholly bequeathed by the late Earl of Derby, first to the Queen, if her Majesty would be pleased to accept it, and, if she declined, next to the Zoological Society. It appears that her Majesty was to be offered the choice of any particular lot she fancied; and it is understood that her Majesty graciously accepts the loyal offer, but postpones making her final selection until the whole catalogue, now preparing, be completed. The Zoological Society, next, were to have the choice of any remaining lots; and it is understood they have already selected the eland antelopes—subject, of course, to her Majesty's prior option. After this, the whole will be sold about October, either by private contract or by auction, already advertised.

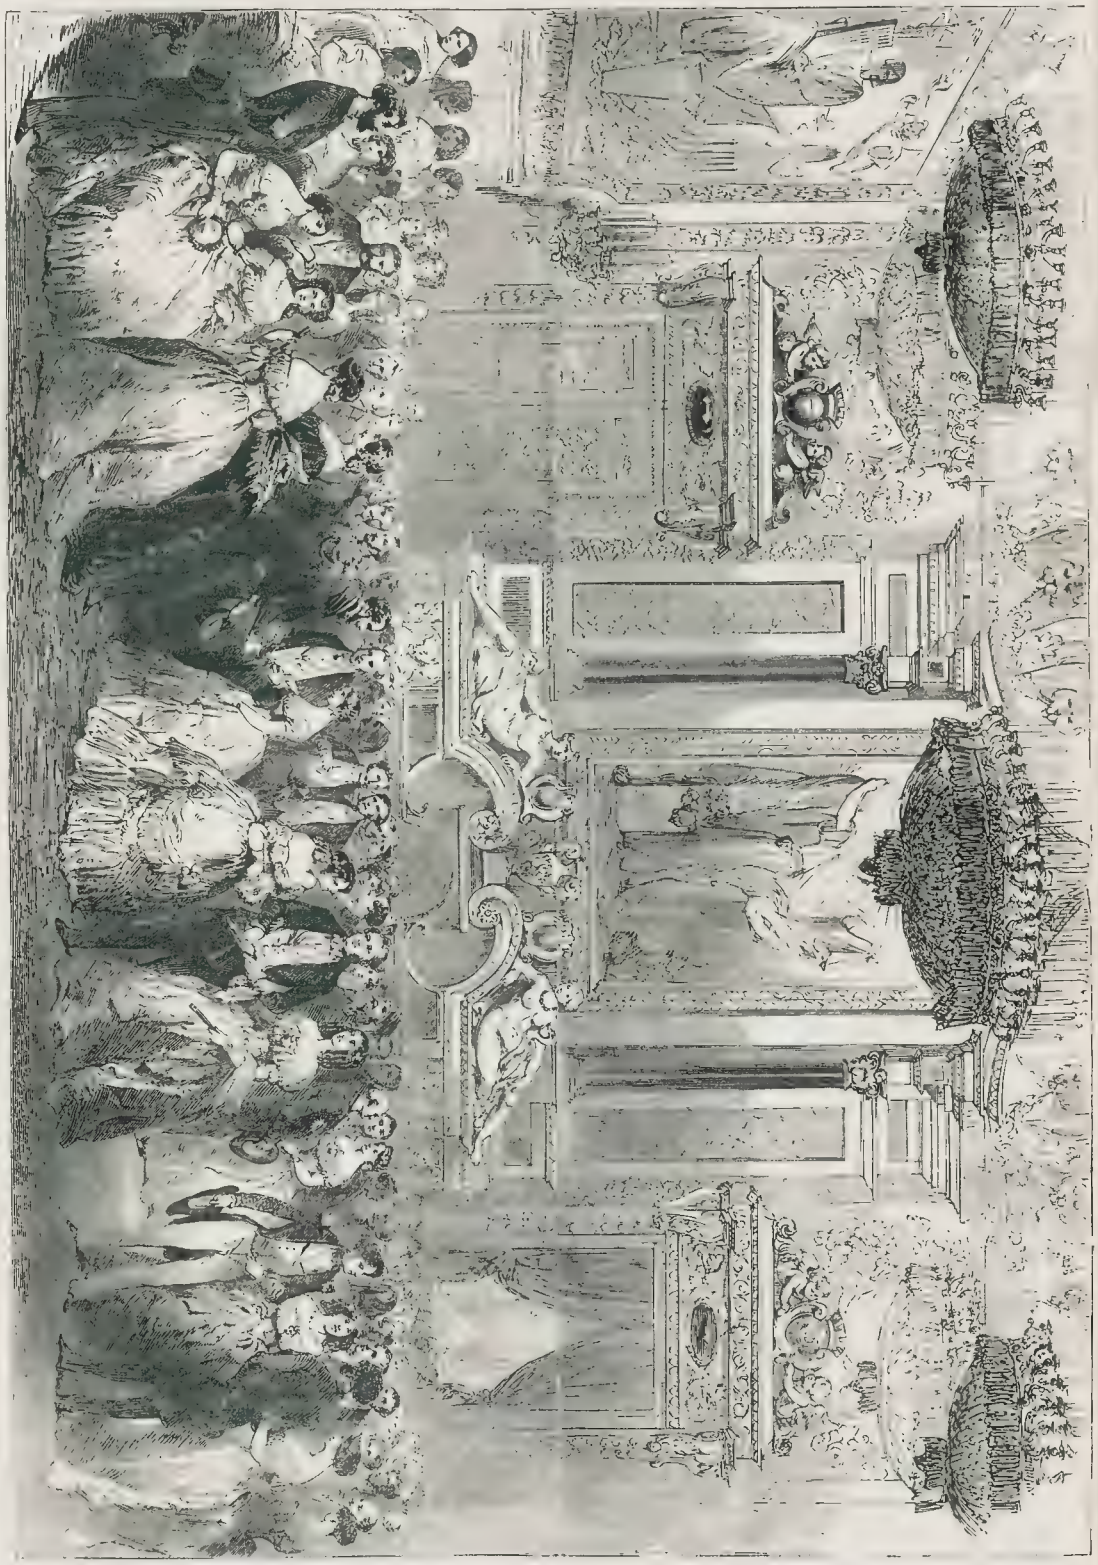
Last Sunday night an accident occurred on the Great Northern Railway, which threatened very serious results. The eight o'clock down-train reached Stevenage, when the engine being exhausted of water, the engineer detached it for the purpose of feeding it at Hitcham, leaving the train to descend the inclined plane. While he was engaged feeding the engine he observed the train descend with rapidity; and deeming escape from collision impossible, put the engine on another line, in the hope of allowing the train to pass by. But in avoiding one danger he fell into another, by running his engine into a large number of carriages and trucks, which were smashed and dashed to pieces in all direction. The damage and loss were very great. The engineer, who escaped uninjured, is in custody.

The Earl of Arundel and Surrey has been returned without opposition M.P. for Limerick, his opponent, Mr. Russell, having withdrawn from the contest.

* Originally the words were, "The said brief, rescript," &c. On the amendment of Sir Frederick Thesiger, the words "All such briefs, rescripts," &c., were substituted.



GREAT EXHIBITION FETES AT PARIS.—GRAND BANQUET AT THE HOTEL DE VILLE.



GREAT EXHIBITION FETES AT PARIS.—GRAND BALL AT THE HOTEL DE VILLE

METROPOLITAN NEWS.

The annual Ministerial fish dinner, in anticipation of the close of the Parliamentary session, was held on Saturday last, at the Trafalgar Tavern, Greenwich. The company proceeded from Hungerford-pier, at five o'clock, in the steamer *Watertoan* No. 12, and sat down to dinner at six o'clock, under the presidency of Sir Alexander Cockburn. The following members of the Government—all of the Royal household were present on the occasion:—Lord John Russell, Lord Palmerston, Lord Grey, Marquis of Westminster, Lord Clarricarde, Rt. Hon. Merivy, Lord Clarence Paget, Admiral Dundas, General Fox, Hon. W. Cowper, Mr. R. W Grey, Mr Baines, Lord Morpeth Hill, Mr. Cornewall Lewis, Mr. T. Bowes, Sir W. G. Craig, Mr. Bodley, Mr Rich, Attorney-General, Solicitor General.

EPIDEMIOLOGICAL SOCIETY.—A monthly meeting of the members of this society, instituted last year for the purpose of investigating the causes and conditions which influence the origin, propagation, prevention, and treatment of epidemic diseases, was held on Monday evening at the house of the Royal Medical and Chirurgical Society, Hanover-square; Mr. R. Gay Sabbaton in the chair. Mr. Tucker, one of the hon. secretaries to the society, proceeded to read a paper by Mr Grove, upon epidemical diseases. Mr. Grove argued that the poisons inducing epidemic, endemic, and infectious diseases must be ranked amongst the things endowed with life. The faculty of reproduction was a distinctive characteristic of animation as contrasted with inanimate or inanimate matter. It was during the reproductive period of existence, he said, that the most energetic operations of the vital forces were developed, and it was during the reproduction of the poisonous germs within the body that the force of diseased action called for special attention. Whether they examined an epidemic or infectious disease of any kind, or a contagious one, they would be found that the essence of the affection was a something which had the power of reproducing its species. Taking this faculty of reproduction as indicative of the existence of a germ, he classed the agents of disease into two—the one of the simple gradual reproduction as the primary law. To account for epidemics and infection upon the chemical basis he held to be impossible, seeing that in no purely chemical process was there any multiplication of the agents, but as far as the physical forces were concerned, one always increased at the expense of the other—heat increased by the chemical change taking place in combustible bodies. The author then examined a correspondence on the subject, which he had had with Mr. Silvester, Dr. Snow, Mr Charles Cochrane, Dr. Mc'William, and Mr Tucker as to part. A vote of thanks was then accorded to Mr Grove for his able paper on the presence of the larvæ of insects in the blood of persons who died in November when it was announced. Dr. R. Gordon Latham will read a paper upon epidemical diseases in Iceland. The committees of the society will continue their operations during the recess.

MIDDLESEX HOSPITAL.—On Thursday a quarterly court of the governors and patrons of this hospital was held at the Middlesex Hospital; W. Cooke, Esq., in the chair. The minutes of the former meetings having been read and confirmed, a report was read, which stated that there were at the present time 240 patients in the house, including various cases of accident. New subscriptions amounting to £60 had been received during the past three months, which, added to former subscriptions and donations, made a balance in the hands of the treasurer. The accounts were then passed, some routine business transacted, and, after a vote of thanks to the chairman, the meeting separated.

ROYAL MATERNITY CHARITY.—On Thursday, the half-yearly meeting of the friends of this charity was held at the London Tavern; Willis Barry, Esq., in the chair. The report sta ed that the receipts for the past six months had amounted to £1722 3s. 2d.; and the disbursements, including the investment of £876, to £1639. The number of deliveries during the six months had been 1320, and the total number from the formation of the charity, nearly 800 000; and the proportion of deaths which had occurred had been very small, as compared with the reports furnished by the different lying-in hospitals in this country and the Continent. There were five annuitants on the superannuated fund for infirm and decayed midwives, which fund now amounted to £5804. The report was adopted, and a vote of thanks given to the chairman at the conclusion of the business of the day.

PHONETIC SOIREE.—A meeting of the friends of the Phonetic movement was held on Wednesday evening in the Minor Hall, Exeter Hall Tea was provided for the phonographers and their friends, at which about 100 persons sat down. After tea the public proceedings commenced, when the room was well filled. The chair was taken by James Stinson Jones, Esq., of Forshibank, Accrington; and on the platform were Messrs Isaac Pitman and A. J. Ellis, the originators of the phonetic movement, Mr. B. Pitman, Professor Cubitt Solar, &c. The chairman, in opening the proceedings, remarked that the conference in the objects of the phonetic movement. Mr. Reid, the secretary, read letters of apology from the Earl of Sydenham; W. J. Fox, Esq. M.P.; W. Ewart Esq., M.P.; Rev. John Kenrick; Dr. Lardner; Dr. Bowring; the Rev. Mr. Clay, of Preston, Geo Dawson, Esq., of Birmingham; Professor Gregory, of Edinburgh; and Joseph Sturge, Esq. Mr. Isaac Pitman, who was received with enthusiastic applause, next addressed the meeting on the leading principles of the phonetic system. He pointed out the fact that each of the letters of the common alphabet represents several different sounds, and that each sound in the language is represented by several different letters. Attempts had been made by several persons to remedy this defect in our orthography, but they had all proved abortive, because they were based upon no principle. This it was, he said, which rendered the art of reading so difficult to acquire to children and to foreigners. No good reason, he contended, could be given why words should be written so differently from their pronunciation. The phonetic alphabet consisted of 40 letters, each letter representing a certain fixed sound, which sound is never represented in any other way. Long experience in the art of learning to read was a knowledge of the alphabet, each combination of phonetic letters accurately and distinctly suggesting the sound of the word it was intended to represent. In the phonetic alphabet all the letters of the common alphabet were used for the representation of the sounds they most commonly signified, and additional letters were introduced for the other sounds unrepresented. The phonetic using of the English language had been advocated by many eminent men (Bishop Wilkins and Benjamin Franklin among the number), but they were prevented by other labours from carrying out this desirable object. Mr. Pitman then read a letter from the Hon Horace Mann, Secretary of the Board of Education of Massachusetts, in which he expounded his high approbation of the phonetic system, and related some remarkable experiments connected with its introduction into American schools. This letter was extracted from a weekly newspaper printed in the Phonetic type, and published at Cincinnati, U. S. Mr. Thomas Allen Reed, of the London Phonographic Institution, adverted to the connexion of the phonetic movement with the principal philanthropic and religious objects now in progress, contending that it was entitled to the regard of every sincere lover of his race. He particularly urged the adoption of the system in ragged schools, in which, he said, it had been already tried with success. As an instance of its legibility, he mentioned the fact that he had with him a report of a sermon, which would be set up by the printers from his notes, without the necessity of transcription. Professor Cubitt Solar, in a few sensible remarks, addressed the meeting. He considered the phonetic cause deserving the sympathy and support of every person interested in educational progress. He stated that the Spanish Government had, within the last few months, introduced the change with success. Pitman and Ellis sought to effect it in the English. He alluded to the difficulties he had himself experienced, in common with other foreigners, in the acquisition of the English mode of spelling, and pointed out the great benefits to be derived by foreigners generally from the use of the phonetic system. He concluded with a glowing eulogium on the disinterested zeal of his friends and colleagues, Messrs. Pitman and Ellis. Mr. B. Pitman related some interesting details of the progress of the system in various towns he had visited. He had lately concluded a seven months residence in Glasgow, during which he had explained the system to nearly 10,000 individuals, a course of practical instruction had been given to 1700, and had also instructed 800 persons in phonetic shorthand. He felt fully persuaded of the immense advantages to be derived from the system, which only required a continued and extensive efforts to ensure its universal adoption.

TEETOTALISM.—A series of meetings, or "demonstrations," as they are termed by the parties themselves, have been held in connexion with the present during the week by the "water-drinkers" whom the Exhibition has attracted to London. On Monday evening they held a crowded meeting at Exeter Hall, the object of which was to explain the programme. A vote of hearty welcome to the teetotalers was—it might be presumed from various parts;" Mr. L. Hayward, M.P., was in the chair, supported by Messrs. G. Cruikshank, S. Bodkin, B.A., Rev. John Burnet, &c. The proceedings were commenced with the singing of a hymn, by a selection from the Welsh choir, who were stationed upon the platform; they numbered 126, and were stated to be all labourers. The chairman then opened the proceedings in a congratulatory speech on the progress of the temperance movement, which, he said, "went on prospering and to prosper" He concluded by introducing Mr Green, to whom was committed the reading of an address, which, while welcoming the many strangers present, reported in favourable terms the general advancement of the cause. After a song of their own composing, by some Welsh quarriers, Mr. Hudson, a delegate from Bristol, came forward to speak. Having begun with various allusions to the Great Exhibition, and to the opposition to it which had emanated from that "extraordinary and tied Barbarossa of the House of Commons, Colonel Sibthorp," he went on to compliment and to congratulate Mr. S. Buckingham and Mr. G. Cruikshank on the successful issue of their labours in the cause. Dr. Lees, of Leeds, followed, and spoke very animatedly and at some length in favour of the principles of teetotalism, and in attestation of their being supported by science. He was succeeded by Mr Thomas Whitaker, who, after a great applause, delivered a very facetious and energetic address, accompanied with much action, and a public shaking of hands with two gentlemen on the platform, for whom he, as a teetotaler, thought the meeting ought to express its special reverence and regard. Mr. King and Mr. Livesey were the parties to be singularised. At the close of Mr. Whitaker's speech, a collection, amounting to seven guineas, was made, and a vote of thanks proposed to the secretary. Mr. John Andrew, of Leeds; Mr. S. Buckingham, Mr Peter Sinclair, from Edinburgh; the Rev Mr. Thomas, who spoke in Welsh; Mr. Evan Lloyd, who rose to translate Mr. Thomas's speech, but seemed made one of his own, interrupted before it was finished by cries of "Time!" and the Rev. Mr. Ballantine and others having addressed the meeting, the proceedings, which commenced at six o'clock, were brought to a close about ten.—On Wednesday morning, about 400 of the teetotalers now in London, who have been recently engaged in demonstrations and general meetings, breakfasted together at the London Tavern, Bishopsgate-street, under the presidency of Mr S Buckingham. The repast concluded, the chairman delivered an appropriate address, and then introduced other orators to the assembly. Subsequently, the entire party adjourned to the Surrey Zoological Gardens, where they spent the afternoon.

NEW SOUTH-WESTERN STEAM-PACKET COMPANY.—On Thursday the half-yearly meeting of this company was held at Nine Elms station; Colonel Hardyson in the chair, and the dividend of five per cent guaranteed by the railway company declared payable on the 16th inst. It appeared that £554 6s. 9d. had been raised on the shares beyond the amount guaranteed interest by the rat way company, and it was resolved for the present to use it by investing it in the finances of the Company, though it will hereafter come as a bonus to the proprietors.

SOUTH-WESTERN RAILWAY.—On Thursday the half-yearly meeting of this company was held at No 24, Spring-gardens, Mr Burlington in the chair The report stated that the receipts for the half-year had been most encouraging, having nearly doubled those of the previous half-year, which had enabled the directors to recommend a dividend of 3 p cent per annum, after which they would have £930 to carry over to the credit of the ensuing half year. A reduction had been effected in the rate of interest of some of the debentures, and they had on hand the money at 4½ per cent, instead of 5 per cent, which was the rate payable upon the debentures paid off The receipts for the last six months amounted to £120 334 18s. 7d., and the expenditure to £63 13 8s. 5d.; leaving a balance of £56 821 10s. 2d. The dividend was declared at the rate of 3 per cent per annum declared, and, after a vote of thanks to the chairman, the meeting separated.

VEGETARIAN SOIREE.—A great gathering of the members and friends of the Vegetarian Society took place in the Freemasons' Hall, on Friday, the 1st inst. Tables were laid along the whole length of the spacious apartment; and between 350 and 400 guests sat down to the repast. The tables were tastefully decorated, and the walls were hung with banners with gay and animated. The bill of fare was most liberal—so moderate that only a *single* was announced. The chair was occupied by Mr. Bro ro, M.P., who made a speech read from the pages of forty-two years. Addresses in favour of the vegetarian system were delivered by James Simpson, Esq., J.P., president of the society, by the Revs. Mr Gallan, Watson; and by Mr De Wolf, Mr. Ward, and Mr. Benn Pitman. We shall engrave the interesting festival next week.

PUBLIC SEED FARM FOR FINSBURY.—The project of a new Park for this extensive metropolitan district, with its ball-alleys and its bands, is at present in abeyance for any hostility in the Government, who, it is fully understood, have determined on making the park, but because the authorities at the office of the Woods and Forests decline the responsibility of preparing the notice of making the same, or arranging for it without receiving specific instructions from the Premier or the Chancellor of the Exchequer on the subject. These official delays are in this case the more to be regretted, as, unless the ground be secured at once, it is a great probability that a large portion of the ground intended to form the proposed park will be taken for building sites—a proceeding minutely delayed, in expectation of the plan receiving the sanction of Parliament before the close of the session. The subject has been strongly urged on the attention of Lord Seymour by the borough members, and there is yet time for effecting a satisfactory arrangement before Ministers leave town.

OPENING OF VICTORIA STREET, WESTMINSTER, BY THE COMMISSIONERS OF THE WESTMINSTER COMMISSION.—This event was inaugurated on Wednesday with public festivity. Having attended morning service at the Abbey, the commissioners and their friends formed in procession, and the bells of St. Margaret's Church chimed a merry peal, "God save the Queen" of England having been first hoisted in commemoration of the name of Victoria-street. The procession passed on the north side of the street to the terminus at the Vauxhall-bridge road, when the children and procession formed into a square, and Sir Edwin Pearson, the chief commissioner, declared the street open for the use of the public for ever hereafter, and dedicated to the public. The barriers were immediately removed, and the public allowed to pass amidst the cheers of an immense concourse of people who had assembled to witness the ceremony, and who were regaled by the children singing the National Anthem; and thereupon a royal salute was fired. Victoria-street now forms a short and pleasant communication, some 80 feet in width, between the Abbey and Victoria-grove

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

A messenger from the office of the Secretary of State reached Nottingham by mail train at three o'clock on Tuesday morning, taking with him a letter for Sarah Barber, under sentence of death for poisoning her husband, to extend over fourteen days from the date at which her execution was fixed to take place, on Wednesday last, the 6th instant. Facts which have come to light since the trial, tending to show that she was an accessory to the murder only after the fact, see n to have led to this respite.

The Baron de Brannow left Ashburnham House on Monday for St. Petersburgh, after having expressed hisses at this Court during twelve of the most eventful years in modern history. He is expected to return in October next.

The Bokingfold Archers held their second meeting for the season on Monday, in Colonel Austen's Park, at Kippington. Mrs. Austen afterwards entertained the party, and many of the principal families in the neighbourhood of Sevenoaks, at a grand dejeuné.

A letter from Moscow states, that, on the 20th ult., as the monks of the convent at Wiadmar, a town about 120 miles to the north-east of that city, were setting out in procession, to visit an image of the Virgin at a neighbouring village, a wooden bridge thrown over the moat of the convent (formerly a fortress) gave way, and out of 2-00 of the monks 188 were drowned. This immense loss of life was caused by the water being 45 feet deep, and the sides of the moat having perpendicular.

The estimated number of letters, as appears from an official return, delivered as "chargeable," was, last year, 447,060,071.

The herrings caught in the Wick (Scotland) district alone, in two days of last week, realised in hard cash to the fishermen engaged in their catch no less a sum than £10,000 sterling!

The French lottery of golden ingots, of which so much has been seen and heard in France, has already realised a sum sufficient for carrying out the purposes which gave rise to it. 30-0 ordinances are to be sent to the towns with the proceeds of the lottery. The house of V. Marzion and Co., of Havre, has obtained the concession from Government of the transport of these emigrants.

At Konigsburgh, Dantzic, and Dereham, where the recent eclipse of the sun was total, darkness like that of night prevailed for some minutes. During this great moment of stars were visible, among them Venus, Jupiter, and Mercury. The natural phenomena produced on the animal and vegetable world were highly interesting: several flowers closed; the birds, which had been before flying about, suddenly disappeared; the cocks crowed, and the birds went to roost.

The provincial journals in France state that the potato crop, so far as is known, presents no traces of malady.

On second re-commitment, clauses have been inserted in the bill further to extend the jurisdiction of the judges of the County Courts, and to facilitate proceedings in the High Court of Chancery, the effect of which will be to ad mit of pleas, answers affidavits, &c., being sworn in Scotland, Ireland, the Channel islands, or the colonies, before any court or person authorised to administer oaths, to give power to superior courts or any two judges to hear appeals in term as well as out of term, in all cases of appeal to the superior courts from decisions in cases tried by the county court judges without a jury, &c.

On Tuesday a public dinner was given to Mr. Paxton, at Derby, in the new Assembly-room, at which nearly 300 of the most influential gentlemen of the county were present. Among them were the Duke of Devonshire, the High Sheriff, the Mayor of Derby, the Mayor of Chesterfield, Mr. Strutt, M.P., Mr. Cavendish, M.P., Mr. John Ellis, M.P., &c. The chair was taken by Thomas Osborne, Esq., and after the usual loyal toasts had been given, the health of Mr. Paxton was proposed and responded to with the greatest enthusiasm. Mr. Paxton achieved the completion in a week of considerable length, which was listened to with profound attention and warmly applauded throughout.

The total sum borrowed by turnpike trusts in England and Wales from the Public Works Commissioners, and not wholly repaid, amounted to £169,650. Of this sum £55,293 has been repaid, and £1 4 4 7 remains due. The interest remaining unpaid on the 5th Jan., 1851, was £5,151 12s. 9d. The amount borrowed in Scotland by the turnpike trustees was £34,276, of which £5,925 has been repaid, and £36,744 remains unpaid. The interest remaining unpaid on the 5th January, 1851, exceeds the principal, and amounted to £67,735.

The Hon. C. S. Hardinge, eldest son of Viscount Hardinge, is the only candidate spoken of for the seat vacated at Downpatrick by Mr. R. Kerr, He is a Conservative, and will probably be returned without any opposition.

The refreshment-room of the railway station of Château Thierry, on the Strasbourg Railway, was destroyed by fire on Saturday morning. It is not known how the conflagration originated.

The works for the erection of the Westminster Hotel, in connexion with the Britannia Bridge, are to be suspended for the present, the shareholders of the line being, it is said, indisposed to sanction the expenditure of so large a sum of money in connexion with it. Holmes have contracted for the erection at a cost of £120,000. The pleasure-grounds, however, are to be proceeded with

Mr. Lewis Charles Tennyson D'Eyncourt, of the Inner Temple, is appointed a police magistrate for the district of the metropolis, in the room of Mr. Burrell, of the Westminster court, whose resignation dates from Thursday last.

On Sunday morning, the Rev. Prince Hohenlohe officiated at mass at the metropolitan Roman Catholic church, St. George's, Southwark. A somewhat general expectation that the Prince would preach was disappointed.

The various species of mining now pursued in California are—washing on the banks of the various streams dammed or laid off for the purpose; "coyoteing," or digging into the earth from one pocket to another, being the rude application of a scientific principle; tunnelling the hills, a system which has proved immensely profitable; and crushing the auriferous quartz rock—the success of which depends as well on skill and machinery as on the richness of the ore.

The total declared value of all British and Irish exports for the six months ending July 5, 1851, is, £24,093 853, as against £21,778,504 in the first six months of 1850, and £25,5.5,429 in the first six months of 1849.

It appears by a parliamentary return, printed at the instance of Lord Rendlesham, that the total amount paid "to Justices and clerks of the peace for their wages in attending quarter sessions in every county and city being a county of itself in England and Wales," in 1850, was £994 4s., viz. £925 12s. to justices, and £68 13s 8d. to clerks.

In consequence of the numerous suicides which have taken place in the army of Paris, General Magnan, the Commander-in-Chief, has addressed to the troops a feeling exhortation against the sinful and unwardly proceeding, and quoted the language of the Emperor in reprobation of it.

Charles Maturin, Esq., has been appointed Crown prosecutor for the county and city of Derry, in the room of the late lamented John Schoales, Esq., Q.C.

The following is an account of the total number of letters delivered in the United Kingdom for the last twelve years:—In 1839, before the reduction of postage, 76,507,872 letters; in 1840, 168,788,281; in 1841, 196,900,191; 1842, 208,434,451; 1843, 220,456,306; 1844, 242,091,084; 1845, 271,110,789; 1846, 299,886,762; 1847, 322,146,243; 1848, 328,890,184; 1849, 337,292,193; and in 1850, 347,060,071. The total number of letters delivered in the week ending the 21st of February, 1851, was 7,2 7,360.

Mr. Francis W. Russell, the late candidate for the representation of the city of Limerick, has been left a large legacy by his father-in-law, Mr. Archer, of Melton, who has just died.

Mr. Fletcher Conyers Norton has been transferred as *attaché* from her Majesty's mission at Brussels to the mission at Naples; and Mr. Joseph Cutts is appointed Registrar of the Supreme Court at Ceylon.

The amount paid by the Post-office for the conveyance of mails on railways in 1835 was only £1743 19s. 11d. The amount paid last year was £400,9o4 3s. 1d.

The General Assembly of Roman Catholic Societies of Germany meets at Prague this year

Near Berlin, in the small town of Wriezen, on the Oder, a Roman Catholic mission has been established for some time past. The King of Prussia has now granted it parochial rights, and permission to extend its activity over a considerable district

The gross revenue of the Post-Office in the official year ended the 5th January, 1851, was £2,654,584 5s. 3d.; the net revenue, £1,460,765; and the net revenue, £803,898 11s. 5d. The postage charged to the Government departments within the year was £109,853 13s 7d.

An address, on behalf of the Early Closing Association, was delivered on Sunday afternoon last at St Saviour's Church, Southwark, by the Rev. W. Curling, M.A., one of the chaplains of the church. The large and beautiful edifice was crowded to overflowing on the occasion by a most attentive congregation. Mr. Curling preached from the words, "Man goeth forth unto his work and to his labour until the evening" Psalm, civ 23.

Mr. Hume's committee on the income and property-tax have reported the following resolutions to the House of Commons: "That the committee have determined, considering the advanced period of the session, and the amount of the business of the House, that their proceedings be now closed That it is not expedient, in the present very incomplete state of the inquiry, to report the evidence to the House. That, in the opinion of this committee, a committee should be appointed next session for the purpose of continuing this inquiry."

The total number of Post-Office money orders issued in the United Kingdom in 1850 was 188,921, and the amount which they represented was £3 1,124 15s. The number has steadily increased ever since, until in the last year it reached the prodigious total of 4 .39 713, representing £8,694,49 i 10s 7d. It appears, therefore, that the average sum for which money orders are issued is about £1 1s 9½. The total number of money orders paid in 1850 was 188,916, representing £3 1,727 5s 1d., and the total number paid in 1850 was 4,331,339, representing £8,483 055 1s. 10 . The total expense of the London and country money order offices (including Wales) for the year 1850 was £56,302, that of Ireland £7969, and that of Scotland £5676. The amount of a commission allowed in the United Kingdom was £73,813.

CHESS.

TO CORRESPONDENTS.

A Y REMIND DERBYON.—Your solution in *four* moves shall be submitted to the author

STEVES Exeter.—No 188 is perfectly correct. Try it over more

W F, Perth.—One of the best of your problems is given in the *Chess-Player's Chronicle* for August

W F, Perth.—Of course it must be placed on the identical square; where else would you place it?

SCOTUS.—In the first place your Enigma is incorrectly described—there is not room on White's Q 4 3rd square for both the Black Kings and a White Pawn; in the second place, there can be no mate in effecting mate when the unfortunate Monarch is hemmed in in the manner you have described him

SOLUTIONS OF PROBLEM No 228, by Milo, Sub-Deacon, Witham, Gloucestershire, Derevon, H K, of Ashford, are correct

SOLUTIONS OF PROBLEM N . 231, by F S E, Milo, Delta, Sath Duo, B W, Caxton, R F, Bembridge, Jack o' Shrewsbury, are correct

SOLUTIONS OF ENIGMAS by F S E, M ., T H T, D D, M D, Medicus, are correct

* * The answers to the majority of our Chess Correspondents are unavoidably postponed until next week; but we must no longer defer our acknowledgment of the following significant communication:—

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—We, the undersigned, offer you our cordial thanks for the insertion of the letter which appeared in your paper of June the 28 h, in refutation of the calumnious accusations which have been directed against the Chess Congress of 1851. With renewed thanks,

We have the honour to be your obedient servants,

(Signed by) The President, the Secretary, the Treasurer, and all the leading members of the Orwell "Hermes" Chess Club.

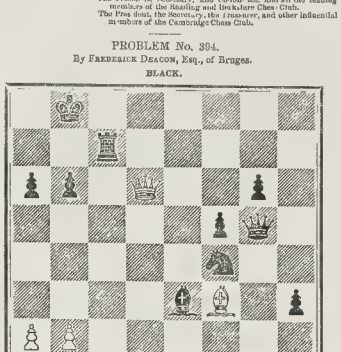
The President, Secretary, and Committee, and all the leading members of the Reading and Berkshire Chess Club.

The President, the Secretary, the Treasurer, and other influential members of the Cambridge Chess Club.

PROBLEM No. 394.

By FREDERICK DEACON, Esq., of Bruges.

BLACK.



WHITE.

White, playing first, mates in seven moves.

GAMES IN THE CHESS TOURNAMENT.

Fine Game between Mr. STAUNTON and Mr. HORWITZ.

(Sicilian Opening.)

WHITE (Mr. S.)	BLACK (Mr. H.)	WHITE (Mr. S.)	BLACK (Mr. H.)	WHITE (Mr. S.)
1. P to K 4th	P to Q 4th	28. K B to Q B 4th	28. K B to Q B 4th	Kt to Q B 3d (*e*)

15. Q B takes P	Kt to Q B 3d (*b*)	41. P to K R 4th	Q to K R 8th	K takes P
16. Q B to K 3d	P takes P	42. P takes P (ch)	K takes P	K to his 3d
17. P takes P	K B takes P	43. K R to his 2d	Q to K 8th	Q to K 8th
18. Q to her 2d	Q to her B 2d	44. Q takes Q	P takes Q	K takes B
19. P to K Kt 3d	K B takes K Kt P	45. K to his 3d	K R to Q 2d	K R to Q 2d
20. K to his 3d (*c*)	K to Q 3d	46. Q R to his 2d	Q R to Q B 3d	Q R to Q B 3d
21. P to Q 4th	P to Q K 3d	47. Q R to his sq	K R to K 3d	K R takes B
22. P to Q Kt 4th	K B to K B 2d	48. P takes R	P takes P	R takes P
23. P to Q B 5th	P takes P	49. Q R to K Kt sq (ch)	Kt to B 3d	Q to K 3d
24. Q P takes P	K B to his 3d	50. K R takes P	Q to his 4th	Q to his 4th
25. K B to K 2d	Kt to Q Kt sq (*d*)	51. Q R to Q B sq	P to K B 5th (ch)	P to K B 5th (ch)
26. Q B to K H 4th	Q to her Kt 2d	52. K to B 2d	B takes R, and wins	B takes R, and wins
27. Q B to Q 6th	K R to Q sq			

The game lasted four hours and twenty-five minutes.

(*a*) Every move in this opening is the result of profound consideration.

(*b*) This combination will be found to exercise an important influence upon the after game.

(*c*) If he had taken the Bishop, White would have got an irresistible attack. For, suppose :—

BLACK.	WHITE.	BLACK.	WHITE.
20. P takes B	Q takes P (ch)	22. B takes Kt (best)	B to Q B 3d (ch)
21. Kt to R sq	Kt to Q 5th	23. Kt to K 2th	P takes Kt

And must win.

(*d*) White has the advantage, both in force and position; but the least relaxation would turn the scale in his adversary's favour.

(*e*) To ward off preparatory to checking with the Bishop, and then discovering check by playing Kt to K 4th. If the King were moved, may be considered the winning coup

(*f*) A good move, but not nearly so effective as Q to her 4th, which seems to have Black no resource

(*g*) Throughout this Tournament White plays much below his old force. In health he would have seen immediately that the winning play now was to take the Bishop, *et pr.*—

BLACK.	WHITE.	BLACK.	WHITE.
40.	R takes B	42 Q to K 5th	Q to Q 3d (ch)
41. P takes R	R to Q B 5th	43. K to his 2nd	R to K 8th (ch), and wins

CHESS ENIGMAS.

No. 696.—By H. F. DUFF, Esq.

White: K at his Kt 2d, R at K sq, B at K R 4th, P at K R 3d.
Black: K at his B 5th, P s at K K 3d and K B 4th.

White to play, and mate in four moves.

No. 697.—By JUDY.

White: K at K B 5th, B at K Kt 3d, Kt at K Kt 5th, P at K Kt 2d.
Black: K at K R 4th.

White to play, and mate in five moves.

No 698.—From *La Régence.*

Black: K at Q B 4th, B at K 5th, P s at K R 7th, K t 6 h, and Q Kt 5th.

White to play, and mate in three moves.

No. 699.—By JUDY.

White: K at K R 6th, R at Q R 7th, Kt at K R 7th.
Black: K at his R sq, R at K Kt 8th, P at Q B 5th.

White, playing first, to mate in three moves.

The ledge of quartz in California, in which the gold is embedded, is stated to extend through the whole length of the state, and even into Lower California. Further investigations pushed into the lower districts, it is thought, will develop new veins of ore; and already in Los Angeles county there is a quartz vein of very great richness.

DISCONTINUANCE OF THE ENTERTAINMENT ON BOARD THE CHINESE JUNK.—The illuminations, with the music and dancing, which have been for some time proceeded with on board the Chinese JUNK, have been suddenly discontinued by the peremptory command of the City Navigation Committee, arising, it is said, from the complaints of some of the inhabitants of Essex-street and its vicinity, tenants of the Duke of Norfolk, made through his Grace's solicitor.

On Saturday evening the directors of the *Citizen* Steam boat Company celebrated the sixth anniversary of its formation by entertaining the men employed in its service on the river, amounting in number to 300. At Londonbridge the boats of the Company started in procession for the Bay of Cremorne, where a display of skill, consisting in the dexterous manœuvring of the boats, was exhibited, under a fire of guns from the forts on shore, after which the men sat down to an entertainment provided for them in the company's dry dock, above Battersea-bridge. It was stated that 4,000,000 of passengers had been conveyed by the boats during the present year.

NATIONAL SPORTS.

The ensuing week gives us only four meetings, and promises nothing above the common in the way of sport We perhampton, which commences on Monday, will be the most attractive, and there seems to be a prospect of fair average sport. Reading, on Wednesday and Thursday, will suit the metropolitans, is pleasantly situated, and likely to "hold its own." Huntingdon will come off on Tuesday and Wednesday; and Tunbridge, in spite of the "saints," on Wednesday.

CRICKET FIXTURES:—Monday, at Canterbury and Birmingham; Tuesday, at Blackheath; Wednesday, at Canterbury and at the Vine; Thursday, at Canterbury, Huntingdon, and Blackheath.

AQUATICS:—Ipswich, on Monday, at Shadwell and Manchester; Wednesday, at Bunhill, Saltertan, and Ryde (Royal Victoria Yacht Club); and Thursday at Brighton.

TATTERSALL'S.

MONDAY.—Owing to the settling on the Goodwood events, speculation was al most at a stand-still, leaving us to submit but a brief list of prices:

BRIGHTON STAKES.		
9 to 2 agst Backbiter	5 to 1 agst Wesley	9 to 1 agst Lord George
5 to 1 — Narcissus	7 to 1 — Cossack (t)	10 to 1 — Ing ambassador
	10 to 1 agst Sir K Tweedhard	
GREAT YORKSHIRE.		
7 to 4 agst Nancy		4 to 1 agst Neasham
	ST LEGER.	
7 to 4 agst Hernandez	9 to 1 agst Bobbejee	10 to 1 agst Alpheus
	DERBY.	
10 to 1 agst Hobby Noble		40 to 1 agst Treasurer

BRIGHTON RACES.—WEDNESDAY.

TRIAL STAKES of 5 sovs. each, with 25 added. Mr Gratwicke's The Squaw (Kitchener), 1 Duke of Richmond's Ugly Buck, out of Magenta (Garvey), 2. PAVILION STAKES of 30 sovs each.—Mr. Payne's freedom (Fairman), 1 Mr. Carew's Hampton (A Day) 2.

BRIGHTON STAKES of 25 sovs each.—Lord Waterford's Lord George (Charlton), 1. Mr. Pedley's Cossack (A. Day) 2.

STEWARD'S PLATE of 50 sovs each, added to a sweepstakes of 10 sovs each. Mr. March's Preslaw (Simpson), 1. Lord W. Powlett's St. Ann (Jeffers), 2.

HOVE-KEEPERS' PLATE of 50 sovs. Mr. Payne's Catalpa (Harding), 1. Sir W. Boothby's Little Fanny (Barber), 2.

TOWN PLATE of 50 sovs, added to a sweepstakes of 3 sovs each.—Mr. Gratwick's Cheerful (Fairman), 1. Mr. Carew's Aristocrat (A. Day), 2.

THURSDAY.

The BRIGHTON CUP.—Landgrave walked over.

GRAND STAND PLATE—Ischia, 1. Agis 2.

THE MARINE STAKES Free-and, 1. Pelerine filly, 2.

NORTH STAFFORDSHIRE STAKES (HANDICAP).—Lady Ebbins, 1. Young England, 2.

HARLEY STAKES.—Alma, 1. Neil Gwynne, 2

TRADESMEN'S PLATE. Ale Mease, 1. Aldgate, 2.

ROYAL SOUTHERN YACHT CLUB REGATTA.

This regatta commenced at Southampton on Tuesday morning, the first prize being the Club Cup, £50, for yachts *bond-fide* the property of members of the Royal Southern Yacht Club; a time race, one minute per ton allowed for yachts under 31 tons. At about half-past eleven o'clock the starting gun fired, when the following yachts got away together well together, with the exception of the *Volante*, which was five or six tonnes behind, in consequence of a slight entanglement; the *Mazeppa* taking the lead, which she kept to Calshot Castle, when she was overtaken by the Earl of Yarborough's cutter *Volante*, the breeze having freshened, and there being more sea room:—

Yachts.	Tons.	Owners
Volante	48	.. J. L. Craigie, Esq.
Vidan	45	.. T Barnett, Esq.
Mab	10	.. L. H Inverarity, Esq.
Mazeppa	23	.. C. Rowley, Esq.

The course for these yachts was round the Nab Light, thence round a flagboat stationed off Yarmouth, leaving both on the starboard hand. In returning, to leave the Calshot Light-vessel on the port hand.

The following is the order in which they returned:—

Volante	.. ..	.. ..	.. 6h 47m 40s
Vidan	.. ..	.. ..	.. 7h 22m 4s

Mazeppa disqualified, sailed several miles out of her course.

For the PURSE of 40 guineas the following yachts started, simultaneously with those for the cup:—

Yachts.	Tons.	Owners.
Tartar	36	.. W H Dawes, Esq
Heroine	35	.. R Bate, Esq
Sea-ut	25	.. R Bell, jun, Esq
Phantom	21	.. Captain Reay
Surprise	17	.. W H Woodhouse, Esq

The *Tartar* got disabled off Stokes Bay, and gave up, and at 7h. 27m. the *Heroine* arrived, being the winner, and leaving the other yachts being in view.

THE QUEEN'S GOLD CUP.

The only match on Wednesday was for her Majesty's Gold Cup, of 100 guineas value, for yachts belonging to the members of the Royal Southern Yacht Club. The *Volante*, being the second cup of the club cup the preceding day, had been entered some days previously, in conjunction with five or six others; but her superior sailing qualities, no doubt, induced gentlemen who had intended to contend for the prize to withdraw and leave the field in possession of the *Arrow*, belonging to Thomas Chamberlayne, Esq., and the *Volante*.

The match is summed up in a few words. The *Volante* had the race in her own hands, and rounded the Nab five minutes in advance of her competitor, which gave in at this point, seeing she did not possess the slightest chance

It is much to be regretted, that, out of the splendid fleet of yachts possessed by members of the Royal Southern Yacht Club, only two could be found to enter the lists. The cup was presented by her Majesty to the club for the first time this season. The queen was at Osborne, and no doubt witnessed part of the match from that direction. If she is advised, surely, if they can, the senses may, so that moral decorum be not violated. But the fact should not be concealed, that the present condition of the building is a national disgrace. The equestrian arrangements have been admirably conducted, and considerable credit is due for them to Mr. Risley, who, we understand, is the manager of the entire performances.

DRURY-LANE—EQUESTRIAN TROUPE.

The star riders continue attractive, and the public crowd the theatre to witness the daring performances of the French and American competitors. But by far the most astonishing miracle-worker of the manner is an American equestrian, Thomas M'Collum by name, whose feats with two horses are the most remarkable examples of prouetting and somersetting that we ever witnessed. While the horses are proceeding with the utmost rapidity, he describes several curves in the air repeatedly, and comes down safely on their backs, having meanwhile compassed a leap over a flag. We present our readers with an illustration. Others have been given of still greater beauty and daring, exciting wonder at the rider's agility, and the training of the noble animals that so implicitly obey the master's volition. The excitement of these exhibitions is exceedingly great; and they have, indeed, in them a certain poetry of their own, calculated to affect the *stones* mind with a sense of beauty; and this is something. If the highest dramatic poetry be necessarily banished from the Drury-Lane stage, owing to the fault of the proprietary, in omitting to fit the machinery for scenic purposes, so as to make its occupation safe to an honest speculator, we see no reason why this equestrian spectacular poetry may not be substituted, until the requisite duty behind the scenes be performed by those who have this Temple of the Muses in trust, but neglect to discharge the obligation implied in their direction. If the Saviour cannot be addressed, surely, if they can, the senses may, so that moral decorum be not violated. But the fact should not be concealed, that the present condition of the building is a national disgrace. The equestrian arrangements have been admirably conducted, and considerable credit is due for them to Mr. Risley, who, we understand, is the manager of the entire performances.

"NANCY," THE WINNER OF THE GOODWOOD CUP.

We this week engrave a portrait of Mr. Martinson's bay mare, Nancy, the winner of the Goodwood Cup on Thursday week. Nancy has a star on the forehead, white spots on the back and on both sides, a few white hairs in the tail, and the heel of the near fore foot white; she is, in short, a bay mare with white hairs.

The "Nancy party" at Goodwood are stated to have won £80,000. After the race, it was announced that Mr. Pedley had required that the winner's mouth should be examined, "a ceremony which, we believe, was performed at Doncaster last year, when she was a two-year-old, and decided time to offer further evidence."—(*Bell's Life in London.*) The stewards complied with Mr. Pedley's request; by their order, Mr. Reid, the veterinary surgeon, was sent for, and, having examined the mare at Singleton, certified that she is three

"NANCY," WINNER OF THE GOODWOOD CUP, 1851.

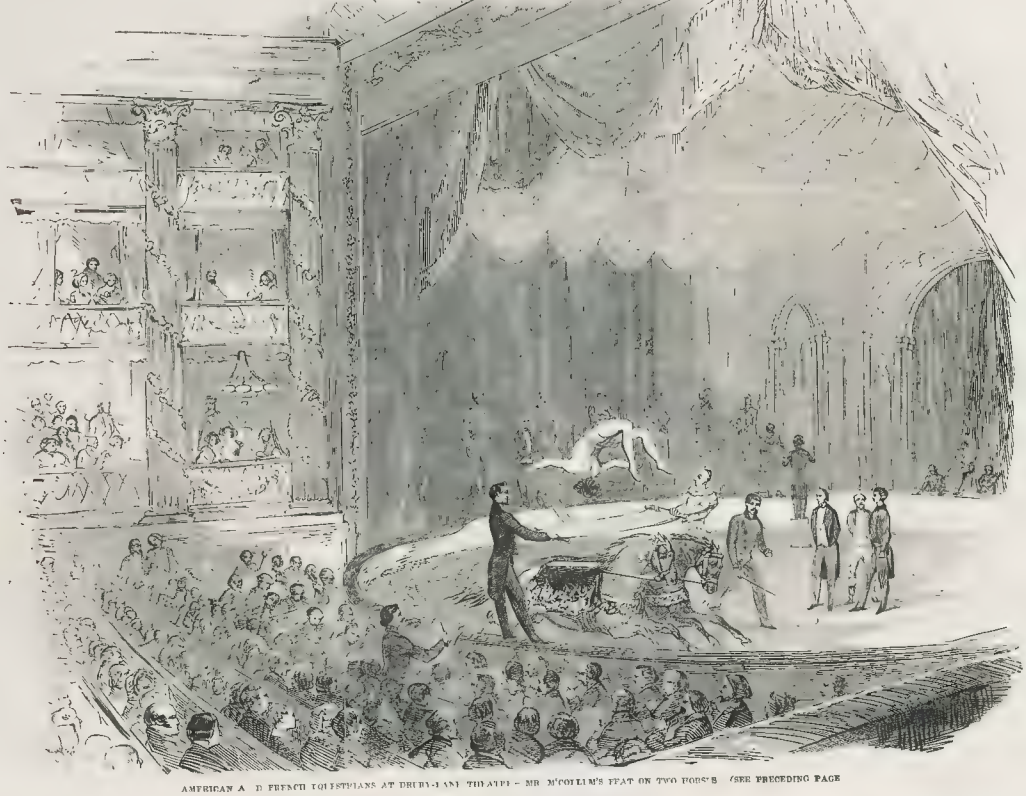
years old. Previous to the examination Mr. Padley publicly declared that he would give £2000 to any one who would enable him to establish his objection.

The success of Nancy, beating Cossack only by a head, in the race for "the Cup," was one of the events of the recent Goodwood meeting. It is considered that she could have made a better finish; but her jockey, thinking all was safe, gave her a pull when near home, and Alfred Day, close at hand on Cossack, taking advantage of the chance, came up, and, had it been two strides further, he was of opinion he should have been the winner. The backers of Nancy were by no means satisfied with the jeopardy in which their success had been placed. "The moment victory was secure, the shouts of the northern division, who had backed the mare heavily, were tremendous—hats and even coats were thrown up, and thousands appeared to be in a perfect ecstasy of delight; while many in the Stand looked not a little mortified at the Goodwood Cup, as well as the Ascot Cup, been, carried off by a party so foreign to the aristocratic circle."—*Bell's Life in London.*

The piece of plate assigned as the Prize was the beautiful silver group, executed by the Messrs. Garrard, from a design by Mr. Cotterill, and founded on these stanzas in Scott's "Lady of the Lake:"—

Exclaim not, gallants: question not.
Yon Herbert and Luffness, alight,
And bind the wounds of yonder knight,
Let the grey palfrey bear his weight,
We destined for a fairer freight,
And bring him on to Stirling straight.

This group was engraved in the ILLUSTRATED LONDON NEWS of last week, with two other Goodwood prizes, the "Stewards' Cup" (the death of Lord Francis Villiers), and the "Chesterfield Cup," a superb cinquecento vase.



AMERICAN AND FRENCH EQUESTRIANS AT DRURY-LANE THEATRE.—MR. M'COLLUM'S FEAT ON TWO HORSES. (SEE PRECEDING PAGE

VIEW OF THE COUNTRY NEAR RUSSIAN RIVER, 100 MILES NORTH-WEST OF SAN FRANCISCO.

NATIVE WOMEN. NATIVE PORTER

INTERIOR OF CALIFORNIA.

CERTAIN travellers who have visited California have reported the country to be strangely deficient in natural beauty, a statement which the accompanying View goes far to refute.

This scene has been sketched by our Correspondent near Russian River, 100 miles north-west of San Francisco. Within thirty miles the country changes from the "oak plains" of Santa Rosa to the alpine scenery of this sketch. The land is equally rich; the game equally abundant; the climate, if possible, more beautiful. The red-wood pine predominates, but oak of a hardy description is not scarse; the wild grape and raspberry are very luxuriant; salmon and trout are plentiful; and the grizzly bears a little too numerous, if anything. This district, the "further back" (from the centre of civilisation), is fast populating. The rocks in the foreground of the Sketch contain 25 and 30 per cent. of gold; but, at present, the expense of working by machinery would not repay labour and cost. The scene of the Sketch is now the residence of an English gentleman, who intends cultivating as much of the surrounding soil as is practicable. The accompanying figures are portraits from the native population of this district; two of them are women in humble life, and the third is a porter carrying baggage across the Isthmus.

THE FIRST PUBLIC EXECUTION AT SAN FRANCISCO.

LYNCH law was never carried into execution with greater deliberation and more solemnity than at San Francisco on last June 10th and 11th. A number of the most respectable citizens, not less than two hundred, being convinced, as they state in their "constitution," that "there is no security for life or property under the law as now administered," being much annoyed at the escape of some criminals, and the slow process of the law in regard to others, formed themselves, the day before that date, into a Vigilance Committe for the protection of his and property. They bound themselves by their honour to perform every lawful act for the maintenance of law and order, and to "sustain the law when faithfully and properly administered." They were determined, however, "that thief, burglar, incendiary, or assassin shall escape punishment, either by quibbles of the law, the insecurity of prisons, the carelessness or corruption the police, or laxity of those who pretend to administer justice." The late fire, causing the destruction of the city, was generally attributed to incendiaries, and crimes of other descriptions were frequent. "For more than three years, says the *Alta California* of June 14, "this state has been the nucleus of the largest emigration ever known The great mass of the people who have thus given up old associations and journeyed to the Pacific were and are industrious, orderly, and patriotic men. With the good emigration the bad have come also. From every part of the habitable globe, but more particularly from the British penal colonies, California has received large numbers of the most daring, depraved, and reckless men ever inflicted upon any community. The consequence has been that every crime known to the calendar of villany has been perpetrated upon the defenceless and orderly. Citizens have been assaulted, murdered, and robbed, not only upon unfrequented highways, but in the streets of crowded cities; houses have been broken open and rifled, and cities have been burned by the torch of the incendiary.

"Month after month has this evil condition grown upon the land. The police have failed, through want of energy or collusion, to arrest most of the perpetrators of crime—a weak, vacillating or culpable judiciary have permitted the 'quips and cranks' of legal gentleman to shield the guilty—our insecure and unguarded prisons have allowed condemned and uncondemned to burst forth again upon society. In fact, the whole machinery of government which the people instituted had utterly failed to accomplish the good ends for which it was established."

It was while smarting under losses and injuries thus described, that the "200 most respectable citizens" forming the Committee of Vigilance, resolved to make and execute the law after their own fashion, and it was not long ere they had an opportunity of acting on the resolution they had come to. Their head-quarters were a building on the corner of Sansome and Bush-streets. We quote what follows from the *Alta California*:—

"About 9 o'clock on Tuesday night, June 10, a man carrying a bag containing something apparently very heavy, attracted the attention of the Whitehall boatmen, at their station on Central Wharf. He jumped into a boat with his bag, and pulled out towards the end of the wharf But few moments had elapsed before Mr. Virgin, a gentleman who keeps a shipping office on the wharf, came down to the boat stand in pursuit of a person who had just robbed his office of a small iron safe, containing a considerable sum of money. The man with the bag was at once suspected, and a number of the boatmen started immediately in pursuit. After a sharp pull they overhauled him, when he threw his booty overboard. After a very severe struggle one party of boatmen succeeded in capturing him, while another fished up the bag, which proved to contain the safe on safe. He was conveyed on shore and at once taken possession of by some of the Vigilant Committee, who conducted him promptly to their head-quarters, where he was tried in presence of about eighty members of the conclave, sitting with closed doors, by them convicted, and sentenced to be hanged in the Portsmouth-square that very night. The precise mode of trial was, of course, a secret. During the time of its progress the citizens had accumulated in large numbers about the building and in Portsmouth-square, the bell on the engine-house of the latter locality having rung a signal to apprise the citizens of the proceedings going on. The populace were very much excited, but more orderly than we ever recollect to have seen such a numerous

LYNCH LAW IN CALIFORNIA.—SCENE OF THE FIRST EXECUTION IN SAN FRANCISCO, ON JUNE 10.

assemblage on any similar occasion. Some disapprobation was manifested at the secrecy of the Committee's proceedings; but when the re-ult was known, there was a very general approval manifested, although there were many who deemed the punishment of death too severe for the offence, and others thought he should be executed in broad daylight. As soon as the sentence was passed, the bell on the California engine-house, near by, commenced ringing the prisoner's funeral knell. Capt. Benjamin Ray, of the police force, applied at the door of the committee-room, and demanded the prisoner, but was refused several times; and although others of the police were upon the ground, they saw it was no use to attempt a rescue.

"About one o'clock Mr. Samuel Brannan came out, and, ascending the bank opposite, announced the res ti of the Committee's deliberations, stating that the man had been fairly tried, convicted upon the strongest testimony, and offered no defence except a denial of the robbery. He gave the name of John Jenkins, and professed to be a native of London. Mr. Brannan then had the prisoner brought another hour to prepare himself for death, and that the Rev. Mr. Mines had been sent for to visit him. The crowd present promptly approved of the action of the Committee From that time the excitement began to increase, and the matter was freely discussed by knots of citizens at the various street corners round the committee-room and the square. A very large majority were evidently in favour of the execution.

"The prisoner was perfectly composed during this time, and indulged in a cigar. The clergyman promptly responded to the request to pray with the prisoner, and remained with him for nearly an hour. If we are correctly informed, his presence had no particular effect upon the condemned man, who doubtless confidently anticipated a rescue by the police.

"About two o'clock the doors of the committee-room were opened, and the condemned was for the first time presented to the populace. He was a tall man, of very great muscular develo; ement, and with rather a forbidding countenance. He was smoking a cigar, and appeared rather rather pale but composed. His arms were pinioned and his hands tied behind him. He was then surrounded by a rope thicket manned by armed men, many others closing on them determined to prevent his escape. In this manner, followed by a large crowd, he was conducted to the public square. His arrival was announced with a shout and every description of vociferation—the wildest scene of confusion and excitement prevailing we have witnessed for a long time. The moon obscured by clouds shed no light, and the picture presented was wild and awful in the extreme. Some person climbed the liberty pole to fix a block for the rope, but a loud shout of 'Don't hang him on the liberty pole' arose. Voices screamed out 'To the old adobe!' and a rush was made for that edifice, upon the centre of the square, formerly occupied as a Custom-house. A rush was at once made for the end of the building, a block rigged and a long rope run through it. In the meantime a number of the police who were on the ground made some attempts to rescue the prisoner from the crowd, but they were roughly handled and prevented—had they persisted, they would have been riddled with balls. Several citizens denounced the execution and sought to aid the police.

"The prisoner by this time was nearly dead with fear and rough handling, when a rush was made towards him, a noose thrown over his head, the rope manned by twenty ready hands, and the latter pinioned man shot up in the air through the sir and dangled from the block. A few fearful struggles, a quiver of the hempen cord, a few nervous twitches—and the crowd gazed upon the lifeless corpse of him upon whom so speedy and terrible vengeance had been executed by an outraged people. As he swung to and fro, and turned round and round, a feeling of awe appeared to spread through the crowd, who could not be otherwise than impressed by the terrible occurrence. Slowly the life pierced, but when day broke there were still many gazing upon the swollen, purple features of the doomed man. At six o'clock the Marshal, Mr. Crosier, repaired to the spot, cut down the body, and consigned it to the dead house. Thus ended the first execution which ever took place in San Francisco, where more crime has been committed than in any other city of the same population in the Union, without one single instance of adequate punishment. Of the guilt of Jenkins there was no doubt. He had been known to the police for some months as a desperate character from the penal colonies, where he had passed many years as a transported convict."

After Judge Lynch had thus, in his rude fashion, wreaked the vengeance o men very greatly of wealth on the thief taken almost in the act, the ordinary law of California and the United States was permitted to come into operation, and a coroner's inquest was held on the murdered man. Fifty witnesses deposed that they demanded the man; that the people mishandled them; they knew many of the persons present, but at first, from fear, declined to name them, that the prisoner was executed in spite of the assertions he made at the time. The execution was an act of rebellion, as well as a murder. The members of the committee had no repugnance to avow the part they took. A Mr. Brannan, who was very active in the business, and to have presided in the Committee, described the trial in his evidence:—"The man had a fair and impartial trial; he was tried before from sixty to eighty men; I believe the verdict of guilty was unanimous, and they came to the conclusion unanimously to hang him. I don't know how the jury was empanelled; think they empanelled themselves, the jury con isted of the Committee of Vigilance; they were all citizens of the town; the man was executed in accordance with the finding of the committee. I understand a record was kept of the proceedings on the trial; six or eight witnesses were examined; the p isoner had the privilege of bringing in evidence on his behalf; he said he had but one witness, who came and testified that he did not know him; there was no counsel for the prisoner; don't know that the witnesses were put under oath; a man is admitted to the committee on a motion by a friend, who vouches for his character, and that he will devote a portion of his time in watching for the interests of the committee; don't know of any other secrecy than that of an honourable man; there is no oath used; the object is to assist the law and administer justice; I do not believe the prisoner would have been hanged if the committee had not been guilty; the committee are good citizens, and of good standing in society."

The jury sat for three days, had all the facts mentioned placed distinctly before them, the principal parties concerned in the outrage identified, and brought in the following verdict:—

"We the jurors of a jury of inquest empanelled by the coroner of the county of San Francisco to inquire into the death of *one* John Simpton, *alias* Jenkins, do find upon their oaths that the said Jenkins, *alias* Simpton, came to his death on the morning of the 11th of June, between the hours of two and three o'clock, by violent means—by strangulation, caused by he ng suspended by the neck, with a rope attached to the end of the adobe building on the Plaza, at the hands of, and in pursuance of a preconcerted action on the part of an association of citizens, styling themselves a Committee of Vigilance, of which the following members are implicated by direct testimony, to wit: Captain Edgar Wakeman, W. H Jones, James C. Ward, Edward A. King, T. K Battelle, Benj Reynolds, J. S. Eagan, J. C. Derby, and Samue. Brannan; and the members of the Vigilance Committee (giving their names), by their voluntary presence and participation in the act. A unanimous verdict. T. M. Leavenworth, Foreman."

The jury approved of the act of the 200 most respectable citizens too much to bring in a verdict of wilful murder, but they condemned the Committee in the crime of strangulating Jenkins, *alias* Simpton. The journal that we have quoted also says:—"The names of the members signed to the document is a sufficient guarantee of the purity of their motives in the course they have adopted; and we are glad that the Committee have come out openly, with a plain, straightforward declaration of their principles, intentions, and the course they have determined to pursue. * * *

If the judicial and police force of the city can protect the property and preserve the lives of our citizens, let them do so. The Vigilance Committee and other good citizens stand ready to aid them in the task. But, if the established laws are to continue to discover their weakness as heretofore, there is no alternative but reliance upon the Committee. In this view of the matter, we feel it our duty to express our conviction that the action of the Committee is such as to give a reasonable assurance that a speedy end to our insecure and defenceless condition is at hand."

The act of the Vigilances Committee is therefore openly avowed and defended by the press, is scarcely condemned by the jury, and is looked on generally in the lawless community as the means of securing life and property. Law there is made and executed in the old fashion; the brief principle of vengeance is acted on, and those who are powerful are not punished for crime as strong will. The 200 most respectable citizens assume the "authority to restrain vice and punish crime." Independently, however, of all the great moral questions involved in such an outrage, and in the justice or expediency of citizens taking it on themselves both to make and execute the law—for the law of the States does not admit the trial on an iron safe to death we do not see the utility a few conservative men and either the Committee or the Government should abdicate its functions, and not put the community to the expense and the inconvenience of having two bodies making and executing the laws, and thwarting each other The following brief account of a public meeting on the subject shows that others than the "most respectable citizens" of San Francisco deem Lynch law a beneficial and civilised institution, and a barbarous murder a wholesome example:—"A large number of persons assembled on the Plaza yesterday afternoon. About five o'clock, Mr. Webb, having been called upon, in mounted the stand, and said, that the share of proceeding he had taken in the morning of the day before, he considered a good one; but that, now that the names of the Committee of Vigilance, he was satisfied that there was no necessity of any further meetings, and he felt perfectly safe in entrusting his interests in the hands of that Committee. He therefore moved that the meeting adjourn sine die. An amendment was made to the effect that the people should consider the Vigilance Committee as their agents, and sanction their proceedings, which was lost The motion to adjourn was then put and carried, and the meeting quietly dispersed."

We have been favoured with the following extract of a letter from a merchant on the spot, which is a fitting conclusion to the article:

"San Francisco, June 14, 1851.

"We have had quite a state of excitement here the last few days caused by the hanging by lynch law of a burglar, who was caught in the act of carrying off a safe, and was hung by the crowd in the square three hours after He appears to have been a determined ruffian; but it is a bad state of affairs, caused by the way in which the law has in every case been evaded by bribery, a bag of gold dust having always got murderers off before. I was coming down the square about 9 o'clock, when the bell at the Monumental engine-house was tapped twice—a sign I knew to the secret body of organised citizens embodied the day before; and I then went up to the house, where the man was being tried, and after waiting a couple of hours went to bed, when I again heard the bell tolling as for a funeral. I dressed, and pocketing my pistols, went away down a main; this was two in the morning. The man was soon brought out rounded, and marched down a line formed on each side, surrounded by about 100 men before and behind with Colt's revolvers held in a threatening attitude, and so taken to the square, here a row commenced, and an attempt to take him away from the people, and for some quarter of an hour it seemed doubtful. I was at one time surrounded by revolvers and knives, but soon cleared out; the people carried the day, and got a rope round his neck, when some of the first men here assisted to pull him, and he was standing about twelve or fourteen feet from the beam they hung him to when they hauled, dragging him along the ground like a bullock: he got his feet on the rail beneath, but was pushed off, and in a minute more he ceased to live. It was an awful moment, and one that I trust I may never again witness. From the low roar of angry strife, cries of 'Hang him, hang him,' and demands of vengeance, came suddenly to the most perfect stillness, that one could hear the pulsation of his neighbour's heart. You will doubtless be much struck with this event in London, but I can assure you it has become perfectly necessary here, when a man cannot walk home of an evening without his head being round all quarters at once, on the look out for slug shot."

LOCKS AND LOCK-PICKING.

(*Continued from page* 142.)

In our last, we gave an account of the picking of a Chubb's lock, in Great George-street, by Mr A. C. Hobbs, and recorded the commencement of his operations upon the Brunnah lock. The fate of the latter is still undecided, Mr. Hobbs, after five days experimentalising, having proposed to construct a new instrument, a proposal which could only be agreed to with the consent of the committee, the members of which were at the time absent, participating in the festivities at Paris Awaiting their return, therefore, Mr. Hobbs has suspended his operations, and we have nothing further of a definite character to report in reference to this interesting question.

It behoves us, however, to take notice of an advertisement which has appeared in the *Times*, in which Mr. Chubb questions the accuracy of our statement, that, at the meeting of the Institution of Mechanical Engineers, Mr. Hobbs had "formally accepted" his challenge to pick one of his locks. We have every wish to do justice to Mr. Chubb, but upon a careful re-consideration of what we have written, and of the authorised report of the meeting referred to, we consider that our statement was substantially correct. The facts were these: Mr. Chubb proposed to submit two particular locks to Mr. Hobbs' experiments; Mr. Hobbs accepted the challenge upon a lock of "a commercial" character, one of which, recently sold by Mr. Chubb, was specially named; and eventually the meeting appears to have come to the conclusion that a committee should be appointed to decide what lock Mr. Hobbs should pick to test and try the question. Unless Mr. Hobbs should pick to test and try the question. Unless Mr. Hobbs should pick to test and try the question. Unless

THE THEATRES.

HER MAJESTY'S

Owing to Mdlle. Cruvelli's indisposition, "Fidelio" was not performed on the 1st inst., and Auber's "Muta di Portici," with selections from "Il Prodigo," were given.

The second representation of Rossini's "Gazza Ladra," with Alboni's *Ninetta*, Coletti's *Fernando*, and Lablache's *Podesta*, took place last Saturday.

On Tuesday night, Madame Barbière Nini appeared for the first time in this country: the opera was "Lucrezia Borgia." The return of Mdlle. Alboni to her former contralto part was a great event, as her "Brindisi" is always so irresistibly charming; and we are delighted to learn that she is shortly to resume her magnificent delineation of *Arsace*. As to Barbière Nini, she achieved a thoroughly legitimate success: these amateurs acquainted with her talents in Italy had over and over again predicted.

Her name has been for years alluded to in our columns as one of those *artistes* who ought to be heard in this country. The supply to our continental appetites was, that Nature has not been bountiful to her in the way of personal beauty; as if there was not one most remarkable instance now existing, how little genius can be restrained, even if it assume the guise of a plain person. Of all the *artistes* who have fretted their hour at Her Majesty's Theatre, not one *débutante* since the day of Lind has obtained such a real triumph as the Barbière Nini. This a man *d'état* will be marked by a reverse or a reaction; this is not an *artiste* who will win an artificial notoriety; this is not a star whose orb will be here-to-day and gone to-morrow—who will be lauded as a genius one day, and then be told that she is a "promising vocalist." No! in the fullest sense of the word, Barbière Nini is an *artiste* such as we have listened to with rapture in Italy—even if her voice be not now quite as fresh as heretofore: but once an *artiste*, always an *artiste*. Rarely has an auditory been more moved and excited than by this her first performance. Her past did not die on that night, nor the glory in Italy had been simply merited: indeed we see the evidence of its multitudes as a musician, and her dramatic power as an actress. Mercadante, Rossini, Verdi have all composed expressly for her. She is very great in *Lady Macbeth*, and her *Lucrezia* in the "Due Foscari" is very fine. How it is often an *artiste* could have so long escaped the attention of managers in this country is no wonder, when we recollect how dreadfully all artistic questions are treated. The most miserable impostor, if cheap, passes muster; the most gifted vocalist, if dear, is excluded from a hearing.

We said but now of Nini's naïve the peculiar attributes of Barbière Nini; she must be heard. No cabal nor intrigue can prevent her passing through the round of her *repertoire*. *Abandon* or impulse is her great gift. Her reception was well and decorous; but we know by some name by a recital of ovations that have attended singers so infinitely her inferiors. Such a rad bit is a wholesome lesson to directors to rely on the public, and not to trust to partizans. Her success was sublime in intensity of pathos: the "Miserere" in which the mother in vain appeals to the despairing son, was the culminating point of excellence in the noble delineation of the *Borgia*.

On Wednesday, Benedetti's "Figlia del Reggimento" was performed, with Alboni's *Maria*, Coletti's *Sulpizio*, and F. Lablache's *Sergeant*.

Mozart's "Don Giovanni" was announced for last night. Alboni appearing, for the first time this season, as *Zerlina*, Madame Fiorentini *Donna Anna*, and Madame Giuliani *Elvira*; Calzolari *Don Ottavio*, Coletti *Don Giovanni*, and Lablache *Leporello*.

Mr. Balfe's benefit will take place next Monday. His "Quattro Fratelli" will be produced, for the first time in Italian, followed by the first act of Gamrosa's "Segreto," assisted by Alboni, Madame Fiorentini, Mdlle. Giuliani, Calzolari, and the two Lablaches; and great ballet attractions.

On Wednesday will be a subscription night, when "La Figlia" will be repeated.

ROYAL ITALIAN OPERA.

Rossini's "Gazza Ladra" was revived on Saturday night, with Grisi's *Ninetta*, Mdlle. Angri's *Pippo*, Mario's *Giannetto*, Tamburini's *Fernando*, Lablache's *Podesta*, Ronconi's *Isacco*, Polonini's *Giorgio*, and Romeo's *Pedrotto*. Nothing could be finer than this cast, the only alteration of which from last season is the agreeable substitution of Angri for Mdlle. de Meric. The overture and trio, "O Nume Custodio," sung by Grisi, Tamburini, and Ronconi, were enthusiastically encored.

On Monday was a subscription night, to replace that of Tuesday, Sept. 9th: the "Puritani" was performed.

On Tuesday, Mozart's "Don Giovanni" was given, with the first appearance this season of Madame Viardot as *Donna Anna*, considered one of her finest delineations.

On Thursday, for the extra night, the "Prophète" was given for the sixth time.

Gounod's "Sapho" is announced for to-night.

Next Monday, Meyerbeer's "Huguenots" will be performed as a subscription night, instead of Saturday, Sept. 6.

Next Thursday, Mozart's "Il Flauto Magico" will be executed for the fifth time.

HAYMARKET.

It is not our fault that we have not alluded before to the operatic experiment now essaying at the above establishment. In discussing the policy and expediency of English opera, we have over and over again pointed out that the mistake of exclusively trying to produce what is termed "Grand Opera" We have cited the instance of the Opéra Comique in Paris, to show how a school for young artists may be formed, by the production of one or two act pieces with spoken dialogue. We have shown how composers thus tried in small pieces, arrive, like Auber and Halévy, at the Grand Opera. Something like an undertaking of this nature is in progress at the Haymarket Theatre, and Mr. Webster has acted wisely in making the essay. We believe that he has given a commission to Mr Edward Fitzwilliam; and that, if properly encouraged by the musical public, he will be enabled hereafter to obtain works from other composers. In the meanwhile, Mr. Charley's English adaptation of Mendelssohn's "Son and Stranger," has been eminently successful. This little work, originally composed for a family festival, and never intended for publication, has been printed by the executors of the gifted composer, and is now published by Ewer and Co., London. There is some exquisite writing in this opera; the overture is full of fancy, the ballads are quaint and characteristic, especially the opening melody; the delightful concerted piece in the first act *Macbeth*, manifested considerable improvement. His style was much more rapid than formerly; and in the passionate speeches he was exceedingly pathetic. In the banquet scene, his encounter with the ghost of *Banquo* was highly striking, and supplied the want of stage appointments under which the entire representation of this great tragedy suffered.

SADLER'S WELLS.

Mrs. Warner appeared as *Lady Macbeth* on Monday, and as *Portia*, in the "Merchant of Venice," on Thursday. On both occasions the house was filled; and this early engagement, which, we believe, closes this evening, has doubtless been found profitable both to herself and the management. Mrs. Warner's visit to America will, we understand, be, notwithstanding her long occupation of the theatrical stage, the first she has made to that country; and we trust she will receive all that advantage from it which her talents and well-practised skill fully entitle her to expect.

SURREY.

The English operatic company, under Mr. G. Reed's direction, continue to draw large receipts. Miss P. Horton, Miss Poole, Mr. Travers, Mr. C. Rouse, Mr. Corri, Mr. Borrani, and Herr Kuhnler have been the principal singers for the past week. Miss Romer, of Drury-Lane and Covent-Garden Theatres, returned to the stage, after a long secession in the character of *Leonora* in Donizetti's "Favorita;" and it is intended, we hear, to produce some new works.

SOHO.

On Monday Mr. Henry Russell commenced his series of panoramic lectures on the World at Home. No. 1, Slavery, at this elegant little theatre, No. 73, Dean street, Soho. He sang with much power and dramatic effect; and, as usual, contributed much to the amusement of his audience by his humorous anecdotes and occasional remarks. The house was numerously attended.

BATTY'S HIPPODROME, KENSINGTON

The performances at this novel place of amusement continue very attractive, serving, probably, as a relief to the more sedate episodes of the Crystal Palace. The scenes in the circle present the strangest of contrasts; and a mixture of zoological contests of various oddity. Thus, we have races of ostriches, monkey riding, mounted open ponies, the Roman horse race, the elegant equestrianism of our own country, &c. &c. &c. A splendid dressed pageant of other times, with its ultimic chivalry, and its retrospections of gay romance. During the past week, the ingenuity of the *entrepreneurs* has aimed at higher game in a balloon ascent. The entertainments, from first to last, are conducted with unity of design, and the proprietor amply deserves the rich reward [illegible]

VAUXHALL GARDENS.—Mr. Wardell's benefit is announced for next Wednesday, when the [illegible] will include the novelty of a ball in the three saloons.

COUNTRY NEWS.

THE SURREY BURGLARS.

At the assizes at Lewes, on the Home Circuit, on Tuesday—before the Lord Chief Justice Jervis—John Isaacs, 39, hawker, and Samuel Harwood, 25, labourer, were indicted for burglariously breaking and entering the dwelling-house of Harriet Stoker, and stealing seven sovereigns, some silver money, and other articles, her property.

The prisoners were the remaining members of the desperate gang of burglars who for so long a period infested the counties of Surrey and Sussex. The prisoner Samuel Harwood was tried with his brother, Lot Harwood, and a man named James Jones, for the murder of the late Mr. Mallett, at Frimley, at the last assizes for Surrey; and upon that occasion he was acquitted, his two companions having been convicted and executed.

On the night of the 3d of June, 1850, the prisoners and their companions mentioned above broke into the house of the present prisoner, who keeps a little shop at Knotford, and, after a severe struggle with her, succeeded in carrying off her pocket, in which the money was. The case was proved by an accomplice and the prosecutrix.

The learned Judge having summed up, the jury almost immediately returned a verdict of "Guilty."

The prisoners were at once called up for judgment, when Isaacs declared that his companion was perfectly innocent of the crime of which he had been convicted.

The Lord Chief Justice said he would pay no attention to such an assertion as that which had been made by the prisoner. They had both been declared guilty by the jury, and the sentence was one of the most serious ever pronounced by a judge. He, therefore, felt himself compelled to inflict the full penalty of the law. The sentence was, that they should severally be transported for life.

Mr Joseph Brigden appeared on the behalf on behalf of Mr. Morgan, the superintendent of the Tunbridge Wells police, through whose instrumentality the case had mainly been made out, to order the payment of a sum of money which he had been compelled to pay in connexion with the proceedings. It appeared by an affidavit that was put in, that, upon the appointment of the prisoner Isaacs as a [illegible] to the police force, the officer had searched certain premises, when a valuable ring, part of the proceeds of a burglary at Uckfield, was discovered, and an [illegible] was awarded £10 damages against him, and the costs of the action. A third great event in bringing out the prisoners, and the learned counsel said he trusted that under the circumstances the court would order him to be paid the amount.

The Chief Justice said it appeared a very extraordinary judgment of the county court judge as to the amount, upon the supposition of the prisoner being actually found, but he had no power to make an order for the repayment of the money. He should, however, allow the officer the travelling expenses he had incurred, and also order him a reward of £20 for the zeal he had displayed in detecting the prisoners.

ACCIDENTS FROM MACHINERY.—A question of some importance to factory workers, and one which has not hitherto been raised, was decided last week by the magistrates of Leeds. Mr. W. Hall, *n* flax-spinner, had been summoned, on the information of Mr. Baker, sub-inspector of factories, for having, after notice to fence off certain machinery in his mill, neglected and refused to do so, in consequence of which neglect, the information stated, Mary Freeman, a girl 17 or 18 years of age, received a severe lacerated wound on one of her hands. The accident happened on the 16th ult. The nineteenth section of the Act 7th and 8th Victoria, c. 15, which enacts, "that, if any person shall suffer any bodily injury in consequence of the occupier of a factory having neglected to fence any part of the machinery of which he shall have received notice from the inspector that the same was deemed to be dangerous, the occupier of such factory shall pay a penalty of not less than £10 nor more than £100," was quoted. The facts proved were, that the notice, which was a general one, applicable to all flax machinery in the mill, was given by the inspector on the 14th of February last, but the particular machine on which the accident occurred was not then on the premises, and was not brought into the mill until the 22d of March; and the question for decision was, whether the notice was valid under the 43d section of the act, as applied to a machine not existing in the mill at the time it was given. The magistrates held that the notice must be one founded on the inspector's own observation of the existing mach nery in the mill, and that it was never meant by the Legislature, in passing this act of Parliament, that machinery brought into a mill at some future time should be covered by a general notice previously given. They, therefore, dismissed the summons; but in doing so, Mr. J. H. Shaw said, the case was one in which the occupier of the mill was clearly bound, probably by law, but certainly in point of morality, to take care that such a machine should not be

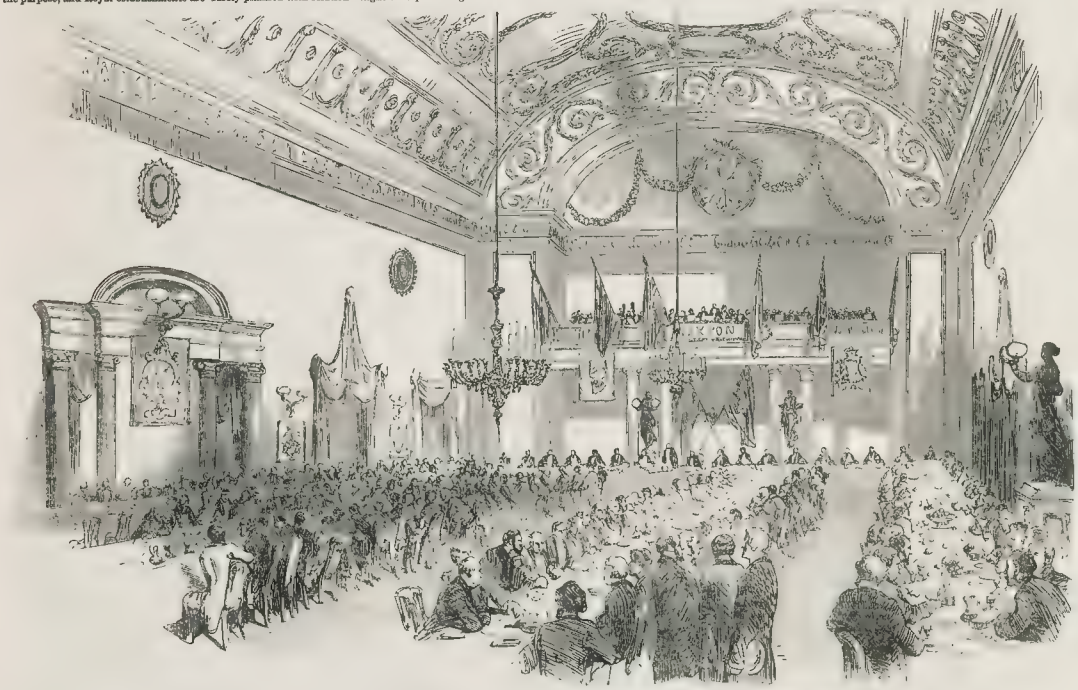
VERSAILLES.—THE GRANDES EAUX.—BASSIN DE LATONE.

ficial fountains—the Grandes Eaux—which he devised and carried into execution, is to this day one of the grandest holiday sights of the good people of Paris; and it is the tourist's duty, who visits the French metropolis, to see the fountains of Versailles. Accordingly, they played a very conspicuous part in the delights of the English visitors on Sunday last.

The Grandes Eaux, besides, are a comparatively rare sight. The Petites Eaux play, in summer, on the first Sunday in the month; but the former only on great occasions, which are always announced in the journals. The Grandes Eaux are stated, in the last edition of Galignani's "Guide," to cost from 8000 to 10,000 francs every time they play an expenditure which we do not precisely understand, as the machinery, canals, and reservoirs have been paid for long since. It may be a great cost to keep the works in repair, and an establishment may be kept for the purpose, and Royal establishments are rarely planned with relation to the number of persons actually requisite for the duties of the situation; and seeing that the fountains play rarely, they may be set down at a considerable sum, with which, however, we have little to do at present, except that it proves the anxiety of the French authorities to give their English visitors a right royal welcome.

It matters not to describe the several fountains. The Bassin de Latone is one of the most beautiful of them; this we have engraved, with the Prefect of the Seine showing his visitors the fountain in full play.

The locality is thus described:—"The Parterre de Latone lies between the Parterre d'Eau and the Allée du Tapis Vert. On the right and left are declivities which form a curving road, skirted by yew-trees, and bounded by a close hedge, along which are ranged statues and groups in marble. Between the two declivities just described is a magnificent flight of steps leading from the Parterre d'Eau to that de Latone, at the top of which are two vases of white marble exhibiting the sun, the emblem of Louis XIV. These steps lead to a semi-circular terrace in advance of the Bassin de Latone, and descend, by two smaller flights, to a lower terrace, on which this elegant basin is situated. These steps are ornamented with twelve beautiful vases, enriched with bas-reliefs. The Bassin de Latone presents five circular basins, which rise one above another in the form of a pyramid, surrounded by a group of Latona with Apollo and Diana, by Marsy. The goddess implores the vengeance of Jupiter against the peasants of Libya, who refused her water; and the peasants, already metamorphosed, some half, and others entirely, into frogs or tortoises, are placed on the edge of the different tablets, and throw forth water upon Latona in every direction, thus forming liquid arches of the most beautiful effect. The tablets are of red marble, the group of white marble, and the frogs and tortoises of lead. On each side of the pyramid a column of water rises 30 feet, and falls into the basin."



DINNER TO JOSEPH PAXTON, ESQ., AT THE NEW ASSEMBLY-ROOMS, DERBY, ON TUESDAY [illegible]

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, AUGUST 9, 1851.

EXHIBITION SUPPLEMENT
TO
THE ILLUSTRATED LONDON NEWS

No. 509.—VOL. XIX.] SATURDAY, AUGUST 9, 1851. { TWO NUMBERS, 1s WITH HALF-SHEET SUPPLEMENT GRATIS.

THE GREEK SLAVE. BY HIRAM POWER.

The Greek Slave, by Power, has attracted so much attention, and received so much eulogy from the multitude, that we are induced to give a representation of it from two distinct points of view There can be no doubt that it is a work of considerable merit of execution; but we must be permitted to question its claim to rank with the highest productions of the sculptor's art. We shall enter at large upon the grounds of our exception to it in a future article on Sculpture. In the meantime, we may generally state that our objections to it are that the figure in itself is ill-studied, and the attitude constrained and inelegant; whilst the incident supposed to be represented that of a modest female forcibly exposed in a slave market, and keenly sensitive of the humiliating indignity to which she is subject, deprives it of that charm which attaches to the nude figures of ancient art, wherein an obvious innocent unconsciousness of *deshabille* prevents all compunctions on the score propriety.

THE GREAT EXHIBITION.

THE FOUNTAINS OF THE CRYSTAL PALACE.

THE spot in which the pure cold water, distilled in Nature's mystic laboratory, far down in the bowels of the earth and amid the roots of the mountains, gushes, gurgling up to the air and the sunlight, sparkling and gleaming as brightly as would a stream of melted Hope diamonds and Koh-i-Noors—the spot in question, the birthplace of the stream or the rill, has always been invested by what we may call an instinctive veneration, or, if not in all cases veneration, an instinctive sentiment of admiration and liking, proceeding not perhaps from the reason, but from the imagination of man. Half the finest legends in the world are connected with fountains. Some of the most beautiful creations of poetic fancy are the sprites or presiding deities coupled with fountains. Fountains in all ages have been associated with pantheistic religion; and even in savage countries, where little is known of the gross and vague creed of the inhabitants, the well-heads of rivers have been found to be reckoned holy ground, and to have priests specially consecrated to their service. When Bruce approached the fountains of the Nile, he was warned to put his shoes from off his feet, and he saw an old man who was called "priest of the river." In the East, it is probable that the theistic—or rather the faith of the people—for the rain blood always teaches spirituality of worship, and is averse to the incarnation of ideas—in the East, we repeat, fountains have a peculiar class of associations connected with the physical circumstances and habits of life of the people. A fountain beside a palm is connected with the very idea of life and strength, and the refreshment of body and soul. A fountain marks a home. To "dig up wells" was the first duty of the nomadic people of the desert. Cities have been built by fountains, fountains have been hallowed by supernatural events occurring upon their brinks. The leader of Israel struck the rock, and a well gushed out beneath the blow. Patriarchs dwelt by fountains, and blessed them. Kings formed them, and made their glories a main adornment of their palaces. The basins scooped by Solomon, Mr. Disraeli tells us, are still visible in one of the gorges near Jerusalem, the site of those gardens in which the greatest King of the Jews "passed his delicious and poetic life;" while in later days of the Holy City, we all know that when the angels stirred the pool, the sick man dipped in the miraculous fluid emerged whole. The well of the desert had its own peculiar sanctity and its own peculiar veneration. The Arab and the Persian never invented nymphs or water-gods. They had neither Arethusas, nor Sabrinas, nor Undines; but their fountains were associated with their sweetest earthly hours—with repose, and shade, and refreshment; and, accordingly, they pictured to themselves, that fountains, crystalline and never stinted, sparkled eternally in their paradise. Imagine, indeed, the affection and gratitude with which the Oriental must have hailed the fountain. For scores and scores of dreary leagues, either one vast sullen sea of sifted sand, hot, and glaring, and scorching in the sun; or regions of wild broken land, mountain and crag and gully—all rock and stone, and hot, crumbling, treeless, plantless, herbless, weedless earth. Fancy, in the midst of this hot and glaring desolation, one peculiar ridge in the desert—one petulliar rift or gully in the mountain's side—where up springs freely, and freshly, and abundantly, the gush of living water—blessing, and hallowing, and nourishing the earth, rearing by thickets the long, rank, green, cool water shrubs—calling into being the soft sward of narrow-bladed grass, and arching this lowly vegetation over with the glorious, graceful, fan leaves of the date tree and the palm. We—not by any means living "in a dry parched land, wherein no waters be"—can only by an effort conceive what the spring is to the Oriental—how it gives him a home and an abiding-place—how he associates it with the sweetest and the well-being of his flocks and herds—how he revels in its water and its shade: our notions of thirst and of hunting after the water brooks" are terribly faint in comparison; and how he marks his desert domain -not as we, in such a land as this, would do, by mountains, plains or rocks, but by the wells which leap gushing up to day, and the rivulets which trickle down from them.

The Greek treated his fountains, as was natural, in different wise; and the reflected light of Greek fancy cast over the springs of the Appennine something of the beauty of association, and the hallowed mystery of sentiment, which attended to those of Arcadia. Had there been no amorous Alphæus, there would have been no stern Father Tiber: had there been no nymphs in the Argive streams, there would have been no Egeria to inspire and instruct old Numa. No page of the old mythology is more charming than that which tells of the beings with whom the wonderfully imaginative nation in question peopled their fountains and their rivulets. The water nymphs borrowed the purity and the lustre of their habitations. They were far less "of the earth earthy" than the fauns and dryads and hamadryads who formed the coarse and animal court of Pan. The fountain nymphs figure in fewer scandals in the notable pages of M. de Lempriére, than almost any order of the minor or the major divinities. The river gods might, indeed, occasionally indulge in escapades similar to those favoured by their brethren on the bank; but the *nympha foridi* was a pure and passionless creature -an emanation of the element which gave her being—so exalted and ethereal a thing, indeed, that human intellect was overthrown by the very vision, for all believed that he who saw a nymph died mad. In the tendency to create beautiful and spiritual beings out of fountains, may be traced at once the original Oriental love and reverence for the well-head, and the plastic imagination of the Greek moulding it into shape, and form, and consistence. The fountain deities were, like most of the Greek creations, capricious, and given to revenge insult: to propitiate them, pieces of money were flung into the wells, which certainly the nymphs might have appropriated, but which, we fear, usually fell to the lot of their representative priests. The inferiority of delicacy and subtlety of the Greeks is finely shadowed out in the prohibition to bathe in a fountain, or near the spring-head of a river. The water in its then condition was meant, they held, for holier use, and the touch of human nakedness profaned it.

Modified, of course, in a hundred ways, by climate, civilisation, habits of thought, and the lapse of events, we still share in our own land some portion of the original Oriental love and sentimental reverence for water issuing pure and cool from the bowels of the earth. The rite of baptism, no doubt, conferred a sacred character upon many of our own fountains. "In that well," quoth the holy Clerk of Copmanhurst, "did my patron, the blessed St. Dunstan, baptize five hundred brethren between sun rising and sun setting." Still the climate prevented the germs of pure attaining that amount of regard and esteem with which the Orientalist would view a fountain of living water. "Although," continues the holy Clerk, St. Dunstan, as he had informed the Black Knight, "was thus lavish of the well water for baptismal purposes, he had never heard of the Saint drinking of it," and the example of the Saint was scrupulously followed by the friar. But if our national beverage can hardly be said to be water, we had nevertheless a fair and fitting reverence for our sweet fountains, and clear, cold springs: we have not been behind-hand in the construction of legends and traditions, attributing healthful and even miraculous powers to the waters of particular springs. We speak not of medicinal wells, but of ordinary sources, the water of which, taken at a certain time, or with certain ceremonies, was supposed to work miraculous physical and even moral effects. As an example of the latter, witness the clever Cornish legend of the well of St. Keene; whichever of a newly married couple drank the water first, after the performance of the ceremony, was to be master or mistress for life. And so much being stated, we have the capital application of the circumstance in the case of a gentleman who hastened to the well from the altar, leaving his bride at the porch; but on his return was horrified to hear, that he had made a wild goose expedition, since the more provident lady had "taken a bottle to church!" Many wells in different parts of the country have miraculous properties attributed to them, if we use the water at certain hours, or certain days. Before sun-rise on the 1st of May is a common period; and the day of "good St. John" is another mysterious speech. In Scotland and Ireland these "fairy wells" are more common than in matter-of-fact England; and in both the former countries remote fountains have the reputation of being haunted; and, as they say in Scotland, "no canny" to be approached after dark. In the Highlands, in particular, there is hardly a well-head without its supernatural associations, or, if not that, without its tale of some feat of arms, of magnanimity, or of cruelty achieved near its waters. The memory of one of the most atrocious family massacres ever committed in the days of clan warfare is perpetuated by a little fountain springing forth on the way-side close to Loch Lochy, in Invernessshire, where the murderers paused to refresh to themselves and wash the bloody heads of a whole household they had slain, previously to displaying to their chief the ghastly tokens of gratified revenge. On a spring still called "the Well of the Heads." Again, in the Grampians, the sources of the rivers which descend to the sea through the plains of Morayshire and Aberdeenshire are one and all associated with supernatural powers and supernatural terrors. James Hogg worked up some of the vague legends about the spirits of the fountains of the Dee and the Don into strong and nervous verse. The springs in question burst forth in almost inaccessible nooks of the wildest and most savage hills; and the wandering shepherds have sometimes managed to have the wild storms which are so frequent upon the Grampian range with the tutelary spirits of the rivers in question. But by far the most beautiful and the most significant legend attached to any British well we know of is a story told of a spring in the Eastern Highland, not far from the little town of Cromarty. The legend is the more remarkable as embodying, in a striking degree, the character assigned to fountain deities by the Greeks; and certainly its poetic grace and characteristic moral are as charming as any ever invented in Arcadia or Thrace. During a hot harvest time a reaper was slaking his thirst at the well. He was a benevolent and vindictive peasant; and as he raised himself from the water, he saw, hastily approaching to drink, a neighbour to whom he owed a grudge. Hastily catching up a handful of earth from the banks of the little rivulet which trickled from the well, he dashed it into the fountain, muddying the waters and rendering them unfit for use. But what was the astonishment of both parties as they stared for a moment at each other across the polluted well, to see the stream suddenly dry up, and the water sink with a loud rumbling noise back into the earth. The insulted maid had withdrawn her bounties, and before sunset the water-herbs and weeds were drooping and dying in unwonted drought. Meantime the culprit was regarded by his neighbours with a species of superstitious abhorrence. He was told that he was a doomed man, that he had insulted the fairy or the spirit of the well, and that there was a curse upon him and his. At length, by the advice of a Celtic seer, he undertook a sort of propitiatory service to soothe the offended powers. At the hour of the day at which he had insulted the water, he repaired to the dried-up well, and with a clean white linen cloth carefully dried out the basin. In a few moments the spring burst again forth with the same sound as that which had heralded its withdrawal; but it only played an hour, and then gradually sank away. Ever since, the stream has broken out on the first thorough cold autumnal day, and ceased flowing when the bright June sun gives token of coming summer. The nymph mock the churlishness of humanity by withholding her aid when the sun is high and the air is sultry: while she pours it forth with provoking copiousness in the damp season, when a hundred mountain runnels are running around. Whatever a stern natural philosopher, deep in the matter of strata and the mysteries of hydrostatics, may think of the legend of the intermitting fountain, there is a fanciful natural birth about it, and an excellent moral point.

So much for Nature as nature has made them to our hands. With such feelings upon the subject of the birth-place of water, so strongly rooted and so unusually diffused, it was only to be expected that men would have attempted to aid natural beauty by means of art that they would have adorned and embellished by the work of their hands the fountains which they most admired: and that they would, at an early age in their progress, have introduced into their cities what we may call architectural shrines for springs, either natural or artificial, of water—the life itself, the soul of the structure—useful and necessary for the daily wants of the inhabitants; the buildings and adornments encircling the spring made to contribute to the glories and the embellishment of the place. Many an exquisite fountain, no doubt, played amid the streets and sparkled in the groves of Athens. In the Moorish cities of southern Europe, the fountains formed the most graceful architectural feature of the place; and they were, as a pump is in a town or village at this day, the great centres of gossip, flirtation, and small talk. The Moors, indeed, were and are a fountain-loving race: they have fountains within doors and fountains without, fountains in their rooms and fountains in their vestibules; everywhere amid their buildings cascading waters rise in glistering jets and fall in sparkling showers, spreading coolness through the hot Spanish or African air, and lulling the pleasant siesta with a lulla by of unbidden water music. The fountains, indeed, spread rapidly and extensively north. On the bleak side of the Alps it very soon became wedded to the ordinary forms of Gothic architecture, and the water used for the household purposes of the middle ages fell in shrines which might be ranked with the chapels of cathedrals. Many of these lovely structures still exist; in the south of Germany and in the Tyrolese towns they are particularly abundant. Augsburg and Nuremberg are studded with such gems; and scarcely less beautiful at notures are to be found in such picturesque lazy old Bavarian towns as Aschaffenberg and Bamberg. In our own land, as they were in the *moyen âge*, fountains were almost equally favoured. These were not the days of water companies and forcing pumps, driving the fluid at high pressure into garrets. A wealthy citizen, or a wealthy guild, or benedictines and liberal clergy, constructed at their own cost and at their own cost, and endowed the town with a conduit or a fountain, for behoof of all and sundry; the water, on great occasions, so far at least as the wealthy community went, being changed for beer, or even wine. There are many items in the expenditure in days gone by, of the city of London, vouching for the fact that the practice was reasonably frequent, so far as regarded the "Conduit in Cheape."

Our fountains, however, found no continued favour in our eyes; from the days of the Tudor dowers England showed scant taste in the art of adorning herself. The Elizabethan architecture was a dismal frittering of the smallest features of the Gothic; these features being dwarfed and perverted in the process. Then came after Palladio the *guest classic* style, ungoverned by the *Renaissance*; but while major fountains were constructed upon the new fashion over the Continent, hardly one was reared in England. To a certain extent this was so much the better. It was with this taste that there came into use all the enormities of tritons, and dolphins, and such sea monstrosities as we too often find in fountains to the present day. Neptune, amphitrite, and their crowd rose everywhere in marble and in bronze. *Louis Quatorze* domineered over the taste as well as the politics of Continental Europe. Perfect crops of sea-monsters, witched out of their native element of brine, rose upon the terrace and the front of Versailles; and, when the fever once established, we have been going on making fountains out of Lempriére's dictionary ever since. Then also arose what may be called the flat dish or saucer style of fountain—the most recent of the unprotected forms, and of which the notable specimens in Trafalgar-square afford brilliant examples. This is the style of fountain which of late has been creeping into use in parks, conservatories, and so forth; where, indeed, the illustrious architect did not content himself with a stone basin and a brass nozzle and pipe, supplied by the nearest water company, in the middle. The rise of mechanical science was, no doubt, one of the reasons of the downfall of fountains in England. The water-wheels established in the three Surrey arches of Peter of Colechurch's London-bridge is an old story; and the wooden piping occasionally dug up in provincial towns showed that our ancestors were early desirous of obtaining a domestic supply of the pure element. Sending to the town fountain was no doubt found to be an unprofitable process. Maidens lingered, their stoops upon their heads, to retail the gossip of the neighbourhood. A great portion of the entire supply of water was no doubt spilled and wasted, and a vast loss of time experienced in getting the supply home. Under those circumstances, no doubt, wells were dug, and pumps began to exhibit their symmetrical and elegant proportions by the land. Terrible affairs, no doubt, pumps were, a by-word and a sobriquet for an unfortunate set of mortals said to resemble them. A fountain and a pump—poetry and prose—fancy and fact; and yet, for serious matter of business domestic uses, which is the more valuable, the town fountain or the house pump? Associate water with nymphs and deities of the stream, with the thirst of an Arcadian shepherd, and the transmigration of the flying damsels in the mythology, and we are all for the fountain. Associate water with washing days, scrubbing floors, cleaning dishes, and shelling potatoes, and the handy household pump will carry off the palm. The fountain in the public square will summon up the idea of an endless lot of small talk, scandal, and Dorothy Draggletails. The instrument of domestic supply—the well-abused "wooden cow"—with all its absurd associations, its handle and its spout, will, at all events, hold its ground as a cheap and convenient implement of household use. Now-a-days, however, the pump has fulfilled its mission; and so far as towns go, its spare will soon be as rotten, and become as great curiosities, in their way, as the beams of ancient stocks. Water supply will, it is to be hoped, speedily bring the fluid to the kitchen and the bed-room of every town-dwelling Englishman—a supply nine-tenths of which shall not run to waste as does that of the fountain; and for the procuring of which no such labour shall be requisite as that exacted by the pump; a supply which shall be always "on," and only require the twist of a cock to evoke. Beautiful as fountains are, much as we love, and earnestly as we are about to advocate them, we would rather see a populous town well supplied with steam-driven water, careering through every street and every house in leaden pipes, than a city with the most magnificent architectural and sculpturesque collection of fountains ever reared. For use, water ought to be brought into every domicile, and be attainable with no labour and little expense. But for ornament the case is different. As matters of ornamental adjunct to other architectural beauties, we should earnestly advocate fountains. We would like to see them shoot sparklingly up in every square and roomy highway; we would like to have them made a conspicuous feature in every ornamental park and public pleasure-ground; we would even like to see them in the halls of great houses; and, in a light, elegant, and portable shape, introduced as after-dinner ornaments upon special occasions of festivity and glee. To all who cry out about the climate being too cold for fountains, we would reply, it is not warm enough certainly to realise all the luxuries of spouting flashing water; but it is certainly not so cold, that the very idea of water breeds discomfort. If you think so, banish the sea, lakes, rivers, and streams as adjuncts of the picturesque and the beautiful in Britain. If a man does not feel unpleasantly chilled gazing on a Welsh or Irish or Scotch waterfall, why should he on a fountain, flinging aloft as many drops of water as the cascade whelms tons, or at least hundredweight. It is not necessary to associate the idea of a *jet d'eau* and a shower-bath; and accordingly we have put off for the present the question all further argument about England being too cold for gracefully arranged streams, jets, and girandolesof flowing water to be looked at with pleasure, or withevon comfort, we proceed to describe the few fountains which the Exhibition has favoured us with, adding an observation or two upon what we will call "domestic fountains," no specimen of which, as far as we observed, is contrined the Crystal Palace.

Place to our neighbours the French, who show just one specimen, and not such a one as we have seen in many a little village of southern France; still M. André's specimen is full of grace and beauty of proportion. It is of bronze, against the dark line of which water always comes well out. The general design is that which we may characterise as the dumb waiter shape, the very *acme* of which, in its barest and most wretchedly naked form, is to be seen in the salon of the unhappy squirls in Trafalgar-square. Graceful carving and moulding, however, relieve the design in question to a very great extent. The wreathed and matted waterflowers and plants, represented as twisting round the edge of the basins, are graceful in the extreme, and the way the water drain from the one of these receptacles, through the petals of expanded aquatic flowers, is graceful and pretty in the extreme. Only we would have surrounded the flowers with twisted and elaborated vegetation, so as to make it appear that the fluid rose,

lilies? In the first place, a triton has no business to spout at all; the notion is anatomically false and unnatural; and in the next place, if he does spout, it ought to be salt water like a whale, and not fresh water like a carafe. There is only, we think, one other fountain, of mark in the Nave, that labelled as designed for a market-place. We only trust that we may never live to see a town in the market-place of which such a shapeless lump shall be erected. The notion of the designer must have been to give about a ton weight of material for any drop of water descending at any particular moment from the humpbacked mass he has imagined; such an utterly unformed, unpreconceived and unwieldy projection we never remember to have seen. Here it is Gothic, there a bastard Romanesque, and anon it belongs to no sort of style whatever, save, perhaps, that of which the makers of plumcakes were the inventors. The classic tritons and dolphins (graviously ill-shaped specimens) consort with *moyen âge* griffins and dragons; and altogether, considering the want of grace, which ought to be the peculiar feature of a fountain—considering the shapeless heaviness of form, the want of harmony between the means and the end, the lack of all style in art, and all perception of the beautiful—we would be inclined to point out the fountain "designed for a market-place" as a combination of every feature and property which a fountain ought not to have.

One word more as to house fountains. As drawingroom ornaments or after-dinner table adornments, they would be equally pretty. In both cases they might be so constructed that the water should leap forth in the midst of natural or artificial flowers—the former, of course, to be changed when necessary. A low jet, just to glance above the herbage and produce a poppling sound, the water to be seen trickling among the stems and lower leaves, before it becomes absorbed in the receptacle from whence it is forced. Such, in general terms, would be our notion of such fountains. There are many beautiful crystal *Epergnes* in the Exhibition which might be made to add flowing, sparkling water to the attractions. We would not advise glass shades, which we see over some small fountains exhibited in shop windows. The effect is toy-like and cramped. The water is not poison, that it should be guarded and imprisoned; while the imbecile trick of making a jet support a little round ball, is purely one of the most childish pieces of triviality to which living and running water was ever prostituted

SALT-GLAZED STONE-WARE.

On the south side of the Western Nave (Class 27, No. 125), behind saddlery and furs, are a pyramid of brown ware, of that material immortalised in the song, which begins—

> Dear Tom, this brown jug, which now foams with good ale,
> Was once Toby Philpot, the pride of the Vale.

The apex of the pyramid is formed by a huge jar capable of containing some hundred gallons. Below are arranged condensing worms for distilleries; jars with stone air-tight stoppers; a pump for acids, of the same material, huge draining pipes, filters, leech jars, jugs, bottles, feet-warmers, and a variety of other articles, with little or no pretension to beauty of form or colour; some of which we are so accustomed to see and to purchase at a very low figure, that, without special information, we should never guess that they were the subject of a very important manufacture, which is daily being extended to new objects of utility.

The value of salt-glazed stone-ware consists in its cheapness, and its capability of enduring heat and resisting the action of acids

Stone-ware has useful qualities peculiarly its own, and must not be confounded with porcelain, as it is an entirely distinct manufacture. In coarser forms, for jugs and jars, the manufacture has been carried on in England ever since 1770, but the improvements which have rendered it so valuble are of recent date. At present, the yearly production in the parish of Lambeth alone exceeds £100,000, of which sum more than one half is expended in labour.

Salt-glazed stone-ware differs from porcelain, especially in the quality of clay of which it is composed, and in the mode of glazing. The clays which are brought from Devonshire, Cornwall, and Dorsetshire, contain a large proportion of silica, the rest being silica with a small quantity of iron and lime in combination. Other clays are brought from other parts of the kingdom; but it constantly happens, that proprietors of clay-pits are disappointed by finding that their produce, when subjected to the intense heat we are about to describe, melt entirely away.

The clays in use may be divided into three classes: first, that used for small ware, or vessels not exceeding in capacity from two to three quarts; second, that used for vessels up to six or eight gallons; and lastly, that for the manufacture of chemical vessels, which are required to contain hundreds of gallons. These last are required for processes where any metal except platina would be corroded and destroyed by the combined action of fire and the acids which are to be stored or even kept boiling in them. Platina, from its cost, is of course out of the question, except for very small retorts. The loss from fracture or perforation in one of these great vessels in the course of chemical distillation would be enormous. It is therefore needful to take the greatest possible precautions. In experiments with new kinds of clay, chemical analysis is now resorted to, instead of the old rule of thumb; but, when the proper mixture of clays has been obtained, a great deal depends upon manipulation. In a work upon potters, published in 1834, the fabrication of a vessel holding between sixty and seventy gallons was spoken of as something extraordinary. The jar before alluded to contains 400 gallons, and the exhibitor, Mr. Stephen Green, of Lambeth, has supplied several of the capacity of 300 gallons to manufacturing chemists.

The following is the

PROCESS OF MANUFACTURE.

Preparation of the Clay.—The clays arrive at the works by sea and up the Thames, in pieces weighing each about 20 lb. These lumps are packed in drying-sheds, to allow the water in combination to flow off by evaporation, until the clay assumes a white appearance, which is technically called "white hard." They are then placed in a powerful crushing-mill (of similar construction to those used for bark for tanning), by which they are speedily reduced to an imperfect powder. For small ware, such as ginger-beer bottles, jars, feet-warmers, &c., the powdered clay does not require any mixture, but is at once ready for the pugging-mill.

The "pug-mill" is a cylinder about 2 feet in diameter, and 6 feet in depth. A perpendicular shaft running through its centre, driven by overhead gearing, revolves in this cylinder, to which are attached a number of knives in the form of an imperfect screw. The powdered clay, with a sufficient quantity of water, is thrown into the top of this cylinder, or pug-mill, and, by the continued stirring and pressure of the knives attached to the shaft, is so thoroughly mixed, that it is delivered from the bottom in a state fit for use, of a very uniform consistence—which is a point of the very first importance.

The second kind of clay is formed by a mixture of various kinds, some of which are brought from Dorsetshire, and mixed with sand in the proportion of about one-fifth of the whole mixture. But it is the third kind of clay, for the manufacture of chemical utensils, which requires the greatest care in composition, both as to proportion and perfection of mixture. A hole the size of a pin would render valueless a vessel perfect in every other respect; and the smallest piece of dirt might cause such a hole by being burnt away in the burning process. It is necessary that these vessels should not only be fit to contain and resist the action of acids, but that they should allow of a certain contraction and expansion when heated, without fracture. For this purpose the strong fire-clays of Stourbridge and Newcastle are employed, with a certain proportion of powder of a vitreous kind of earthenware. These are carefully mixed, sifted in a fine sieve, and passed through a pug-mill expressly kept for the purpose, from which it emerges in the shape of fine paste, perfectly smooth, soft, and tough.

In Mr. Green's establishment, the clays prepared in the pug-mill are lifted by machinery to the respective establishments where they are required.

Moulding and Shaping.—The mode of shaping all circular articles in stone-ware is the same as in china and earthenware manufactures, by the potter's wheel. Other forms are made in moulds of plaster of Paris or wood. The potter's wheel it is unnecessary to describe, as it must be seen at work to be understood. It is enough to observe that it was employed with admirable skill, as precisely the present, two thousand years ago, by the Egyptians, and subsequently by many other extinct nations.

The small round ink-bottles and monstrous vases are made on the wheel in the same manner, the only difference being in the superiority of the clay mixture of the larger article, and the necessity that exists for making it at several times. It must, however, be admitted that there are very few workmen capable of making a vase of the size exhibited perfect enough to be employed for chemical purposes.

When the vessels are made, they are placed in the drying-rooms. If any accumulation of moisture should remain in the body of the clay when heat is applied, the sudden expansion would fracture the vessel.

Burning Kilns.—When sufficiently dried, the vessels are placed in a kiln, which is a circular room entirely composed of fire-bricks, about 12 feet in diameter. In the sides are a number of openings to admit the heat from fires. The roof arches in about eleven feet from the floor, and contains a number of holes about six inches in diameter, besides a still larger orifice in the centre, in order to allow the smoke to escape, and for a purpose which will presently be explained.

In the kiln the smaller articles of stone are arranged on open shelves, and the larger ones upon another in tiers. Hence the importance of each vessel being thoroughly dry; for if one break in the course of baking, a general smash will often follow.

When the kiln has been filled, the doorway by which the goods have been carried in is carefully built up so as to exclude air, and fires are lighted in the several openings, which generally amount to six. For the first twelve hours the fires are very gradually increased, after which, for about thirty-six hours, they are intensified as much as possible, so that, at the end of forty-eight hours in all, a glowing white heat is attained.

In all other kinds of glazed earthenware the vessels are dipped into a composition of materials, which become, at less heat than required for stone-ware, converted into a kind of glass. This, when large vessels such a process is obviously impracticable. Accordingly the following plan is adopted, which was invented by the brothers Elders, two Dutchmen, after a series of experiments, about seventy years ago.

Glazing.—Some few minutes after the last supply of coals have been cast on the fires, a quantity of very coarse salt—fine salt does not answer so well—is thrown into the vessels through the small holes before described, in the roof of the kiln. The heat within the kiln instantaneously converts the salt into vapour, which penetrates and envelopes every part of every vessel in the kiln, and chemical action follows, by which the base of the salt, soda, unites with the silica of the clay, converting it into a perfect glass, over the surface of the whole vessel; the chlorine attacking the iron in the clay to form chlorides, mixed with a portion of it and escapes into the air from the roof of the kiln. A distribution of about a hundredweight of salt in ten minutes is found to be sufficient for glazing a kiln full of vessels. This glass, being composed of the body of the vessels, is not affected by the action of air or acids. Vessels glazed by this process have been known to be in use for the manufacture of nitrous acid for twenty years, with very slight deterioration of the surface.

After glazing, the fires of the kiln are allowed to burn out in the course of thirty or forty hours: the doorway is unbricked, and the vessels, after proving, to show that they are water-tight, are ready for the home, the Indian, the American, and the Australian markets, where they are largely in demand.

Thus, at a very cheap rate, a rapid supply is procured of articles of great size, durability, and perfection of glaze—fourteen gallons being about the capacity of vessels procured by the dipping process.

This is a healthy employment in all its branches, and the workmen of skill earn good wages. A good hand at the potter's wheel can earn from £2 to £4. During the time the cholera raged in Lambeth, although a fœtid smell was constantly arising from the vats of the bone boilers near the potteries, not one potter fell a victim to that plague. This has been attributed to the purifying effects of the large quantities of chlorine envolved in the process of glazing.

Among the articles of stone-ware exhibited, we would particularly call attention to the large water and drain-pipes, which are made by machinery, and from their smooth surface afford a cheap and efficient conduit for liquids. A cheap drain-pipe is a great aid to the sanitary movement.

The stone pump is ingenious, and so are the patent jars with air-tight stone-ware stoppers—the cords being simple but perfectly efficient, and of the utmost value in packing stores, such as spices, tea, coffee, butter, pickles, or preserves for a long voyage, or valuable essences and drugs. The impermeability of these stoppers, to which iron cramps have not been affixed, may be ascertained by a very simple experimeat. Throw a piece of lighted paper into one of the jars, allow it to burn for a few seconds, then put on the stopper, and it will be found that the vacuum created has been so great that to remove the stopper by any ordinary force will be impossible.

It is worth noting, that, although the clay, sand, and coals have all to be imported into London for this manufacture from great distances, London continues to be the place where it is most largely and successfully carried on.

We have devoted some space to these explanations on the manufacture of articles more useful than brilliant, because nothing on the subject of the peculiar differences and advantages of salt-glazed stone-ware has appeared in print in those works which treat of china and earthenware, and because we happen to know that the specimens exhibited have attracted much attention and admiration from distinguished foreign chemists and manufacturers.

GUTTA PERCHA CONTRIBUTIONS TO THE GREAT EXHIBITION.

(SECOND NOTICE.)

In our first notice of the articles made of gutta percha, we gave an account of its introduction to this country by Dr. Montgomerie in 1844, and explained the nature of the tree from which it is collected, and also referred to its chemical properties, and further described generally the modes of manufacturing it at the two great gutta percha establishments in this country. Our present object is to draw attention to the various specimens of both useful and ornamental articles contributed by several exhibitors in various classes of the Great Exhibition.

In the first place, we find some fine specimens of the raw material contributed by Messrs. Bunn and Co., in the North-west Gallery, under No. 77, Class 28. The gutta percha of commerce usually contains a large amount of foreign substances, which render the value of the article and deceive the unpractised purchaser; sometimes even earth has been enclosed within the blocks, which are usually square, but are sometimes made up into fanciful forms, as of fish, birds, &c. Messrs. Bunn show some twisted gutta percha as imported to this country, and also flat cakes of fine quality; we also discover in their case specimens to illustrate the process of manufacture, as slips cut by the knives mentioned in the first notice; then in its minced state, and, subsequently, as manufactured, ready to be converted into pipes, bands, or other articles. Messrs. Bunn's collection is completed by a display of pipes, soles, straws, whips, picture frames, balls, string, and wires coated with gutta percha for telegraphic purposes.

Immediately adjoining the case the contents of which we have described, the Gutta Percha Company (No. 88, same class) make a grand display of this useful article in every variety of form; and, for the purpose of illustration, exhibit sections of the wood from which the *gutta* is derived, with the gum adhering to it, as also the bark and the leaf, together with the parent tree in its native locality in Java. In addition to the above, we observed bowls, traces, watering-pots, shoe-soles, life-buoys, thread, card-trays, whips, life-preservers with whistles, inkstands, music cases, valves, cog-wheels, pen-trays, picture frames, chemical bottles, clock cases, lathe bands, pipes for various purposes, stop and other pails, bottle-holders, &c. The articles which we have enumerated are but a tithe of those that may be manufactured from this extraordinary material.

No. 87. Thomas Walker contributes gutta percha hat bodies and norwesters, some of the former having perforations in their crowns for the sake of ventilation: he also shows a hat-box; but it is far too clumsy in appearance to compete with those of leather as ordinarily made.

The fourth gutta percha stall (No. 90) is that of Mr. Charles Hancock, by whom enterprise the manufacture of gutta percha by machinery was first brought about in this country: all the specimens which he exhibits, including draughtsmen, life-preservers, pipes, frames, curtain rings, &c., are of exquisite finish, the ornamental contributions being very artistic, especially the "Stags and Dogs," a most elaborate production made of the material peculiar to the West Ham gutta percha factory, and known as *metaline*, or *metallo-thionized* gutta percha, which is in appearance similar to bronze. This artistic composition is made up of many pieces, each of which being first united with its neighbour, the whole is then run into mould to very great durable pressure: when put together the whole is finished by the practised hand of a first-rate artist. Water buckets made by Mr. Hancock's gutta percha turning machine complete his collection.

In the same class, but without number, is exhibited by N. J. Hewes the roof of a horse shoe lined with gutta percha: there is no notice appended to this contribution as to its having been successfully applied.

In Class 10, No. 670, North-west Gallery, M. Caplin exhibits a rope ladder, the rounds of wood and the lines of gutta percha.

620. Dr. O'Leared exhibits a *double* stethoscope for ascertaining the state of the lungs; single stethoscopes of gutta percha have been in use for the past three years

631. Weiss, the surgical instrument maker, exhibits bougies and catheters of the same material, adapted for hot climates. To these purposes the attention of surgical instrument makers was specially directed soon after the arrival of Dr. Montgomerie's valuable contribution to the Society of Arts, in 1844.

Mr. Truman (726, Class 10, North-west Gallery) contributes artificial teeth made from pure gutta percha, which is said to be not only more durable, but, of course, more comfortable to the wearer, on account of softness than the material ordinarily used.

In the Middle Gallery North, No. 419, Class 10, are several applications of gutta percha to construction with telegraphs, contributed by Mr. F. Whishaw: first a pipe of gutta percha made by hand by that gentleman when secretary of the Society of Arts, in 1845, and also a lathe band, which, no doubt, led the way to machines being constructed for more expeditiously and more economically manufacturing these important articles: then we find three examples of his *telekouphon* or speaking telegraph, which, as a substitute for bells, saves both time and labour—one for houses, having whistles and indicator complete, a second for communicating between guard and driver, and a third for private carriages; this latter is braided with silk. Perhaps there is no use to which gutta percha has been applied more extensively than that of pipes for the conveyance of sound, as first introduced by the above-named exhibitor. The next application is that to the manufacture of Whishaw's telephones, which are used in pairs, being placed at considerable distances from each other, and necessarily in the same focus, and are applicable in cases where the tubes cannot be laid down. The telephone inverted is used in connexion with conducting tubes to different parts of a church or chapel from the reading-desk, or pulpit, or to the vestry-room of a church, or to private houses not far distant from the church. In connexion with Whishaw's Indec Electric Telegraph, we find coils of copper wire coated with gutta percha, for the purpose of effectual insulation from wet or atmospheric influence; this mode of protecting wires has now been sufficiently tested, especially in Prussia, to recommend it as the most economical and perfect mode of conducting wires between distant parts. Two specimens of the submarine telegraph conductor are contributed by the same gentleman, which are simply the gutta percha covered wire first braided with whipcord and painted white, to prevent the attacks of fish, and, secondly, coated with marine glue, to prevent the attack of the *teredo navalis* and other destructive marine insects; these conductors were made years before the experiment of completing an electric circuit across the Channel was carried out, in the year 1850. The wire and covering in that case was increased in section to 7-16ths of an inch diameter, as it was used without the additional strength of braiding, as above-named. The last application of gutta percha, as exhibited by Mr. Whishaw, is that of plugs perforated for as many wires as are intended to be conveyed under ground, in strong glass or earthenware pipes, the plugs being placed at the joints and secured to the glass by white lead or other suitable means

421. (Class 10). Mr M'Nsir contributes a large coil of gutta percha-covered wire, coated with lead, for underground work. This is of course a good plan, but the expense is very materially increased; and as the gutta percha covering has been found to answer the purpose for years, it is perhaps quite as well to mention the fact.

429. Messrs. Brett contribute a sample of the wire coated with gutta percha as used in the experiment across the Channel, which would no doubt have remained in its place much longer if it had been properly protected; but whatever kind of sub-marine conductor may be again tried, it will always be subject to a removal by the dragging of anchors, unless buried in the bed of the Channel, according to the plan adopted in crossing the Rhine, at Cologne, where chain pipes, somewhat similar to those exhibited by Mr. Whishaw are laid down.

In the same class, Mr. Heeps exhibits a pulpit telephonic apparatus to full scale: the sound-receiver, however, is of different form from that of Mr. Whishaw, and instead of being placed in one corner of the pulpit or reading-desk, is fixed outside in front.

130. (Class 10). Mr. Roberts has the hammer of his Alpha clock made of gutta percha, which is found to answer its purpose very well.

The following contributions of gutta percha articles in Class 5, including life-boats and life-beat appurtenances. The first is a life-boat entirely of gutta percha, numbered 50, and placed against the Western Wall. It is to be observed, that full-sized life-boats of gutta percha have not been seen used with advantage.

No. 31. John Lavais exhibits a folding buoy and settee of gutta percha, each compartment of which holds an air-tight case.

No. 7. A method of connecting wood and gutta percha is exhibited by John T. Forster, R.N.

No. 60. The gutta percha emigration life-boat of Mr. W. Dyne is constructed with ribe moving on pivots in a line with the keel, the gunwale folding down in the same direction. It possesses, therefore, this recommendation, that fifty of these boats can be packed in the space usually occupied by five ordinary ones. The same gentleman contributes his "Eclipse," or standard life-boat, formed of diagonal battens, similar to lattice-work, its outer sheathing being of gutta percha.

No. 40. A wooden life-boat, rendered more buoyant by the introduction of gutta percha lines or circular rails of gutta percha.

No. 49. Mr. W. W. Bonney exhibits square life-buoys of gutta percha, which are placed in receptacles or cells on either side of the boat, and secured thereto by ropes.

In Class 26, (No. 49), Cyrus and James Clark, of Street, near Glastonbury, exhibit in the leather department, underneath the Middle Gallery North, their patent "elongating gutta percha goloshes," which may be put on or removed from the feet without the aid of the hand.

In Class 6, Messrs. Pare Curtis and Medley, who exhibit an extensive series of cotton machines, have introduced well behaved cog-wheels of gutta percha in place of those of iron, whereby the noise of their machinery whilst in motion is considerably reduced; but at present they have not had sufficient trial of the new application of gutta percha to ascertain whether they will answer in the long run.

Near to the doorway, leading from the Bookbinding and Stationery department to the Machinary-in-Motion, is a large printing press in the course of erection, for the purpose of printing from circular type made of gutta percha; near to the machine is a table, on which specimens of printing and copies of engravings executed from gutta percha type and plates are exhibited, as also the matrix and stereotype plate produced therefrom. The mode of proceeding in this art is first to obtain the matrix from the metal type, as set up, with the cuts interposed; the gutta percha stereotype cylinder is then moulded, and figured from the same in the patent cylinder press. The cylinder may be ready for printing within half an hour from the time of taking the matrix which process lasts but a few minutes. The patent press is constructed for at least three cylinders, from two of which one side of the paper is printed as it passes by them in continuous length and in opposite directions; while by the third, or inner cylinder, the other side of the paper is printed. It is worthy of notice that dry paper may be used in printing from gutta percha, which paper may also be glazed if desired.

In the Agricultural Implement Department, Messrs. Burgess and Key exhibit their patent gutta percha union joints for pipes, and also their patent sleeve for fire-engines and for the conveyance of liquid manure; the hose is made of canvass saturated with a solution of gutta percha.

In the Furniture Department (Class 26), Messrs. Thorn and Co. contribute specimens of gutta percha picture frames, various decorations, bracketed mouldings, &c.

It is quite possible that there are many other applications of gutta percha to be found by long and diligent search in different parts of the Building, but we have introduced in the present notice all that we have been able to discover.

INTERIOR ECONOMY OF THE EXHIBITION.—The number of persons that are daily in attendance in the body of the Building, augmenting the stream of its contents, is more considerable, perhaps, than the public in general are aware. Besides those in the immediate employ of the commissioners, there are upwards of 300 persons in the pay of the commissioners, and 2000 exhibitors and exhibitors' assistants in daily attendance. With such a multitude of people engaged in the interests of trade, the infinite variety of risks which arise from carelessness and asthousand other causes, the reader may be curious to learn what precautions are taken to provide against accidents. Like everything else connected with this great work, they are extremely simple. In the first place, every exhibitor is left to take care of his own goods in the best way he can, which undoubtedly affords the guarantee for the general security. The most complete protection against fire is organised. All over the interior, consisting of sixteen hydrants, several fire-engines, and a large supply of fire-buckets and iron reservoirs, all of which can be brought into play at a few moments' notice. This instant the necessary labours are over (until a little or none is done after dark), all lights are put out, and the protection of the Building for the night is consigned to fifty policemen, twenty-four sappers and miners, and six firemen, who sleep upon the premises. But how is this extensive area kept in repair, dusted, and cleaned? By a systematic arrangement, equally simple and effective. Six hours, from four o'clock in the morning till ten, are dedicated to these purposes, and are found amply sufficient. It is, perhaps, the only instance on record of a great public exhibition which has received troops of visitors for a period of three months, without having been closed up for a single day to be repaired or refreshed. This Exhibition is independent of such necessities, for which it is partly indebted to its structure, being a self-acting duster and cleaner in its floors and roof.—*Fraser's Magazine.*

WALL DECORATION IN MARTIN'S CEMENT.—BY STEVENS AND SON.

WALL DECORATION IN STEVENS' MARTIN'S CEMENT.

This chaste and elegant piece of work, from the designs of J. T. Knowles, Esq., is intended to show the various purposes to which the above cement can be applied. A minute examination convinces one of the great beauty of the article in its pure white state, as used for the architectural enrichments of rooms, while some portions of the design demonstrate its excellence in the shape of scagliola work; and others shew how well suited it is for painting and gilding upon, which processes can be performed in a few hours after the cement is put up. This material is fireproof, and susceptible of the highest polish.

SILVER INKSTAND.—BY LAMBERT AND RAWLINGS.

SILVER INKSTAND. LAMBERT AND RAWLINGS.

This is a very showy affair, almost too showy for our taste. In the centre we have a figure of Britannia; and, on either side, smaller ones of Commerce and Plenty, executed in frosted silver, and which, we presume, are intended as handles to the covers of the ink and wafer bottles. The tray in front, which is a shell pattern, is richly gilt.

CLOCK-CASE. DESIGNED BY J. BELL.

Mr. Bell has contributed more to ornamental manufacture, in the plastic line than, perhaps, any other artist of the day; and the present is by no means the least happy of his productions, coming, as it does, within the scope of legitimate sculpturesque decoration of a work of utility. It is styled the "Hours Clock-Case," from the fact of the face being embellished with a bas-relief representing the twelve hours circling round the clock; which itself has an enamelled dial, "representing the sun, its centre a flying phœnix, which fable relates is born anew every 500 years." At the base are two figures respectively illustrative of repose at evening, and the waking to labour in the morning. The apex is crowned with a figure of Psyche, or the soul, looking upward, emblematic of eternity. The whole is prettily conceived, and pleasingly designed; though it might, perhaps, be improved in subsequent copies by omitting the void interval between the figures and the clock face, which produces an effect of flatness which is not satisfactory. The connexion between "the hours" and the clock would also be more distinctly marked by this alteration: the figures might, in short, be represented as supporting it through space. Some modification would, in that case, be necessary in the clock-face itself, which, instead of representing the sun, should represent a clock-face *tout pure*. This work has been produced in electro bronze, by Messrs. Elkington, the exhibitors, in their best style.

SILVER VASE. BY WAGNER, OF BERLIN.

One of the most interesting objects of art contributed by Berlin to the Exhibition of Industry is a magnificent silver épergne, from the establishment of Messrs. Johann Wagner and Son, silversmiths and jewellers to the King of Prussia. It is 4½ feet in height, and weighs 80 lb. It was designed and executed solely by M. Albert Wagner, to whose artistic taste and skill it does the greatest credit. A unity of design runs through the whole. The artist has embodied the "Progress of Mankind to Civilization, under the guidance of Genius." The group of figures at the base, which are designed with vigour and freedom, represent man in the first stage of development, and as the hunter and herdsman. The female figures above denote the blessings of abundance attending the more regular pursuits of cultivation and husbandry. The bas-reliefs which encircle the outside of the vase have a reference to both these ages. Here closes the external struggle with nature. From within rises a palm-tree, surmounted by Genius bearing a torch, and strangling the evil principle of ignorance, typifying the internal culture of the soul to its perfectibility. The figures are sculptured, embossed, and cast, the workmanship of every part being of the finest description. The vase was exhibited for some days in Berlin before being shipped for England.

SILVER VASE.—BY WAGNER, BERLIN.

CLOCK-CASE, DESIGNED BY J. BELL.—BY ELKINGTON AND CO.

ELIZABETHAN GRATE. PEIRCE.

This is a very handsome and satisfactory production. It is a fac-simile of one made for the drawing-room of the Earl of Ellesmere, at Worsley Hall. It is in the pure Elizabethan style: the bars are of dead polished iron, the back of fire-lumps, with cast-iron ornaments on the upper part; and the grate is supported in front by two handsome dogs of solid British silver. The ornamental curtain around the grate is after the pattern of one made for the contraction and cure of smoking propensities of a large chimney at Carew Hall, the seat of Lord Carew. The Elizabethan fender is also of solid British silver; and the general appearance of the whole is appropriate to a stately baronial hall.

VASE IN ELECTRO-PLATE.—ELKINGTON.

This very handsome vase, designed and modelled by Mr. W. Beatte, is intended to represent the Triumph of Science and the Industrial Arts in the present Exhibition. The style is rich Elizabethan. On the body of the vase are four statuettes of Sir Isaac Newton, Lord Bacon, Shakspeare, and Watt, respectively personating the genius of Astronomy, Philosophy, Poetry, and Mechanics. Between these figures are four bas-reliefs illustrative of the practical operations of Science and Art; whilst on the base their benign influences are typified by figures, the overthrow and subjection of War, Rebellion, Hatred, and Revenge. The recognition and the reward of these ennobling pursuits are symbolised by the figure of his Royal Highness Prince Albert, on the apex, who, as originator and patron of the Exhibition, is awarding the palm of honour to successful industry. The height of the vase is four feet. The execution has been very carefully and successfully carried out.

ELIZABETHAN FIRE-PLACE.—BY PEIRCE, JERMYN-STREET.

CENTRE-PIECE. ELKINGTONS.

This is a large and showy centre-piece for eight lights, in silver and electro-plate. The design is of a very ordinary character, by which we would imply no disparagement of the labours of the producers, but rather a reflection upon the tastes of purchasers, who "ordinarily" love to load the centres of their tables with as large and impervious a mass of plate as they can afford to purchase. To produce these structures, little boys are called into the service by dozens, without having time to dress themselves, and there they stand *in statu*, with fruit baskets upon their heads, and thorns or unkind rocks wounding their unprotected feet. One of the greatest evils of this style of table furniture is that it intercepts the view across the table, both sideways and lengthways—obstructs conversation; and not only that, but that interchange of smiles and intelligent regards in which half the charm of a social party consists. We should be glad to see these pompous displays—we might almost call them *pompes funèbres*—discarded, and something more rational, something quite as handsome, but less intrusive, supplied in their place. Indeed, Messrs. Elkington themselves exhibit a dinner service, designed from the antique by the Chevalier de Schilich, which is perfectly to our taste. Here the centre-piece, which is of elegant design, does its duty as a piece of ornamental furniture, without obstructing the free circulation of air and thought in the midst of the table; adds to the effect of a handsome banquet, without monopolising all the attention to itself.

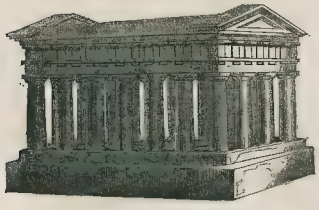
PIANOFORTE. BY MONTAL.

This is a very elegant piece of furniture, in rosewood, richly embellished with marqueterie and bronze ornaments.

MONUMENT TO THE EARL OF DURHAM IN CANNEL COAL

This model has a double interest, first, as a memorial to a departed statesman of undoubted ability and patriotism; and, secondly, as a specimen of the capabilities of the material in which it is produced. The cannel coal is of a very hard and clean quality, and is nearly as available for the purposes of sculpture as jet, which it much resembles.

VASE.—BY ELKINGTON AND CO.

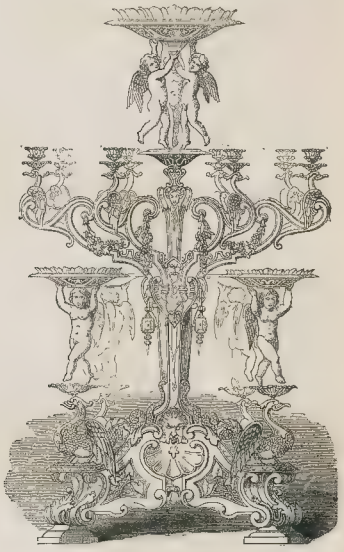


CANNEL COAL MODEL OF THE EARL OF DURHAM'S MONUMENT.

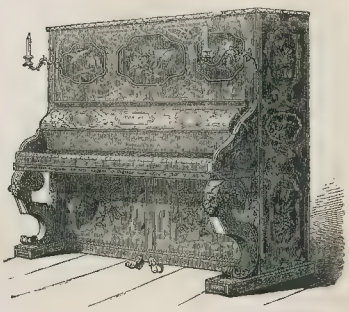
CANDELABRUM.—AUSTRIA.

CANDELABRUM. AUSTRIAN DEPARTMENT.

The design, by E. de Bernardis, a German architect, is good as an instance of how the Italian styles are understood in Austria. It is very elegant, and the massiveness is placed where it should be—in the base. It was produced at the foundry of the Prince of Salons, at Vienna; and it must be remarked, despite what has been said of German casting, that this work is not superior to that of the Coalbrookdale Company, of which several samples of large dimensions, and in various styles, are in the Exhibition



CENTRE-PIECE FOR TABLE.—BY ELKINGTON AND CO.



PIANOFORTE, IN ROSEWOOD.—BY MONTAL.

ARTISTS' IMPLEMENTS, &c.

From the earliest history of painting, we learn that artists were invariably in the habit of mixing their own colours and making their own brushes. This practice has continued within comparatively a few years of our own time. For information with reference to the former fact, we would refer to Mrs. Merrifield's elegant translation of Cennino Cennini's "Treatise on Painting," which was contributed to our art literature in 1844, and deserves to be extensively known. There are but few, if any, of our artists who now grind or temper their colours, but who, on the contrary, prefer purchasing them from the colourmen ready for use. This practice forms a new era in art, and it may be one of considerable consequence to its progress. The artists, it must be admitted, thus gain some advantage over the old method; although that knowledge of the properties of his native colours, and of the durability or fugaciousness, with which the masters of old were necessarily acquainted, is by this course, in most cases, denied to the moderns. So seductive is this plan, that even the artists of Italy, of Holland, &c. have, upon their arrival in England, fallen into it. It is well known that Mr. Sang, amongst these, when he left Rome for England, partook of the system generally adopted here. This facility he found to his cost not always advisable with regard to every colour; and he had to fall back upon the practice of his native country, and that of many of his Munich brethren in art, and he prepares most of his media now himself, and hence that unrivalled brilliancy and transparency of tints as exemplified in all those of his works painted within the last six years. It may be questioned whether the permanence of ancient pictures is not attributable to the elaborate insight of their painters into the nature of the pigments they made use of, and, above all, to the simple manipulation of their works, and the few colours actually enlisted into their service. It is obvious that the number of colours since the time referred to has been considerably augmented; and now, as may be seen by any list procurable at artists' warehouses, they amount to an aggregate almost sufficient to deter the beginner from entering the lists of art. To those who would wish to make themselves conversant with the several names and the properties of pigments, we would recommend an attentive study of Mr. Field's "Chromatography," who, to a profound chemical research into the capacities of all colours for good or ill, adds much general information invaluable to artists. Upon matters of detail it must be obvious we should be necessarily terse although it be difficult, at the same time, to confine ourselves to generalities where the subject is so replete and tempting; and therefore we plunge at once *in medias res*. It is then with "Artists' Implements" of our own period with which we have to deal, and as, they appear at the Exhibition of which we have to write. We will, therefore, append any observations we have to make to the several items under review, as Fat passed his counterfeit shilling amongst his sterling coppers.

And here, as a matter of paraphrase, we would say a word upon testimonials. We cannot but consider the readiness with which artists in general give these written vouchers to the character of the materials submitted to them is deserving, in some instances, of the severest reprobation. Colours are at once pronounced to be pure and enduring that have not been tried more than a few days, if tried at all. Pencils and brushes as quickly obtain certificates for excellence, although they have not undergone the ordinary ordeals to which they ought, and will have, to be subjected. And how is this, that a body of men, well known for their refined sensibilities and exalted notions of honour, should thus thoughtlessly prove force and value to the designs, it may be, of the mere charlatan? A box of paltry colours can have nothing to do with the inducement. 'Can the parade of name, which is afterwards to be made in circulars and advertisements, be sufficient to account for so much confidence? Are we to attribute it to that unbusiness thoughtlessness, to which most men of talent and genius are said to be prone? In any case, it is a custom which reflects discredit upon the arts, and tends to cast suspicion upon testimonials in the mass, the mute particularly when the same name is found to be attached to "*the very best of their kind*," although the uses of the material subscribed to are identical. In justice, however, to the artists who have thus pledged themselves to the excellence of some description of materials, we may state, as a caution to them personally, and to the public generally, that these gentlemen have been grossly imposed upon—colours, crayons, and pencils having, in more than one instance, been sent of the first description and quality, for the purpose of eliciting an autograph encomium, which has afterwards been used for inferior and trashy productions.

No. 1 in the Fine Art Court shows us several contributions from Mr. T. Miller, of Long Acre. These consist of specimens of paintings in "silica colours" and "glass medium," but which appear to exemplify no one particular virtue unattainable by other pigments.

It must be borne in mind, that persons of property lay out their money upon modern art as much for the love of it for its own sake, as for an investment of capital. It is likewise well known, that, whatever the leading connoisseurs in art purchase, at once rises in value from the fact of their choice having fallen in that direction; and that such works, when brought to the hammer, fetch much higher sums than their original price, by reason of the *prestige* acquired by being selected by men whose judgement and taste may be relied upon. To add to this inducement to invest money, it is the breaking duty of a number of the fine discernments, and the legitimate fame consequent upon the title of a judicious patron, and the attendant acceptance by the public that such a desire for acquisition is prompted by an elevated intellect far above the average run of men. We suppose a picture is found to crack —to fly—to fade—its shadows to lose their transparency—the "light within" to become dull without—one colour to sink beyond recal, another to glare in the opposite extreme—a sky in its pearly greys to turn green; and, in a word, after a few years this picture should retrograde in its evidences of talent, and from a marvellous production become a lamentably and vapid daub, what then? Its undoubted genuineness may for a brief period keep up its price. It is doomed to sink; and, but turn it into the market, and from the rooms of Christie it will fall to those of Leicester-square, to the exquisite mortification of the painter, if living—to the injury of his fame, if dead; and, finally, to the serious detriment of modern art, as it would serve to awaken its patrons to the mutability of their investments and consequent impolicy of their purchase.

Most of the pictures themselves, more particularly that of the "Genius of Peace," are distinguished for considerable ability in handling, and a correct probationary course of study. In that of Mr. Corbould's "Britons deploring the Departure of the Romans," we fancy we detect some little "trick," more particularly in the orange tumble, in the surge of the sea, and on the shore, an indication of "body," and the presence of a *medium* which belongs less to the element of water, than of that of gums, resinous compounds, or of oil. As a work of art, we object not to the use of any extraneous aid we have at our command, if it but add to the powers of a particular and express fact; and we could, therefore, have desired that, for the sake of art, that which appeals to us as possessing extraordinary claims upon attention, should have brought with it the first necessary proofs of superiority.

The brushes in this case appear admirably made; and, in this respect, Mr. Miller, we believe, stands almost alone, having had a long practical experience in this branch of trade, which requires an intimate knowledge of the wants and caprices of the artist.

No. 2. Rowney and Co., Rathbone-place.—These gentlemen savour a good deal of the fashion of the time, and give us an almost bewildering classification of colours. Their dividing Naples yellow into tints is, however, a valuable exception, and their desire to supply the artist with a cheap, and, at the same time, a good article is deserving of praise.

No. 3. W. H. Kearney, Brompton, gives examples of crayon painting, executed with his Venetian pastils, which are impervious to damp, and, therefore, adapted to many decorations hitherto beyond the reach of ordinary painting.

No. 4. Roberson and Co., Long-acre, show a very good selection of canvas, painting-brushes, and pencils, which is indicative of a sterling respectability without meretricious allurement. His palette-knife, for placing the colour on the canvas or panel, without the aid of a brush, is a neat adaptation of the common table-knife, and will be found of much service, where boldness of impasta is required. There are several specimens of water-colours, in collapsible tubes, admirably adapted for sketching from nature; and a newly-invented oil sketch-book, very light and convenient, for carrying a sketcher to nature's fair, and for wet paintings without injury. The prepared canvas in the same case is worthy of remark, from its being a successful attempt to give to that fabric the surface of fine panel.

No. 7. Messrs. Reeves and Sons, Cheapside, London, contribute a case of some importance to artists, inasmuch as it contains the proofs of an efficient substitute for the far-famed black-lead mine of Cumberland, which is now thoroughly exhausted. It is well known, that, for all purposes having reference to art, this lead of Cumberland was unsurpassable; that no other could compare with it in quality of colour, absence of grit, or was so easy to erase; indeed, that no other yet found could be thus made use of in its natural state. That from the Balearic Islands is "cindery;" that from Ceylon, though purer than any plumbago known, in the excess of its carbon, and the small portion of iron and earthy matter, is too soft and flaky; that termed Mexican is really produced from mines in Bohemia, and is also friable and earthy. Other varieties, from Sicily, from California, from Davis' Straits, and elsewhere, have been tried, but all have proved unfit for the use of the artist. Cumberland lead is the only black-lead that in its native state could be cut into slices, and thus be inserted into the channels of the cedar pencils; this being alone a remarkable test of its superior fitness as a native lead. The substitutes for Cumberland lead are manifold, some or all of the varieties of the leads before mentioned being worked into pencils variously designated "prepared," "purified," or "compounded." These different leads, by means of gums and resinous matters, are either kneaded in a plastic state and forced into the channels of the cedar wood, or more frequently combined and ground with substances with which they will bake to the required hardness, or with others which will fuse, and the mass solidify when cold. Lustre, intense colour, freedom in working, and ready erasure, Cumberland lead possessed in an eminent degree beyond all other leads known; but its uncertain temper and occasional grit—properties common to all leads in a natural state—gave rise to the amalgamation with other substances which have been enumerated; and though some of the qualities in which Cumberland lead falled have been obtained with varying success by these amalgamations, its especial and valuable qualities when pure have in the same ratio been deteriorated and destroyed. Thus the artist has been left to choose between the evils of a native and a spurious lead, until the somewhat recent discovery of Mr. Brockedon of a process by which Cumberland lead is made perfect. It would seem that these pencils are especially made for Messrs. Reeves and Sons, and that they are unquestionably what they affect to be. Another important evidence of successful trade enterprise in aid of art is to be found in the water-colours prepared with wax, as shown in this case. They dissolve with ease, possess great volume and transparency; and, moreover, they cannot be converted into flint by hot temperature, so often the fate of the ordinary water-colour. The introduction of a medium of the purest wax into the manufacture of water-colours was a stage in the art of water-colour painting deserving of honourable mention. It has given to this delightful department of art a facility of unapproachable character, and tended to rank it very close to that of oil, which it surpasses in its powers of drying, the advantages of smaller space, and ease of carriage. Very many have been the attempts to give body to the colours used with water, and a variety of media have been used for this purpose. One of these is the more purely tenacity worth mentioning, as showing the avidity with which anything new is seized upon, even by the intelligent and discerning, and the effects which followed a too confiding credulity. We allude to the use of honey for the purposes above stated. This medium certainly had the desired result of keeping the colour with which it was mixed in a moist state; indeed, if the brush was too fully charged with it, those parts of the drawing to which it was applied would not, unless in hot weather, or in a warm room, dry for some time; and even then dry, such drawing, if exposed to a humid atmosphere, became "tacky" again in their folio or elsewhere, and stuck to their unctuous companions in the most sweet but destructive union. A drawing finished with these colours could not be left a moment with safety. The flies, attracted by the tempting treat, would moisten the choicest parts with their proboscei, and tattoo the human face divine, or give to that lovely of woman all the appearance of being ravaged by small-pox. It was no unusual thing to find a flock of sheep disappear from a common, a chicken shattered and unroosted in a night, and a litter of pigs and a cow or two carried away in a fly. Nor was the artist himself exempt from the annoyance of their perseverance and pilferings. To paint from summer nature in the open air was to look through a swarm; and the head of the luckless draughtsman became like a hive in the midst of the winged insects of all descriptions, attracted by its virtues, assembled at the opening of this box of Pandora, and ruthlessly attacked and devoured the creations of art under the very nose of the designer. Nothing came amiss to them. Fresh and gushing mountain streams rendered dry in a twinkling, and the sole of the luckless sea left nought but a sheet of paper. Like Orpheus, they moved whole rocks, and levelled mountains with a speed which would raise an envy in a railway contractor. The foliage of the forest and the herbage of the plain changed their sterility under their house-like influence; and it is even asserted that a large spider, painted with the fidelity of life, possessed no terrors sufficient to overcome the attractions of its saccharine formation.

The fields of art are haplessly subjected to many visitations of the fly—would that their causes were as easily estimated and as readily removed.

The allusion to a temporary false step in the onward progress of chemical research in art naturally—although in a very oppositive category—directs our attention to the subject of "fixatives," a very strong term, but nevertheless true—frauds upon artists. It must be in every father's experience—in that of every director of youth—that there is a particular period in a boy's life when the yearning for a "box of paints" becomes positively painful, according to the amount of difficulty which surrounds its possession. A guinea obtained, the next fancy-stationer's is re-sorted to for the much-coveted box. There it lies upon the counter, with its lid slightly and mysteriously raised, displaying just enough of its contents to increase a desire of ownership. The prize purchased, homeward, paper tints and plate turned, the attractive colours are rubbed one by one in neat array upon the delf. A good specimen of water-colour has been, "lent to copy," and now comes the first essay. All the efforts of the tyro to imitate the flat tint of its sky or the rich impasta of the foreground are in vain. Time and perseverance but add to the vexation. His colours are poor, weak, thin, and washy. He is, however, ignorant of this fact. Young and confiding, the shop which boasts of being "established" at a period when his father was a boy, would never stoop to cheat. He throws aside this attempt and tries again. The useful qualities of the colours either penetrate through the paper, or, for want of sufficient grinding, their crude and earthy particles are floated about for an instant on the surface, and the next left in spots and patches. Here is a young and ardent lover of nature, stimulated by a noble mind and delighting in invention, shamefully surrounded in his first encounter by disheartening difficulties, which are the more serious because their cause is not understood. At the very threshold of the temple of art he is rudely repulsed by the sordid and fee-seeking, who are clumsy and careless here, and falsely deny that either Talent, or his senior partner Genius, are within. There exists not the shadow of excuse for this abrupt rebuff. The profits upon art appurtenances are large and ample; and the thus adding to positive extortion, the intimidation to modest merit, is as cruel as it is dishonest. But, says the advocate for cupidity, any description of colours will do for a boy to begin with. Then, if such be the case, why charge as for the best? But it is not the fact. It is true that there are professors (save the mark! it is a correct one) of music, who do not hesitate to set a girl down at a piano "of any sort;" but will any rational person, who is impressed with the divine gift of the appreciation of sweet and harmonious sounds, affirm that such a course would not tend to vitiate taste and injure an otherwise correct ear? But we must restrain ourselves. Our indignation would carry us beyond our limits; for is the indulgence of it we should have to bring forward a quantity of "damning facts" capable of swelling a volume, much less the necessarily prescribed space of our Journal. The little we have said will be appreciated by those who, together with a love of art for its own sake, follow it from poverty or necessity.

We shall add a few more remarks, partly borrowed from an article by Mr. Brockedon, upon the black-lead pencil, a more important auxiliary to art than would at the first thought be supposed. It is not generally known that lead ores are subjected to plumbago, is combined with sulphuret of antimony, or pure sulphur; and the greater the proportion of this ingredient, the harder the composition. When ground with the lead—generally that called Mexican—the compound is put into an iron pot, or frame, and subjected to a degree of heat required to sublime the combining ingredients. It is then, whilst hot, put under a press, and kept there until it is cold; when it is turned out as a block, ready to be cut into slices, and inserted in the cedars.

The impossibility of rubbing out a composition when sulphuret of antimony is used, led to the rejection of the sulphuret and the employment of sulphur only, treating these ingredients as before. This makes a better composition in the quality of rubbing out, but possesses, in a greater degree than the former, a serious evil. The sulphur is readily set free by bodies with which it, and remonrands made with this composition can be reproduced although rubbed out, so far as with such composition is practicable. If the place where the writing was be wetted with an alkaline liquor a sulphate will be formed; and if, after drying, it be again wetted with acetate of lead, it will exhibit the writing in sulphuret of lead. This is obviously a most dangerous property for persons who may require to make notes not intended to remain or be again producible. To an artist it may be very injurious as regards the purity and security of his productions, for many of the colours which have metallic bases, are liable to be affected if they come in contact with the lead of sulphured pencils. A ready and simple experiment will place our readers in possession of an infallible test, and thus protect that portion of them with whom the fact is of consideration from so deceitful an instrument. Draw some lines with the suspected pencil on a sheet of paper, and place these lines in contact with any bright, smooth, silver surface—a spoon, for instance; in a few hours, if these lines contain sulphur, corresponding dark lines will be found on the spoon, formed by the action of the sulphur on the metal. A good black-lead pencil may yet more readily be known. It should work freely; be free from grit, yet without a greasy, soapy touch; bear moderate pressure, have a lustrous and intense black colour, and its marks be easily erased. It should be borne in mind, however, that no pencil appears to be the same at all times. This arises from the nature of the paper, whether hard or soft, or the condition of the atmosphere, whether it affects it materially. The same pencil, on smooth or rough, moist or dry paper, will mark as if four different pencils had been used. The softer or darker degrees of lead are weaker, and yield more readily than the harder varieties.

The varieties of German pencils, with ornamental exteriors, which have recently been imported in large quantities, are, it appears, made of clay mixed with Bohemian lead, and a glass which fuses at a moderate temperature. The materials are ground in water together, and dried slowly to a stiff plastic state, and then put into a vessel like that used for forming macaroni; under a powerful press this composition is forced through holes in the bottom of the vessel, thus forming the material into square threads of the required sizes. These are laid in convenient lengths in wooden troughs, which keep them straight until they are thoroughly dried. They are then laid in similar troughs or close cells on iron plates, and put into a muffle, or furnace, subjected to a degree of heat sufficient to render them hard and ineolable, and are then placed into the channels cut in the wood, and glued there; the different degrees of hardness depend upon the proportion of the ingredients. All these pencils, however, are harsh in use, and their marks cannot be entirely erased.

No. 8. Green and Fahey, Charlotte-street, Portman-place, exhibit folding drawing models in three series, illustrative of perspective, and the principles of light and shade, which will be found of service both to master and pupil in the elementary studies of art.

No. 9. J. E. Cook, Greenock, Scotland, exhibits prepared panel for amateur painting, which requires but a day or two to be ready for the artist. Mr. Cook is deserving of much praise for this attempt to give facilities for the obtainance of materials to the young beginner, who is too often cramped for the want of the necessary funds. It is related of Wilkie, that, by partly pulling out a drawer from a set, he made himself an efficient easel; and of Sir Benjamin West, that he obtained his first brushes by taking the hair off the tail of a favourite cat.

No. 10. Harvey, Oxford, shows an easel for artists sketching out of doors, containing everything required. This is a judicious arrangement of materials, and one hitherto much wanted. We trust, it will not be long ere greater activity be given to the trade of which Mr. Harvey is a member, by the appointment of professorships of painting, sculpture, and architecture at our Universities. Why should not the youth of England, in their more docile years, acquire a taste for, and a love of, art, the more as they are in after life to become patrons, and sit in learned conclave as committees of taste upon the merits of the rival works of the greatest men of their day. It would tend greatly to rescue them from egg throwing and chicken hazard, and other low and frivolous pursuits, too often the resource of those who have nothing to do, rather than the offspring of innate vice. The sister arts have their professorships; why then, should painting be driven from the seats of learning?

No. 129. Wolff and Son, Spitalfields.—A selection of chalks and Athenian crayons, which appear of a superior description.

No. 130. E. F. Watson, Piccadilly, has sent some excellent specimens of gilding, which contrast strangely with the cheap gold frames around. There are few artists but are aware how much their productions depend upon the frame by which they are surrounded; and while a picture shall appear surpassingly beautiful in one frame, it shall seem poor and illconditioned in another. This perception of the uses of frame required for the particular style of picture is granted to but few of our framemakers; and we are led to believe that it is of the fact that Mr. Watson being an amateur artist himself, that is to be attributed his possession of the gift in an ordinary degree.

It may here be remarked, that the "cheap" frames, now so much in vogue, which meet us at every turn, are the dearest the artist can purchase. The yellow preparation of their groundwork, but once, and rarely, covered with gold (and that "gold" too often of a spurious Dutch description), peers through in unutterable poverty of aspect upon the slightest contact or friction, while the warmth of a room creates gaping crevices at each juncture, and cracks and shrivels the composition ornaments as though they consciously shrunk from contact with the gem whose rich and tasteful and its shabby disguise, upon which they had been so unceremoniously placed.

It may be taken as an axiom, that an oil painting should never be exhibited without a good frame, or a drawing without being properly mounted.

No. 249. T. Carrick, Montague-street, Portman-square.—Mr. Carrick is a clever miniature painter, but we cannot recognise any additional virtue in white marble, as a "ground," over the ordinary material in ordinary use, to compensate for that coldness of general effect which will necessarily be produced by the change from the nature and tone of the marble. It certainly, for many purposes, offers considerable inducements to the painter, and its granular and regular surface renders the touch more easily capable of finish; but its hue lacks the warmth of ivory, and is unsympathetic with flesh tints. The question whether the contact of any hard substance would not cause the work to chip, and even the application of the finger nail to make it "fly."

No. 245. Gear, J. W., Charlotte-street, Fitzroy-square, exhibits a composition to supersede ivory for large water-colour paintings. The inventor, who is likewise an artist, informs us that it can be manufactured of any requisite size without a join; the colours, he adds, appear brilliant and clear upon it; and, as it is capable of being used in every respect as ivory, without the brittleness of other substitutes, it will be found worthy a trial at least of the attention of the artist. We have no other means of judging of its merits than the single sample in the Exhibition, which, being completely covered with a drawing of but average talent, denies us all opportunity of doing more than quote its discovery. This and similar attempts will supersede ivory, which *once* could only be obtained of a limited size, however praiseworthy, are, where this is the object, no longer of importance, as ivory, by rotatory motion and fixed vertical saws, can now be cut into sheets of almost any extent. This observation likewise applies to ivory.

No. 250. Sir W. Newton, Argyle-street, who contributes several miniature paintings of his own, to exemplify a power he possesses in secret of "joining ivory together without the seam becoming apparent." These specimens are, however, unfortunately selected for the purpose. The seams are, to our eye, *are* apparent, more particularly in that of "The Homage," where a join runs the full length and breadth of the picture, in defiance of the thick and heavy "handling," obviously intended to hide it. And this undue amount of colour appears to us to be the only means he has to conceal the seam, to which their great purity and richness; more particularly the purple madders, the extrast of gamboge, the madder carmine, and the oxide of chromium. They likewise exhibit the dense oxide of zinc, or Chinese white, originally prepared by them, and the sulphate of baryte, or permanent white, which, had it been discovered earlier than it was, would have saved many valuable drawings from the sacrilligious hand of the restorer, nearly all the white for water colour, sold for that purpose as "constant," turning *black* in a few years. The *papier maché* palettes for water-colour painters in this case are a novelty.

In the same Class—Chemicals Mr. Parrott, the artist, of 7, Clevelandstreet, has deposited some specimens of a semi-transparent brown colour, from the smut of corn, by the admixture of which, in oil colours, or dilution in water, many shades are of course obtainable and, as the colour itself certainly differs from most other browns in its properties, we beg to direct the attention of the chemist to the discovery, that more may be known of its components. It, moreover, serves to show that there exist artists who have not altogether abandoned the once necessary duty of analytical research into the various natural products by which they are surrounded, with a view to render them practically subservient to the requirements of their profession.

In No. 1, Class 17, a somewhat dark place, is a selection of fancy stationery from the old-established house of Ackerman and Co., of the Strand. Amongst it is a colour-box, fitted up with every requisite the amateur may desire; the whole arranged with] great elegance and taste.

Mr. Grundy, of Manchester, exhibits in Class 26, No. 121, some very beautiful specimens of frames, which are intended to display to the best advantage fine engravings, drawings, and other works of art, and adapting them for the tasteful embellishment of the drawingroom, boudoir, &c. These frames for drawings are exquisitely beautiful; and a simple contrivance, the works are sunk or inlaid in the *matte*, or mounting, which preserves them from injury, while they are likewise kept perfectly flat, and do not touch the glass. The frames are altogether lighter than usual, take up less space upon the walls, and have a charming appearance when relieved by a buff or scarlet ground. Water-colour drawings, and the lighter descriptions of oil-paintings, are surprisingly benefited by this ornamentation, while prints appear to be very considerably enhanced in value by such means. The new method of mounting water-colour and other drawings without cutting their edges, we believe, is due to Mr. Grundy; and the advantage of placing them beneath, instead of above the card-board, &c., owes its origin to his brother, of Regent-street.

HARTLEY'S MODELS OF A GLASS-HOUSE AND GREENHOUSE, &c.

Messrs Hartley and Company, of Sunderland, finding themselves in the position of many other exhibitors who were not on the spot during the allocation of space in the British side of the Building, were glad to avail themselves of accommodation on the east side of the United States division, and south of the great eastern or Foreign avenue. It so happened that our brother exhibitors from the other side of the Atlantic found, that, instead of 25 acres, which they originally applied for, they had not collected a sufficient number of articles to occupy anything like the area which had been allotted to them, and they at therefore, kindly gave up a tolerable slice of their portion to the Messrs. Hartley, and other Sunderland exhibitors, who would otherwise have been cramped within a very small space in the western division, or shut out altogether.

The model of an eight-pot furnace glass-house is the most conspicuous object in Messrs. Hartley's collection. The cone is made of bent glass, which, from its peculiar shape, and from the radius varying, is a very difficult task to accomplish. This arrangement, however, enables the visitor carefully to inspect the interior arrangement of the furnace and "pots," or crucibles, in which the material is mixed, and also the "cone," or tunnel, by which alone any air is admitted into the glass-house while the operation of melting the metal is going on, and which, of necessity passing through the furnace, forms a constant blast, by which means a greater heat is obtained than is required in any iron-works. This model is constructed to a scale of 1½ inch to a foot; the diameter of the floor of the model being 7 feet 2 inches, the height of the floor from the basement 1 foot, and the height of the cone 12 feet

The model of a greenhouse, 4 feet 2 inches square, is interesting, as being constructed on the "ridge and furrow" principle adopted in the construction of the roof of the Crystal Palace. In 1846 Messrs. Hartley constructed a conservatory in the horticultural gardens at Chiswick, and several others in different parts of the kingdom. By this plan, Messrs. Hartley did away with the lap-joint, making the whole length of glass, from the gutter to the ridge, in one piece.

A third model of a ridge and valley roof is also exhibited, being constructed of rough plate glass, each square being 62 inches long, 18 inches wide, and ½ of an inch thick; the weight being 30 oz. to the foot superficial. The strength of this glass is sufficient to resist the effects even of the most heavy hail-storms.

As the produce of the various stages of the glass manufacture are shewn contiguous to the models already described, it may be as well to give an account of the different stages, first, of the manufacture of *crown glass*, and, secondly, of *sheet glass*.

The material having been properly and sufficiently fused in the furnace, is collected on the end of an iron tube called the "blowing-pipe," by a workman called the "gatherer," who, by continual practice, is enabled nicely to calculate the weight of metal required: this constitutes the *first* stage. The glass so collected is next handed over to the blower, who, by first inflation, produces a hollow piece of glass, in shape somewhat similar to a pear: this is the *second* stage. The glass having become cooled, is now removed to a furnace used for the purpose of warming the glass for further inflation, by which a globe of the diameter of 24 inches is formed: this constitutes the *third* stage. It is then taken to another furnace; again heated; and, for the last time, inflated into the shape of a sphere of the diameter of about 24 inches, forming the *fourth* stage. At this point, a small piece of glass attached to an iron rod, by a boy, who fastens it to the opposite end of the globe to that to which the blower's pipe is attached. The blower, by a little cold water applied drop by drop with a piece of iron, and a sharp blow from a wooden mallet, severs his pipe from the globe, leaving a circular opening therein. Here the duty of the blower is at an end, and thus the *fifth* stage is accomplished. The globe of glass is then taken to another furnace, for the purpose of heating the thick end whence the blower's pipe has been removed, previously to the first part of the process of opening being commenced—forming the *sixth* stage. This operation requires more skill on the part of the operator than any of the others, and is performed at the "flashing furnace," where, by a compound centrifugal and eccentric movement, the globe gradually expands into a round plane surface.

In the manufacture of sheet glass, which was originally introduced into this country by Mr. Hartley, and which is fully illustrated by various specimens exhibited on another table, the first part of the process is the same as that used for crown glass. In the second stage a piece of glass, as formed in a wooden block by the blower, is swung with great dexterity over an opening in the ground, similar to a saw-pit, giving it a cylindrical form, which is the third stage.

Only one furnace is used in making sheet glass, and this is simply required to warm, from time to time, the cylinder, which is swung from side to side alternately, until it arrives at the required size.

A small piece of glass is next attached to the end of the cylinder, which is again placed in the furnace: the rarification of the air causes it to burst at that extremity, when a boy cuts off the end with a large pair of scissors. The cylinder, still attached to the pipe, is placed on a wooden horse, and by drawing a piece of cold iron over the end near to the pipe, it is separated from the cylinder by a sharp blow. When the cylinder is cool, the blower, with a piece of hot glass, surrounds the end as it were with a cork, and cuts it off as if a diamond were used. The cylinder is now transferred to the kiln, to be flattened, slit up the centre, and afterwards placed in the flattening kiln, by which the sides fall down to a certain extent; and, by further exposure in the same kiln, the sheet becomes entirely flattened.

Five specimens of sheet glass, 62 inches by 41 inches, containing each nearly 18 superficial feet, are exhibited. There are also various other objects of utility made of glass for the dairy, the garden, and for other purposes, as manufactured by Messrs. Hartley and Co.

TEBAY'S WATER METER.

Many plans for measuring the quantity of water supplied to the consumer by the water companies have, from time to time, been submitted to the Society of Arts, but, as yet, little has been done towards the introduction of the water meter by the great water companies of the metropolis, who are, however, fully alive to the advantages of such a mode of detecting the dishonest consumer. On the north side of the division appropriated to Machinery in Motion, we find a compact and exceedingly neat contrivance for this purpose, invented and patented by Mr. Tebay, consisting of three main parts: first, a registering apparatus for ascertaining the quantity of water flowing through the machine; second, a self-acting regulator to enable the instrument to suit itself to any pressure; and, third, a check-valve to prevent surreptitious use. The measuring or registering apparatus stands on a perpendicular column, and is furnished with a dial having a pointer to indicate the number of gallons and pints which have been drawn from the cistern in a given time: the inlet pipe passes through a horizontal flange, by which the machine is supported; the outlet pipe is connected to the back part of the registering apparatus.

This meter may be placed at any part of the water-pipe, and at any altitude, and in any part of the building. Its action is certain, easy, and effective; and, however suddenly the pressure may be increased, or the flow of water through it impeded, or altogether stopped, there is not the slightest concussion or reaction. Another great advantage worthy of being mentioned is, that it cannot be tampered with without detection.

There cannot be a more equitable mode of assessing water-rates than that by which each consumer pays for what he actually uses, and no more; while, without such adjunct, a very large quantity of water is frequently wasted, by which the company experience a considerable loss, while, on the other hand, those who do not require half the allowed supply are made to pay, as it were, a double rate.

TOBACCO.

If the present age were not by general consent most appropriately christened the iron age *par excellence*, it would assuredly receive the title of the age of smoke. As iron is the mineral, tobacco is the vegetable type of the days in which we live. But for tobacco, modern history must inevitably have been as different from what it is, as it would have been without the revolutionary inventions of gunpowder and printing. The importance of the effect of tobacco, and the gigantic extension of the consumption of alcoholic liquids, upon the physical and moral nature of man, is a theme worthy of the meditations of the most enlightened student of physiology, statistics, and philosophy. The use of this potent and mysterious drug has become all but universal. It has entered as an element of existence into the life of man, whether for good or evil many hesitate to decide. Perhaps the present Grand Exhibition, which, rightly regarded, offers not only a catalogue of the productions, but a record and a summary of the whole character of the nineteenth century, is no unfitting occasion for a passing consideration of so weighty a subject as the part which any particular article of general commerce and consumption plays in the great drama of history, of which we are, one and all, at once the actors, the spectators, and the recorders.

In this consideration it is of course necessary to lay aside all individual prejudice. What we have to deal with is a great fact. To those who neither smoke nor take snuff, the use of tobacco may naturally appear a very disagreeable, deleterious, and even absurd habit. Not being a necessity, it of course depends upon taste and opinion for its justification.

Like opium, betel, the *Cannabis indicus*, commonly known as hashish, and several other drugs well known in chemistry, tobacco is a narcotic stimulant. It is also an aperient, and in the form of a decoction, or extract, one of the strongest known to medicine. It is also a powerful emetic. But it is rarely applied by physicians, except in extreme cases, when it has often been found of extraordinary efficacy. Such being its properties, it is evident it cannot be greatly indulged in without materially affecting the nerves and the digestive organs. It is also evident that its abuse must lead to very serious results. Many persons, from excess of smoking, bring on dyspepsia, and an extreme irritability of the nerves, consequently of the brain, consequently of the whole system. The confessions of many smokers would rival the celebrated opium-eater's account of his terrible sufferings. But these are persons of delicate stomachs and sedentary pursuits. These, also, are the people who, generally from personal experience, condemn the use of tobacco and its poisonous qualities. Yet the navigator and the sailor (two classes whose names are one, and whose occupations are so opposed) chew and smoke to a great extent with rare inconvenience. In fact, we are inclined to think that, to the labouring classes, tobacco may sometimes be a benefit and luxury. A life of healthy bodily exercise renders their nerves proof against the effects we have described it as producing on more susceptible organisations. Who ever has entered a country public-house in the evening, and observed the grave circle of steady old smokers that does not feel the pipes to form an essential part of the picture? What would Knickerbocker's "Dutchmen" be without pipes? Imagine that solemn circle of politicians all twiddling their thumbs, or sitting with their hands in their pockets! Besides, what a relief for a taciturn man to watch puff after puff of silver grey smoke ascend and vanish like a phantom raised by his conjuration. A pipe is a substitute for wit, for eloquence, for gesticulation; it is our excuse for silence, for slowness of repartee, and for gravity; above all, it is *something to do* with one's hands, one's eyes, and one's mouth. A stranger enters; he is modest; he takes a seat and smokes himself a veil. Nobody stares at him and he stares at nobody unpleasantly, because all have their pipes to look at, which, being clay, remind them that man is no better. But tobacco possesses one other remarkable virtue; it destroys insects; hence the fumigations of gardeners in hot-houses. Now, this virtue may be far more important than at first sight appears. Many modern physicians refer to, reparat

THE ZOLLVEREIN DEPARTMENT.—LOOKING WEST.

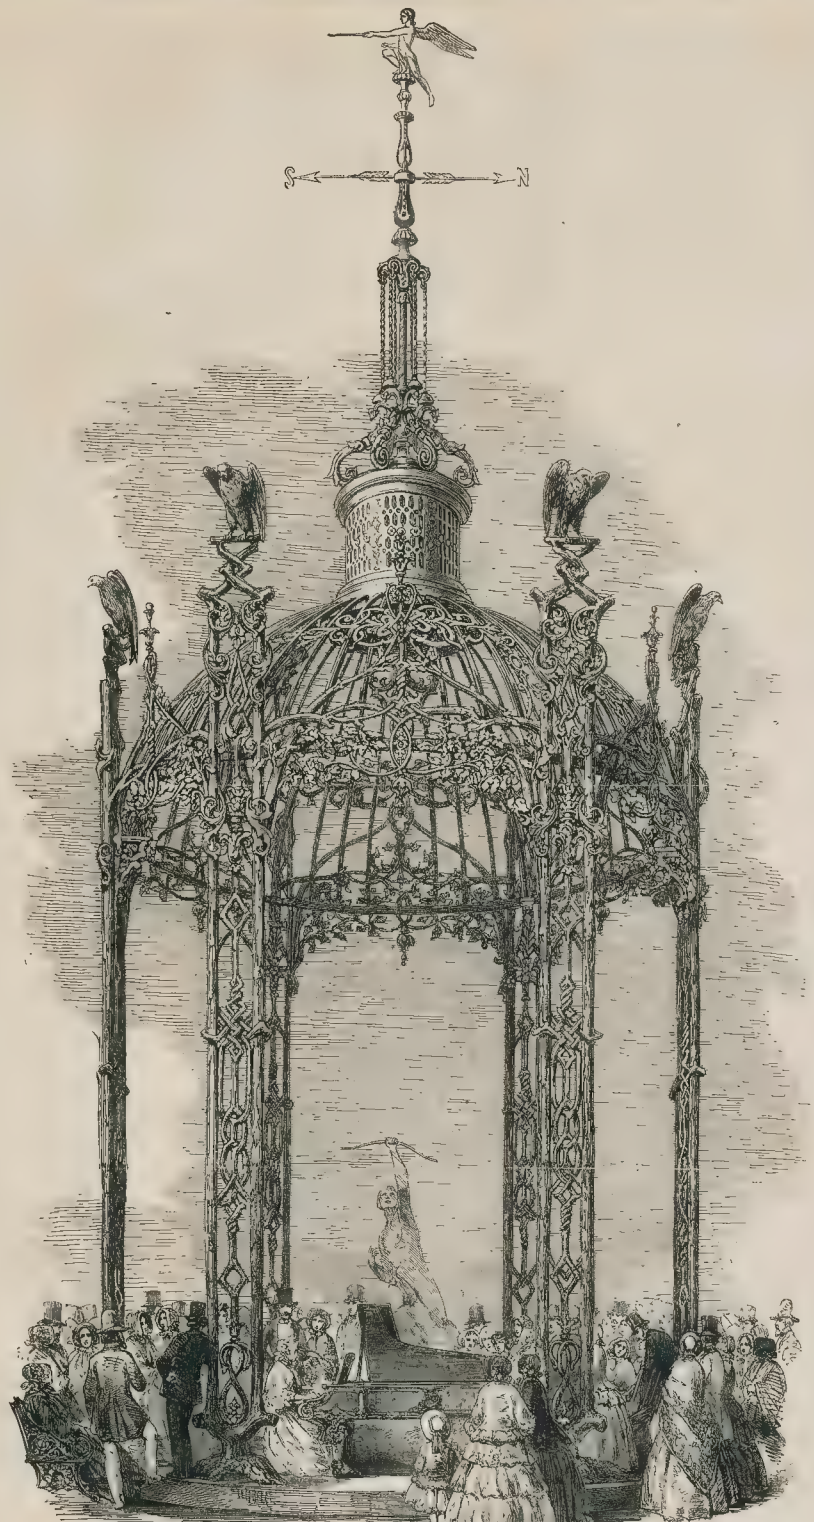
THE ZOLLVEREIN DEPARTMENT.

The Engraving on the preceding page gives a comprehensive view of that portion of the East Nave (looking west) appropriated to the Zollverein Department, the courts of which branch off right and left. The large tent-like object bounding the foreground is the tent containing the famous Dante window from Milan; the equestrian statue to the rear is the colossal Godfrey de Bouillon; and in the foreground are the Amazon, by Kiss, of Berlin, and the Bavarian Lion, which we have engraved and fully described in former Numbers. Around are various objects of Sculpture, which have been very liberally contributed by the States belonging to the Zollverein.

MAUDSLAYS' COINING PRESS.

The coining press is worked by a double cylinder direct-acting high pressure engine, on the shaft of which is a metallic pulley of 36 inches, and a fly-wheel of 72 inches diameter respectively. The cylinders are each of 5 inches diameter, and the length of the stroke 16 inches. From the pulley of the engine a strong double leather strap passes to a drum of 56 inches diameter on the main shaft of the press, by which motion is given to the cross-head and other parts of the machine: the drum is attached to the engine fly-wheel, of 64 inches diameter

In coining presses, as ordinarily used, either a screw or lever is employed to give motion to that part of the machine by which the necessary impressions are given to the metallic *blank*; but in the present instance this motion is obtained by means of an eccentric, by which a pressure is brought into action of 140 tons: the cross-head worked by the eccentric, which is concealed from view, has an alternate vertical motion of three-quarters of an inch. Underneath and attached to the cross-head are two collars, the lower one of which contains the upper die, while the lower die is contained in a collar, which is kept up by three radially placed springs pressing thereon, and forms the temporary resting-place for the blank undergoing the process of stamping. At proper intervals the collar is pressed down by two small levers or arms, having an alternate motion. The blanks, twenty-eight in number, each of nearly one-eighth of an inch in thickness, are placed in a circular brass hopper, from an opening in the bottom of which they are successively transferred to the lower die by means of a split curved arm, or tongs of ingenious construction, having two fingers at the end, by which the blank is held during its transference from the hopper to the lower die, when the curved arm is opened so as to release the die: the distance between the centre of the hopper and the centre of the die is five inches. The opening and shutting of the split-arm or tongs is effected by a vertical pin moving in a short slot formed in the stem of the curved delivery arm; the pin is attached to the end of a second horizontal arm or lever, which is worked by a vertical spindle in connexion with an elliptical cam towards the top and front of the press. In case of a blank being larger than that of the required gauge, a safety spring is attached to the second horizontal arm already mentioned, having its centre of motion on the vertical spindle, by which the error is detected without doing any injury to the machinery. By this press 60 double impressions are thrown off in a minute.



THE IRON DOME EXHIBITED BY THE COALBROOKDALE COMPANY.—GROUP LISTENING TO ONE OF MESSRS. COLLARD'S PIANOFORTES.

ORNAMENTAL IRONWORK DOME. BY THE COALBROOKDALE COMPANY.

One of the most pretentious works in the Building in this fantastic and withal remarkably pretty inutility. The casting supports the reputation of the founders: but there are many and grave objections to the design, which is not so happy; the upper part is less relieved than the lower, which least required spirit, and the cupola and vane are very bad. In the midst is a cast of J. Bell's "Eagle Slayer." The eagle transfixed by an arrow at the top inside must be considered an absolutely inexcusable piece of bad taste.

The pianofortes in the Crystal Palace, more particularly the instruments placed in the Nave, continue to form one of the most attractive features of the Exhibition; and with their brilliant and more costly rivals, the diamonds, fairly divide the admiration of the fairer portion of the visitors. On the more fashionable days, crowds of aristocratic and attentive listeners may be found lingering around and within the cast-iron dome of the Coalbrookdale Company, listening to the tones of Collard's splendid grand pianoforte, which has here found a resting-place, the tasteful decorations of the instrument—in the style of Louis XV.—richly carved and gilt, the beautiful figure of the mottled oak of which the case is formed, contrasting strangely but most effectively with the more sober hues of the bronze castings of the dome.

On the occasion of our visit we had the pleasure of listening to the performance of Madame Launitz Tipping, a lady with whose name the musical public should be more generally acquainted. M. Székely (a Hungarian pianist of great talent) also exhibited his powers on the same instrument. These pianoforte performances form a most agreeable interlude; for while they invite the weary to take a brief repose from their fatigues, they, at the same time, afford them a rich and unexpected treat.

GLASS WARE. BY POWELL.

The Engraving at page 196 illustrates some of the specimens of glass ware manufactured by James Powell and Sons, of the Whitefriars Glass Works, London; viz. a large glass stand, with four gas burners, suitable for a pedestal, designed by Mr. Archibald Cole; also, parts of a dessert service, designed by the same gentleman. Some of these articles are made of the American sand from Wenham Lake district, remarkable for its transparent brilliancy. At the same stall is a specimen vase of yellow glass, produced by the oxide of uranium, first applied by Messrs. Powell to the colouring of glass many years ago, at which period it was sold as high as 2 guineas per ounce; but, from its having been brought since that time into general use, may now be purchased at a much less price per pound. Patent joints for glass tubing, applicable for conveyance of water, telegraph wires, &c., are also exhibited by the same manufacturers.

"SUSPENSION." BY VOISINLIEU.

This is a pretty basket-shaped production in hard earthenware, for the reception of flowers and candles, which affords the means of decorating and lighting a room at a comparatively trifling cost.

FURNITURE. BY CLARK.

Our Engraving (at page 196) represents two very rich and ambitious articles of furniture, by Clark, of Dean-street. The ebony centre-table is supported by a pillar composed of a group of three eagles in or molu, highly chased, surrounded by oak leaves and acorns. The top is surrounded by a rich or molu moulding, and is divided into six compartments by branches in the same material extending from the centre to the circumference. This, ornamental as it is, is the only point which we object to in this table, destroying, as it does, its evenness of surface. The intervals between the branches are inlaid with buhl, is in English walnut-tree wood, is supported upon elaborately-carved foliage standards, the top being inlaid with marquetrie, on the upper and under surface. Altogether, this is an undeniably elegant piece of workmanship.

BEDSTEADS.

"It no more follows," says a learned essayist, "that because the word 'bed' is pure Saxon, its origin is derivable from our ancestors sleeping on sacks, than that a man was necessarily indebted for his lodging who slept upon *tick*." It is strange that so little has been written upon beds. Can it be so drowsy a subject, that, as soon as we are led to incline our minds thereon, the god Somnus claims us as his own? Surely that which contributes to so much of our enjoyment, in many instances to the employment of one half of our lives, has sufficient of interest to claim the attention of the learned. If so, perhaps the history of beds should be traced back to Adam, for whom Mother Earth made one upon her bosom, giving him a springy mattress of sweet-scented herbs pillowing his head amidst the pendent and sleep-inviting poppy. But should we have the courage to go thus far back, we should be compelled to do justice to all intervening times and nations, which would detain us from our duties much too long ere we arrived at the beds to be found ready made in the Crystal Palace. Nor could we, without a wide discursive text and elaborate graphic delineations, give anything like a notion of the various forms given to the bed or the materials of which its appurtenances have been composed. It may, however, suffice to state, that there has been but little change in the shape of bedsteads, or material for beds, since the time of bed-making by the pioneers of civilisation, the Egyptians and the Assyrians, the Phœnicians and the Persians. Indeed, in this respect it has been matter of surprise how little change has been introduced during so great elapse of time, beds and bedding being at the present day almost identical with the periods referred to.

A late writer, while glanc ing at this subject, remarks, "that climate is the great arbiter of custom with us all, and that those inhabiting the same latitude exhibit a general similarity in their method of repose." The habits of our early British forefathers differed little from those of most uncivilised nations; and in this state they appear to have remained until the conquest by the Romans, when policy it always was for the latter to bring their own manners and customs into the countries overrun by their victorious arms, and accordingly during their occupation of Britain the customs became assimilated to those of Rome. On their retirement, the people suffered a relapse, and civilisation remained at the ebb until the establishment of the Anglo-Saxons once more introduced a comparative degree of refinement into their modes of life.

We find payment ordered for taffeta, fustian, and silk for the King's bed, in a document in the reign of King John, and in another of the same period linen sheets are mentioned. The wills of the Monarchs, and the principal nobility in the fourteenth century likewise give us a hint as to the truly sumptuous character of the bed-hangings of the period, when satin, velvet, and embroidery of gold and silver appear to have been profusely employed; and up to and during James the First's time the fittings of the bed-chamber appear to have been of the same rich and florid description. In a warrant to the Great Wardrobe, issued in 1613, is a long list of articles of furniture. Among other items occurs, "For embroidering the several parts of a sparver (canopy) bed of crimson velvet;" and in others the bed is enumerated—"bed, bolster, and pillows of Milan fustian, filled with down; quilts of fustian, filled with wool and cased with taffeta; two pair of blankets of Milan fustian; two pair of fine Spanish blankets; two counterpoints of plush," &c. During the Commonwealth, the supremacy of the Puritans imparted a more formal character to the domestic furniture of the time, and, at the Restoration, the luxury and extravagance of the Court were imitated by the nation. During the succeeding reigns domestic comforts appear to have been more uniformly diffused among the general body of the people, and beds and their appurtenances followed the changing fashions of the times.

The bedsteads, beds, and bedding in the Crystal Palace are exceedingly varied. There are some of a most formidable description, perfect billows of down, into which a man might plunge, disappear, and be loth to rise again. While some, of aristocratic pretensions, present formidable obstacles to occupation from their height; others are almost as low as the *divan* on the ground bed of the poor. Here we have a bed, hard and unyielding to the touch. There is one provided with springs, from which, if you go in with a jump, you will turn a somersault and come out with a bump. Now we have one sufficiently wide to hold a large family, like that of Priam; and there is one with only a single strip of bachelor-like bedsteads, marshalled rank and file, reminding us of the well-known reply of the Duke of Wellington to an officer who remarked upon the scantiness of his Grace's couch, that there was not room enough to turn in it, "Well, then, don't think of turning in, sir, it is time to turn out." Again, there are beds that turn up, fold up; and, moreover, almost every kind of chair-bed, sofa-bed, pianoforte-bed, library-bed, and in one case a clock-bed. From the whole of these we purpose selecting only those which present any feature of decided novelty, either of form or material.

We give precedence, with all due respect, to those beds and bedsteads which have for their object the amelioration of the sufferings of frail humanity. Of these there are several, each of which bearing manifest evidence that a high and ennobling philanthropic feeling has had more to do with a successful result, than the mere desire for worldly lucre and aggrandisement. Dr. Ridge, of Putney (No. 9, Class 26), exhibits an invalid bed for spinal and other complaints, which is simple in its construction, and appears to us admirably adapted to its object. We are apt to forget, in the bloom of health, whilst traversing acres of human necessities and luxuries, as set forth in the Crystal Palace, that sickness or helplessness can assail us. There are many, however, who cannot dismiss these things; they are painfully reminded of them by a suffering relative whom they have perhaps left for only a few hasty hours' relief from long and anxious vigils by his couch. Upholsterers have done their duty in the providing easy couches, chairs, beds, sofas, &c., and with only one idea, that the sufferer who uses them is never to be off them; they seem provided for him to live on. But who that has been ill and helpless, does not know the luxury of being moved from even the easiest couch? From the medical profession, therefore, a noble invention has sprung, and we doubt have great pleasure in urgently calling the attention of the invalid of every grade, the benevolent medical societies, and, moreover, the governors of our hospitals, to this philanthropic invention, which is suitable for any bed in any room. Only one model is exhibited, which, as we have personally seen it in active use at Guy's Hospital, we may safely append a description. An iron framework, divided into three by hinges, over which is strained a double ticking, is placed on the invalid's bed. The patient, once laid thereon, need not be lifted off, for a beautiful, and even elegant contrivance is brought to his bedside. a projecting leg runs under the bed, and an overhanging cradle, with four pendant rings, is brought over the centre compartment of the frame, the four corners of which are to be attached to the cradle by a handle is turned, and the entire raised by the rings, without being conscious of the movement. The upper and lower portions of the frame are attached by small ropes to the top of the cradle, and, when raised sufficiently high to clear the bed, the carriage is moved away with its occupant in a suspending couch—easier than all the water-beds, air-beds, cushions, &c., the Macintosh covering of which is the great alloy to all their comfortable qualifications, not only from leakage, trouble of filling with air, and water, but the offensive smell which ever accompanies the caoutchouc. All these are here avoided, and, in fact, are unnecessary. When the sufferer is removed, the upper third of the frame can be raised at his back, the lower third depressed to let the legs fall, and thus are all the comforts of a chair provided for him while he still remains upon it. In fact, the apparatus can be placed at various angles to suit any position required or wished. When the patient is tired of this, he can be conveyed to bed again, and the bed carriage taken away. Thus it presents the curious anomaly of a person being taken from his bed, yet never off it. All honour to the noble profession which has been emanates. The

willing slaves to the latter. Nothing which aids in banishing this mental stagnation, and in encouraging sound thought, is to be despised. Great thinkers, ancient and modern, have agreed that bed is the place for reflection. An occasional half-hour's thoughtful reading, stolen from the stillness of the early morning, before we are immersed in the business or the amusements of life, will give point to our reflections, and do none of us any harm. You are not advised to lie in bed *to read* (though this is not so bad as murder, especially in November), but sometimes to curtail the idle half-conscious morning dose, which unprofitably runs away with many an unheeded, but valuable hour, redeeming time and reclaiming thought from the barren waste of rapidity. Try it, reader! Place the Iris ready near the bed; you will find your mind unusually fresh at that time, all the more from being removed from any care about supporting its dull companion the body. In a few mornings you will look forward to it as a delightful privilege, and (thanks to the perfect abstraction, favoured by stillness and bodily repose) you will gain so much new and valuable thought, that you will afford to smile at the imaginary sin, or the foolish parrot-like cry at the idea of reading in bed.

Thus it will be seen, although there is much to claim attention amongst the bedsteads, there is but little to elicit praise, always keeping in view that utility and comfort stand first in appreciation, and that, without these, decorations, however florid or artistic, must in this particular take but a secondary rank.

FLOOR INLAY. PRATT.

This is one of numerous specimens of floor inlaying, produced by machinery by Mr. Pratt. This invention enables us to procure an agreeable variety in the arrangement of our wood flooring; and though it does not show anything worthy to enter into competition with the masterly productions in this line from Rauma, it is deserving of commendation.

FLOOR INLAY.—BY PRATT.

LOCOMOTIVE ENGINES.

THE locomotive engines, which form the most conspicuous portion of the railway plant exhibited at the world's gigantic Fair, are not quite so difficult to discover as the clocks and watches, and other articles of comparatively minute dimensions. England, France, and Belgium are the only countries contributing specimens of the locomotive engine of 1851. Unlike some other inventions of great utility, the locomotive in its present state is the joint production of many minds. In its infancy it was a comparatively insignificant machine; in its present condition, however, a single locomotive engine of the first class represents in power many hundreds of horses.

The earliest engine was Murdoch, the great friend of Watt, produced his three-wheeled locomotive engine to run on common roads, a model of which is exhibited in the Great Glass Building by the celebrated firm of Messrs. James Watt and Co., and which we illustrated a few weeks since, he little thought of the gigantic strides in locomotion which were in store for those who should come after him—when travelling by public conveyances, instead of being comparatively slow, irksome, and very fatiguing, should become easy, swift, and positively luxurious. For many years after the appearance of Murdoch's mechanical novelty, the improvements in the locomotive engine were few and far between; and it was not until the directors of the Liverpool and Manchester Railway—most appropriately called the grand experimental line—attracted the attention of engineers to the important subject of the safest and most economical method of moving loads on the railway, that anything like velocity was obtained. Hitherto a speed of a few miles per hour, on the Killingworth Colliery line, and the Stockton and Darlington Railway, had been found sufficient for the transport of coals; but when it was determined to convey passengers as well as merchandise by railway, it became quite essential, in order to eclipse the fast coaches of those days, to ensure a velocity above the high rate of speed which distinguished the Devonport "Quicksilver," the Cheltenham "Hirondelle," and the Shrewsbury "Wonder." The directors of the Liverpool and Manchester Railway, however, in giving their invitation to mechanical engineers to compete for a premium to be awarded to the builder or inventor of the best locomotive engine suitable for their railway, were satisfied, in the first instance, with a speed equal to that of the fast coaches already mentioned, viz. ten miles an hour. The competitors for the prize were Robert Stephenson, of Newcastle; Timothy Hackworth, of Shildon; and Braithwaite and Ericsson, of London. The "Rocket," the "Sanspareil," and the "Novelty" were the three engines sent by the respective competitors to the great trial railway.

The "Rocket" had outside sloping cylinders of 8 inches diameter, with a stroke of 16½ inches: the driving wheels, placed towards the front, were of 4 feet 8½ inches diameter, while the trailing wheels were 3 feet in diameter: the boiler, at the suggestion of Mr. Booth, the treasurer of the Liverpool and Manchester Railway Company, was multitubular, and is said to have been the first of the kind used in this country; the tubes were each of 3 inches diameter, and altogether 25 in number: the heating surface of tubes was equal to 117·75 superficial feet, and the fireheating surface to 20 feet: the area of the fire-grate was equal to 6 feet; the chimney, was placed in front of the engine, as in all modern locomotives; the exhaust steam was discharged into the chimney, the beneficial effects of which were soon discovered.

The "Sansparell" was mounted on four coupled wheels, of 4 feet 6 inches diameter, the driving-wheels in connexion with the piston-rod being towards the back part of the engine: the cylinders were vertical, and of 7 inches diameter, with a stroke of 14 inches; the grate and chimney were situate in front of the boiler, connected by a flue tube having one bend, the diameter of the tube being 2 feet at the grate and 1 foot 3 inches at the chimney. The surface of the grate was equal to 10 superficial feet; the steam was discharged into the chimney by means of a blast-pipe, whereby the draft was materially increased. The tube surface was equal to 74·6 feet, and that of the fire-box 15·7 superficial feet. The weight of this engine was about 4½ tons, while that of the "Rocket" was only 4¼ tons.

The "Novelty" presented, upon the whole, the least cumbersome appearance, and its construction differed essentially from that of each of its competitors. The fire-box was circular, of 18 inches diameter, and surrounded by the water of the boiler; it was supplied with fuel by means of a hopper. A single tube, of 36 feet in length, with two bends, passed from end to end of the boiler three times; bellows placed near the chimney served to keep the fire alive. The "Novelty" had only one cylinder, of 6 inches diameter, with a stroke of 12 inches; the wheels, four in number, were each of 4 feet 6 inches diameter, the driving-wheels being connected with the piston by means of bell-cranks. The heating surface of tube was only 33 feet, and a fire-box 9½ feet, the surface of grate being equal to 1·8 feet. The weight of this engine was not much more than three tons, and during the experimental trip there was no render attached to it. The average speed of the "Rocket," drawing a gross load of 17 tons, was upwards of 12 miles an hour; and the Sansparell, with a gross load of rather more than 19 tons, 14 miles per hour. And of the Novelty, with a gross load of nearly 10½ tons, 15 miles an hour. The "Novelty," however, broke down more than once during the experiments; and the "Rocket" alone accomplished the distance of 70 miles, the whole length of the trial run.

Two other engines, with several improvements, were afterwards built by Mr. Stephenson, after the general plan of the "Rocket," each having an extent of heating surface more than double that of the "Rocket." Mr. Nicholas Wood, of Killingworth, was also engaged in altering the boiler of one of the old Killingworth engines; and, at the same time, Mr. Timothy Hackworth was making vast improvements in the boilers of the Stockton and Darlington Railway engines; and it is reported that Mr. Hackworth's engine, called the "Globe," was the first to run at so high a speed as fifty miles per hour. Mr. Bury, Messrs. Fenton Murray, and Jackson, Messrs. Hawthorn, Messrs. Mather, Dixon, and Co., Messrs. Taylour, Messrs. Sharp, Roberts, and Co., and Messrs. G. Forrester and Co., followed the earlier locomotive engine-builders; and supplied a vast number of engines, from time to time, not only to the British, but also to the foreign lines of railway. The British locomotive engine-builders of the present day, who have sent samples of their productions to the Great Industrial Exhibition, are Messrs. Hawthorn, Mr. Crampton, Messrs. Stephenson and Co., Messrs. Kitson and Co., Mr. England, Messrs. Fairbairn and Sons, Messrs. Bury, Curtis, and Kennedy, Messrs. E. B. Wilson and Co., and the Great Western and North-Western Railway Companies respectively.

Taking the engines in the order adopted by the compilers of the Official Catalogue, we find the monster engine of the Great Western Railway Company (No. 506, Class 5) placed on a piece of permanent way, as a sample of the Great Western line, towards the west end of the Railway Department of the Great Exhibition. This engine was built at the company's works at Swindon, under the direction of Mr. Gooch, the locomotive superintendent, and is altogether a fine specimen of the work turned out at that extensive and interesting establishment. It is mounted on eight wheels, four of which are in front of the engine; then the driving-wheels, of 8 feet diameter; and, lastly, the trailing wheels, corresponding with those in front: the diameter of cylinder is 18 inches, and the length of stroke 2 feet. The number of tubes running through the boiler is 305, giving a radiating surface equal to 1760 feet, while the heating surface of the fire-box is equal to 156 feet, the maximum pressure of steam being 120 lb.; the actual power of this machine, ascertained by a dynamometer, is equal to that of 748 horses. At an average speed of 60 miles an hour—the flight of the pigeon—this same monster is able to draw the enormous load of 120 tons. The weight of the engine without fuel and water is 31 tons, and with complement of fuel and water 35 tons. In addition to which, the tender, which is mounted on six wheels, weighs 9 tons empty, but charged with water and coke, 17 tons 13 cwt making the total weight of engine and tender at starting 52 tons 13 cwt. The consumption of coke, with an average load of 90 tons and average speed of 28 miles per hour, has been found with the ordinary mail trains to amount on an average to 29·8 lb. Most persons who have been accustomed to travel in the first-class carriages of the Great Western Railway, especially by the express train, will allow that nothing can be more luxurious in the shape of locomotion than to leave London with a morning paper damp from the press, and be transported rapidly into the beautiful county of Devon almost before you have finished the news of the previous twenty-four hours.

Next in order we find Mr. Crampton's express locomotive engine, the "Folkestone," built for the South-Eastern Railway Company. The peculiarity of this engine is the position of the driving wheels, of six feet diameter, behind the fire-box, whereby an intermediate shaft is rendered necessary. We have heard that great things are accomplished by this form of engine; but having no particulars nor accurate information on the subject, we are unable to enlighten our readers as to the true state of the case. It is numbered in the Catalogue 508.

"Speed, safety, and economy," in gilt letters on a blue flag, suspended over the "Little England," will attract the attention of the visitor to Mr. England's competitively diminutive locomotive engine, numbered 509: the driving wheels, in middle, are 4 feet 8 inches in diameter, and the leading and trailing wheels 3 feet; the boiler is multitubular, and only of 30 inches diameter. The tank and coke receptacle are on the same frame as the engine—a plan which was successfully used ten or twelve years ago, and which is now likely to come into vogue, especially for branch lines of railway.

"Ariel's Girdle," No. 510, constructed by Messrs. Kitson and Company, of Leeds, according to the patent of Mr. W. B. Adams, is another sample of a light tank engine. It has, however, only four wheels: the hind part of the engine being connected with a composite carriage, underneath which one of the tanks is suspended. The cylinders are of 8 inches diameter, with a stroke of 16 inches; driving wheels of 5 feet, and leading wheels 2 feet 6 inches diameter, respectively; multitubular boiler, containing 83 tubes, each of 1¾ inches diameter, giving a heating surface of 456 feet superficial, in addition to 39 feet for the fire-box giving a total radiating surface of 495 feet. The coke receptacle is over the fire-box, and is capable of holding 6 cwt. The tank under the engine holds 304 gallons of water, and that under the carriage, 533 gallons; together, 837 gallons. The composite carriage in connexion with the engine is also mounted on four wood wheels, with wrought-iron tires. This description of locomotive and carriage—especially calculated for branch railway passenger traffic—has been successfully tried on the Eastern Counties Railway.

The London and North-Western Railway Company exhibit their express locomotive engine, called the "Liverpool," built according to Crampton's patent principle, and numbered 512 in the Catalogue. It is mounted on eight wheels—the driving wheels, of 8 feet diameter, being, as in the case of the "Folkestone," behind the fire-box; the leading wheels being each of 4 feet diameter; the cylinders, placed outside, are of 18 inches diameter, with a stroke of 24 inches; the total area of radiating surface is equal to 2290 feet superficial, of which 154 feet is derived from the fire-box; the total weight of engine, with fuel and water, is 37 tons, being two tons more than that of the Great Western engine, already described. According to the Official Catalogue, this engine is exhibited for its great amount of heating surface and its general construction.

The same company exhibit the "Cornwall," built by Trevethick, and, no doubt, named by himself after his native county. The novelty of this engine chiefly consists in the boiler being suspended between the wheels. It was built at the company's locomotive establishment, Crewe, in 1847, and is shown at the World's Fair for "improved construction." The cylinders are outside, and of 17½ inches diameter, and stroke of 24 inches. The driving wheels are 8 feet 6 inches in diameter; the weight of engine 27 tons.

The celebrated firm of Fairbairn and Sons, of Manchester, also exhibit a tank-engine, whose boiler is 8 feet in length, and 3 feet in diameter, having 86 brass tubes, each of 2 inches diameter. The effective heating surface is equal to 430 square feet; the fire-box of copper 2 feet 5 inches long, 3 feet broad, and 3 feet 5 inches deep. The cylinders are of 10 inches diameter, with a stroke of 15 inches. The driving wheels, in middle, are of 5 feet diameter, and the leading and trailing wheels of 3 feet 6 inches diameter respectively. The tank is placed underneath the foot-plate, and contains 400 gallons of water. The ascertained consumption of coke by this engine is 10 lb. per mile; and in working condition the weight is 13 tons: useful load, six composite carriages, with 250 passengers. Similar engines are at work on the railway from Lancaster to Skipton, and on the Belfast and County Down, and Newry and Warrenpoint lines respectively.

A double boiler-tank engine is exhibited by Messrs. E. B. Wilson and Company, numbered in the Official Catalogue 526. As its name to a certain extent implies, the principal novelty consists of introducing two multitubular boilers side by side instead of one, as in all other locomotives of the present day. It has six wheels, four of which are coupled, including the driving-wheels, of 5 feet diameter; while the leading wheels are 3 feet 6 inches. The outside cylinders, placed horizontally, are 12½ inches diameter, with a stroke of 18 inches. The whole length of engine is 26 feet 3 in.; breadth, 8 feet 3 in.; and height, from surface to top of chimney, 13 feet 6 in.; the whole weight of engine, exclusive of fuel and water, is 16 tons; and the additional weight, with complement of coke and water, 3 tons 17 cwt.; making together 19 tons 17 cwt. The tubes, of 1¾ inches diameter, are altogether 136 in number, giving a radiating surface of 694 feet superficial, in addition to which the heating surface of fire-box is 61 feet; together, 755 superficial feet. The tanks will hold 520 gallons of water, which is found sufficient for a journey of 26 miles. The coke space is equal to 42 cubic feet, or 1½ cwt., equal to 26 bushels of coke. In addition to the above particulars, we are enabled, owing to the intelligence of the attendant, to furnish the following: Buffers, 5 feet 9 inches apart, and 3 feet 3 inches above the top surface of rails; the centre line of boiler is 4 feet 8½ inches above the same level; length of the boilers, 10 feet; and diameter of each 21 inches. The fire-boxes, 2 feet 2 inches by 1 foot 2 inches, and 4 feet 9 inches high; fire-box shell, 4 feet 5 inches by 2 feet 9 inches; front and back water spaces, 3 inches; middle ditto, 2½ inches; sides, 2½ inches; collective areas of cross section of tubes, 289 superficial feet; area of fire grate, 7 feet 5 inches; length of connecting rod, 4 feet 5½ inches; diameter of pump valve, 1¼ inch; length of slide block, 10 inches; diameter of crank axle in centre, 9 inches; size of under bearing, 7 inches; and of outside bearing, 7 inches; diameter of trailing axle, 5½ inches; size of bearings, 7 inches by 5½ inches; diameter of leading axle in centre, 4 inches; bearings, 7 inches by 3½ inches; breadth of tires, 5½ inches; thickness, 2½ inches; spring plates, 3½ inches by 5-16ths inch.

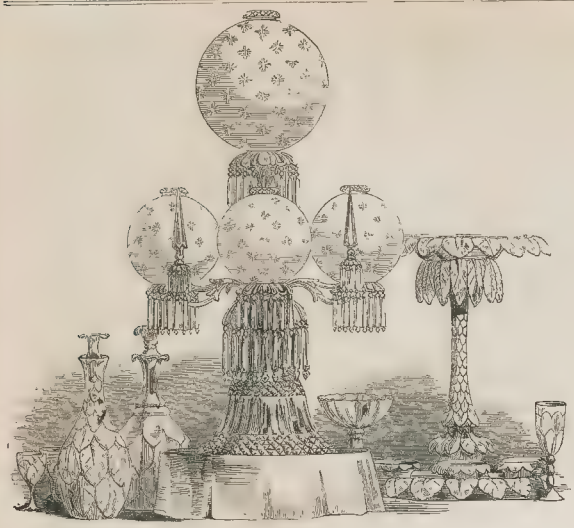
Messrs. Kitson, Thompson, and Hewetson, of Leeds, the builders of the little engine on Adams' principle, called "Ariel's Girdle," also exhibit one of their own tank engines on six wheels, the drivers being in the middle, and of 5 feet diameter, while the leading and trailing wheels are 3 feet 8 inches diameter respectively; the cylinders, placed outside, are of 11 inches diameter, with a 22-inch length of stroke; there are 105 tubes, each of 1¾ inches diameter, giving 538 superficial feet of heating surface, with an addition of 6·7 square feet for the fire-box, making together 598 feet. The tanks will hold together 500 gallons of water; the complement of coke being 10 cwt. The whole is well finished, and the name we find attached to it is "Aërolite," numbered in Catalogue 534.

Last, though not the least important of the locomotive engines exhibited by various celebrated makers at the World's Industrial Show, is a handsome passenger engine from the works of Messrs. R. and W. Hawthorn, of Newcastle, whose house has now been famous for so many years. It is numbered in the Official Catalogue 535, and bears the name of the makers. It is mounted on six wheels; the drivers being 6 feet 6 inches, and the fore and hind wheels of 3 feet 9 inches in diameter respectively. The cylinders are of 16 inches diameter, and the stroke of piston 22 inches. The number of tubes, of brass, is 158, each of 2 inches external diameter, giving a radiating surface of 865·4 superficial feet, in addition to 110 feet of fire-box, making a total of 975 1 superficial feet. There is a bridge across the fire-box, having an additional water space. All the framings, both inside and out, extend the full length of the engine, and are firmly connected together by strong iron double-knee brackets. The whole of the machinery was fitted and fixed entire y independent of the boiler, and, when completed, the wheels and axles being put into their proper positions, the boiler was fixed in its place, and firmly secured by bolts to the brackets already mentioned and to the outside frames. There are four novelties in this engine; viz. Messrs. Hawthorn's patent double compensating beams, their patent slide valves, their patent link motion, and their patent steam pipe, instead of the six springs ordinarily used in locomotive engines, the builders of the "Hawthorn" have introduced on each side of the engine two beams and two springs, by which a direct action is communicated at once to all the axle bearings, so that a uniform weight is constantly maintained on each of the wheels and axles, thereby securing a constant amount of weight upon the driving wheels for adhesion, a matter of considerable importance. Secondly, the patent slide valves are placed vertically between the cylinders in one steam-chest in the usual manner. One slide valve has a plate, and is bolted, upon the back, which is accurately planed so as to be perfectly parallel with the face of the valve. The other slide valve has a box cast upon the back, into which is fitted a projection or piston, the face of which is also planed so as to be parallel with the valve; it is pressed by the most simple manner and made steam-tight, and then put into the steam chest, as in ordinary valves. A passage is formed between the exhaust ports through the slide valves, thus giving a free discharge to the steam. These valves are relieved from one-half the pressure of steam, and, consequently, one-half the friction. Thirdly, the patent link motion is also introduced into the machinery of this locomotive. The expansion link, instead of being connected to the ends of the eccentric rods, and having to be continually raised up and down with them, is directly connected by an eye-joint to the slide rod, and therefore suspended; hence its weight is removed from the reversing gear. Having a fixed centre, the link requires less power to move and regulate the slide valves; the link is also much more durable, as the sliding block is more than three times the length of the ordinary block. Lastly, their patent steam pipe is substituted for the domes and cumbrous projections on the top of the boiler, this pipe is fixed into the tube plate of the smoke-box by a ferule, as in the case of an ordinary tube, and extends nearly the whole length of the boiler, being placed near to the top; it is perforated along its entire extent with small slits, so proportioned as to admit the steam into the pipe directly above the place of generation. This is a manifest improvement on the ordinary method, where the steam has to reach from all parts of the boiler to one or two orifices, as it is now conveyed to the cylinder in a purer state; moreover, *priming* is, to a considerable extent, avoided.

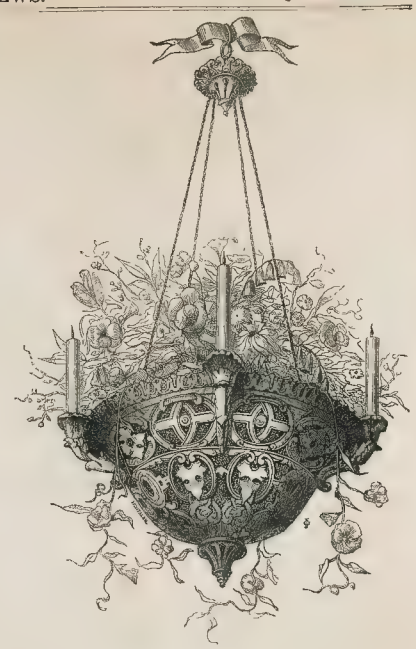
Having completed our survey of the British locomotive engine department, we will now briefly describe the locomotive engines sent by our Belgian and French competitors respectively. From Belgium we find only two engines, and from France only one. The Belgian locomotives are placed near to the north wall of the department allotted to contributions from that country. The first from the Société de Couillet Belgique, numbered 129 in Catalogue, is a six-wheel engine, constructed after the plan adopted for some time by Messrs. R. Stephenson and Co., of Newcastle. The six wheels, of 5 feet diameter each, are all coupled; the boiler is multitubular, and contains 185 tubes of 1¼ inches diameter. The workmanship and finish are altogether inferior to the manner in which all the British locomotives are turned out. A six-wheel tender is attached.

The second Belgian locomotive engine, No. 119 in Catalogue, is from the celebrated house of Cockerell and Co., of Seraing, near Liege, one of the most extensive establishments of the kind in Europe, where the coal and iron are raised on the spot, and the latter converted, by powerful machinery, into the various parts of locomotive and fixed engines, which are turned out in considerable numbers. Having had an opportunity of going over the Seraing works, we are enabled to speak of the interesting establishment in which the "Vallée de la Vesdre" was constructed. This engine is mounted on eight wheels, four of which, including the drivers, of 4 feet diameter, are placed behind, and four bearing-wheels, of 2 feet 8 inches diameter, in front; the cylinders are placed outside, and in a sloping position. The novelty in this locomotive appears to be a "donkey," or auxiliary pump, with, however, a good deal of work about it.

The solitary locomotive engine from France is to be found in the machinery department of the space allotted to that country. It is named "Labore," and is from the firm of Messrs. J. F. Call and Co., being somewhat similar to that of the Belgian company, Couillet, having six coupled wheels, of five feet diameter. It stands above an *engine race*, or pit, which has been constructed for the purpose of allowing the machinery to be examined, which will not, however, bear comparison with the exquisite workmanship of the British locomotive engine builders.



GROUP OF GLASS. EXHIBITED BY MESSRS. POWELL.—(SEE PAGE 193.)

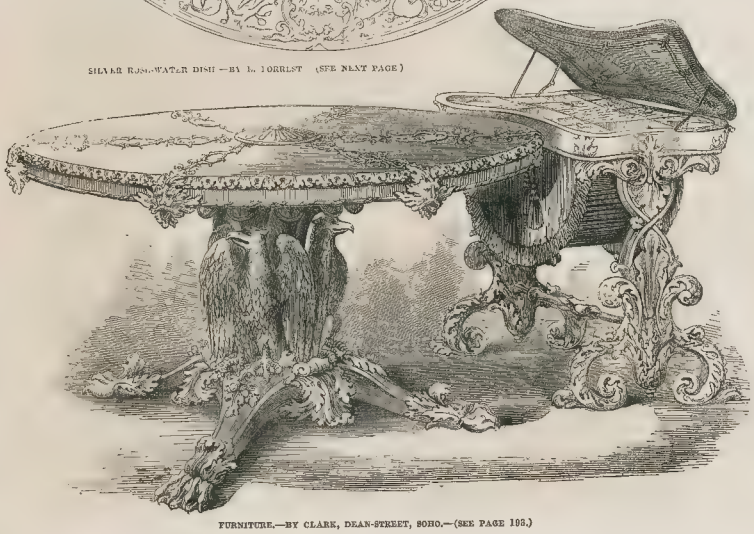


"SUSPENSION." BY VOISINLIEU.—(SEE PAGE 193.)

SILVER ROSE-WATER DISH.—BY L. MORREST. (SEE NEXT PAGE.)

CHURCH LAMP.—BY BRUCKMANN AND SONS, WURTEMBURG.

This little silver lamp is almost unexceptionable as a specimen of cheap and showy Gothic workmanship.



FURNITURE.—BY CLARK, DEAN-STREET, SOHO.—(SEE PAGE 193.)

CHATELAINE.—BY J. B. DURHAM.

WORK-TABLE, FROM HAMBURGH.

SILVER ROSE-WATER DISH. BY WAGNER.

This rose-water dish (p. 196), partially gilt, is the work of the late celebrated artist Wagner, of Paris, who designed, modelled, and chiselled all his own works. It is known to have been the last work he executed, and has very great merit, more closely resembling the best works of the Italian school of the fifteenth century than most other works of the present age. It is exhibited by Mr. Forrest, of the Strand.

CHATELAINE. BY J. B. DURHAM

Here is a specimen, in its utmost completeness, of those *petits affaires de rien* without which young ladies of the present day fancy they are not properly equipped for the domestic circle. Future generations of readers will stare and rub their eyes when they contemplate this childish decoration of their grandmothers.

BOOK-CASE. BY RIVART AND ANDRIEUX.

The use of porcelain as an inlay to ebony seems peculiar to this house; but the present book-case is not so happy a specimen of its use as the casket in front of it. The work engraved below is, however, a very showy piece of furniture, in style belonging to a late *renaissance* era, and appears to deserve the credit of being one of the best examples of French workmanship in the Exhibition.

CENTRE-PIECE. BY LA HOCHE.

We engrave another of M. La Hoche's very handsome works in porcelain and or moulu for the decoration of the centre of a table. The designs are very tasteful and creditable as works of art.

WORK-TABLE. BY P. MEHNE.

This rosewood table, with bag in crimson silk, is a very pretty design of the 18th century, and German fashion, containing numerous divisions and boxes, with mirror, work-bag, &c. The effect of the chenille fringe is very good.

CENTRE-PIECE, PORCELAIN AND BRONZE.—BY LA HOCHE.

BOOK-CASE IN EBONY.—BY RIVART AND ANDRIEUX.

SURGICAL INSTRUMENTS.

Surgical instruments might naturally be supposed to offer but little interest to the general public; yet the display which is exhibited, both by the British and foreign manufacturers, is so replete with curious contrivances, and is so remarkable, that we feel bound to give a short notice; and we venture to hope, that even the non-professional reader will be gratified with the account of some of the curious adaptations which have been devised to alleviate suffering or to cure disease. The time has long since passed away when the surgeon alone commanded respect for bold operations, and the medical man is now most esteemed who, by skill and judicious treatment, and who, by the power of thought and the use of the faculties of the brain, so treats his patient that the knife is unnecessary, and nature is assisted to work its own more natural cure. In this manner, hundreds of limbs which were formerly recklessly amputated are now saved to the patient, and this class of operation is lessened, by skill and judgment, to an extent which hardly admits of belief. Of late years, however, an extensive class of new operations has been introduced for the cure of deformities of various kinds; and though even here, perhaps, in future days the necessity for operating may be lessened yet, whilst it exists, their performance confers a great boon to the patient.

First and foremost, we have to consider the orthopedic operations for the cure of contracted limbs, &c. These deformities are cured by a division of the tendons of certain contracted muscles, when, by mechanical contrivances, the limb is brought into its proper position. The after mechanical adaptations require much skill and knowledge on the part of the instrument-maker, and the deformity is rectified, other operations are performed on the eye to remove or heal up the crystalline lens, the opacity of which constitutes cataract; and again delicate operations are sometimes required for the purpose of forming an artificial aperture in the centre or iris, when by disease it has become artificially closed. For all these purposes the most delicate and perfectly constructed instruments are required; and, in our judgment, the palm must be awarded in this case to our French neighbours; and we may even say that we are surprised at the excellence, ingenuity, perfection, and cleapness of the articles which they have exhibited. For ophthalmic instruments, perhaps M. Luer must be considered the first exhibitor, and when we mention that in our presence he took a cataract needle, bent it backwards and forwards, cut his nail with it, and then shewed that it retained its cutting edge sufficiently well to cut a piece of leather, the surgeon may form an idea of the perfection of the manufacture. The whole of these ophthalmic instruments are so excellent, that doubtless the English surgeons will become extensive purchasers; and there are several different instruments for cataract and artificial pupil which are not known in this country. Whilst we are inclined, in ophthalmic instruments, to award the first place to M. Luer, yet the difference between him and Mr. Arnott in this matter is hardly discernible, as his ophthalmic instruments appear to possess the highest order of merit

There are exhibited by many manufacturers different specimens of trusses, and the practical surgeon knows that sometimes one is preferred, sometimes the other, according to the particular case which has to be treated; but we have now to call attention to that which has lately been devised by Dr. Arnott. We have, on many occasions, had to notice the obligations which the profession and the public owe to the ingenuity of this distinguished philosopher, and perhaps on no respect is he entitled to his well-deserved reputation more than in this invention, the particulars of which he has not even, as yet, published. The truss itself may be seen in Mr. Ferguson's case, and it is so contrived that it can be made of any strength in the spring, the form of the spring can be regulated to the exact shape of the patient, and can be set to any declination to the spring, and there fixed. By this excellent device, some of the worst forms of disease can be effectively reduced, and by this contrivance a desideratum long required has been efficiently supplied. To the honour of the medical profession, and the credit of the true philosopher, this invention, like all his former ones, Dr. Arnott has given to the public without reward, and hence any mechanic may make it, either for his own use or for sale.

In Mr. Ferguson's case are also shown instruments adapted to support the patient in cases of lateral or posterior spinal curvature. Such contrivances are, undoubtedly, occasionally required; but the majority of these deformities, especially in the slighter cases of females, are owing to the improper use of stays, which are now especially contrived to favour such deformities; and, in fact, the majority of these abominations shown in the Crystal Palace may be viewed rather as articles to be avoided than to be commended. Every mother should know that the female form is never developed in all the beauty of nature if it is permitted to be impertinently meddled with by art, and hence the Chinese shoe or Indian compress are no whit more barbarous than the English stays. The one destroys the foot, the second completely alters the shape of the head, and the last contorts the chest and forms a lateral curvature in the back; so that, whilst we may send out schoolmasters to civilise the Chinese and Indians, they, in return, may send to this country teachers to rectify English notions

Whilst upon deformities, we may call attention to artificial legs and arms, in the South-east Gallery, which are employed in the Austrian army after amputation has been required. They are shown for the economy of their manufacture, and are certainly vastly superior to the wooden pegs and hooks used in this country. Artificial noses are shown, which wonderfully hide the disfigurement countenance caused by a loss of that organ; and artificial eyes have been contributed by Grossmith, and in this department the French are also exhibitors, in the person of M. Boissonneau. We have not observed that Mr. Gray is an exhibitor in this department, as circumstances would lead us to suppose as, in our experience, his artificial eyes are entitled to the first place, for beauty of finish and excellence of workmanship. Artificial eyes are used to correct the deformity which is produced by a collapsed globe; and so perfectly can they be adapted that a mistake is made, and it is with difficulty that the one can be recognised from the other. We remember to have adapted an artificial eye to a shoemaker who was unfortunately in this position, and when he next went to his club his companions were mightily astonished at the difference, saying that it must have been a wonderfully clever surgeon who could have converted so hideous a tubercle into so perfect an eye; and they never for a moment supposed that he simply wore a glass eye between the lids. The glass eye remedies the disfigurement, but not the loss of sight of the lost eye, and it is true charity to supply such a contrivance to the poor person so situated. Glass eyes are made of very fusible enamel, which partially dissolve by the tears, and hence require to be renewed once a year or year and a half. We do not know whether any of those exhibited are so made as to obviate this very serious inconvenience.

Amongst the instruments, stethescopes are shown in many varieties. At the mill where the paper for the Illustrated London News is made, we were much amused by another application of the stethescope, which doubtless is new to the surgeon. The manager of the works was exhibiting the pulpforming machine to some visitors, and to convince them how true the machine acted, he gave them a piece of stick, by which he connected the machine to his ear, and in fact stethescoped his apparatus. By the stethescope, the physician ascertains what is going on within his patient's chest: he hears the air enter and emerge from the lungs; he listens to the action of the valves of the heart, and ascertains whether any deviation from a healthy function is occurring. The stethescopes made by Dr. Cutta Percha are perhaps among the best which modern science has afforded. For ourselves, however, with certain exceptions, we greatly prefer the ear alone, unaided by foreign contrivances. By using the means which the ear affords for the discrimination of disease, the physician has added to his powers what is gaining knowledge a most important method for obtaining information of his patient's state.

Amongst other contrivances for distinguishing disease, the instrument devised by Mr. Avery, which is shown by Mr. Weiss, well deserves attention. By the use of a speculum and lamp, he is enabled so to illuminate cavities in the body as to be able to see in situations where hitherto it has been thought impossible to obtain a view of the parts. We happen to know that Mr. Avery has laboured for years to bring his invention to its present perfection, and he must now be congratulated for his present success

In a former article we mentioned Mr. Alfred Smee's optometer, for accurately determining the optical properties of the eye, and which is so important for discriminating the numerous diseases of defective adjustment and impaired sight.

Tourniquets, or instruments for arresting the flow of blood, are shown in many varieties. Of late years, attempts have been made so to construct these instruments, that, whilst they press upon the artery and prevent the flow of blood into the limb, they do not compress the veins and prevent its return. The instrument devised by Mr. Skey, jun., is well adapted for this purpose, and is shown in the interesting collection of instruments exhibited by Mr. Ferguson. Mr. Ferguson also shows chloroform inhalers; but many surgeons now simply place a small quantity of that fluid upon a handkerchief. At St. Bartholomew's Hospital chloroform has been almost invariably adopted since its discovery, and, we believe, has not been in any one case attended with any unpleasant result. Nevertheless, at other places accidents have occurred from its use; so that the great discovery cannot altogether be said to be free from danger. On the first announcement of the discovery, Mr. Hood er made the first in London, and sent some to our office. We tried its effects upon some rabbits, and lost one or two, from which we stated, that we feared, that, without great care, untoward results might possibly occur. Extended experience has shown that our fears were well founded; nevertheless, by proper care and skilful management, the discovery of its properties has conferred a great boon on mankind, by allowing the surgeon a time, in some cases of operation, to render man into an insensible body, and by enabling him, in that state, to conduct his operations attended with as little pain as though the patient were a lifeless stone or inert leg of wood.

The French instrument makers are greatly distinguished for their ingenuity, and, really, many of their contrivances are mere useless toys. Nevertheless, other devices deserve high commendation. They have an instrument for removing pieces of catheter, which is so devised, that whether caught transversely, or in any other position, it swings round into the horizontal form, and is driven out by its long axis By this device an operation may be sometimes prevented, as an instrument may be extracted by its means, which could only otherwise be removed by the knife. The apparatus for removing the lateral curve in the vertebral column is much cheaper than those made by our instrument makers. There are several varieties of trepanning apparatus amongst the French instruments which deserve attention, though in civil service this is an operation which is but seldom employed.

Dr. James shows contrivances for obtaining a loss of feeling by intense cold, and also means for keeping a constant stream of water of any given temperature against any part of the body. By the application of heat and cold vast results may be produced; and it is said that operations may be performed without pain upon parts benumbed with intense cold.

Amongst the surgical instruments are placed a series of Daguerreotype drawings by Dr. Badcock, of cases illustrating that the small-pox virus may be inoculated on the cow, and gives rise to pustules, which again may produce in man the cow-pox. He states that his experiments have been conducted in 8000 cases; and hence it follows, that if the small-pox should break out in any part of the world, there is no occasion to wait for lymph from distant countries, but medical men have means at command of producing from the patients that which is competent to protect others. The discovery of Jenner is certainly one as remarkable as any in medical history. Had he done but one tithe for law or divinity what he did for physic, he would have established his family for generations; and had he slain his thousands, instead of having saved his tens of thousands, doubtless a dukedom would have chronicled the event for ever.

There are several varieties of transfusion apparatus shown by different makers. Occasionally, when a patient is suffering from the last stage of fainting from loss of blood, the abstraction of blood from one person and injection into the patient has sufficed to restore life. We have seen two or three instances where such an operation has been perfectly successful, and yet it should be considered in particular cases. Upon the whole, perhaps, the best instrument is that exhibited by Ferguson, with the double receiver, devised by Dr. Goodfellow, to hold the blood, and at the same time to keep it warm to prevent its coagulation.

A number of specimens of oil-silk and other transparent membranes are shown for the treatment of incised and other wounds. The art of surgery has in no direction more advanced than in the treatment of these cases; and many instances, which used formerly to be covered with heavy masses of poultice, which irritated and caused much discharge, are now treated with a piece of oil-silk or gutta percha, a piece of lint and a covering of either oil-silk or gutta percha. This line of treatment is not only one which affords much comfort to the patient, but the progress of the cure is much facilitated, and the recovery is more rapid than this plan was formerly.

The various instruments necessary for removing calculi are shown. It was hoped that by crushing the stone the operation for lithotomy might often be dispensed with. Nevertheless, notwithstanding the great improvements in the instruments for crushing the stone, and the practising in many cases, and the surgeon has now more frequently to perform the operation for lithotomy than was originally anticipated when the new process came into use. The French lithotrites are remarkable for their compactness, and we believe that they are more in favour with them than those which are manufactured by English workmen. Mr. Wakley's instruments for dilatation are shown by two or three exhibitors; and they consist of a series of tubes, each of which slips in succession over the other. Mr. James Arnott has also shown his pneumatic dilator, but it has not met with very extensive application.

Cutting instruments, such as scalpels, bistouries, saws, scissors, are shown in every conceivable form to meet various cases. Every form of surgical needle is also shown, including those more complex contrivances for sewing in cavities far removed from the surface

With regard to splints, many are exhibited in various parts of the Building, adapted for various fractures. When the upper part of the thigh is broken, the surgeon experiences much difficulty in keeping the bones in their exact place, and hence many contrivances have been made for that purpose. We were much pleased with the registered leather splint for fractures of the tibia and fibula, having used a somewhat similar contrivance ourselves with great success. The use of gutta percha, suggested to Mr. Smee by his eminent medical brother, for fractures and diseased joints, does not appear to be sufficiently illustrated, though we observed a gutta percha splint in the Indian collection. In our own practice we rarely use anything but moulded gutta percha splints, and, having the material at hand, and adding those more pliable it rightly is better adapted for splints than any other substance.

There are various artificial leeches shown, but the natural leech is probably preferable for taking blood to any contrivance which can be made. Cupping instruments are, as a matter of course, are exhibited; and the French have exhibited a contrivance for drawing the milk by means of a vacuum, with a contrivance that the child may draw it through another tube at the same time. We have no practical experience of the efficacy of this invention, but, where necessary, it might be subjected to the test of experience.

There are several specimens of Hutchinson's spirometers, instruments used for determining the amount of air which is inspired and expired. Our present impression is that the standing of this class is by auscultation, percussion, and by observing the amount of expansion, are really almost ample for the purpose of distinguishing disease. At some of the insurance offices this instrument is employed; but a glass-blower or other person accustomed to the use of his lungs may acquire powers as to the use of lungs which is far too great for his height and bulk. Without positively stating that in no instance it may be useful, we may state that it is far from being an universally applicable instrument for the surgeon.

The dentist appears by numerous specimens of his art. We are hardly disposed to consider the relative merits of the rival exhibitors, but the contest appears to lie between those who make their teeth of the tusk of the hippopotamus, and those who rely upon a peculiarly hard enamel constructed for the purpose. In the adaptation of artificial masticating apparatus it is necessary that they should be constructed with the greatest nicety; and perhaps the best apparatus which has yet been devised is that which has been patented by Mr. Tomes, and which has already received the medal from the Society of Arts. This machine, which is very simple, Mr. Tomes has neglected to send to the Exhibition—an omission which, in our judgment, he should not have been guilty of, as it is the most interesting addition to the mechanism recognised by the scientific dentist which has been devised of modern years. In the South-west Gallery, those who dine in the refreshment room may much amused by sets of artificial teeth which are kept in motion by mechanical contrivances.

In giving this sketch of the surgical instruments, we feel bound to express our opinion that there is great equality of perfection in the respective instruments, and we can easily appreciate the difficulties which the jury must have had in estimating their relative value. Mr. Weiss has exhibited a complete surgeon's cabinet, and his instruments, especially his forceps and lithotries, are of the highest finish. Mr. Evans and Mr. Savigny are greatly celebrated for their cutting instruments, and, from our own experience, we must say that this latter firm are famous for the quality and temper of their knives, and, perhaps, upon the whole, we prefer their instruments of this class. Mr. Simpson has contributed a limited display of good instruments. Mr. Ferguson's case contains by far the most extensive variety of instruments, and for all the orthopedic instruments, he must be considered to hold the first place For minute contrivances and complicated instruments, M. Charierre and M. Luer bear the palm; so that, in point of fact, whilst all are excellent, each of the firms is distinguished for some point, and all have maintained their high reputation in the different articles which they have shown.

SIEMENS' AND HALSKE'S TELEGRAPH, KNOWN AS THE "PRUSSIAN TELEGRAPH."

In the summer of 1849, having occasion to examine the telegraph system of Prussia, with a view to corroborate the efficiency of a plan recommended for the adoption of the East India Company in their vast Asiatic possessions, we had opportunities of seeing not only the factory where Siemens' telegraphs are constructed, but also of examining the instruments as work at several of the railway stations. We are glad to find that the inventors have contributed a pair of these instruments, in working condition, to the Great Palace of International Industry, which are placed in the Middle Gallery South, and in the Zollverein department. The chief peculiarities of these instruments, which are both indicating and printing telegraphs, are their self-acting and self-regulating qualities, as neither clock-work nor aid by hand is required, the electric current itself being the only acting agent, thereby causing its successive breaks and restorations to be such, that the former are always the natural consequences of the latter, and these take place at two or more stations (if required) simultaneously. In order practically to show the working of these instruments, two tables are placed at some distance from each other, representing the same number of stations, at each of which is an indicating telegraph with a printing instrument attached, the latter performing the duties of secretary to the former, as the signals transmitted are all noted down by the latter

The exterior of the indicating telegraph is very simple; it consists of a hand which moves round a horizontal dial plate by the action of the electric current, having thirty keys placed radially and marked with the letters of the alphabet and other necessary signals, the hand making from 35 to 40 revolutions in a minute, and which is stopped by pressing down any one of the keys as required at the moment when it has arrived opposite to it: during the time the finger is on the key the electric current is interrupted

In consequence of the hands of the instruments at the different stations revolving in concert, the one signal is pointed to on the different instruments simultaneously. By releasing the key the armatures at the different stations move on, continually pointing in the same direction, and the current is renewed. The indicating apparatus consists of two parts; viz. the alarum and the telegraph proper. The use of the former is to give notice to a given station that a communication is about to be transmitted thereto. This is effected by a hammer striking in rapid succession against a bell, and it continues to do so until the manipulator has prepared the telegraph for the transmission of a message: this is done by a *commutator* on the right hand side of the telegraph and on the same board. This commutator is merely a short lever or arm, which, by being turned in one direction or the other, brings the line-wire into contact with one of two springs of German silver. One of these springs is connected with the works constituting the telegraph, and the other with the alarum. The positions of the two springs are indicated by the two letters T and R: so that by turning the arm towards T the line-wire is brought into contact with the spring for the telegraph; and, on the contrary, by turning it towards R, with the alarum spring. When in a state of rest the commutator arms of both instruments will stand on R, and the telegraphic, *i. e.* the T battery, of each station will be excluded from the circuit. If at any of the stations the arm is turned from R to T the battery at that station is included in the circuit, and the alarum, *i. e.* the R battery, excluded; consequently, the telegraph alone will act at such station, while both the alarum and the telegraph will act at the other. The construction of the telegraph is different from that of the alarum, as it requires streams of electricity of longer duration and greater intensity, so that the included alarum at the other station will act before the telegraph is in working order. The officer of this second station having been aroused by the alarum, turns the arm of the commutator to R so as to exclude the alarum as soon as the sound has been given: this being done, a message may be transmitted from one station to the other.

The working of the printing apparatus, which, as already observed, is connected with each station with the indicating telegraph, and is generally in action with it, is in principle similar to that of the latter, but by mechanical arrangements is made to answer another purpose. There are neither keys nor an armature connected with it: instead of these there is a wheel, having 30 steel springs, on the thickened ends of which are engraved the same 30 letters and signals as on the keys of the indicating telegraph, but in a reversed position. When any key of the indicating telegraph is pressed down, the printing telegraph wheel moves round in concert with the latter, and the type wheel moving in concert with the armature, is adjusted in such a manner that the corresponding spring always stops below a hammer, which immediately falls down and strikes the type engraved on the end of the spring against a blackened roller over which runs a band of white paper to receive the impression The hammer is moved by a magnet excited by a local battery, the current of which, not being strong enough or of sufficient duration to influence the armature, is continually broken and restored when the instrument is in use; but when it is inactive a continuous current acts upon the magnet, thereby causing the hammer to strike off an impression of a letter or signal, and at the same time break its own current and fall down again. The blows against the springs of the type wheel are also used to turn the roller the breadth of one signal by forcing the roller to which the paper is attached, by means of a ratchet wheel, the same breadth. By this arrangement new surfaces of the roller are repeatedly exposed to the hammer, until the blackening has all been impressed on the strip of paper, when the process of blackening must be repeated.

These instruments communicate with only one line-wire; they require no regulation of current, and will only run quicker or slower according to the powers of the battery. Another advantage is, that the message need not to be returned to have its correctness proved, as by the use of the battery of intakes is entirely done away with. An experienced manipulator will communicate more than 60 signals in a minute with unequalled certainty. If the message is required to be sent to the farthest station only, the intermediate ones can be examined from the circuit by means of an instrument, invented by the same gentlemen, and known as the "excluding alarum," a model of which has been deposited at the Exhibition, and is placed near to the other instruments. By means of this instrument a message may be conveyed to the extent of 500 miles, when the conducting-wire is in good condition. When the message is finished, a button is pressed down at each of the stations in communication with each other, which causes both batteries to act exclusively on the alarums of the instruments at all the intermediate stations; the officers of these intermediate stations turn up an arm of their instruments respectively, which causes the stations to be again included in the circuit.

On railway telegraphic lines another instrument is used, consisting of a large powerful electric bells, which are stationed along the railway at such distances from each other as to be heard at every part of the railway when acting simultanously. They are placed in the railway watch-houses, and are included in the same line-wire, as can be made to work in the same manner as the excluders, by pressing down a button. The button is always pressed when a train starts from the station, and is repeated by the other instruments to the next station to inform the watchmen along the line of the fact. This instrument is used to a great extent in Germany, and is found very convenient for railway management. The other instruments of Siemens and Halske before mentioned are in use on all the Prussian Government lines, and nearly all the railway lines of the north of Germany.

Another telegraph exhibited by the above firm, and invented by Mr. Siemens, resembles in many particulars Morse's American Telegraph, as it prints dots on paper by two pins in different lines. It is worked by a local battery, and also produces audible signals by the striking of two hammers against two sounding bells. The apparatus consists of a communicator and a receiver. Of the former there are two kinds exhibited: the one consists of two keys only, and the other of thirty, with all the letters and other signals marked upon them; the alphabet of the former communicator is the same as that of the English needle telegraph, a dot on the upper left line, and a sound of the light bell, corresponding with a movement of the needle to the left, &c., and instead of moving the handle to the left or right, the left or right key is pressed down. By using the other communicator, with the thirty keys, it is only necessary to press down the key which corresponds with the signal to be sent.

BASKETS AND MATTING.

It is interesting, amid all the display of complicated inventions and manufactures, applications of old and new materials to innumerable purposes, and marvellous combinations of modern machinery and industry, so abundant in the present extensive exhibition of the results of human thought and labour, to turn for an instant to one of those simple and primitive arts, which, born in the infancy of our race, still flourishes in a green old age, one of the most extended and generally useful of man's ingenious contrivances.

The idea of intertwining, weaving, or plaiting straw, reeds, rushes, &c., for the formation of various articles of domestic comfort, is so naturally suggested by the abundance of the substances in question, and their facility of manipulation, that we do not wonder at finding the origin of the manufacture lost in the shadows of early fable, like the origin of agriculture itself, which it possibly preceded in antiquity. Nor is this an unfounded hypothesis, for savage nations, ignorant of the cultivation of the soil, are often constructors of baskets, mats, and similar fabrics; indeed, it is not unfrequently a most important part of the industry of uncivilized or semi-civilized nations. In some islands in the South Seas, so many mats, or baskets, are the forms in which taxes or tribute are liquidated; and there is scarcely a race or tribe on the face of the earth totally unacquainted with their manufacture. The mere act of twisting a few rushes in the hand might suggest the first idea of the fabric, and a single man might unaided, and without other machinery than his two hands given, him by nature, bring the art to a very high degree of perfection. In fact, a day's experience might lead a clever fellow to the creation of a very tolerable piece of matting, whilst the progressive mechanical genius of many ages could alone suggest the application of the same straw-reeds, or rushes to the manufacture of paper—one of the greatest triumphs of modern industrial ingenuity. We may mention casually, that, in the United States department of the Exhibition, are some specimens of straw paper and pasteboard, of the most admirable manufacture. Nor should we despair, were the paper duties removed, of the employment of a variety of fibrous vegetable substances in that important manufacture, which is capable of a reduction in cost that might appear fabulous to those uninitiated in the matter.

The matting of India is justly celebrated; and we accordingly find, in the Indian department, a variety of specimens of the most delicate and beautiful texture. Some of these mats are almost as flexible and fine as cloth, and are worked into the most tasteful and regular patterns in different colours, the straw being dyed with permanent tints for the purpose. Some are of thin rushes, some are of the most complicated woof, and others consist merely of straws or rushes laid smoothly side by side and carefully united at the ends. "Palghal mats from South Malabar" is their designation in the Catalogue. There are also baskets and seats of admirable make. But in the Canadian department, opposite, is a piece of stuff woven of the finest grass, which decidedly carries off the palm for fineness of texture, and indeed suggests very endurable garments for a primitive state of life. Of this description is the *tappa*, or native cloth, of the Sandwich Islands. It is more difficult for a European, accustomed to the luxury of calico, linen, and lawn, to understand the comfort of an openwork shirt, made of little slips of bamboo for summer wear in *China*, and exhibited in the department of the Celestial Empire. Leaving which, after vainly searching for other specimens of interest, we discover in the Tunisian territory some straw matting almost equal in fineness and finish to that of the Indian exhibition; besides a vast collection of high steeple-crowned straw hats, with brims as broad as umbrellas—no doubt, very pleasant wear in a country where the sun blazes so fiercely over the cranium of the traveller. A great many baskets for dates are also to be seen; but both the hats and baskets are rather of the useful than the ornamental class of merit. Yet it is curious to contrast these rude *sombreros* with the exquisitely plaited straw bonnets exhibited in the Tuscany department, by Messrs. Vyse and Sons, of Prato, and Nannucci, of Florence, or with the Brazilian hats made of the Cuban fag grass, or the Dunstable bonnets of various kinds, exhibited by our own countrymen in the South Transept Gallery. There, too, are worthy of notice—the bonnets made from the English willow by Messrs. Woodhouse and Luckman, which have a very elegant appearance.

In the North Gallery, west of the Transept, are specimens of English basket-work, &c., to which we must now refer. Beehives are a time-honoured production of basket-makers: accordingly, we find several examples of this popular structure, amongst which we specially notice one by Mr. John Ramsey, of Berwick-on-Tweed, with moveable bottom and screw, with a movable crown, and with glass crown, &c., which appears to us extremely suitable for all practical purposes. Our attention is next arrested by the works of the School of Industry for the blind, manufactured entirely by blind persons, consisting of worsted and cocoa-nut fibre door-mats, fire-screens, baskets, dish-mats, &c. We cant or say that the ornamenting the cocoa-nut fibre mats with worsted has a good effect, nor that the union of the two materials is judicious. Messrs. Bevington and Morris, of King William-street, exhibit cocoa-nut fibre matting and mats, with some Indian hemp and worsted door-mats.

Mr. T. Trelour, of Ludgate-hill, displays matting, rug, &c., of cocoa-nut fibre and Manilla hemp, which appears a remarkably strong and successful combination. Messrs. Wildey and Co., of Holland-street, Blackfriars-road, are patentees and manufacturers of cocoa-nut fibre, floor mattings, door-mats, netting, &c., and show also some specimens of nets made of cocoa-nut husk fibre, which appear very strong and serviceable. These cocoa-nut fibre mats are indeed a great improvement on the old hempen mats, and for the floors of rooms present one advantageous peculiarity, perhaps not generally known, viz. that they do not give out dust when trodddden on, which makes them very recommendable for the studios of artists.

Mr. J. King, of Tufton-street, Westminster, exhibits some baskets and a chandelier of coloured straw: the latter is rather a curiosity in its way, but we doubt whether many people would care to risk one in their drawingrooms. Messrs. Robinson and Co. exhibit specimens of China matting, and stained in pattern by a new process. This is a fabric of rushes, which are shown also in their raw state, and dyed with various colours. Messrs. Armstrong, of Charleplace, Gray's-inn-road, exhibit carriage-rugs, mats, rugs and mats of worsted, with hemp and jute and cocoa-nut fibre. Some baskets are also exhibited by the School for the Indigent Blind, St. George's-fields, Southwark. There is something very touching in this sharing of the poor people who are cut off from all hope of beholding its splendours in the Great Industrial Festival of all Nations. They claim a passing thought; they seem to say, "Look at our work, which we can see have never seen, Pity our sad privation in the midst of the enjoyments of that glorious sense which for us is not."

A basket for soiled linen, by Mr. J. Williams, of Exeter-street, Strand, is remarkable for the fineness of the workmanship, though we must give preference to the pagoda-shaped clothes-basket by Mr. C. Franks, of Wolverhampton, which is really a very admirable example of basket architecture. Mr. H. Bode, of Port-sea-place, Connaught-square, exhibits a variety of baskets of excellent manufacture. W. Rendall gives us "various samples of Tuscan plait for bonnets, the straws grown and dressed in Orkney, and plaited by the females." This contribution interests us as coming from the Ultima Thule of our British dominions, and reminding us how the active spirit of industry has penetrated every nook and corner of the great land of commercial domination. Mr. C. S. Stitt, near Kirkwall, exhibits similar specimens. Messrs. Toplis and Sons shew the variety of purposes to which basket-work may be applied in their improved letter-basket, fancy knitting-basket, work-basket, and dog-kennel, all of which are very creditable to the exhibitors. Mr. J. Smith, of Burstmoneoux, exhibits a set of Sussex truck baskets made of laths of willow wood, very strong, and neatly constructed, and water-tight, for various purposes. These baskets would, we should imagine, be very useful in stables, or for fishmongers. A cradle made of osiers, by Mr. W. Tarbuit, of Cranbrook, Kent, ornamented neatly, decorated

NEW BOOKS &c.

13, Great Marlborough-street.

COLBURN AND CO.'S NEW PUBLICATIONS.

EIGHT YEARS IN PALESTINE, SYRIA, and ASIA MINOR, from 1843 to 1850. By F A NEALE, Esq. late attached to the Consular Service in syria. 2 vols. with Illustrations. 21s. bound.

SCENES from SCRIPTURE. By the Rev. G. CROLY, LL.D. 1 vol. elegantly bound. 10s 6d.

THE ENGLISH in AMERICA. By the Author of "Sam Slick." &c. 2 v ls. 21s. bound

"Invaluable for its accuracy and impartiality."—Herald.

TO TOURISTS, INVALIDS, and FAMILIES

WESTON-SUPER-MARE, on the GREAT WESTERN LINE

DAVIES and SHARP HOTELS RE-OPENED FOR THE SEASON

WESTON-SUPER-MARE, on the West Coast of England, OPEN TO THE ATLANTIC OCEAN, stands unrivalled as a healthful Watering-Place. It is built on a dry and healthy soil. The air is peculiarly bracing, and free from those of mildness without any relaxing tendency The town is protected from the north winds by a spur of the Mendip Hills, which is beautifully and romantically wooded. The Beach is two miles in length, of firm sand, with a gradual slope. To all these peculiarly favourable points, as a Watering-Place, Weston affords all the conveniences of a city, containing good churches, libraries, assembly rooms, shops, and a well supplied daily market, with superior villa and other residences, commanding an extensive view of the sea, and the mountainous scenery of South Wales. In the immediate neighbourhood are numerous picturesque walks and drives, and within a short distance are the celebrated Cheddar Cliffs, Axbridge Caves, Woodspring Priory, Wells Cathedral, Glastenbury Abbey, and many other places of natural and historical interest. Few places, indeed, present to the seeker of pleasure or of health more advantages, combining comfort with economy, than Weston-super-Mare.

REGENT HOTEL, LEAMINGTON.—THOMAS BISSEY KEY begs respectfully to acquaint his Patrons that this Establishment has lately undergone very extensive alterations, by which he is enabled to offer improved accommodation at very moderate charges. A tariff is placed in each room, including every item necessary to calculate the expenditure of those who may be desirous to favour him with their commands. And, in response to this, the object of the Proprietor has been to satisfy the Public generally of the great advantages this Hotel now offers

SHAKSPEARE'S NATIVE HAUNTS.

THE CHELTENHAM and WARWICK Express who may visit England during the forthcoming exhibition, will willingly act as their agent for securing the rooms in which the Immortal SHAKSPEARE was born; and also those in which he married, lived, and died. Secured from London in no means if the LONDON and NORTH WESTERN RAILWAY transfer of Railway Tickets and Parcels, by which it has long been celebrated for its Moderate Charges and Expeditious arrangements as a town of Residence at present, the centre of a week's excursion is Warwickshire

The Hotels in WARWICK are splendid commodious, and recommended with the greatest confidence to Families and Parties. Arrangements to let to those from Warwick Castle and Regal Guilt, Leamington Priors, and about 20 from Birmingham, the largest seat of British manufactures.

LEAMINGTON is central-ally situated from all these places with many which there is direct and cheap rail way communication, and from which there is a choice of scenery at distance by time instead of mileage. From each have been selected the following Hotels, viz. those of London, twelve of Dublin, eleven of Edinburgh; four of Liverpool, three of York, Leeds, and Bristol, and four of Dover Brighton and Southampton

PATRIE DE SHAKSPEARE.—Les voyageurs d'Europe et d'Amérique, qui viennent à Londres pour voir la GRANDE EXPOSITION, ne voudront pas manquer l'occasion de visiter le pays où est né l'immortel SHAKSPEARE, où il a vécu et où il est mort. La ville la plus proche est celle qui contient à LEAMINGTON par le CHEMIN de FER du GRAND OUEST (London and North-Western Railway), en passant par Rugby. Les Hôtels y reçoivent les Voyageurs à des prix très modérés. LEAMINGTON SPA, peut être considéré comme la ville la plus centrale dans le comté, puisque l'on puisse habiter pour faire une série d'une semaine dans le Warwickshire. Les Hôtels y sont superbes, commodes, et aérés.

Souvent écrit par des filles de toutes sortes. LEAMINGTON SPA est situé à quelques milles de Chilvan de Warwick, au rocher de Guy (Guy's Cliff); à 5 des ruines de Kenilworth, dont le nom est si bien associé à la gloire de Walter Scott, et à 10 de Coventry, ville aimé intéressante par ses diverses fabriques par ses manufactures; à peu près à la même distance de STRATFORD-SUR-AVON, berceau et grande patrie de Shakspeare, ce grand et vrai "gigantesque homme" enfin à 30 milles environ de Birmingham, le grand foyer des manufactures Anglaises

LEAMINGTON SPA est placé au centre de toutes les villes, et il est facile à de communiquer avec elles par ces chemins de fer qui les prolongent très modérés. Selon le nouveau système de mesurer la distance par le temps, il n'est qu'à une distance d'un quart d'heure de Warwick, à deux heures de Londres, à 1 de Dublin; à 11 de Liverpool, à 3 de Manchester, de York, de Leeds et de Bristol, et enfin, à 6 de Douvres, de Brighton, et de Southampton.

TO THE FAMILIES AND RELATIONS OF CLERGYMEN AND OF THE WIVES OF CLERGYMEN.

CLERGY MUTUAL ASSURANCE SOCIETY, established in 1829.

Patrons—The Archbishops of CANTERBURY and YORK

Trustees—The Right Hon. Lord Langdale, the Master of the ROLLS, and the Right Hon. the Chancellor of the EXCHEQUER

Chairman of Directors—The Archdeacon of LONDON

Vice Chairman—E. L. WOLLASTON, Esq., M.A.

Assurances may be effected in this Office for sums from £100 to £1,000, and the profits are divided quinquennially amongst the assured members upon the five years previous to each division. Persons assured, Clergymen, brothers brothers and sisters, uncles and aunts, nephews and nieces of clergymen, and the wives of clergymen, the wives of brothers of clergymen, brothers, brothers, sisters, uncles, aunts, nephews, and nieces of the wives of clergymen.

Prospectuses to be had at the office of the Society, No. 41, Parliament-street, Westminster. JOHN HODGSON, M.A., Secretary. JOHN BUTLER, Actuary.

ESTABLISHED 1841

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall

During the ten years which this Society has been established, more than Three Thousand Two Hundred Policies have been issued,—

Yielding an increase to the extent of Thirteen Hundred Thousand Pounds,—

Yielding Annual Premiums amounting to upwards of Fifty-three Thousand Pounds.

This Society is the only one possessing Tables for the Assurance of Diseased Lives.

Healthy Lives Assured at lower rates than at most other Offices.

A bonus of one per cent. per annum was added to the sums at last Division of Profits.

Agents Wanted. Prospectuses, Forms of Proposal, and every other Information may be obtained of the Secretary at the Chief Office, or on application to any of the Society's Agents in the country.

F. G. P. NEISON,
C. DOUGLAS-PINDAR, Secretary.

THOMAS BOULTON'S NEEDLES.—These Needles have been celebrated for the last half-century, and are unsurpassed in excellence. They are manufactured from the best spring steel, have highly-finished taper points, and perfectly burnished eyed tops. Sold in papers and in every variety of fancy boxes and cases adapted for presents, by Owen, 88, Oxford-street; Millikin, 161, Strand; Lockey, 61, Leadenhall-street; City; and by all fancy drapers. "Thomas Boulton, manufacturer, London," on each paper.

THE TEETH.—A very curious invention connected with Dental Surgery has been introduced by Mr. HOWARD, 17, Gerrge-street, Hanover-square; it is the introduction of an entirely NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble natural teeth as not to be distinguished from the originals by the closest observer. They will never change colour or decay, and will be found very superior to any teeth ever before used. The method does not require the extraction of roots, or any painful operation, and will support and preserve the teeth that are loose, and is guaranteed to restore articulation and mastication. The invention deserves the notice of the scientific, and is of importance to many persons, and those who are interested in the natural beauty of the mouth. Howard's Patent Enamelled Mineral Teeth are unrivalled for delicacy of shade, and in all Dentists.

NEW MUSIC.

NEW BALLAD, "HAPPINESS."—Just published, THOMAS BAKER'S last New Ballad, entitled "Happiness," price 2s. postage free. Also, by the same Composer, "GERALDINE," in which he introduces the plaudits, 2s.

JULLIEN and Co., 214, Regent-street, where may be had all Thomas Baker's compositions.

THE POPULAR SONG of the DAY, new edition, just issued, "THAT'S THE WAY THE FAIR AVA." Composed by THOMAS CHANTREY. Its great sale may be attributed to the elegance, simplicity, and originality of the melody, which bear thereby hands to the imagination, while it is within the compass of every voice. The accompaniment (certainly a desideratum in a song) is in this most easy. Price 2s.

LONDON, ADDISON and HOLLIER, 210, Regent-street.

NEW SONG.—THE YOUNG LADY'S "NO."—Composed by the Author of "Will you love me then as now?" "The Rich Man's Bride," "The Secret," "Yes, I have dared to love these," &c. Price 2s (post postage free). This arch and pleasing ballad, just introduced with great success by Miss Poole, is likely to become one of the most popular songs of the day: both words and music possessing that point with will ensure success.

DUFF and HODGSON, 65, Oxford-street.

OPERA.—Her Majesty's Theatre and the Royal Italian Opera, Covent Garden Tickets Stalls, and Boxes, at CRAMER, BEALE and Co.'s, 201, Regent-street; and 67, Cornhill-street.

PIANOFORTES.—CRAMER, BEALE, and Co. have the best of every description, English and Foreign, New and Second-hand, for Sale or Hire.—201, Regent-street; and 67, Cornhill-street.

PIANOFORTES for SALE or HIRE, at CHAPPELL'S, 50, New Bond-street.—A large STOCK of NEW and SECOND-HAND PIANOS, by Erard, Broadwood, Collard, &c. for SALE or HIRE Instruments by less reputed makers at the lowest terms. Any one hiring a piano for not less than one year, and, if desired, chosen a perfectly new instrument from the factories of any of the best makers. Old pianofortes taken in exchange. A large ASSORTMENT of the BEST HARMONIUMS, by Alexandre, of Paris, from 15 to 45 guineas.—50, New Bond-street.

PAINTINGS COPIED.—A Gentleman of considerable talent in the Continental Galleries, and who has undertaken a copying, in Water-Colours, either on Ivory or Paper, of Portraits in Oil, Miniatures, Water Colour Drawings, and Daguerreotypes. He will also copy, in Chalk, drawings executed in this material. As his principal object is to obtain increased and constant employment, he trusts his favourable prices will be found much lower than the usual charges; and in no instance will he demand payment unless entire satisfaction be given to the Employer. Country orders will be promptly and carefully attended to. Address, PICTOR, Mr Morley's Library, 27, Park-terrace, Park-road, Regent's-park.

CORAZZA SHIRT.—CAPPER and WATERS, Inventors, 26, Regent-street, St. James's.—Gentlemen can have the Corazza, or any other fine Shirt, to their own measures, taken light, round neck, round chest, waist, wrist, and height of collar. Excellent Long Cloth Shirts, with five Linen Fronts, Collars, and Wristsbands, from 8s 6d to 12s. Linen Shirts, 10s to 35s each. Additional charge for Dress Fronts, 3s to 5s. Sample Shirts are sent, carriage paid, to any part of the kingdom, on receipt of money order for price of the Shirt, with addition of 2s, which addition is deducted from the amount of the order.

METCALFE and CO'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-brush searches thoroughly into the divisions, and cleanses the teeth without injuring the gums; it never moves loose: is. Peculiarly penetrating Hair-brushes, with the durable unbleached Russia bristles, which will not turn white, recommended for hair. Shaving-brushes, that cleans harmlessly in one-third the time. An immense Stock of genuine and fashionable Combs. Metcalfe's Alkaline Tooth-Paste, 2s per box. Nail and Clothes Brushes of every description. Metcalfe and Co.'s only Establishment, 130B Oxford-street, one door from Holles-street.—Metcalfe's Alkaline Tooth-Paste, 2s. per box.

ANCIENT and MODERN COINS, MEDALS, &c.—Mr. C. R. TAYLOR solicits the attention of Collectors and others to his extensive Stock of the above Articles. which may be purchased at his residence, 3, Percy-street, Bedford-square. All communications punctually attended to; and articles forwarded to any part of the country for inspection.

A HANDSOME PRESENT.—A Gold Watch and fine Gold Chain, complete, in a morocco case, for 4l 10s. The watch is of the horizontal construction and jewelled in four holes, with fine gold dial, beautifully engraved with rich scroll work, the entire warranty is given, and twelve months' trial allowed. The above is of Swiss manufacture, its more elaborate and costly finish cannot be surpassed, per post, upon the receipt of an order for the amount by Messrs SARL and SONS, Watch Manufacturers, 17 and 18, Cornhill.

IF you require your FAMILY ARMS, send Name and Country to the LINCOLN'S-INN HERALDIC OFFICE, Great Turnstile, Holborn, and a Sketch will be forwarded, per return of post, with the Arms painted in their proper colours, the Crest engraved on stone, the Motto, and the Name and Address written correctly, for 7s. Pedigrees traced, Manors found, Boundaries ascertained, Seals and Dies engraved, Diplomas painted, Engravings of Seats, Plate, Carriages, Liveries, Monuments, Windows, Rings, Books, Steel Dies, Copper-plate Engraving, Embossing, Illuminating, Heraldic Painting, Arms Painted on Vellum, Cards, Seals, Dies

THE ILLUSTRATED LONDON NEWS.

SECOND SUPPLEMENT.

VOL. XIX.] SATURDAY, AUGUST 9, 1851. [GRATIS.

THE EXHIBITION FETES AT PARIS.

(From our own Correspondent.)

THE Exhibition *Fêtes* given by the City of Paris to the City of London and the Royal Commissioners, the Executive Committee, the Juries, and to a whole host of celebrities, French as well as English, have passed off with a degree of splendour seldom witnessed in the festivities of modern times. Nor has the satisfaction of the guests been less complete than the splendid hospitality of their entertainers. *Fête* succeeded *fête*, each more brilliant than its predecessor; and, for the first time in the international history of the two greatest nations in the world, there has been a manifestation of hospitality on the most princely scale, and a reciprocation of good feeling and kindly offices. France and England have shaken hands, and sworn themselves brothers, and France has given the civic dignitaries of London, and the officers of the Great Exhibition, a reception, which in former times, now happily passed away, would have been reserved for some great king or conqueror, and which it would have been thought absurd and extravagant, if not positively insane, to have wasted on such peaceful, unobtrusive, useful, and matter-of-fact persons, as Lord Mayor, Aldermen, traders, manufacturers, and the employers of labour. The world has much to learn; but there can be no doubt that it is growing wiser; and that, within the last fifteen or twenty years, it has been learning its lessons of peace and true virtue with more rapidity than in any previous period of history. It has begun to perceive, that, after all, work is the duty, and ought to be the pleasure, of great nations as well as of small individuals; and that fighting with each other is not by any means the business of Christian and civilised nations.

The hospitalities of the city of Paris were planned in the most complete and comprehensive manner. Each invited guest received through the intermission of M. Sallandrouze—a gentleman whose modesty demands all praise—a ticket entitling him to pass free from London to Paris and back again, and an admission to such of the *fêtes* as were calculated for the accommodation of so large a number of persons. The *fêtes*, according to the plan laid down, comprised—first, a grand banquet, on Saturday evening, at the Hôtel de Ville, to which a portion only of the guests could be admitted; secondly, a concert, at a later hour of the same evening, to which the whole of the English guests were invited, including the wives of all those who were known to be so fortunate as to possess them. The *fêtes* on Sunday included an excursion to the splendid Château of Versailles, to witness all the fountains at play, a sight of which is considered one of the grandest things that can be offered to delight either a Frenchman or a foreigner. On Monday the *fête* was a visit to the President of the Republic at St. Cloud; on Tuesday, a grand ball at the Hôtel de Ville; and, on Wednesday, a review in the Champ de Mars, with a grand entertainment at the Opera in the evening. Each of these *fêtes* was perfect in its way; but, before describing them in succession, let us detail, as nearly as we can, the journey to Paris, and the incidents of the route.

THE DEPARTURE—FRIDAY.

The Commissioners' special train was fixed for nine o'clock on Friday morning, and at that hour, in the vicinity of the London-bridge station of the South-Eastern Railway, a continuous string of private and public carriages rattled up to the doors, and were successively stopped by policemen, who demanded whether the occupants were furnished with the blue-edged tickets denoting their right of entry to the privileged train. The tickets having been shown, the holders were speedily within the station. The special train stood hissing and ready to go, but the carriage doors were locked, and the whole platform was a swarm of eager, bustling people, rushing frantically about with luggage or searching for luggage, begging, and praying inaudible parties to open the carriage doors. Among the crowd, the City notabilities, of course, showed largely. The Lord Mayor, Aldermen, and Common Council arrived early at the station, and got as soon as possible into their places.

Nine o'clock sounded, and in a minute or two thereafter the train was under weigh. Not above half the people on the platform could possibly be taken, and the remnant were left for the next despatch. Meantime the first special glided smoothly on its way. Engine and carriages were alike new. The former was the manufacture of Mr. Crampton, and is one of the class for which it is said he has received the first prize at the Exhibition. The train consisted of thirty-two first-class carriages, and these the locomotive drew to Folkestone in about two hours and a quarter.

At Reigate station the train drew up to refresh the engine. At Tunbridge the process was repeated; after which it got rapidly to the hills above Folkestone, and caught a glimpse of the sea, studded with ships beating down Channel, or careering up with a pleasant drawing breeze. After a stoppage of a few moments at the station, the train was run on the incline, down which it deftly slipped, the passengers finding themselves in a moment in the midst of the old town; and then the harbour, with three or four white-funnelled steamers smoking in the midst, and a handful of coasters decked out with colours, and the quays all crowded with spectators, kept in due order by boundary ropes—all these floated upon the eye. The next moment the occupants of the train were elbowing their way to the *Princess Helena*. There was no cheering or demonstration. In a few moments the decks and cabins of the steamer were invaded by upwards of 600 ladies and gentlemen. Meantime the luggage was being shipped—and such a pile! The sojourners for a week at Paris could not have been more amply provided if they had intended going round the world. The shower of carpet-bags, portmanteaus—ay, and huge boxes—appeared to be all but eternal; and the gallant captain was stamping indignantly on the paddle-box before the last precious receptacle for coats and ball-dresses had been tumbled down the forehold. The happy moment, however, at length arrived. Round went the paddles, and, clearing the jetty, the steamer began to rise and fall on a tumbling irregular swell, which gradually increased, producing what sailors call a "lumpy" sea, as the boat drew out from under the protection of Dungeness.

While the events we have described as to the first train were going on, the scene at the London-bridge station, with the visitors left behind, was most animated. There was the ordinary daily express train to Paris ready to start; but the bearers of the favoured passes could not comprehend why they should be separated from the Lord Mayor's train. After considerable confusion, everybody was provided with a place; but the second train did not reach Folkestone before half-past twelve. The *Lord Warden* steamer was speedily crowded, and then the anxious question arose amongst the passengers, whether they should be in time for the Boulogne special train.

ARRIVAL AT BOULOGNE.

The passage was somewhat rough, and uncomfortable to the fairer portion of the travellers, as well as to the great bulk of the male visitors. But sea-sickness was soon forgotten, and all traces of it vanished when the long pier of Boulogne, crowded with spectators and decorated with flags, burst upon the longing eyes of the travellers.

Every exertion had been made by the authorities of Boulogne to render the reception worthy of the guests of the municipality of Paris. The quay was decorated with flags and garlands, mixed with escutcheons bearing appropriate mottoes. The whole population of the town had assembled, and every window which commanded a view of the landing-place was filled with ladies. At two o'clock the appearance of the steamer in sight of the port was announced to the expectant crowd by a signal gun from the vessel, which was answered by one at the pier-head, and in a short time after she ran alongside the jetty. M. Fontaine, the Mayor, M. Sorbier, the Sub-Prefect, M. Calley de Saint-Paul, one of the directors of the Boulogne Railway, with the different authorities of the port, were present to receive the visitors. The Lord Mayor, Sir John Musgrove, was the first who landed, and was followed by a number of the notabilities of the City, members of the Corporation, and others, and their first step on the soil of France was hailed with a hearty cheer by the assembled crowd, and with loud cries of "*Vive l'Angleterre!*" "*Vive le Lord Maire!*" Immediately on his reaching the pier, the Lord Mayor advanced towards the Mayor of Boulogne, who shook him heartily by the hand, and said, "Although your visit to this place has not been officially announced to me, I could not allow you to pass through the town without offering a welcome to the first magistrate of the first commercial city in the world, and telling him, in the name of my fellow-citizens, that we are grateful to him for having selected our port as his place of landing, thus pointing it out to the world as the connecting link between England and France." The Lord Mayor briefly, but courteously, thanked the Mayor for the reception he had given him, and then, amidst the renewed acclamations of the people, proceeded to the carriage which had been prepared for him, the remainder of the party taking their seats in carriages and omnibuses which had been provided by the railway company. The whole party then proceeded to the railway terminus, where a *déjeûner* had been prepared in a *salle* fitted up with great taste for the occasion. M. de Saint-Paul did the honours of the table. Numerous toasts were drunk with great enthusiasm. The Lord Mayor gave "Unity, peace, and concord between the two countries." The Sub Prefect proposed "Union! May our guests, like us, preserve the remembrance of this visit." Mr. M'Gregor, one of the directors of the Dover Railway, proposed the health of M. de Saint-Paul, and expressed the thanks of the company for his courtesy. The Mayor of Boulogne gave a toast in welcome of the visitors; adding, that, although the reception they might meet with in Paris would be more brilliant, it could not be more cordial.

Amongst the company present at this banquet were M. Sallandrouze de Lamornaix, M. Charles Dupin, Lord Wharncliffe, Hon. J. Stuart Wortley, the Recorder of London, Lord Albemarle, &c. At about four o'clock, the first special train with the City authorities of London departed, leaving the passengers by the *Lord Warden* in possession of the remains of the banquet. The train, in less than two hours, arrived at

AMIENS.

Here the demonstrations of welcome on the part of the population were most marked and enthusiastic. The public walks were filled with spectators. The station was gaily decorated with flags, festoons, and flowers. All the civil and military authorities of the town were assembled in full dress. The National Guards, as well as the troops of the line, were under arms. A long table had been prepared in the middle of the station, covered with pastry, and filled with wine. This refreshment scarcely can be called a luncheon, it is entitled a *goûter*. M. Deberly, Adjoint, made a neat address, welcoming the guests from hospitable England; and the Lord Mayor briefly expressed his acknowledgements, proposing the cordial union between the two countries. When the band at the extremity of the table struck up the National Anthem, the enthusiasm of the French, particularly of the military, was singularly fervent. The ladies waved their handkerchiefs, the soldiers joined in the *vivas* of the officers; and it was some minutes before calm was restored, to enable the Lord Mayor to walk to the carriage through the excited populace. The first train reached the station of the Chemin du Nord at nine o'clock; the entire distance, exclusive of stoppages, having been accomplished in less than four hours.

ARRIVAL AT PARIS.

The Lord Mayor was received by M. Berger, the Prefect of the Seine, and was immediately conducted, with his suite, to the carriages of ceremonial provided by the city of Paris. The square at the extremity of the Rue Lafayette was filled with a dense mass of people, who loudly cheered the *cortège*. In the first train was a Chinese Mandarin, with his interpreter. Our Engraving, it will be perceived, contains the portrait of this visitor, whose presence in Paris has created such a sensation, and given rise to so many *piquant* articles in the *Charivari* and other journals. Before the second train reached the Parisian terminus it was eleven o'clock. Happy were those who had taken the precaution to look after their own luggage, as travellers ought; and happy, also, were those who had managed to secure beds beforehand, by dint of the intermediation of friends and correspondents. Many a notability of London was bagageless and houseless in Paris on Friday night. The baggage was left behind at Boulogne, and almost every bed in every hotel was bespoke. Aldermen and Sheriffs, as we have heard, walked the streets, for want of accommodation; and still the trains kept pouring in visitors—not invited, but anxious to see the sights. The presence of these crowds tended to increase the difficulty of procuring beds; but, with some trouble and management, and occasionally an extra charge for house-room, the party, large as it was, managed to find house and home in one quarter of Paris or the other, and by midday on Saturday every one was accommodated. But as to the luggage, despite of the electric despatches hourly sent from the station to Amiens, and then expressed to Boulogne, it was Sunday before the bulk of the luggage had arrived. In order to be present at Saturday's Banquet and Concert, considerable purchases of clothes and linen had to be made. Nothing could be worse than the arrangements at the Boulogne Custom-house for the transport of the luggage to Paris; and it is a pity, as so much inconvenience was experienced, a portion of the passengers had not been sent on through Calais, so as to divide the pressure.

THE BANQUET AT THE HOTEL DE VILLE ON SATURDAY.

The banquet at the Hôtel de Ville commenced the series of festivities. No capital, perhaps, in Europe can boast of a civic building so well calculated as the Hôtel de Ville to receive distinguished guests with fitting magnificence; and the consciousness of possessing a building so unrivalled for festive purposes appears to constantly stimulate the corporate body of Paris to spare no expense or exertion to render each of its *fêtes* worthy of the admiration which the preceding one had excited.

The banquet was prepared in the noble gallery called the Salle des Fêtes, and nothing could be more gorgeous and dazzling than the *coup d'œil* which it presented. Two immense parallel tables ran down the full length of the room, the whole resplendent with plate, flowers, fruits, and ornaments. Three ranges of immense lustres of cut glass, with branches of the richest gilding, and remarkable for the beauty of their chiseling, flung down the blaze of nearly 3000 wax lights on the fairy scene below. Banners of all nations were suspended to the ceiling. About midway down the hall stood a pedestal, on which was placed a bust of the President of the Republic; and opposite to it another smaller room was also set out with tables, ornamented similarly to those in the Salle des Fêtes.

The hour originally fixed for dinner was half-past six; but, in consequence of M. Berger, the Prefect of the Seine, being detained at the Legislative Assembly by a discussion which concerned the city of Paris, the guests did not take their places until nearly a quarter-past seven. The Prefect was seated in the centre of the room, in front of the bust of the President, and on his right hand Monsignor Garibaldi, the Pope's Nuncio, and Lord Normanby, the British Ambassador. Opposite the Prefect was seated M. Dupin, the President of the Assembly, having on his right Lord Granville, Vice-President of the Royal Commission of the Great Exhibition, and on his left M. Baroche, Minister of Foreign Affairs. At the parallel table, exactly opposite the Prefect, was seated Sir W. Musgrove, Lord Mayor of London, having near him M. Lanquetin, President of the Municipal Council, and M. Carlier, the Prefect of Police. At about the same part of the *salle* were seated Lords Holland, Wharncliffe, Albemarle, and Ebrington; Sir T. Baring, Mr. C. Barry, Mr. Shepherd, Mr. W. Cubitt, Mr. Scott Russell, Mr. Edgar Bowring, Mr. C. W. Dilke, Dr. Charles Mackay, Mr. Francis Bennoch, John Bright, Esq., M.P., &c.; also, the Lord Mayor of Dublin, the Lord Provost of Glasgow; the Mayors of Manchester, Birmingham, and Leeds; Mr. Paxton, the originator of the Crystal Palace, and Mr. Fox, who carried the idea into execution in so short a time: in the same neighbourhood were also the members of the French Committee at London, MM. Sallandrouze, C. Dupin, De Lesseps, Héricart de Thury, A. Seguier, Hervé de Kergorlay, &c. At the tables near were seated MM. Léon Faucher, Fould, Chasseloup-Laubat, and other Ministers; the Vice-Presidents, Secretaries, and a number of the members of the Assembly; General Leflô, MM. Baze and De Panat, the questors; M. Portalis, President of the Court of Cassation; M. de Royer, Procureur-Général; M. Vivien, Vice-President of the Council of State; the diplomatic corps; the Archbishop of Paris; Marshal Excelmans, Grand Chancellor of the Legion of Honour; Generals Magnan, Carrelet, Lavasseur, Guillabert, Rollin, Courtigny, Dulac, &c.; the members of the Municipal Council; the Presidents of the Chamber and Tribunal of Commerce; the members of the Prefecture of Police; the Mayors of several manufacturing towns of France, such as Lyons, Rheims, St. Quentin, Nantes, Lisle, Rouen, Marseilles, Valenciennes, &c.; MM. Villemain, Mignet, Walckenaer, &c. The President of the Republic was not present, the whole proceedings being considered of a private character between the two corporations.

The banquet was served with perfect regularity. Not less than 300 attendants were on duty. Behind the Lord Mayor stood three of his servants in silvery nearly covered with gold lace, and seemed to attract great attention. His Lordship and M. Berger were habited *en bourgeois*. During the repast, an orchestra placed in a gallery above played various pieces; amongst which might be distinguished the overture to "William Tell," parts of the "Muette," and selections from the "Armide" of Gluck. The dinner, which was provided by M. Chevet, the Soyer of Paris, seemed to give great satisfaction to all.

DINER DE L'HOTEL DE VILLE A SERVIR LE 2 AOUT, 1851.

MENU GENERAL.

45 POTAGES.

Potages printaniers | Potages à la reine

30 RELEVES.

14 Turbots à la Hollandaise | 6 de 2 chapons à la Godard

VIN DE DESSERT. Malaga. Paxcoret.
Bordeaux { Sherry. / Haut Médoc Léoville. / Château Margaux. / Château Lafitte. / CHAMPAGNE. Mosé. / De Montebello. }

When at length the dessert was arrived at, the Prefect of the Seine proposed the health of the President of the Republic. When due honour had been paid to it he again rose, and spoke as follows:—

Gentlemen, I propose a toast to the noble guests of the city of Paris—to the Commissioners charged by the Queen of England to organise the Universal Exhibition to Prince Albert, its illustrious President—to the Executive Committee—and to the International Jury, whose skilful labours have given so much brilliancy to that imposing solemnity. (Loud applause.) Honour to the fruitful thought which has collected in the same palace the marvels of human intelligence! In such an Industrial Congress—a true Congress of Peace—nations, in mingling together, forget their ancient enmities, and, in presence of the masterpieces of all, refuse, for the future, to form but one single and immense family. The City of Paris will inscribe with pride the date of August 2, 1851, on the page of its municipal annals. It is for it a memorable day, of which its magistrate will always preserve a precious reminiscence. (Renewed applause.) Thanks, then, to our guests for having been pleased to take their seats at the banquet, so cordially offered: the Hôtel de Ville is proud to receive them under its roof. I drink to our guests; I drink to the illustrious representatives of the industrial genius of all nations, to

the Royal Commission of London, and to the International Jury. (Great cheering.)

When the applause had terminated, Lord Granville rose, and delivered in admirable French, though with a slight English accent, the following reply :—

Monsieur le Préfet and Gentlemen,—Permit me, in very indifferent French, but with heartfelt sincerity, to thank you, in the name of Prince Albert and of the Royal Commissioners, for the honour which you have just done them. As to me, gentlemen, the impressions of my youthful days, the bonds which I have since contracted, the remembrance which you have been pleased to preserve of him whose name I bear—(Loud applause)—and who devoted so many years in cementing the union between England and your lovely France, which he had learned to respect and to love as a second country of his own—(Renewed applause)—all this, gentlemen, causes me to feel at the same time exultation and embarrassment at having the honour, so little merited by me, of being the organ of the Commissioners before this brilliant assemblage, at a *fête*, of which the magnificence is only equalled by the cordiality of your reception. (Loud approbation.) The desire had caused itself to be felt in England to attempt these sort of those grand National Exhibitions which had so well succeeded in France, and which had been marked by such useful results. Prince Albert had thought that that idea could be enlarged and its advantages extended, if, at a moment when all countries were drawn closer together by the progress of science, and by the spread of education, they were invited to exhibit together their products, so varied in character. It appeared to him that such an Exhibition would serve to mark the progress of civilisation in its present state ; and that, whilst it taught us to render thanks to the Creator of all things for the benefits with which He loaded us, it would also prove to us how much the common happiness could be increased by the union not merely of individuals, but of nations. I am specially charged by Prince Albert, as well as by my colleagues in the Commission, to thank Prince Louis Napoleon and his Government for their most ready co-operation, for the sage and enlightened measures which they adopted for the purpose of dissipating the prejudices which might still arise, and for the choice which they made of the persons who have aided in the execution of the plan with so much skill and conciliation. (Cheers.) We never entertained the pretension of getting up an English Exhibition of the industry of the world ; but we considered it as an immense honour to be able to offer to other nations the means of displaying their own exhibitions as integral parts of that great work. (Loud applause.) Gentlemen, we have also to thank the French exhibitors for the splendour and elegance which they have imparted to the Exhibition by their products. They have more than confirmed their ancient reputation for the invention and good taste which prevail in the execution of their manufactured goods. I trust that the sacrifices of time and money, which they have made, will not be altogether lost to them, even in a commercial point of view. I hope, also, that they will not feel any jealousy, if we, on our side, profit in some degree by the lessons which they have given us. (Long-continued applause.)

Our thanks are due above all to those men, so distinguished in sciences, arts, and manufactures, whom France sent over to us as members of the jury. Our organisation, as a voluntary association, caused us to lay down rules which were contrary to their old experience as French jurymen. They did not, however, cease for a moment to fulfil their laborious duties. No opinion was rejected—everything was freely and frankly discussed and voted ; and it was frequently the French members of the jury who pointed out the merits of the exhibitions of other nations. At the termination of a labour of seven or eight hours a day, for the space of two months, they separated from their colleagues in the most perfect harmony, and have left in England sentiments of respect and kindly feeling. (Prolonged applause.)

Permit me, gentlemen, to say a word to you of the visitors whom France sent over to us to examine the Exhibition. Amongst them, there were some of the most illustrious of your statesmen, of your men of letters, of your military men ; there were representatives of those names, which, since the middle ages, have added lustre to the history of France and of Europe ; there were also some of the burgher class, which has so much advanced the prosperity of your nation ; and there was a portion of your workmen, so remarkable for their intelligence ; and even some of your peasants, so famous in their agriculture. All, gentlemen, in different degrees, have exhibited that intelligent curiosity, that supple and lively character, that good humour and courtesy, which so markedly distinguish the inhabitants of France. (Loud applause.)

For a great length of time the disguised mind of the two countries had known how to appreciate reciprocally the merits of their neighbours on the other side of the Channel: but, as to the English people, during long ages, it was able to know nothing of the French, except their bravery and military genius. At the end of many years of peace, the Exhibition has furnished an opportunity to every class of my countrymen to examine close at hand the moral and intellectual qualities which render Frenchmen so distinguished in the arts of peace. (Prolonged applause.) An event unexampled of ages has been solicited this year in the destruction of national prejudices and antipathies. (Renewed applause.)

I ought to apologise to you, gentlemen, for so long trespassing on your patience. ("No, no," and applause.) I thank you from the bottom of my heart for the kind attention which you have accorded me, and I ask your permission to drink in a glass of this wine—one of the products, so delicious, of your country (Laughter and applause)—to the political, social, and commercial prosperity of the city of Paris. (Great cheering.)

The loudest applause not only followed the delivery of this reply, but continued for several minutes after. When silence was re-established, M. Lanquetin, the President of the Municipal Council of Paris, rose and said :—

Gentlemen,—I ought, perhaps, to leave you under the charms of the eloquent words which you have just heard ; but you will pardon me for yielding to the sentiment of gratitude with which they inspire me, and for coming forward in the name of the municipal corporation of Paris, to thank Lord Granville for having added to the *eclat* of this *fête* by a speech which explains so perfectly its object. But the honour of finding myself seated by the side of the Lord Mayor of London imposes on me a duty which I will attempt to fulfil. The presence of the Lord Mayor of London at the Hôtel de Ville of Paris, is not only a fact without example, but is an event which will serve as an epoch in future times, since it will efface the last remaining traces of those prejudices which war has so long maintained between two nations fully capable of esteeming each other. (Cheers.) Gentlemen, the nations are drawn together by the stores of intelligence which they contain, will henceforward continue their march at the head of civilisation with so much the more rapidity and success, that they will be the more firmly united. It is to contribute to that union, that I, the first magistrate of the city of Paris, to propose to you a toast to the Lord Mayor and City of London. To the Lord Mayor, that municipal magistrate, so worthy, so revered, so powerful to do good ! To the City of London ! To the rich and immense capital of the United Kingdom of Great Britain ! To the great and noble rival of Paris, honour and gratitude ! Honour—for it has the first realised the grand idea of the Exhibition of the products of universal Industry ! For it has thus procured the triumph of the sentiment of a noble and enlarged assimilation over that of egotism ! Honour and gratitude ! for it has shown itself grand and generous in establishing a splendid arena for that pacific struggle, and in offering the most gracious hospitality to the sages of industrial science, who are called on to bestow crowns of honour on the most deserving. We entertain the most profound conviction, that the city of Paris, in every part, so honourably situated in the industrial world, applauds without the slightest reserve this *fête* offered in its name, in its Municipal Palace, to the honourable members of this great Jury, and to the most notable representatives of the Industry of all Nations. It felicitates itself on our having invited to this festive meeting the Mayors of the principal manufacturing towns of France and England, in the presence of our great French dignitaries, of the diplomatic body, and of the high personages of England, who have most contributed to realise this grand work, the Exhibition. The city of Paris is above all happy at the presence of the Lord Mayor of London at this solemnity, of which it will always preserve an ineffaceable remembrance. To the city of London and its Municipal Corporation ! (Loud applause.)

The Lord Mayor of London made the following reply :—

Monsieur le Préfet and Gentlemen and Noble and Honourable Lords, I regret very much that I am not able to express myself in your language, because I feel how superficial I should be able to do justice to the observations which have been made by the hon. gentleman who has just addressed you. But, after the very eloquent and impressive address of my Lord Granville, on the subject of this international Exhibition, it is quite unnecessary for me to advert further to that subject, I cannot feel otherwise than deeply sensible of the honour of being present at this grand banquet, and I cannot but feel a great gratification that it should have remained for the chief magistrate of the city of London, in the year 1851, for the first time in the history of France and in the history of England, to pay a visit to the Prefect of the Seine. (Loud cheers.) Gentlemen, I may venture to say to you, on behalf of the municipal authorities of the city of London, that they have always felt an anxious desire to co-operate with all those who have manifested a deep interest in this Exhibition, because they saw that the result was likely to produce, not only in this country, but in all the countries of Europe, peace, unity, and concord. (Applause.) It is with these feelings that I can affirm, with the concurrence not only of the citizens of London, but of all the English people, that I cordially rejoice at this very interesting event (Cheers), and at the opportunity which has been afforded them of giving their assistance in carrying out that great work. And although I am speaking in the presence of my own brethren and colleagues, I am not unmindful that I am also heard by other members of municipal authorities, and by the commissioners and representatives of other countries in Europe, who, I am sure, concur with me in these opinions. (Hear, hear.) I terminate these observations by thanking you, in behalf of the City of London, for the honour which in my person has been conferred on them ; and I conclude by proposing as a toast, "The Prefect of the Seine, and prosperity to the city of Paris." (Loud applause.)

Just as the cheering was about to die definitively away, Mr. Francis Bennoch, a member of the Common Council of London, gave the word to drink the toast with three times three, in the English fashion, which was effected to the great amusement of the French portion of the company. Some of the guests then quitted the apartments of the Prefect to take coffee, whilst others went to witness the representation of the "Médecin malgré lui" of Molière, played by the actors of the Comédie Français. A temporary theatre had been erected in the ancient Salle du Trône ; and by the time the banquet had terminated, the benches were completely occupied by elegantly dressed ladies, of not less than 4000 invitations having been issued for the *soirée*. The arrival of the vast number of carriages required for so great an assemblage was effected without the slightest disorder ; for, as the Salle St. Jean had served as the entrance for the dinner-guests, so the small hall at the south-western corner was set apart for the reception of those having an invitation for the evening. At last the piece commenced, and Mdlle. Augustine Brohan, Mdlle. Denain, and Monrose, Delaunay, and Got, excited great laughter ; and more, perhaps, amongst the English portion of the audience than the rest.

It is unnecessary to state, that the magnificent rooms composing what is called the Prefect's apartment were thrown open to the guests, and that ices, *sorbets*, and other refreshments were distributed, as usual, in abundance during the evening. We should, however, regret not to mention that the Court of Louis XIV was boarded over and transformed into a sort of open conservatory, a fountain, ornamented with shrubs and flowers, being substituted for the statue which usually stands in the centre. The effect of this transformation was charming.

THE CONCERT ON SATURDAY EVENING.

A musical mission to the French capital would be, at any time, eminently suggestive and replete with interest ; but, connected as the present inquiry has been with the Exhibition *fêtes* of the city of Paris, no little amount of curiosity existed amongst amateurs, to learn in what manner the hospitable hosts would seek to amuse their London visitors with melodious strains. The duties of your musical correspondent are confined within narrow limits, and he leaves to your special commissioners the task of describing the rush and confusion at the Londonbridge station on Friday, the embarkation in the three steamers at Folkestone, the landing at Boulogne, the railroad banquet at the station, the departure of the Lord Mayor's special train for Paris, the *gouter* or light luncheon provided at Amiens, the arrival at the terminus of the *Chemin du Nord*, having completed the transit in four hours from Boulogne to Paris, the hunt for the luggage and the disappearance of those dismal and dismal travellers on the rails, amidst piles of packages, whilst waiting for every fresh train to come up, the despair of the majority at two in the morning at having to go to their respective quarters without a *sac de nuit*, much less a trunk, the dreadful scenes during the whole of Saturday at the electric telegraph office, where in vain I endeavoured to the Boulogne authorities to send up the missing baggage ; all these, and divers other eventful scenes, will have filled the columns of the journals, but it is not within my department, albeit a personal sufferer, to dilate on the manifold contrarieties of this civic campaign to the Gallic territory. Suffice it, I might have a few notes about the missing hat of the Lord Mayor, and about his horror at being deprived of his civic crown. I might say something touching of the enormous difficulties of our city dignitaries in providing themselves with ready-made suits of clothes, to appear at the banquet at the Hôtel de Ville, difficulties which were found to exist in vain forwarded to the Boulogne authorities to send up the missing baggage ; all these, and divers other eventful scenes, will have filled the columns of the journals, but it is not within my department, albeit a personal sufferer, to dilate on the manifold contrarieties of this civic campaign to the Gallic territory. Suffice it, I might have a few notes about the missing hat of the Lord Mayor, and about his horror at being deprived of his civic crown. I might say something touching of the enormous difficulties of our city dignitaries in providing themselves with ready-made suits of clothes, to appear at the banquet at the Hôtel de Ville, difficulties which were found to exist in vain for Alderman Wire (Louis Blanc being in London), and no Parisian Moses and Co. could accommodate Alderman Humphrey (Cassidière being also in exile). Doubtless, the fate of the citizen of Candlewick, who was honored into a masquerade dress, under the pretext that he ought to appear at the banquet in the suit of the time of Louis the XVIth, will have been made known. However, it is time to be at the concert, given after Saturday's banquet at the Hôtel de Ville, and my narrative of things musical begins as late as eleven o'clock, for tables had not been cleared and the orchestra got ready before that hour.

The musical readers of the ILLUSTRATED LONDON NEWS are doubtless aware, that the present month is the dullest in the year for Parisian amusements. The season here is from October to the end of May, and from June to the autumn the great singers are away on leave of absence. Viardot and Alboni, of the "Opéra de la Nation," are at the Queen's London opera-houses ; M. Roger in Germany ; the "Théâtre des Italiens" is shut ; the "Conservatoire" concerts have long ended ; the grand musical performances of the "Philharmonic Society," under the direction of the gifted Berlioz ; the St. Cécile concerts, the classical *chambre matinées* and *soirées*, the public and the private entertainments of the roving speculators—all are over. Little was therefore left to be done, except the resources of the military bands ; but the spirit of the managers of the *fête*, nothing daunted by the inopportune period, prompted the happy notion of resuscitating the famed Conservatoire concerts, in order to afford English amateurs a notion of French orchestral executing. What they have had, therefore, was a Conservatoire programme executed under M. Girard's direction, only that it was considerably lengthened, the monster bills of London, no doubt, having been quoted as evidence of our voracious musical appetites. But the fates were untoward. After a banquet of gigantic proportions, succeeded by a piece entitled the "Médecin malgré lui" of Molière, played by the company of the Théâtre Français, to expect that a concert commencing after eleven o'clock, and ending at half-past one in the morning, could be sat out, would, indeed, have been unreasonable. The conductor was evidently vexed at the lateness of the hour of beginning, but his forces seemed resolved that there should be a good notion entertained of their capabilities, for the opening chorus from Rossini's "Siege of Corinth" (a work well worthy of being produced in London) was spiritedly sung. As at the Conservatoire, the lady choralists were dressed in white, and the gentlemen in black, some of the principals of the Grand Opera joining in the choruses. The "Oberon" overture was vigorously attacked, and created quite a sensation : there is more delicacy in the undercurrent of instrumentation than at our Philharmonic concerts ; but I prefer Costa's energetic taking of the last movement to Girard's cold, mechanical beat. After the fashionable and dreamy chorus from Mozart's "Castor and Pollux"—not very smoothly done, by the way, the defective intonation being remarked—we had a slashing reading of Rossini's "Gazza Ladra" overture ; the witty passages for the wood band, the brilliant phrases for the stringed, the mile on rolls of the side-drums, the pomp of the brass, all the fineness, fire, and ideality of this admirable conception, were wonderfully developed. After a portion of Beethoven's "Ruins of Athens," the first part terminated, and there was an immense retreat of visitors. The second act began with Handel's chorus from "Judas Maccabeus," "See the conquering hero comes" ("Chumbus, chantons victoire"). In whom this paean was addressed, became a subject of much discussion. Some pretended that it was to the Lord Mayor ; others argued that it must have been to Mr. Bright ; some thought that it was to Mr. Paxton ; then it was ascribed to Mr. Fox as the man of iron, if not the Iron Duke ; again, Mr. Alderman Sidney was quoted, only he has not yet been admitted in the House of Commons. A French *feuilletonist* maintained that the hero must be Sir John Rennie, on account of London Bridge, but I am satisfied that the "Conquering Hero" meant was Mr. Wylde, who has raised the "Globe," and who was present wearing his order of the Legion of Honour, given him by Louis Philippe. After Handel's chorus was the treat of the night, Beethoven's Septuor, Op. 20 in E flat major. This great work, the *ne plus ultra* of chamber compositions, was originally written for violin, alto (viola), horn, clarionet, bassoon, violoncello, and contra-basso. Hummel arranged it for the piano, flute, and violoncello ; Czerny has arranged the Septuor as a pianoforte duet for four hands ; Liszt, more hardy still, has reduced its proportions to a pianoforte solo, and, as he plays it, the instruments of the original score are scarcely missed. We have even heard of this Septuor being adapted for two guitars ; but of all the arrangements known of this Septuor, nothing can be more wondrously exciting than its interpretation by the Conservatoire band. All the violins, all the tenors, all the violoncelli, all the contrabassi play, whilst the parts for the clarionets, horns, and bassoons are doubled. The effect is electrical ; happy were the amateurs who remained to hear this prodigious execution—to listen to the heart-captivating strains of the slow movements, to be moved and excited by the soul-stirring passages of the *thème varié* with its brilliant variations. It was the late Habeneck, so many years the conductor of the Conservatoire concerts, of which he was the founder, who first trained the players for this matchless specimen of instrumental imagery ; and the traditions of his fiery style have not yet been lost. The wild savage chorus of "Scythe," from Glück's "Iphigenia," followed : then came the final movement of Beethoven's Symphony in A ; and the concert was finished with the chorus, "The heavens are telling," from Haydn's "Creation." Thus, as is usual with the Conservatoire concerts, there was no solo singing ; the only departure from their custom being, that there was no solo instrumentalist and no complete symphony. It is much to be regretted that the hour of beginning was so late, and that, during the execution, refreshments were distributed—distracting the attention of the amateurs ; but an authority told me, that it was in accordance with English customs to interrupt the music, so we must be content with the intended politeness, if we cannot subscribe to the historical accuracy of the givers of the *fêtes*.

THE TRIP TO VERSAILLES ON SUNDAY.

The Sunday's visit to Versailles was not without its vicissitudes. The lion of the *fête*, the Lord Mayor, arrived so late, that even the frigid Chinese who had been so much stared at as the Lord Mayor, was out of patience, and gave himself an extra fanning. The curious in natural history are aware that the Arabs in the desert watch with intense anxiety the descent of birds, because where they fall there is a chance of water. The experienced travellers who were with the Mayor at Versailles followed him through all the mazes of the grounds, admired, like his Lordship, the playing of the hidden military bands, as well as of the fountains, in the fond expectation that where a Mayor would stop, there would food for the inward man be found. But, alas for all human hopes, the Mayor was an unlucky bird for the London Arabs ; there was no *buffet-dîner*, no refreshment room save the ghost of an Amiens *gouter*, in the way of cakes and champagne. The Mayor, after he had done with the troubled waters, disappeared by a military manœuvre of a flank march, and a gate of iron shut out the aspirants for a feed, leaving only the resources of a small *cabaret*, with stale sponge cakes, wishy washy table beer, or red ink *ordinaire*. The retreat of the citizens by the left and right banks of the Seine railroad was disastrous, and the nearest houses to the station were besieged for dinner, the knowing pioneers, however, seeking for the lively and hospitable *Chaumière*, where a good *cuisine* can be found.

THE PRESIDENT'S FETE AT ST. CLOUD ON MONDAY.

Monday's music at St. Cloud was very delightful—invisible bands of music being heard amongst the trees, and their charming playing, combined with the murmuring of the waters, and the presence of a serene sunny sky, with the feeling of a balmy atmosphere, formed a most delicious ensemble. When one of the bands was executing the music of Boieldieu's "Dame Blanche," in which the touching melody of "Robin Adair" is introduced, associations of bygone days were evidently presenting themselves to the devoted Royalist, to the staunch Imperialist, and to the steadfast Orleanist. The locality to each adherent of a fallen dynasty was replete with interest, and the sight of the Papal Nuncio walking in the grounds, and looked upon the Archbishop of Paris and divers Bishops promenading with their attendant priests—as we gazed upon the myriads of stars, orders, crosses, ribbons, and decorations that were exhibited,as we regarded the line of Cuirassiers in the gilded saloons of the Chateau, and the guests raised on the mind, if we were enjoying ourselves under the Republic ; and this reflection brings me to mention a very remarkable fact. From Boulogne, on Friday, to the hour I write, I have never heard the "Marseillaise," nor even a whistle from a *gamin* of the "Chant des Girondins." But I heard our National Anthem sung, played, chaunted monotonously, and was struck with amazement at the enthusiasm with which it was received at Amiens by the National Guards, the officers of the line, and by the population ; and, at St. Cloud, yesterday, the sensation of "God save the Queen" was no less marked on the part of the French auditory. Has this demonstration, by a nation of republicans, any significance towards us, or was there something of a deeper emotion in the Gallic heart, at the display of enthusiasm for our monarchical air? Having nothing to do with politics, I shall not attempt to reply to these queries—I state the fact, your readers may draw their own conclusion.

The *fête* began at three o'clock, and terminated at dusk. At five o'clock the Lord Mayor was received in the gardens by the President of the Republic. The Prince had promenaded through the grounds with the Marchioness of Normanby on his arm, and a long suite, the entire afternoon, doing the honours of the Palace with much grace and affability. The invitations had been liberally extended to all the chief civil and military authorities as well as to the foreign visitors. The banquet in the Orangery was attended with great confusion, owing to the rush of subaltern officers, who seemed little disposed to imitate the polite bearing of the host towards strangers.

THE GRAND OPERA ON MONDAY NIGHT.

I was present at the 103rd representation of Mayerbeer's "Prophète," on Monday night, at the Grand Opera. Again hearing this magnificent work, caused me to regret that the curtailments in the Royal Italian Opera have been so injudiciously and remorselessly done. I allude particularly to the last act, and to the one in the fifth act, in the tent scence, a piece which creates here always an immense effect. We are also a long way behind in our dance arrangements in this opera. If only to see the skating scene here, Paris is worth a visit ; so exquisite are the groupings, so perfect the *ensemble*. On the other hand, we have here decidedly the best orchestral and choral opera, with the exception of artistic delicacy and quality, in which French *artistes* cannot be rivalled. Of the new tenor, Chapuis, in *Jean of Leyden*, nothing can be favourably written. Mdlle. Masson's *Fides* is a sorry substitute for Viardot ; but if the representatives of the three Anaspatists in London could amuse the three actors here, a very different effect might be drawn from these ill-used parts at Covent Garden. Mdme. Ugalde has returned to the Opéra Comique—a theatre she ought never to leave. The third lyric theatre is in active progress and will be opened in September. The hopes of the Grand Opera are on Scribe and Halévy's "Wandering Jew," for which the decorations are preparing. As regards Gounod, the commission he has received to write a five-act opera, will suffice to show that he has made a real artistic impression, if not a financial one, by his "Sapho." Great exertions are making to urge Meyerbeer to hasten his "Africaine ;" but the Berlin composer will take his own time, as he did with the "Huguenots" and the "Prophète," only he must recollect that he has not the same time before him at his age, if he means to give his own traditions for the execution of his new work.

FETE ON TUESDAY AT THE BRITISH EMBASSY.

One of the most delightful of the entertainments given in Paris was the *fête champêtre* (as it may be termed) held at the British Embassy, in the Rue St. Honoré, on Tuesday afternoon. The invitations, amounting to many hundreds—stated that the Ambassador of England and the Marchioness of Normanby would be "at home" that day from three to six o'clock. Scarcely had the former hour struck, when several of the *invités* presented themselves ; and the arrivals thence until six o'clock were incessant. On arriving in the elegant *salons* of the Embassy, the guests were received by his Excellency, by whom they were in due form presented to the Marchioness of Normanby. By a quarter to 4 o'clock the receptions were so numerous, that the visitors, led by the noble hosts, repaired to the beautifully ornamented lawn of the edifice, at one extremity of which was located an excellent military band. By

a quarter past four o'clock, the lawn and alleys were crowded with the *élite* of Parisian society, in addition to the foreigners of note for the moment in the French capital. Nothing could be more charming and brilliant than the *toilettes* of the ladies, and many of the guests wore their orders and decorations.

Several *buffets* were laid out in the interior of the building, accessible from the gardens through parterres of flowers. These *buffets* were served in profusion with all the delicacies of the season, and with the finest and most rare products of the French, Spanish, Portuguese, and German vineyards. At six o'clock the company commenced a reluctan retreat.

Amongst the distinguished visitors filling the Embassy and the gardens were the President of the Republic, his sister, the Princess Stéphanie, Prince Paul of Wirtemberg, Prince Poniatowski Prince Murat, Prince Lievestein, Monsignor Garibaldi (Nuncio of his Holiness the Pope), several of the French Ministers, including M. and Mme. Léon Faucher, the Prefect of the Seine (M. Berger), the Governor of the Bank of France (Count d'Argout), the Marquis of Hereford, Earl Granville, Lady Augusta Hallyburton, Lord Frederick Hallyburton, the Misses Kennedy Erskine, Lord Ebrington, Lord Albemarle, Lord and Lady Wharncliffe, the Hon. James Stuart Wortley and Lady, Lord and Lady Gray of Gray, Lord Dunkillin, the Hon. E. Phipps, the Hon. Spencer Cowper, the Hon. Lady Dering and Miss Hamilton, General Sir John Burgoyne, Captain Stopford Claremont, Captain Stretfield and Mr. Lumley (1st and 2d Life Guards), General Carrilet, General Roguet, Viscount Peraigny; MM. Estanlan, Fleury, and Bacciochi; Major Nicholson, Drs. Oilliffe and Sutherland, Mr. Graham Vivian, Mr. Richards, Mr. Bright, M.P., Mr. Fitzroy, M.P., Mr. Shepherd (Chairman of the East India Company), Mrs. and Miss Shepherd, Mr. Hankey (Governor of the Bank of England) and Lady, Sir Anthony Perier, Mr. Brown, M.P., Mr. and Mrs. Woolaston Blake; the Austrian, Russian, Prussian, Danish, Swedish, Bavarian, Hanoverian, Baden, and Bohemian Ministers and their ladies; the Count de Thomar, M. Santa Cruz, the Hon. W. Stuart, the Hon. Richard Edwardes, Mr. Paget, Mr. and Mrs. Bransley Sheridan, the Lord Mayor of London; Aldermen Salomons, Humphery, Wire, Wilson, &c.; Mr. W. Cubitt (engineer), the Sheriffs of London elect, M. and Mme. Salandrouze, Mr. Pickford, (British Consul at Paris), the Lord Provost of Aberdeen, the Sheriffs of Glasgow and Ross-shire, the Mayors of Manchester and Bolton, &c.

THE BALL AT THE HOTEL DE VILLE, ON TUESDAY NIGHT.

The night was devoted to the great ball at the Hôtel de Ville, for which a great deal of preparation had been made. Most of the decorations employed on the night of the banquet and concert remained as they were, with many additional arrangements. Enormous vases of richest porcelain, filled with the choicest flowers of France, lined the magnificent marble staircase, and filled every niche along the vast halls and throughout the splendid *salons* of reception. At intervals along the interminable corridors, and on the landings of the staircases, gigantic candelabra of or mould, exquisitely ornamented, and resplendent with wax tapers, threw a softened brilliancy over the flowers, the statues, the fountains, and the gay visitors, which could not have been given by the most powerful gas lights. The dancing was confined to the great state saloon, which had been previously the scene of the banquet. The banners of many nations still floated gaily above the heads of the company; the wreaths of brightest flowers fresh from the *parterres* revelled in the light of myriads of tapers. The band was placed in the orchestra made on the occasion of the concert. At nine o'clock the company began to throng together, and by soon after ten there was little room to spare in the principal *salons*. It is said that 8000 invitations were issued, and most assuredly there must have been that number in the Hôtel de Ville between ten and eleven o'clock. At the latter hour the President arrived and walked round the chief rooms with the Marchioness of Normanby, followed closely by the British Ambassador, the Lord Mayor, the Ambassadors of other Courts, Lord Cowley, and several of our aldermen, and a number of French officials. It was with the utmost difficulty that way could be cleared for the party, so densely packed was the assemblage, by whom the Prince appeared to be cordially welcomed. The heat in most of the apartments was insupportable, a very few of the lofty windows having been left open, so that it was impossible to remain long in them, and the ebb and flow of the bodies to and from the great central court for fresh air was continuous. This court had been arranged with great taste as a flower garden; a fountain was playing in the centre amidst a mass of beautiful foliage, whilst around the exterior were placed benches, covered with silk damask, huge candelabra, and outside all, long rows of the most delicate flowering plants, both native and exotic. The freshness and quietude of this pleasant retreat contrasted most agreeably with the heated scenes above; its stillness was broken by the splashing jet of the fountain, and the soft strains of distant music and many voices. Thither, amongst others, Prince Louis strolled, accompanied by one or two of his friends, and chatted with some of the English gentlemen, evidently enjoying as much as any one the agreeable freshness of the spot.

In the various *salons*, gay as were the dresses of the French, both civil and *militaire*, the chief attraction seemed to be the court costume worn by several of our countrymen, and the military dress of some officers, the simple richness of which contrasted favourably with the gaudy finery and tinsel decorations of the French generals. Amongst the Parisian ladies flowers took took the lead in decoration, whether of the head or elsewhere, while in the colours the favourites were decidedly white and blue.

As usual, there was no lack of ices and iced drinks; but, amidst such a vast crowd, it was difficult to obtain a supply—the more so as the refreshments were issued by small detachments through little doors in remote corners of the rooms. In this particular our Parisian friends would do well to take a lesson from us.

By one o'clock, numbers of the guests began to leave, oppressed, no doubt, by the excessive heat and want of fresh air. At two, the rooms were perceptibly thinning, much to the satisfaction of those who were bent on keeping it up. At three o'clock, dancing was proceeding rather more vigorously than before; and not a few were found who were thus engaged when the clock struck four, soon after which there was a general break up. We have rarely heard more effective orchestral music than at this ball.

The Hôtel de Ville is a very remarkable edifice: it was commenced in 1533, after the designs of an Italian architect, Boccaridore, but it has been frequently repaired and beautified, especially in Louis Philippe's reign. The apartments are extensive, handsome, and commodious. The principal hall is a vast parallelogram. On looking at the gay throng of Tuesday, reminiscences were raised of the strange scenes witnessed in the interior. Louis XVI. was brought from Versailles here by the mob, and exhibited from the windows. During the three days, fighting of 1830, the Hôtel de Ville was taken and retaken several times. It was herein that Louis Philippe was proclaimed Lieutenant-General of the kingdom, and, subsequently, King. It was here that the "Gouvernement Provisoire" proclaimed the Republic in 1848, and held for some days their sittings. It was here that Cavaignac installed himself as Prefect of Police, and the orgies of his followers took place. I saw the edifice at that period, and could not help contrasting the costumes of the ruffians who were then in possession, with the gay toilettes of the *ancien régime* so frequently seen on Tuesday night.

THE REVIEW ON WEDNESDAY.

There is a story of a German Prince, who, after entertaining a powerful visitor and bestowing upon him all the attention which the most magnificent and courtly hospitality could suggest, sent the whole of his standing army to escort him home. In a somewhat similar manner, the Parisians, after providing their English guests with balls, concerts, and banquets, invite them to witness one of the grandest military displays that have been seen in France; although, to avoid an entire resemblance to the German Prince, and to prevent the possibility of a compliment being in any way misunderstood, they follow it up with a performance the same evening at their principal theatre, part of which is devoted expressly to the celebration of the good feeling existing between the two countries. The Review, which took place on Wednesday last, in the Champ de Mars, must be considered, then, as the *grand tableau* of a holiday entertainment, in which the fountains of Versailles and the ball at the Hôtel de Ville were two of the most beautiful scenes. No series of *fêtes* can terminate satisfactorily in Paris without a review. A dinner without a dessert, a ball without a supper, or even a quadrille without the last figure, would not be more incomplete. And it is not surprising that a grand review should be an object of so much interest in a country like France, where the standing army is so recruited, and is so large, that nearly all families must have some friend or relative actually employed in the service. There the military idea is exhibited as well in the sports of the children as in the trousers of the men. The wish to be mistaken for a soldier is as evident in the case of the mechanic, who delights in Sunday garments approximating as closely as possible to a regimental pattern, as in that of the child, who prefers strutting about with an impracticable gun over his shoulder, and, alas! a too practicable drum at his side, to the more active, but less glorious pursuits of cricket and leap-frog. Look again at the French vaudevilles, one-third of which have a soldier for their hero; whereas, in England, a private in the Guards of the present day becomes useless for dramatic purposes directly we separate him from the policeman and the ordinary class of low-comedy characters.

If we consider the military feeling in France, which proceeds from actual love of destructiveness, as separated from the taste for theatrical display, is it not shown in the inordinate number of booths devoted to shooting purposes which are to be found outside every barrier, at all the fairs, large or small, and permanently in that part of the Champs Elysées which is generally given up to amusements of the Greenwich Fair description? And these are no ordinary arenas for the display of proficiency in the use of fire-arms. Some of the meaner ones, which are patronised by the more quiet order of destructionists, are certainly provided with the ordinary target to which we are accustomed in the galleries of our native land, and nothing more; but every keeper of a shooting-booth with the slightest pretensions to bloodthirstiness, furnishes his marksmen with a hideous human figure, on which the heart is painted in brilliant red, without much regard to anatomy, but at the same time in such a position, that a bullet piercing a corresponding part of a live biped would cause very unpleasant consequences. These latter are, of course, intended for the use of homicides in general; but the amateur murderer of a particular individual is not left uncared for, provided always that his wished-for victim be of sufficient elevation in the social scale. Many of the booths are filled entirely with plaster busts of unpopular ministers. The images of the late King of the French is now fired at more often in the course of one hour than the original was during his entire reign. M. Guizot may be perforated with bullets at the rate of three for one *sous*, and M. Thiers may be shot through his spectacles at an equally economical rate.

Moreover, a really grand review must have attractions even for a member of the Peace Congress; and any person who has ever derived the least gratification from witnessing a military spectacle at Astley's in London, or at the Cirque in Paris, must feel unbounded delight at seeing manœuvres executed, with all the precision of "real soldiers," by a troupe, the engagement of which for a single day would be more than sufficient to ruin a management backed by the united capital of all the theatres in Europe. Indeed, the theatre in Paris which is particularly devoted to military representations, would soon have to close its doors, if the Champ de Mars were once to enter into competition with it. We admit, that an interest is excited on behalf of the heroes of warlike dramas which is not at all felt in the case of a general reviewing his troops in actual life; but what can equal the series of magnificent *tableaux* presented to us in the latter instance? and how superior is the training of the supernumeraries!

The authorities, however, on the present occasion, determined to give as much dramatic interest as possible to the operations of the army of Paris; and, accordingly, the official programme, as published in the *Moniteur de l'Armée*, announced a *simulacre de combat*, or sham fight, to take place between two hostile armies, stationed on opposite sides of the Seine. The army on the left side of the Seine occupied Grenelle and the Champ de Mars, and consisted of General Guillabert's division, a brigade of cavalry, a reserve composed of the cavalry of the Republican guard, and two brigades of artillery. The army of the right bank occupied the Trocadero and the Bois de Boulogne, and was composed of two divisions, commanded by Generals Carrilet and Forey, and four brigades of artillery, under the command of General Carrilet. The number of men engaged is not stated, but is set down by military amateurs at from twenty-five to thirty thousand. It is also impossible for us, in the absence of any official document, to give any precise idea of the comparative numbers of the two armies; but it would appear that the army of the left bank was the richer as regards cavalry, while that of the right had more artillery.

On the eve of the day fixed for the Review, an announcement appeared in the journals, and on placards posted about the city, to the effect that the President of the Republic, taking into consideration the extreme heat of the weather, had resolved to postpone the military operations from eleven in the morning until four in the afternoon, at which period there appeared some possibility of the soldiers going through their duties without experiencing an almost mortal fatigue; for the heat during the two previous days had been so excessive, that a "*simulacre de combat*" at noon would have been scarcely preferable to an actual engagement towards sunset.

And there were other good and valid reasons why no such amusement should commence at an early hour on Wednesday. For the ball at the Hôtel de Ville, on the night previously, had been kept up to an unusually late hour, and there was no necessity, in the present happy time, for introducing the cannon's roar too abruptly after the "sounds of revelry by night." Besides, many of the officers who had to serve in one or other of the hostile armies destined to meet in friendly warfare, were old campaigners at the Italian Opera, and had seen much hard service at the Opera ball and Café Anglais: it is well known that such heroes exhibit the greatest physical endurance during an entire night, and even refrain from retiring to rest until day has nearly broken; but it is also believed that early rising is not enforced in any article of their military code. So this as it may, the sham fight was put off until the heat should have passed away. If real fights were postponed until all unnecessary warmth had subsided, we imagine that few would take place at all; but the army on the left bank of the Seine had no idea of postponing its attack on its hated rival one moment later than four P.M., and, accordingly, on the morning of the day in question, the streets were crowded and the shops empty. Tradesmen gave up all idea of profit and loss for the day, and close their establishments to betake themselves to the field of action. Others, unable to reconcile themselves to the idea of entire cessation from business, nevertheless forsook their counters for several hours; most of the Parisian idlers, all the visitors from Great Britain (and Paris, to borrow a military term, is now literally occupied by the English), in fact, the population generally, were out of doors even before the sun had attained a sufficient altitude to recommence his present popular process of scorching pedestrians within an inch of their lives—the sun which will inevitably send back "the blond misses of Albion" with such complexions, that the epithet which their French admirers are so fond of applying to them will appear only capable of an ironical interpretation.

Although the actual operations were not to commence until the afternoon, a great deal in the way of marching through the streets of Paris was gone through in the morning. The troops during this performance presented a far more military aspect, in the conventional sense of the word, than is usually the case. The discipline of the French army does not, as a general rule, enforce the same rigid attention to personal deportment in the individual, and uniform action in the masses, which we find in our own. Whole regiments march out of step, and in an apparently slovenly manner; while the muskets of 2000 men, instead of being all turned in the same direction, rise towards the sky at 2000 different degrees of elevation. It is held by the French officers, that the seemingly negligent manner of marching, whether graceful or otherwise, enables the soldier to get over more ground than the more formal and measured tread adopted by fancy regiments, such as our Foot Guards. It is considered unimportant that the muskets of a regiment in marching order should be shouldered so as to form parallel lines one with the other; but it is deemed essential that this regiment should know how to bring them all to bear on the same object at the same moment. The barrels of the fire-arms used by the French army are certainly not remarkable for brilliancy; and the sun is not reflected from them in so pleasing a manner as the military amateur might wish: the fact is, they omit to polish their muskets with sand-paper, because, although it makes them look very pretty, it at the same time renders them extremely liable to burst. This attention to the essential and useful, and the neglect of the ornamental and worse than useless, part of the military profession is carried to such an extent, that during an ordinary parade, when a temporary cessation in the inspection of any one company has taken place, the officers of this company will take out their cases and smoke their cigars among the privates; and the privates will take out their pouches and smoke their pipes by the side of the officers.

On Wednesday last, however, it was evident that the army of Paris had put on its holiday manners with its *grands beaux*; and, certainly, so long as a review is not a battle, polished muskets, splendid accoutrements, and a good theatrical style of drill will be essential to its success. The appearance of the troops was accordingly all that the most ardent soldier of the most fashionable tailor could desire. The army of the *rive droite* appeared boiling with indignation at the thoughts of what the legions of the *rive gauche* were preparing for them; and the cohorts of the *rive gauche* were evidently thirsting for the blood so soon to flow from the *rive droite*. The finest regiments physically, as well as regards dress, are now in Paris; and certainly, if the soldiers owe something to the accoutrements for their magnificent appearance, the accoutrements are also indebted for theirs to the manly appearance of the "braves" who wear them.

On contemplating these picked regiments hurrying to their posts, it is absolutely mortifying to think to what an extent the arts of peace have been laid under contribution for the greater glory of the art of war; how every improvement in science which has been calculated to increase the happiness of mankind, has been shortly afterwards turned to purposes of destruction; how discoveries which should only have had the effect of softening our manners, have, with Satanic dexterity, been made the means of rendering them more ferocious. Take one of the best cavalry regiments in Paris; look at the breed of the horses (for the French cavalry are the best mounted equestrians in France), and observe all the latest improvements in saddles, bridles, stirrups, and spurs exhibited in the equipments. Of course, too, all the carbines have percussion locks; while many a rural sportsman (on whose class they were originally invented by a peaceably disposed individual) is obliged to make uncertain attempts on the lives of small birds with a steel and flint fowling-piece. During the peace the French have made great improvements in certain departments of hardware manufactures; and, accordingly, an officer in a light dragoon regiment has a blade which would do honour to Saladin or the gentlemen who bisect legs of mutton in Leicester-square; while at an ordinary Parisian *table d'hôte* you can't find a knife sufficiently sharp to cut a hard-boiled potato through the middle. How long had the steam-engine been invented before the steam-gun was spoken of? and it is only yesterday, just when the electric telegraph is attaining something like perfection, that we hear of an electric cannon, with power to do evil in exact proportion to the power to do good possessed by the humanising invention which suggested it. In the meanwhile, we must not forget that peace has derived some advantages from the one great discovery which was originally intended for war alone: gunpowder is frequently used for clearing out the crooked little flues of old-fashioned stoves, which could not be thoroughly cleansed by any other process.

But we must return to our armies on the opposite banks of the Seine. In order to prevent general inconvenience, and to render the occupation of Grenelle and the Bois de Boulogne an exploit of no great difficulty, A general order had been issued, by which ingress and egress to and from certain parts of the scene of war was forbidden after ten o'clock. It was not long after that hour when signs of excitement on the part of the so excitable Parisians became apparent. People who were determined to get good places hurried to the scene, without regard to the hours during which they would have to wait, and the sun by which they would be scorched, and long before the ground had been marked out, the Champ de Mars contained a sufficient number of persons to have made the fortune of M. Poitevin, the aëronaut, had their object been to witness one of his popular ascents; for the Champ de Mars is not exclusively a military arena: not only have its sands been trodden for months past by the most skilful Arabian acrobats we ever beheld, but M. Poitevin and Madame Poitevin, and M. Poitevin's carriage, and Madame Poitevin's horses, have been in the habit of making it their starting-place for their weekly wanderings in the air. Of late the Champ de Mars has almost forfeited all claims to its title; it has been dedicated more to the god of the winds than to the god of war; and the commander of the army of Paris, with his staff, has been seen there far less frequently than M. Poitevin with his tri-colour car with a phaëton and two horses attached to it.

But it was time for more serious display when the army of the left bank began to exhibit unmistakeable intentions of attacking the enemy. The assault was soon commenced. Each force set to form a bridge across the Seine, several companies of *voltigeurs* crossed over in their boats, and, under the protection of their fire and that of the artillery, a line of boats was at last constructed, over which two battalions immediately passed in order to attack the head of the bridge on the left; while two others, who had at the same time crossed the Bridge of Jena, attacked it on the right; and four other companies who had crossed the same bridge, threatened it from the front. These three attacks were made simultaneously; and we certainly thought that General Guillabert and his army on the left bank were going to have it all their own way, when suddenly a body of soldiers issued down from the Trocadero and the ground behind it in sufficient numbers to make it advisable on the part of the army of the left to beat a retreat, and to repass the bridges; after which they destroyed the line of boats which had been thrown across the river, and formed again in the Champ de Mars under the protection of the artillery and cavalry.

The review commenced at four o'clock, and perhaps it would only be fair on our part to chronicle a drawn battle, which is all we could anticipate from the admirable manner in which both sides behaved. The army from the army of the left, not content with repulsing the enemy, actually followed them into the Champ de Mars, and gave them a complete thrashing in the presence of one of the most brilliant assemblages ever collected "in this or any other field of battle." The army of the left General Guillabert, with the greatest success. In fine, the "*armée de la rive gauche*" met with the treatment which its insolent conduct deserved, and we have no doubt that the result gave the greatest satisfaction to the distinguished visitors present.

The various movements, considering the confined space, were executed with the greatest precision. The charges of the cavalry were much admired, especially those of the dragoons and carabiniers. The hussars also showed to the utmost advantage. Several accidents occurred, owing to the riders losing their seats. The President of the Republic rode rapidly by to the dismounted hussar to ascertain the extent of his hurts. The Prince rode a magnificent charger, and his style of riding was universally admired. With his staff he was a strange admixture of uniforms. Marshal Narvaez was present with two aides-de-camp. General Sir John Burgoyne Captain Stretfield and Mr. Lumley, of the 1st and 2nd Life Guards, were in full uniform. The troops did not begin to defile before the President, who wore the uniform of a General of the National Guards, before six o'clock; the passing of the cavalry in full trot was very imposing. Various calculations were made as to the number of troops; we estimated them at 30,000; viz. 4000 cavalry, and 26,000 infantry. All the members of the Peace Congress had been invited to this review, and we recognised Mr. Bright, M.P., in one of the tribunes. The light infantry, particularly the Chasseurs de Vincennes, attracted the highest admiration. Their activity is astonishing, and their steadiness in mixing amongst the masses of charging cavalry won universal applause—for, shame as the fighting was, it became a reality to many of these skirmishers, three or four of whom were driven down by the horses, and severely injured. It was past seven o'clock before the review was over, and the return to Paris of the troops was also as animated a spectacle as the assembled masses of soldiers on the field of battle. The Prince was very respectfully received, if not cordially; he was generally saluted with cries of "Vive Napoleon"—we heard no mention of the Republic.

THE GRAND OPERA ON WEDNESDAY NIGHT.

The performance which took place this night at the Grand Opera, in honour of the guests of London, was a magnificent spectacle. The invitations were thus expressed:—"Académie Nationale de Musique, le Mercredi, 6 Août, 1851. Représentation extraordinaire offerte par la ville de Paris à Messieurs les Commissaires délégués de l'Exposition Universelle de Londres;" and the number of the reserved place was then specified. After the sham fight in the Champ de Mars, the crowds formed on the Boulevards leading to the Rue Lepelletier, anxious to obtain a glimpse of the lion of the capital, the Lord Mayor. The rows of chairs before all the *cafés* were increased tenfold; and, as at the corner

of the street leading to the opera-house there were gas illuminations. nothing could be more animated than the aspect of the vast populace. The exterior of the theatre was lighted up with garlands of gas-lights At eight o'clock the first act of "La Juive," of Halévy, was commenced, but few of the foreigners invited having arrived, owing to the lateness of the hour at which the review ended. At the Corinthian columns of the proscenium, and at those of the angles of the *façade* of the boxes, tricoloured flags were clustered, a large eagle being a remarkable object in the centre of each group of flags. The beautiful music in the first act of this work, comprising the lovely melody of the *Cardinal*, with its elegant orchestral under-current, the serenade of *Leopold*, and the septuor of the drinking chorus, were but indifferently executed; but Mdlle. Poinsot and Gueymard, the tenor, by their energy in the finale, "Oh, ma fille chérie," created a great effect. The Lord Mayor arrived towards the close of the first act, but was not recognised by the audience: not so the Chinese, over his head, in the public boxes, who was again the observed of all observers. At the beginning of the fourth act (the third at Covent-Garden) Lord Normanby and Lord Granville joined the Lord Mayor; and just as the *duo finale* between Mdlle. Poinsot (*Valentina*) and M. Gueymard (*Raoul*) was ended, the President of the Republic entered his box, on the first tier on the stage, next to that occupied by the English Ambassador. No recognition of Prince Louis Napoleon took place on the part of the auditory: he had changed his dress of a General of the Legion of Honour to that of a private gentleman. He looked in excellent health and spirits, as if quite satisfied with his day's campaign in the Champ de Mars.

As Gueymard is now the star tenor of the Grand Opera, it will be necessary to observe that he has considerable fire, both in his acting and singing, but that he wants style and refinement. I must confess, that I prefer the stage action of the "Conjuration des Poignards" to that adopted in London; but our musical execution is far preferable. Besides the two acts of "La Juive" and "Les Huguenots," the second act of Auber's "Enfant Prodigue"—with Mdlle. Dameron as *Jeffelle*, Madame Laborde as *Nephté*, Mdlle. Robert, an exquisite *danseuse*, as *Lia*; Obin as *Beaucheris*, Gueymard *Azael*, and Morelli, a capital baritone, *Ruben*—there was also a comic representation by Desplechin, the Grieve of the Grand Opera, of our Crystal Palace, with a new ode, "Les Nations," prepared for the occasion. M. Théodore de Banville is the author of the poem; and M. Adolphe Adam, the popular composer of the "Postillon de Lonjumeau," "Le Brasseur de Preston," "Le Torréador," &c., has written some charming music, vocal and choregraphic. M. Arthur Saint-Léon (husband of Cerito) has arranged the incidental *divertissement*. As regards the operatic portion, Mdlle. Masson represented *England*; Mdme. Laborde, *France*; M. Obin, *Labour*; and M. Chapuis, *Commerce*. The dance divisions were assigned to Mdlle. Marquet, *Peace*; Mdme. Flora Fabbri, *Glory*; Mdlle. Mathilde Marquet, *La France Guerrière* (France belligerent); the charming Celestina Emarot, *England*; Mdlle. Robert, *Spain*; Mdlle. Caroline, *Turkey*; Mdlle. Savil, *America*; and Demoiselles Pierron, Lacoste, and Nathan, the *Northern Nations* (*Prussia, Russia, and Austria*). Besides a *pas de deux* between Mesdames Rousseau and Astory, there was a *pas* of the three colours—white, red, and blue—and a ballet of the nations by the representatives I have named. The ode opened with *France* calling on the *Patrie* to sing to *Peace, Art*, and *Labour*, in harmony with the *Muses*; and the chorus echoed the voice of *France*. After this eloquent exordium, *France* announced that "l'Angleterre aux yeux bleus" (Saxon, we presume) had quitted the Crystal Palace to be present at the French *fêtes*: the *Maîtresse des Mers* (the ruler of the sea) and a flourish of brass introduced the *Nations*, around whom the chorus grouped gracefully—an imposing *cortège*, in which there was a car, surrounded with clouds, on which (the car) *England, Labour, Commerce, Manufactures*, and the *Arts* guided the nations towards *Glory*, with *Peace* serenely looking on. *France* then addressed *England*, in what is designated in a6rdinner phraseology a "neat speech;" and *England* responds:—

O ma sœur, une reine a pour la Liberté
Elevé d'un régard mon Palais enchanté.

Or, in plain words, that our gracious Queen, for the sake of liberty, had improvised an enchanted palace; and then Mdlle. Masson, equally complimentary, as the Anglican deputy, told her sister (*France*) that she produced under her "*beau soleil*" dinty wines. She insists that the two countries should remain united by a thousand harmonies, and that they should be a cordial pair for the "*genre humain*." Then, rejoined *France*, very characteristically, "Let us cement our hymen by a dance;" and *England*, like a *prima donna* in a grand opera, being conducted to a seat, the dance began with some forty damsels dressed in the national colours (tri-coloured), the groups depicting the suspended banner of Republican France. After this the nations had a turn, each with an appropriate emblem—*France*, with a lance; *England*, with a ship; *America*, with merchandise; *Spain*, with its Toledo blade; *Turkey*, with its dancing almées; *Prussia*, typified by Meyerbeer sounding the trumpet of Fame for the "Prophète" and "Huguenots;" *Russia*, with its pickaxe, seeking for gold in the mines; and *Austria* holding the Italian fyre. This dance music of Adam was enchancing; and after the divers *pas*, a hymn was sung eulogistic of the arts of Peace and Labour; and, finally, the Crystal Palace appeared in the midst of an allegory in honour of Commerce and Arts.

The delegates of the Exhibition had, most assuredly, little reason to be critical touching M. de Banville's inspirations, and M. Adam's melodious developments thereof. That such an ode should have been presented at a national opera-house in France, must be looked upon as one of the most remarkable demonstrations of the age—a reaction in public opinion between the rivalities and jealousies of two nations that may lead to the most important results.

CONCLUSION OF THE FETES.

With the performance at the Grand Opera on Wednesday night, ended the grand *fêtes* given with such hospitality by the Ville de Paris to the Commissioners of the Exhibition, and to the civic authorities of London. Besides the public entertainments, the guests were cordially received at the private houses of their friends; and *déjeuners à la fourchette*, and *dîners* at the famed *restaurants*, abounded. Men of all shades of public opinion met in friendly converse; violent antagonism was cooled down in moderation; and the past, present, and future were canvassed with calmness by the extremes of all parties. A general spirit of candour seemed to prevail as to the respective claims for superiority in each country; the advantages of very opposite forms of government were discussed, with the evident desire to arrive at a pacific solution of all intricate systems. These meetings were perhaps some of the most curious results of these *fêtes*, and may lead to very important results. It is impossible to eulogise too highly the disposition on the part of the public, as well as of the authorities, to bestow every attention on the visitors. If an Englishman found himself in a train or in a public room, without the facility of describing his feelings or wants in fluent French, ready interpreters were soon found; and often the eloquent expression of the eye was seen to convey the friendly sentiment which ignorance of the language could not give vent to verbally. This will be a lasting benefit to the French capital. Many antipathies have been removed, many prejudices dispelled, many errors corrected, many enmities ended, and many friendships cemented. "If," exclaimed with fervour a once well-known hater of the English to one who had been equally bitter against the French, "nous ne pouvons pas être des amis sûrs, soyons au moins des ennemis généreux." The apostrophe was received with enthusiasm in a large circle of distinguished men of great extremes in politics; and it will not be without an echo in both countries. Yes! if we cannot be stanch friends with our neighbours, let us, at least, be generous enemies.

THE ILLUSTRATIONS.

In our present Number appear the following Engravings:—

No. 1.—Reception of the Lord Mayor at the railroad station of the Chemin du Nord in Paris.
No. 2.—Portrait of M. Berger, the Prefect of the Seine.
No. 3.—Arrival of the Lord Mayor at the Hôtel de Ville.
No. 4.—Banquet at the Hotel de Ville.
No. 5.—Ball at the Hôtel de Ville.
No. 6.—The Grandes Eaux, Versailles.

Next week we shall continue to illustrate the incidents of these magnificent and unprecedented *Fêtes*.

M. BERGER, PREFECT OF THE SEINE.

Our Artists present a very striking portrait of the Prefect of the Seine, in this day's columns. Jean Jacques Berger was born at Thiri (Puy-de-Dôme), on the 21st of June, 1790. His father was a papermaker. At thirteen years of age, M. Berger was sent to the Lycée Napoléon, in Paris, to study; and he became an advocate, ultimately purchasing the practice of *avoué* (attorney), in 1819. On the 29th of July, 1830, he was made Mayor of the *arrondissement* of Paris; and, in 1833, sold his office of *avoué*, to devote himself exclusively to municipal affairs. In 1837, he was elected a deputy. On account of his strong opposition in the Chamber, the Ministry, or rather Louis Philippe, dismissed him from the post of Mayor; and, against the wishes of the electors, another candidate was chosen. In 1842 and in 1845, he was at the head of the poll for Mayor, but the Cabinet continued to prefer the candidate with the inferior number of votes. In 1846, he was elected deputy for this very second *arrondissement*, as well as for another place; the electors of the former proving that they were resolved to have him their representative, if not their Mayor: M. Jacques Lefebvre was beaten on this occasion, and the contest created intense interest throughout the country, so much so, that the Ministry, on his re-election as Mayor in Dec., 1847, was compelled to accept him, indicating the increasing strength of the Reform or Republican party. M. Berger was present at the famous Château Rouge banquet, and was elected Commissary of the Banquet of the second *arrondissement*, prior to the revolution of February, 1848. On the 21st, he signed the act of accusation against the Ministry. On the 25th of February, he was maintained Mayor by the Provisional Government, and subsequently he was made Prefect of the Seine. His personal character stands high. The Lord Mayor has been his guest at the Hôtel de Ville, the official residence of the Seine Prefect. The attention of M. Berger towards the English during the *fêtes* has been marked.; it was through him that the Ville de Paris issued its invitations to London. He has a tall commanding presence, and he speaks well.

THE "SPIRIT," NEW WELLED FISHING SCHOONER.

MR. ROBERT HUNTLEY, Greenwich, has lately had built at Sandwich, by Mr. James Hood, a beautifully modelled schooner, fitted with a well in the centre for fishing purposes. Her burden is 116 tons, new measurement. Her dimensions are:—length of keel, 74 feet; breadth of beam, 18 feet; depth of hold, 10 feet; length of well, 22 feet.

The peculiarities of this vessel's well from those in cod-smacks is, the well is divided into three compartments instead of two, and the holes through the planks that lead into the well, instead of being round, are cut longitudinally, or lengthways. Each hole may be about six inches long and one inch wide. This improvement is to admit more air into the well, and a more free circulation of water. The vessel is strongly built, and is coppered and copper-fastened.

The *Spirit* is now engaged in the eel trade, carrying living eels from Ireland to market. The eel trade continues about four months in the year. The remaining part of the twelve months she will be employed in the Iceland cod fishery. The proprietors of this schooner give considerable employment to many of the inhabitants of inland towns in Ireland, fishing for eels in locks and lakes, &c. Last year they imported upwards of 100 tons of eels from Ireland, the most of them large.

The cubic contents of water in well is 1200 feet; will carry 20 tons of eels alive, or 3000 cod fish.

The *Spirit* was built under the superintendence and inspection of Mr. J. Bishop, Greenwich.

To Mr. J. E. Saunders, Lower Thames-street, Mr. Howard, of Manningtree, and Mr. Dempster, who has long advocated fishing improvements, some credit is due for their constant exertions in keeping the important question before the public.

"THE SPIRIT," WELLED FISHING SCHOONER.

THE TOTAL ECLIPSE IN NORWAY.

The *Scotsman* of Saturday last contains an interesting communication from the Astronomer-Royal for Scotland, who proceeded to the western coast of Norway for the express purpose of witnessing the solar eclipse of July 28. This account of the remarkable phenomenon is important, not only as being the first which has appeared in this country from any quarter in which the eclipse was total, but as being probably the only account which we shall have from all that part of the line of complete darkness, which, whether seeming to prevail everywhere else in the neighbourhood, which was, moreover, one that could hardly have been reached but for the unusual assistance which was obtained in the present case. The paper is as follows:—

"After all that has lately appeared in print in various places, it is, perhaps, hardly necessary to dwell on the extreme importance of a total eclipse being observed at that narrow strip of the earth's surface where it is quite total. There it is everything, elsewhere it is nothing. That is, there a darkness approaching to that of night is experienced, lasting most of interesting phenomena then, and then only, reveal themselves, and furnish the only clue, which we can ever hope for, to the physical nature of the light and heat giving surface of our sun, with the state of which all well-being is so intimately bound up. But elsewhere than on that contracted line, but one hundred or one hundred and fifty miles broad, though the eclipse be a large one, still, if the smallest particle of the sun's disc be left unobscured, there is still the brightness of day, and none of those phenomena are displayed.

"The places where an eclipse will be total, are, in the present state of astronomy, easily and accurately computed beforehand, so that observers may choose their stations with certainty. After full consideration of what was preparing and was likely to be done elsewhere, there seemed a probability of the western coast of Norway being less effectively occupied than any other part of the line; by reason, probably, of its inaccessible nature, caused by the absence of any direct means of public conveyance by sea or land. But, at the same time, the eclipse happening earlier there than in any other part of Europe, would render it, in so far, the most eligible station of all. A representation was therefore made by the Astronomer Royal for Scotland to the Commissioners for Northern Lighthouses, on the important results which might accrue to the science of astronomy, from the line being well observed on the western coast of Norway; and the Commissioners, with their usual readiness to do all that they fairly and properly could towards the promotion of science, without detriment to their own immediate duties, unanimously awarded. The latter description was supplied by making application to the hydrographic department of the Admiralty, which, in the person of its chief, Sir F. Beaufort, not only offered the loan of any of the royal navy's surveying instruments, thus rendering the Scottish expedition more complete in this respect than perhaps any other, but prevailed on the Board of Admiralty to procure through the Swedish ambassador, from the Government Bureau of Norway, full leave for the party to land with their instruments on any part they pleased of the coast of Norway, of which, moreover, he procured an accurate manuscript chart.

"These matters, therefore, being arranged, the astronomical party being taken on board as the vessel passed on its way to the Shetland Isles, and the inspection of the lighthouses there being completed, a rapid run was successfully accomplished to the Norwegian shore, and a station was selected on one of the outlying Bue Islands, in lat. 61 deg. 50 min. This position not only placed us in the centre of the line of shadow, but gave us a clear horizon in the direction of the sun at the time of the eclipse, and removed us sufficiently far from the great meridian chain of mountains, running along the western coast of Norway, and gathering about them that morning a multitude of clouds, to make up, as it seemed, by an unprecedented deluge of rain, for the unusually long space of uninterrupted fine weather which had been experienced before our arrival. The instruments were landed at an early hour, and there were sufficient glimpses of the sun through the clouds to obtain the necessary observations for time and for latitude; and before the commencement of the eclipse each observer was told off, with his instruments prepared, and with a code of instructions. These, too, were so arranged, that, by division of labour, it was hoped, that, although the important part of the eclipse was of so short a duration, and the number of phenomena to be noted so many and various—that yet none of them, whether referring to the purely astronomical bearings of the case, or to cosmical or terrestrial physics, could be overlooked—that is, weather only permitting, but this was by no means so favourable as could have been wished. Still, however, the commencement of the eclipse was very fairly observed, and sufficient time was gained for its progress to enable the observers to take accurate notes of some spots on the sun, and of mountains on the edge of the moon, so as to be prepared to state their degrees of connexion, as regards place, to those wondrous tongues of light, and the variations of the corona, the most inexplicable and the most important of all the phenomena present at during a total eclipse. Further, the instant of complete obscuration was observed very accurately, and some interesting features were remarked, tending to explain anomalies perceived in former total eclipses, and especially fluctuations in the degree of brightness of the sun's surface. Immediately after this, however, the clouds became so very thick, that the emersion of the sun was not seen at all, and heavy rain beginning soon after, continued through the rest of the evening. But the terrestrial phenomena, to which more attention could be turned on the loss of the celestial ones, were of a nature abundantly sufficient to satisfy any soul capable of entering into and appreciating the awful and the sublime. As the totality approached, the air felt sensibly colder at every moment, and the darkness plainly increased; the clouds seemed to lower, and under the sun was seen an appearance of rushing and ascending vapour—like that from the sea-birds appeared by their noise to be gathering around the rocks for their nightly rest or for shelter. The difference of illumination had also become very marked on the mountains at different distances, those far from us being brought out with a vividness and distinctness which made our own increasing gloom the more observable. Suddenly, at the moment of totality, the very extremity of darkness seemed to fall upon us. Not so, however, absolutely; for the rain clouds, which closed in the greater part of the horizon, left open a strip of sky extending from N.W. to E.N.E., and two or three degrees high, and which at this moment became of a dark lurid orange colour, verging from red on one side to greenish on the other, and enabled us barely to see each other by a faint unearthly sort of light. Small hand lamps, 50 or 60 yards off in a hollow, were as visible as in a dark night, and with their red colour contrasted strangely with the general green hue of everything immediately around. But the appearance of the country seen through that lurid opening under the clouds was the most appalling. Though standing in the centre of the shadow, we could yet, by reason of their great height, see the distant peaks of the lofty Jostedals and Dovrefjeld mountains, still illuminated by the rays of the sun descending upon them from on high, but we were shut out from any other darkness. Some approximation to the appearance might be obtained by watching the opportunity of a similar configuration of clouds in the north from the Calton Hill during a midsummer's midnight, but still it would be only an approximation, for never have we observed all the lights of heaven and earth so entirely confined to one narrow strip along the horizon, never that peculiar greenish hue, and never that appearance of outer darkness in the place of observation, and of excessive distance in the verge of the horizon (caused in this case by the hills there being more highly illuminated as they receded, by a less and less eclipsed sun; while in a morning or evening sky they are, on the contrary, most in the shade, and, therefore, are dark and unnaturally thrown forward). Though none of us were unmoved with gratitude at having been allowed to witness such a spectacle, though we should have been glad to have enjoyed its teaching for a longer space of time, and should have been alarmed, indeed, if it had not happened as it did, and with such wonderful accuracy to the computed time, yet a certain feeling of relief was experienced when the lurid streak in the sky suddenly changed to yellow, when the clouds brightened up, and the darkness seemed to be wafted visibly away to the southeast. The sea-birds that had stopped their screaming during the darkness now reappeared; but the wild harmony of these cockylaes, and of the congregated auks previously around us during the commencement of the eclipse, when the light returned where were they? Gone to hide themselves in their huts, thinking that they were in the jaws of destruction; amongst the stones of darkness and in the shadow of death. Such, we heard afterwards, was the general feeling amongst them all along the coast, even beyond the limits of total obscuration. Horses and oxen began to wend their way homeward, and geese to fly up to their roosts; but one farmer informed us that an amusing scene of confusion took place when the fowls found the darkness coming on so quickly that they could not all get placed on their perches in time; and then, again, when they found by the quickly returning light that they had had a false alarm. We also heard that there had been over all that line of the country such excessive rain that day, that our party, enabled by the lighthouse steamer to take up the peculiar position we did, was probably the only one that had had the good luck to make any accurate observations; a circumstance the more fortunate, inasmuch as that was the earliest part of Europe visited by the shadow in its progress from west to east."

CLEOPATRA'S NEEDLE.

(To the Editor.)

Allow me to correct a statement which appeared in your Journal of June 28, being the Egyptian Obelisk given to the nation by the late Pasha is now lying on the ground, broken into several pieces, and I should think it would be almost impracticable to place it again in an upright position. However interesting such a relic in this country may be to the antiquary and hieroglyphist, it would present but an unsightly appearance in the streets of our modern Babylon. I do not think any one of correct taste can consider the *coup d'œil* of the Place de la Concorde, at Paris, is improved by the addition of the obelisk of Luxor.

If the public money is to be spent on such an object at all, would it not be better to obtain the leave of the Pasha to improve and beautify the locality of the standing obelisk at Alexandria, and by that means record our victories in a distant land, and at the same time shew that we consider, that, when practicable, the preservation of objects of antiquity in their own country is much more desirable than their removal to distant lands. In this case they are of little interest to any but antiquaries, and their display in the public streets would not tend to improve the already low standard of national taste.

Gravesend. EGYPTUS.

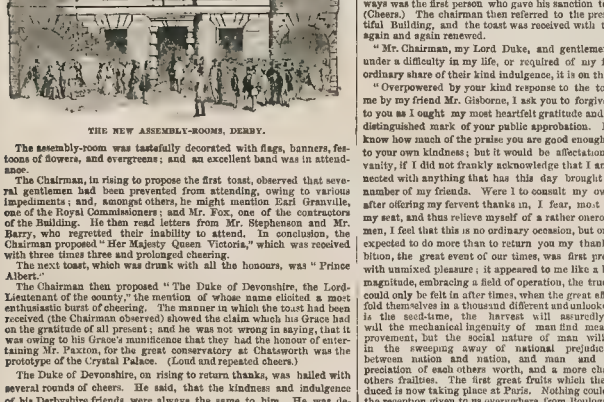
The following railway bills received the Royal assent on Friday week; viz. Llynvi Valley and Duffryn, Llynvi and Porthcawl; Maidenhead, Buxton, Matlock, and Midland Junction; Thames Haven; Cameron's Colbrook Steam Coal and Swansea and Loughor; and the Manchester and Salford Extension, making together five new acts for railways.

DINNER TO MR. PAXTON, AT DERBY.

(See the Illustration at page 184.)

ON Tuesday, a dinner was given to Mr. Paxton, in the New Assembly Rooms, Derby, at which there were 300 guests. His Grace, the Duke of Devonshire accepted a special invitation, and was loudly cheered on his entrance, and during various parts of the interesting proceedings. Earl Granville would also have been present, but for the entertainments given in Paris. Mr. Fox's absence was also attributable to the same cause; but he was ably represented by his indefatigable partner, Mr. Henderson.

The chair was taken by Thomas Gisborne, Esq., who was supported by the High Sheriff of the county, the Mayor of Derby (Mr. Fox), the Mayor of Chesterfield, Mr. Strutt, M.P., Mr. Cavendish, M.P., Mr. John Ellis, M.P., Sir H. S. Wilmot, Mr. Gesch, M.P., Mr. Evans, M.P., Mr. Heyworth, M.P., Mr. Mundy, M.P., Mr. Bass, M.P., Mr. R. Arkwright, Mr. W. P. Thornhill, Mr. J. Strutt, Mr. P. Arkwright, Mr. E. S. Pole, Mr. T. H. Barker, Mr. Peach, Mr. George, Mr. R. G. Gisborne, Mr. T. S. A. Shuttleworth, Mr. J. Setton, Mr. Balguy, Mr. H. Bowdon, Mr. T. G. Radford, Mr. T. G. Crompton, Mr. W. W. Needham, Mr W. Longsdon, Mr. James Barker, &c.



THE NEW ASSEMBLY-ROOMS, DERBY.

The assembly-room was tastefully decorated with flags, banners, festoons of flowers, and evergreens; and an excellent band was in attendance.

The Chairman, in rising to propose the first toast, observed that several gentlemen had been prevented from attending, owing to various impediments; and, amongst others, he might mention Earl Granville, one of the Royal Commissioners; and Mr. Fox, one of the contractors of the Building. He then read letters from Mr. Stephenson and Mr. Barry, who regretted their inability to attend. In conclusion, the Chairman proposed "Her Majesty Queen Victoria," which was received with three times three and prolonged cheering.

The next toast, which was drunk with all the honours, was "Prince Albert."

The Chairman then proposed "The Duke of Devonshire, the Lord-Lieutenant of the county," the mention of whose name elicited a most enthusiastic burst of cheering. The manner in which the toast had been received (the Chairman observed) showed the claim which his Grace had on the gratitude of all present; and he was not wrong in saying, that it was owing to his Grace's munificence that they had the honour of entertaining Mr. Paxton, for the great conservatory at Chatsworth was the prototype of the Crystal Palace. (Loud and repeated cheers.)

The Duke of Devonshire, on rising to return thanks, was hailed with several rounds of cheers. He said, that the kindness and indulgence of his Derbyshire friends were always the same to him. He was delighted to meet them on an occasion so interesting, and to find that so many had given their names and their sanction to the object that had assembled them. (Cheers.) He said, that a year ago, at a meeting held at Bakewell, to consider the new, magnificent, and, as it has now turned out, the eminently successful plan of his friend Mr. Paxton, for an Exhibition of the Industry of all Nations, the design, description, and explanation of the Building now called the Crystal Palace were for the first time made known to a public audience. The difficulties encountered by the Royal Commissioners had become appalling; and appeared to be every day increasing, till Mr. Paxton came, and with a plan as simple as it was stupendous, caused an immediate change in the current of public expectation. (Loud cheers.) At that Bakewell meeting he minutely described his intentions, which were certainly listened to with great astonishment. "I ventured," said the Duke, "to predict his success—(Cheers)—and I intended those who heard me to be under no sort of alarm, for Mr. Paxton had never yet failed in anything he had undertaken. (Loud cheers.) Gentlemen (continued the Duke), has not the event justified my sanguine assertion? and is it not clear that the method employed was not only the quickest way, but the only way by which the expectation of the whole world would not be disappointed. (Loud cheers.) The Duke proceeded to say, that it was an honour to him to have had his name connected with that great work; the perfection of it had astonished everybody employed and concerned. The compliment had often been paid to him of being the grandfather of the Crystal Palace—(Laughter and cheers)—which he thought he had, perhaps, turned his head a little; but (said his Grace) it was not the possession of a few houses of glass and iron, serving, perhaps, in some degree as models; it was the mind of their inventor, well regulated, clear, and active; and the will, powerful and persevering, that had given importance to those objects, and that had led him to the ultimate result; the mind, the integrity, the simplicity, and talent that had caused him to be what he is, the person whom they were met together to honour, to be connected with whom was his pride, and to possess whose confidence was a gratifying to his (the Duke's) feelings as his extensive services had been conducive to his worldly prosperity." (Vehement cheering.) His Grace then said that he considered Mr. Paxton most fortunate in having selected Messrs. Fox and Henderson for the execution of this great undertaking. Day after day, in the winter and in the spring, he had witnessed the unremitting zeal and ability with which Mr. Fox gave his constant and scientific attention to the colossal work in which he was engaged. (Cheers.) Messrs. Fox and Henderson had been for the last year the object of approbation, the Duke knew him to be a man of that high feeling and great delicacy, that it would have pained him to accept this token of admiration, had not a similar compliment been paid to his friend and associate in this town. (Cheers.) The Crystal Palace had had a respite, and it was to be hoped that its future destiny was secured; and quite sure am I (said the Duke), that, should the arrangements and regulations be confided to the inventor, its merits and advantages in a second state would be as striking and as well appreciated as they were in the first. (The noble Duke was loudly cheered on resuming his seat.)

Mr. Strutt, M.P., in proposing "The Royal Commissioners," said, if they had not had the candour to abandon all their preconceived notions, the Crystal Palace would not have been in existence, and the present assembly would not have had the pleasure of doing honour to the genius and originality of Mr. Paxton. (Cheers.) The Royal Commission contained in its number many of the most eminent persons in the country—men holding office under the Crown, men of all political parties, men of the greatest scientific eminence. But great and eminent as these persons were, their eminence was not enough to ensure success. It had often been remarked, that when great works were entrusted to bodies of eminence, their success did not equal the expectations entertained from their exertions, because a unity of purpose was sometimes wanting. (Hear, hear.) No complaint of this kind, however, could attach to the Royal Commission; and he could say without flattery that one great cause of its success was owing to its having at its head that illustrious Prince—(Cheers)—whose ability, judgment, indefatigable industry, and conciliatory deportment had been the great means of carrying the plan into effect. (Hear.) There was another member of that Commission who had rendered the most valuable assistance; he meant Earl Granville—(Cheers)—a nobleman not more distinguished by the high qualities of his mind than by the goodness of his heart. If there was one quality for which he was more distinguished than another, it was his amiability of disposition and courtesy of manners, which never interfered with the firmness with which he performed his duties. (Cheers.) He would now propose "The Royal Commissioners," who had performed their duties ably and successfully, conferring honour not only on themselves, but on their native country, in the face of Europe and of the whole civilised world. (Loud and continued cheering.)

The Chairman requested the attention of the assembly whilst he proceeded to propose the next toast—that of their distinguished guest, Mr. Paxton. (Loud and prolonged cheering.) He had known Mr. Paxton for many years, and retaining for him the most kindly feeling had ever existed between them. But to-day he only knew him as the originator of the Crystal Palace. When Mr. Paxton's magnificent idea began to assume form and substance, it was absolutely necessary that some preparation should be speedily made for receiving the contributions that had been invited from foreign countries. All the constructive genius of mankind was invited to show how that object could be effected. Great architects and engineers began to knock their heads against ashlar stone and bricks, and to flounder amongst mortar and cement, when a gardener stepped amongst them, and said, "Gentlemen, there's nothing like glass and iron." (Cheers and laughter.) In this there might be something professional, for he was old enough to remember when the largest thing in existence that could be called a glass structure was a hand-glass to cover cucumbers. (Laughter.) Mr. Paxton, however, had covered the industry of all nations with a structure of glass and iron, and the notion had commanded the universal admiration of all mankind, except Colonel Sibthorp. (Laughter.) But, to speak more seriously, how many admirable qualities were involved in his plan? Many men looked to precedents; but what precedent was there to guide Mr. Paxton? From the hand-glass Mr. Paxton carried on the idea to the conservatories at Chatsworth, and then advanced to that magnificent structure which had excited the wonder of the world. (Hear, hear.) In Mr. Paxton's case there was the great quality of originality—he had almost said the audacity of genius. (Cheers.) Amongst the most valuable qualities which a man could possess, was the power with which genius brings other minds into co-operation with his own; and it was no small evidence of Mr. Paxton's genius, that he was able to secure the skilful co-operation of such constructors as Messrs. Fox and Henderson. (Loud cheers.) It was perhaps a singular thing that the inventor of metal tubes for railways was the first person who gave his sanction to the Crystal Palace. (Cheers.) The chairman then referred to the preservation of the beautiful Building, and the toast was received with thunders of applause again and again renewed.

"Mr. Chairman, my Lord Duke, and gentlemen,—If ever I laboured under a difficulty in my life, or required of my friends more than an ordinary share of their kind indulgence, it is on the present occasion.

"Overpowered by your kind response to the too flattering account of me by my friend Mr. Gisborne, I ask you to forgive me if I fail to express to you as I ought my most heartfelt gratitude and thanks for this most distinguished mark of your public approbation. I am not so vain but I know how much of the praise you are good enough to award me is due to your own kindness; but it would be affectation more offensive than vanity, if I did not frankly acknowledge that I am proud of being connected with anything that has this day brought together so large a number of my friends. Were I to consult my own feelings, I should, after offering my fervent thanks in, I fear, most feeble words, resume my seat, and thus relieve myself of a rather onerous duty. But, gentlemen, I feel that this is no ordinary occasion, but one on which I shall be expected to do more than to return you my thanks. When the Exhibition, the great event of our times, was first propounded, I hailed it with unmixed pleasure; it appeared to me like a beam of light of vast magnitude, gracing a field of operation, the advantages of which could only be felt in after times, when the great efforts made would unfold themselves in a thousand different and unlooked-for channels. This is the seed-time, the harvest will assuredly follow. Not only will the mechanical ingenuity of man find means for extended improvement, but the social nature of man will receive its rewards in the sweeping away of national prejudice, and establishing between nation and nation, and man and man, a kinder appreciation of each others worth, and a more charitable view of each others frailties. The first great fruits which the Exhibition has produced is now taking place at Paris. Nothing could be more hearty than the reception given to us everywhere from Boulogne to Paris. All appeared to vie with each other in giving us a cordial and hearty welcome. The magnificent reception given at the Hôtel de Ville might almost have shaken the prejudices even of Colonel Sibthorp. We have no place in England where such a dinner could be given as that of the Hôtel de Ville, and no place where there could have been so magnificent a reception. What has long been dead among nations, has been a more free and unrestrained communion of their inhabitants with each other. When this shall fully take place, it will not require the abstruse study which is now requisite for a Foreign Secretary or Minister to conduct the affairs of nations with satisfaction to all parties. I believe England has added another wreath to her Crown, in the glorious part she has taken in first establishing an Exhibition of all Nations. It is a rather curious fact that there never has been a National Exhibition similar to that of many other countries, and that we should then at once enter upon so gigantic a task as an Exhibition of All Nations before we had an Exhibition of our own. To his Royal Highness Prince Albert the world is mainly indebted for carrying out this most wonderful undertaking; and to his Royal Highness belongs the credit of having persevered through most difficult and harassing circumstances to so happy a result.

"It was while this magnificent scheme was passing over the shoals and quicksands that always beset great undertakings, that my humble efforts were called into request, and at the risk of being thought tedious, I will venture to give a short history of my connexion with it, and the reasons which induced me to furnish a plan.

"You are aware that as soon as the Royal Commission was formed, gentlemen were selected as a Building Committee; to this committee was entrusted the onerous duty of giving a proper form to the Exhibition. Their first public act was to send out invitations for designs for a suitable structure. About 240 designs were sent in, but the committee not finding any of these exactly in accordance with their views, set about devising a plan of their own; and this being completed, they prepared detailed drawings and specifications for the purpose of obtaining tenders. The structure they proposed to erect was severely commented upon in the public journals, on account of the vast amount of bricks that would be used in its construction, and the permanent character of its work. It was not until a war of words was raging with great fierceness, that the thought occurred to me of making a design which would obviate all objections. Fortunately, at that time I was erecting a house of peculiar construction, which I had designed for the growth of that most remarkable plant, the *Victoria regia*; and it is to this plant, and this circumstance, that the Crystal Palace owes its direct origin.

"Being in London, and having to see Mr. Ellis, the member for Leicester, on business connected with the Midland Railway, I sought him at the Houses of Parliament, and found him at a morning sitting in the new House of Commons, which was held there on that day, for the purpose of testing its fitness for use. Sir Charles Wood was addressing the House; but not a word of what he said could be distinctly heard in the Speaker's gallery; upon which I observed to Mr. Ellis, that I feared they would make a mistake in constructing the Great Exhibition Building, and that I had some thoughts of sending in a design that would obviate the difficulties complained of. After a little further conversation, Mr. Ellis went with me to the Board of Trade to see Lord Granville. We did not find his Lordship within; but Mr. Henry Cole, one of the Executive Committee, happened to be there. I went to No. 1, Old Palace-yard, and after conversing for some time with Mr. Cole, I found that the Building Committee had advertised that the plans and specifications for contractors to tender would be ready in about a fortnight; and I also heard that the specifications would contain a clause by which those who tendered might also tender for designs differing from the plan of the Building Committee. From this moment I decided that I would prepare plans for a glass structure; and the first thing I actually did was to go to Hyde Park, and step over the ground, to ascertain the extent in length and breadth on which the Building was to stand.

"Having made an engagement to be at the floating of the third tube of the Britannia Bridge, I could not commence the plans until after my return; and it was at the Midland Station, in this town, in one of the committee-rooms, that the first mark on paper was made of the Crystal Palace; and the most remarkable fact connected with the Crystal Palace is, that the blotting-paper sketch indicates the principal features of the building as it now stands, as much as the most finished drawings that have been made since. In nine days from the time of making the blotting-paper sketch, I found myself again at Derby, with a roll of plans under my arm, on my way to London. These plans, five in number, had, with the exception of one, been prepared by me at Chatsworth; the one not prepared there had been made for me by Mr. Barlow, the eminent engineer of the Midland Railway, who kindly gave me his valuable assistance in calculating the strength of the columns and girders. At the Midland station I had the good fortune to accidentally meet with Mr. Robert Stephenson, who had come from Newcastle by the same train in which I was going to London. On our journey I showed the plans to Mr. Stephenson, and got him to read the specification. He expressed his unbounded admiration of the design, and promised to lay the plans before the Royal Commission on the following day, which promise he fulfilled. As Lord Brougham had said so much in the House of Lords against a brick building being erected in Hyde-Park, I waited upon his Lordship and explained to him the nature of my plans; from that day Lord Brougham has never uttered a word against the Exhibition building, but, on the contrary, his Lordship became my warmest supporter. I also showed the plans to Lord Granville before they went before the Royal Commissioners; and here I must remark, that to Lord Granville the country owes much in respect to the success of the Exhibition. The easy access and courtesy of manner displayed by his Lordship to all who approach him, added to most excellent business habits, has removed many difficulties that would not otherwise have been effected.

"After my design had been laid before the Royal Commissioners, and had been investigated by the Building Committee, and seen at Buckingham Palace by her Majesty and Prince Albert, I took the plans to Newstreet, Spring-gardens, and had the good fortune to find Mr Fox at his office. Mr. Fox was much pleased with the design, and at once agreed to go heartily into it. Mr. Henderson (Mr. Fox's partner) and Mr. Robert Lucas Chance, the great glass maker at Birmingham, were telegraphed to be in London early on Monday; and after a long consultation, my plans were sent to Birmingham for the purpose of having detailed estimates and drawings prepared. The Royal Commissioners were made aware of the fact of Messrs. Fox and Henderson's intention to tender for my design, and Mr. Cole went to Birmingham to counsel Messrs. Fox and Henderson to tender for covering the ground in the exact roof as marked out by the ground-plan prepared by the Building Committee. Mr. Brunel also suggested that the interior columns should be placed 24 feet apart, instead of 20, in order to suit the Exhibition.

"During the preparation of these plans and estimates, Messrs. Fox and Henderson came to Chatsworth to settle with me some of the more important details, and I went twice to Birmingham to see the progress of the plans and estimates. During the preparation of these plans, Mr. Henderson suggested the Transept. To this I at first objected. I did so on these grounds; namely, that, as the Exhibition was to be a fair competition of skill for all nations, I held it to be fair and right that each exhibitor should have an equal advantage as regards position, which they could not have with the introduction of the Transept: another objection I entertained was, that it could not stand in the centre of the Building, as the ground-plan was then arranged; but the moment Mr. Henderson said it would impart strength and solidity to the Building, I assented to its introduction.

"At length the day for sending in the tender came, but considerable delay took place before it was finally accepted. I have before stated, that, in order to get the tender in, it was necessary the Building should cover the exact space marked out by the Building Committee; but, in conforming to this plan, the Transept was obliged to be put into one side of the Building, for the purpose of avoiding the great trees which now stand within it, but which, according to the tender sent in, were to be in an open court. At one of the meetings with the Building Committee, it was suggested by them that the Transept should include the great trees; but there appeared at first sight a good deal of difficulty in accomplishing this, as at that time all the roofing was designed to be flat. We proceeded to see what could be done before the next meeting of the committee. I went direct with Mr. Fox to his office; and while he arranged the ground-plan so as to bring the trees into the centre of the Building, I was contriving how they were to be covered. At length I hit upon the plan of covering the Transept with a curved roof similar to that on the great conservatory at Chatsworth, and made a sketch of it, which was copied that night by one of the draughtsmen, in order that I might have it to show to Mr. Brunel, whom I had agreed to meet on the ground on the next day. Before nine the next morning Mr Brunel called at Devonshire House, and brought me the heights of all of the great trees; in the note containing the measurement Mr. Brunel wrote thus:

"'I mean to try and win with our plan; but I have thought it right to give your beautiful plan all the advantages it is susceptible of.' I then showed Mr. Brunel the plan I had made the night before, for covering in the trees, with which he was much pleased. I have been led into these minute details, *first*, to show that the circular roof of the Transept was designed by myself, and not by Mr. Barry, as currently reported; *secondly*, to show the kindness and liberality of Mr. Brunel. At the time of the tender being accepted, the Building Committee asked me if I had any objection to my design being improved in some of its details; my reply was to the effect that I should have great pleasure in agreeing to anything that could be shown to be an improvement.

"I must here tell you how some alterations had become necessary. When the gallery columns inside were changed from 20 to 24 feet apart, it put the outer columns and outer sashes quite out of proportion as to distance; instead of there being one intermediate column and sash between the 20 feet opening, there were two intermediate columns and two sashes in the 24 feet: and the plan Mr. Barry made for improving this had my entire approval, because it brought back the design to its original proportions.

"As soon as my design had been accepted, it was decided by the Royal Commissioners to entrust the superintendence of its erection to Mr. Wm. Cubitt, the President of the Civil Engineers' Institute; and Messrs. Fox and Henderson had, as contractors, to submit the detail drawings respecting the strength of the Building for his approval.

"Just after the contract had been accepted, I was obliged to leave England for a month; and, at the last interview I had with Mr. Fox before my departure, in the presence of Mr. Leech, he promised that all should be carried out in accordance with the design, and that no alteration should be made without my approval. When I first thought of sending in a design, I had to consider, not only what I knew well myself, but what great would be thought practicable by others; besides, I had to keep in view not only the probability of the mechanical realisation of my design, but also the possibility of its realisation within a given time. That I did not err in this last respect, I owe to the ability, energy, and unwearied skill of Messrs. Fox and Henderson; and if I have one word more than another that would express my approbation of their exertions, I should have infinite pleasure in using it. Not only did they arrange all the details for carrying on the works with great precision and speed, but they entered into the project with hearty good will; and there is a great deal of credit due to them for having taken up my design in the manner they did. The structure was an entirely novel and new one to them; previously they had no experience in the peculiar plan of roofing and, frankly, which was for the first time brought before them in my plans for the roofing, and therefore they had to rely entirely upon my experience in all these matters. They ventured, however, to embark their money and reputation upon plans and information which no one had experience in except myself. They fully relied upon me, and I must say they deserve immense credit for having thus ventured their fortunes and reputation on the faith of one man.

"If there had been sufficient time given, there would have been no difficulty in putting up the Crystal Palace—if a year had been afforded, instead of a few months, the accomplishment would have been comparatively easy, because the Building is composed of simple parts, and it only requires favourable weather and a multiplicity of hands to erect a building to any extent.

"Now, gentlemen, I wish to disclaim all part in the Building that does not belong to me. It has been said that 'it was a fortunate idea'; but the idea, though fortunate, was not a fortuitous one. It was the result of long study and long labour, without which no really practical idea can be worked out into a distinct and palpable design. The great experience I had in the erection of glass structures and the invariable success which had attended my exertions, emboldened me to produce that design, because I had not a doubt of its practicability, if properly carried out. I had two objects in view in offering a design: the first was, that my proposal would be exactly suitable for the exhibition; and, next, it would meet a long-cherished idea of mine for a National Winter Garden; so that, like Goldsmith's piece of furniture, it was contrived

A double debt to pay—
By nature dressed to-morrow,
As by art to-day.

"I have stated to you that the *Victoria regia* was the immediate cause of my sending in a design for the Crystal Palace; but the Crystal Palace does not derive its origin from the existence of that noble plant. No! It owes its erection to a nobler work of nature—the noble Duke whom I have had the honour and the pleasure to serve for more than a quarter of a century. It is to his fostering hand I owe all I possess: he took me when quite a youth, and moulded me according to his wants and wishes; he has given me all the advantages of extended travel with himself, which could not fail to produce fruit in due season; by his confidence and liberality I have had placed before me ample means for various experiments, and without which, expend upon it there never would have been a Crystal Palace; and if there is one thing more than another that would enhance the pleasures of this day, it is that his Grace has done me the honour to be present to see the flattering tribute you have paid me.

"Gentlemen, one word more, and I have done. You can readily believe how great the anxiety and responsibility I imposed on myself when I undertook the design for the Crystal Palace; but believing that I could remove the many serious objections urged against the erection of a building composed of bricks and mortar, I considered it a duty I owed to my Sovereign and my country to waive all personal considerations, and do my utmost to save so grand a project from failure. From the day I sent in my design, to the time of the successful accomplishment of the Exhibition, my anxieties have been almost overpowering. I felt what must be my fate if by any accident my design should not be successfully carried out, and any failure would have reflected back upon me; but great as that anxiety has been, and laborious as have been my duties even up to the present time, this day's proceedings amply reward me, and give a triumphant finish to the whole.

"It is now twenty-five years since I came into this country a comparative stranger: you then received me kindly -that kindness has since ripened into friendship, and it has, I am thankful to say, been my happy lot to make troops of friends.' My public duties have been many and onerous, but in the performance of them it is my happiness to know that I have never lost a friend. The marks of respect you have shown me to-day will sink deep into my heart, and the recollection of it will afford me delight for the remainder of my days."

Mr. Balgny, in complimentary terms, then proposed "Messrs. Fox and Henderson," remarking, that whilst they admired the genius of the designer, they ought not to forget the genius and knowledge of those who carried such a magnificent design into effect. (Great cheering.)

Mr. Henderson, on rising to return thanks, was most enthusiastically received. After remarking on the candid and cordial manner in which Mr. Paxton had received and acted upon every suggestion which appeared likely to carry his great object into effect, he observed that an impression seemed to prevail that Mr. Barry was the originator of the circular roof for the Transept. Now, that was not correct; for Mr. Paxton originated it, and carried it out according to his intention. (Cheers.) He would endeavour to explain how the mistake had originated. One Saturday night, when the Commissioners sat late, it was suggested that some plan should be adopted for covering the trees. Mr. Barry had been absent every day during the week until that evening, and he knew the difficulty. Mr. Paxton had suggested that the covering should be by a circular roof. He did not think that Mr. Barry knew that arrangement, and on Monday morning Mr. Barry produced a sketch giving to the Transept a circular roof. This statement would neccessitate the discrepancy which existed on the subject. (Hear, hear.) Mr. Henderson then expressed his gratitude for the valuable assistance which had been afforded to his partner and himself by all the parties with whom they had been associated during the construction of the work, particularly mentioning the names of Messrs. Dowson and Co., timber merchants; Messrs. Chance and Co., glass manufacturers; and Messrs. Fairbairn and Co., iron merchants. He also expressed his high obligation to the parties more immediately in his own employment, specifying the names of John Cochrane and Charles Clark, who had exerted themselves in the most remarkable and praiseworthy manner during his illness. (Cheers.) Some remarks had recently been made on the perishable nature of the materials of the Building, and particularly with respect to the woodwork in the roof. Now, from his own experience, he had no hesitation in saying that the roof would last 100 years. (Great cheering.)

Mr. Fox (the Mayor of the borough) returned thanks on behalf of his brother, from whom he had received a letter stating that it would have appeared an ungracious thing if both he and Mr. Paxton had been absent from Paris at the present time, as the French people were displaying such unbounded hospitality in honour of the Exhibition and those more immediately connected with it. He added, "I need not tell you how highly I estimate Mr. Paxton's talent, and with what admiration I regard the great and lofty conception of his which has justly given his name a world-wide celebrity." (Loud cheering.)

The Chairman then proposed, "The High Sheriff of the County;" which was duly acknowledged by that gentleman.

Sir H. Wilmot proposed, "The Members for the County," which was responded to by Mr. Evans and Mr. Mundy.

Mr. Sutton (the Vice Chairman) gave, "The Borough Members;" who severally acknowledged the toast.

Then came, "The Mayor;" which was responded to by his worship.

Mr. Cavendish, M.P., in highly eulogistic terms, proposed, "The Chairman;" who briefly acknowledged the compliment.

The Rev. J. Sykes then proposed, "The Guild of Literature and Art."

Mr. Foster responded.

The Chairman then proposed "The Strangers."

The toast was acknowledged by Mr. M. Lemon, and the company shortly afterwards separated.

The dinner, which was supplied by Mr. and Mrs. Higgins, of the Royal Hotel, was of excellent, kind and on a magnificent scale. The bill of fare included 10 haunches of venison, 10 necks of venison, and 20 venison pasties; nor were the famed "Bake well puddings" forgotten. The dessert was of the most rare and delicious kind, principally from the Duke of Devonshire's gardens, at Chatsworth. There was abundance of English and foreign pines, grapes, melons, nectarines, peaches, apricots, &c. The wines, which were of excellent quality, included Johannisberg, Rudesheim, Hockheim, Marcobrunn, sparkling Hock, Moselle, champagne, Madeira, claret, &c.

A VISION IN THE CRYSTAL PALACE.

FOR many hours I had wandered through its gorgeous mazes, till my mind felt nearly as bewildered under the excitement of scenes so novel and splendid, as my limbs were weary. It was with a feeling of inexpressible satisfaction, that I at length dropped into a seat within sight of those green, ancient elms, so still above the moving throng, while at the same time my eyes fell upon the sweet refreshing waters flowing from the crystal fountain, and on the delicate flowering shrubs disposed with so much taste amidst the splendid ornaments and statues of this glorious Palace; the swelling tones of the magnificent organs, added to the fascinating influences of the place, rose and fell on my senses like the songs of distant angels. I thought upon all the wondrous works of art which I had beheld throughout that long day, and felt that man had indeed richly availed himself of the bountiful gifts of the great Creator—of that "rough produce," of those "raw materials," without which none of these splendid works of man's art could have sprung into existence. I looked on the crystal fountain, that amazing specimen of human skill and ingenuity. What a wonderful combination!—sand—flint—alkali!; Can these substances indeed have produced that fairy structure, as well as this light airy dome over my head? Then my eyes glanced on the liquid crystal, the pure, cool, flowing waters—what would that fountain be, after all, without its bright streams?

O fons Bandusiæ! splendidior vitro!
(O fountain of Bandusia! more brilliant than crystal!)

And yet, of the millions who may frequent this Palace, how many will only look upon these as secondary adjuncts, to set off the skill of the architect of the fountain; and those beautiful shrubs, and flowering plants of various hues, with those glorious old trees, will they be considered by the masses otherwise than as helps to decorate the splendid scene formed by the hand of man? * * * * *

When this long day of excitement was over, and sleep at last visited my eyelids, it was not surprising that my sleeping thoughts borrowed their imagery from my day reverie at the fountain. * * *

* * * * It was a clear moonlight night, and I was wandering about the precincts of the fairy-looking Palace, and admiring its brilliant appearance, as it glittered in the bright beams of the moon. I could see within distinctly. All was silent and deserted. There I beheld the flags, and the gorgeous hangings, marking out the compartments allotted to the various nations of the earth, and there lay all their treasures in rich profusion. By that strange faculty of locomotive power which we often seem to possess in our dreams, I passed onwards, right through the glassy barrier, and found myself once more standing by the fountain. At first, all looked desolate, and a feeling of awe stole over my mind; but gradually a clear subdued light filled the place, composed of the loveliest blue and white, the silvery beams which it threw around penetrating to the remotest bounds.

What was my amazement, no longer to behold any of the works of man! All had disappeared! The elms still rose, silent and majestic; no waving branches gave signs of life, nor betokened any stir in the air; the silvery walls of the Palace, with its arched transept, glittered round and above me; but, as I gazed, to what an extent—to what a height—did they spread out! Even while mine eyes were looking on them, the more and more the expanse grew! 'Twas all dreamy, vast, and solemn! . . . What a Palace would this be in which to display the works of the great Creator! If man would assemble here some little portion of His great and marvellous works, would not the nations of the earth rejoice to come and behold them? To what a holy purpose might this vast structure be consecrated! even to the praise and glory of Him of whose marvellous works there is no end; and if man could but be touched to feel their beauty, as well as our understandings enlightened to comprehend their worth, what years upon years (instead of days and weeks) might we pass here, and never feel satiated.

With a start of glad surprise, I once more looked around! Where in the daytime I had seen banners of crimson cloth inscribed with letters of gold, I now beheld inscriptions of the purest white *light* on a ground of lovely azure, like the soft clouds floating along the heavens on a calm bright day, when you love to gaze upwards into the blue ether—"the deep serene." On one of these angelic banners, I read—

He hath given us richly *all things to enjoy.*

On another:—

By Him were all things made, and *for His pleasure* they are and were created.

On another:—

The earth is full of His riches.

And again:—

How manifold are His works, in wisdom He hath made them all.

And again:

He doeth great things, past finding out, and wonders without number.

And so on, and on, all along those interminable vistas, waved the angelic banners: long I wandered, reading their bright inscriptions. but as I retraced my steps towards the Transept—wonder upon wonder! —I walked upon a verdant carpet of the softest green velvet, lovely flowers springing up all around me—the flowers of childhood's delight, the "wee, modest, crimson-tipp'd daisy," with its "silver crest" and "eye of gold," with bright yellow buttercups, and "Hope's gentle gem, the sweet forget-me-not."

But what a glorious sight beneath the dome of that transept! There I beheld, in stately order, all the trees which delight the sons of men—"every tree which is *pleasant to the sight*," and good "for food"—the stately spreading cedar—the towering palm, with its plume-like foliage—the banyan and the tamarind, the plane tree and the olive; then, again, the tapering fir and pine tribe—the drooping willow, the fluttering aspen, and the silver birch; and then, again, the oak, the sycamore, the elm, and the beech, the Spanish chestnut, with its white spry blossoms standing up so firm, and the limes and lilacs and laburnums, with their gracefully pendent clusters.

Father, thy hand
Hath rear'd these venerable columns, Thou
Didst weave this verdant roof; Thou didst look down
Upon the naked earth, and forthwith rose
All these fair ranks of trees; they in Thy sun
Budded, and shook their green leaves in Thy breeze,
And shot towards Heaven. * * *
Thou Last not left
Thyself without a witness, in these shades,
Of Thy perfections: grandeur, strength, and grace
Are here to speak of Thee. This mighty oak,
By whose immoveable stem I stand, and seem
Almost annihilated,
Wears the green coronal of leaves with which
Thy hand has crowned it, and, its firm root
Is beauty, such as blooms not in the glare
Of the broad sun. That delicate forest flower,
With scented breath, and look so like a smile,
Seems, as it issues from the shapeless mould,
An emanation of the indwelling life
A visible token of the upholding love
That are the soul of this wide universe.—BRYANT.

It seemed as though years and years were passing over my head while I wandered amidst these marvellous works, and meditated upon the wondrous contrivances which were so beautifully displayed in the adaptation of the varied kinds of trees to the climes of which they were the natives. I thought that an eternity might well be spent in contemplating their elegant symmetry, their diversified foliage, their beautiful adaptation to the wants and comforts of the races who wandered beneath their shades—when my senses were arrested by a fragrance so delightful, that words must fail to convey an idea of the soft perfume which, like incense, floated around me—that sweet incense mentioned by the poet—

The breezy call of incense-breathing morn,

Which seemed to convey "a blessing in the air." Beneath that airy dome, on one side, I beheld, . . . to the unseen hand of a gift, a brilliant glowing heap, a radiant mountain, composed of all the brightest and loveliest flowers of the earth, as if just plucked from their stems and thrown there in wild and graceful profusion. Bright tropical flowers of all hues, and tints, and sizes—roses of various tints, from the purest white to the deepest red—lilies, hearts-ease, geraniums, verbenas, tulips, hyacinths, carnations, all kind of bright, spreading, twining, creeping, pendent blossoms, were there "expanding their light and soul-like wings."

Then I turned and beheld another beautiful pile the lovely wild flowrets of the earth gems that are "born to blush unseen, and waste their sweetness on the desert air." Weeds—weeds—I have always marvelled why we call any of God's works "weeds." To me they have always been mysteries. How beautiful they are, those bright little starry blossoms peeping out here and there, white and blue, and pink and yellow—" vernal flowers, with their *quaint enamelled eyes!*"

Ye field flowers, the gardens eclipse you, 'tis true;
Yet, wildlings of Nature, I dots upon you,
For ye waft me to summers of old,
When the earth teem'd around me with fairy delight,
And when daisies and buttercups gladden'd my sight,
Like treasures of silver and gold.—CAMPBELL.

But see what gifts are still showered down for our use—lo! another golden crimson-purple heap! All the fruits of the various climes clustered together in rich luxuriance. What provision is here for the wants, the comforts, the luxuries of man! Not a month passing over our heads without bringing rich gifts in its train. Pine-apples melons, oranges, limes, lemons, bananas—for whom are all these glorious purple and golden fruits—the vine, "with a blessing in its clusters," the ripe bursting figs, juicy peaches, nectarines, apricots, and plums; transparent bunches of currants, white and red, how beautiful they are! mulberries, strawberries, raspberries, and all the nut tribe, what thought, what contrivance is manifest here! the cool juicy fruits for the hot and thirsty races of men, the fleshy firm products for the more temperate climes, and see——. Over these wondrous gifts floated the angelic "Banner of Love," inscribed at one end thus—"Thou crownest the year with Goodness;" and at the other, "Heaven and Earth are full of the Majesty of thy Glory. Truly, indeed, hath the curse been removed; "Thorns and Thistles shall it bring forth to Thee!" Has that sentence been carried out? say, ye children of a kind and merciful Father? think of that first sad and dreary day on earth, when all the glorious trees and flowers, and fruits of Paradise, were lost to our parents, and they stood alone on the barren earth that was cursed for their sakes. Now, indeed, doth the "desert rejoice, and blossom as the rose." "Instead of the thorn behold the fig-tree: instead "of the briar doth come up the myrtle tree." But the wonders I beheld seemed to multiply at every turn; the waving ears of corn, the golden grains, the delicate green feathery grasses, who shall tell their numbers or their tribes?

Through all this long dreamy night I felt as if my life was passing on, on; but I knew not what it was to feel old or weary. Alone I was, but so absorbed in joyful adoration that I considered not that no other living creature passed by me, till suddenly there came "a change over the spirit of my dream," and oh, what bright and lovely *living* things I beheld! The feathered tribes, the songsters of the groves, trilling their loveliest notes, birds of paradise, with their graceful-waving plumage, bright, jewel-like humming-birds, peacocks, with their gorgeous sprawling tails; stately ostriches, with their heavy waving limbs. The animal part of the air, too, were teeming with life: all kinds of brilliant golden and green creatures, sporting, flying, rejoicing. "Some shone like gold, others were of the colour of silver or brass, some spotted, some striped, blue, green, brown, lilac. The heads of some were rounded like a turban, those of others drawn into the figure of a cone; here it was dark as a suit of black velvet, there it was spotted like a ruby. There was not less diversity in their wings: in some, they were long and brilliant, like transparent plates of mother-of-pearl; in others, short and broad, resembling network of the finest gauze. All had different modes of disposing and managing their wings; some disposed them perpendicularly, some horizontally, some few spirally, and they seemed to take a pleasure in displaying them."*

It was a delight to see the birds floating hither and thither, some among the branches of the trees, some to the fruits, while out from among the flower-heaps what lovely transparent creatures flew! it seemed as though the very blossoms themselves were suddenly endued with life, and were about to float away in the air. Butterflies of all the varied hues of the rainbow, bright, sparkling, joyous creatures, full of light and life; azure, golden, lilac, crimson, purple, pink, and blue and silver. Oh! who hath painted all these delicate wings with such exquisite taste and beauty? Take a wing from a butterfly, a feather from a bird, a petal from a flower (say a heart's-ease or geranium), even a leaf from a tree. What delicacy of texture! what elegance of design! what beautiful pencilling. Had each of these only been of one simple colour, truly they would have been marvellously beautiful; but who hath touched and retouched all these with such delicate shades and contrasts? Here a spot, and there a streak. Truly "for his pleasure they are and were created." For whom? for angels or for men? Surely we are not worthy to possess the humblest flowret that springs from the earth; had not the curse been removed in mercy, surely the very lowliest would never have gladdened the eyes of man.

Wondrous truths, and manifold as wondrous,
God hath written in the stars above,
But not less in the bright flowrets under us
Stands the revelation of his love.
Bright and glorious is that revelation,
Written all over this great world of ours,
Making evident our own creation.
In these stars of earth, these golden flowers;
And with childlike credulous affection,
We behold their tender buds expand,
Emblems of our own great resurrection,
Emblems of the bright and better land.—LONGFELLOW.

But I had not yet seen all the treasures this wonderful Palace contained. Another heap, and yet another—beautiful shells and corals. What elegant graceful forms, what delicate designs, what wonderful contrivances are manifest here! And behold again those sparkling gems—diamonds and topaz and amethysts, sapphires and rubies, jasper, and opal, and emeralds; and look again here—precious metals and ores, gold and silver, and minerals—what forms and colours and strange varieties are here!

Still my dream continued, my life seemed passing slowly away long long years, and I distinctly felt that I never could satiate my eyes with the objects before them, never could fully comprehend all their mysteries.

All along those interminable aisles, on both sides, I beheld the fourfooted animals of the creation passing along, from the largest and stateliest of antediluvian growth down to the very tiniest little creature that burrows in the earth. Far, far beyond the glassy precincts the wondrous procession onwards passed; and through its transparent walls on one side I beheld the waters of the ocean rolling on, bearing along on its waves all that have their being within its bounds; while on the other side flowed a calm shining river, through whose blue transparent waters were visible the bright inhabitants of that fresh element. Oh, that pictorial, that lovely scene!—may I never forget the sweet vision! Then, indeed, did I seem to behold those beautiful objects so touchingly painted by the inspired writers. "How goodly the ligne aloes by the water side! how lovely the trees planted by the rivers of water, bringing forth their fruit in their season, the fig-trees putting forth the green figs, and the vines with the tender grape giving a good smell, and the pomegranates budding forth." And beyond these what a goodly land, "A land of brooks of water, of fountains and depths, that spring out of valleys and hills; a land of wheat and barley, of vines, figs, and pomegranates; a land of oil, olive, and honey." And far, far beyond, in the blue and purple mists rising up to heaven, "the everlasting hills." Above, below, around, everywhere, life, in all its multiplied forms, and provision for every living thing! Down far into the bosom of the earth—far, far into the unfathomable depths of the ocean—far above in the unseen heights of the air—all is thronged with *living beings. Life* under an infinite variety of forms, adapted to a variety as infinite in the qualities of the material things which surround it, yet *symmetrical* these many forms.* But more: "There are *unseen living things* whose *shadows* only the most perfect appliance of artificial vision has yet reached!"

As I pondered on these wondrous works, and gazed out on the beautiful landscape, the same hurried impulse by which I forced my way into the Palace seemed to urge me on. I passed out in thought into the cool fresh air: millions of worlds, visible and invisible, were rolling on in their silent courses; all, all, doubtless, as full of life as this sphere below; all as radiant with glory and beauty; and my heart felt awed within me. Gradually the bright orbs paled away until they disappeared, and brilliant golden and roseate beams announced the rising of the glorious orb of day: the visions of night and the realities of day became blended together, and I awoke as the bright beams of the rising sun shone through my uncurtained window. J. W. B.

THE CRYSTAL PALACE AND THE VICTORIA REGIA.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

WHAT an admirable place the Crystal Palace would be for the cultivation of this magnificent plant! It is hardly possible to conceive a more grand, novel, or interesting sight than the *Victoria regia* would present, surrounded by all the species of *Nymphæaceæ*, in one noble central aquarium, where the public could enjoy the danger of being stewed in a reeking atmosphere. The surface temperature in winter need not exceed 45 degrees, as suggested by Mr. Paxton as the necessary warmth desired for the interior of the building; bottom-heat could be supplied by piping connected with a boiler, which, at a very trifling expense, would warm the whole Building. If the idea is carried out of converting the Crystal Palace into a winter garden (water being an essential feature in a garden), it would not be complete without it. I would in this case suggest that the aquarium be stocked with gold and silver fish, which would keep the water gently agitated, and would have a very lively appearance, and prove conducive to the health. The whole might be enclosed by an ornamental iron railings to prevent accidents to the junior members of society.

King's-road, Chelsea, August 3, 1851. We are, &c., J. WEEKS and Co.

ORDNANCE SURVEY OF SCOTLAND.—The select committee appointed to inquire into and report on the present state of the Ordnance survey of Scotland, and on the works which will be required for its completion, have issued their report, together with an account of the proceedings of the committee. It appears that the sum of £750,000 has been spent in the survey of England, £320,000 in 23 years on the survey of Ireland, exclusive of £200,000, the estimated expense of revising and contouring the map of Ireland, which is now in progress, while in Scotland only £94,000 of the whole country has been surveyed and published, and the average annual expenditure in the survey since its commencement in 1809 has been only £3418. The following are the recommendations made by the committee upon the subject:—1. That the six-inch scale be abandoned. 2. That the system of contouring be abandoned. 3. That the survey and plotting on the two-inch scale be proceeded with as rapidly as is consistent with accuracy, with a view to the publication within ten years of a one-inch map, shaded and engraved in a manner similar to the Ordnance one-inch map of England, with as many elevations as possible given in figures. 4. That the survey be proceeded with steadily from south to north, as was the original intention. 5. That the suggestions made by Mr. Brunel (A 294) be adopted. Your committee, in conclusion, beg to call your attention to the important fact, that, if the above recommendations are adopted, a saving to the nation of no less than £500,000 will be effected. Your committee, therefore, feel that they can confidently recommend such an increase of the annual grant as will complete the publication of the survey of Scotland, as proposed, within a period of ten years; so that some, at least, of the present generation may hope to live to see it finished."

The accounts just received from the mining districts of California, both north and south, represent the operations as being very successful. There is more activity, and more gold is probably being got out than at any former period in the history of the Californian mines.

* St. Pierre. † Moseley.

LITERATURE.

The Life of Edward Baines, late M.P. for the Borough of Leeds. By his Son, Edward Baines. Longman.

This is the biography of our English Franklin. His life is divided between Preston and Leeds—the first partakes in the renown of his nativity, the second in that of his activity. The name of Edward Baines is associated with provincial journalism. The *Leeds Mercury* grew, under his hands, from a poor pamphlet to an important newspaper, an influential organ of public opinion, that at last availed to lift its editor and printer into Parliament, and to lay the basis of the fortunes of his family and his children. The records of his diligence extend over many years—from 1774 to 1846; and his biographer has connected these years with the events that happened during this long interval. Thus it is that the life of Edward Baines becomes identified with the history of his times. We have little indeed in this volume of private biography. Mr. Baines lived all his life in the midst of the concerns of those of his country. Truly said he, when reflecting on his past life, and preparing for death, that his business, like the British Constitution, seemed to have grown up gradually." He was well satisfied, also, with the public and religious principles on which his journal had been conducted, but complained of his want of intense feeling in regard to the latter. It was this want, probably, which led him so safely through the perils of his position. He was the very type of an industrious, respectable man, to whom all work and little play was the element in which he most delighted. At the end of his career, he felt that he had much more than the average amount of comfort and happiness in this world, and ought not to repine at the common destiny. He had through his life displayed, in the words of his biographer, "manly firmness in conflict, modesty in conflict, and hearty earnestness in the cause of humanity and freedom."

Mr. Baines's life is almost that of the newspaper press—small in its beginnings, but acquiring in its progress prodigious power. Provincial journalism was, at his commencement in business, of a very humble character. Prior to providing to an official statement, there were in 1724 only twenty-eight printing-houses out of London; and the informer against these—one Samuel Negus, a London printer—stated that "the country in general copy from the ranks of the papers in London, and thus the poison is transmitted from one hand to another through all his Majesty's dominions." But local newspapers increased in number with the general improvement in the intelligence and circumstances of the people. When the *Leeds Mercury* came into the hands of Mr. Baines, the circulation was about 700 or 800, and the paper one-eighth or one-ninth of its present dimensions. In the year 1801, it had no editorial comments whatever: all the political paragraphs were then extracted from the London papers; and the duties of the editor were such as are now discharged by the "sub." The general news were chiefly copied from the London papers, and were either written by the editor from the information he gathered, or were furnished by unpaid correspondents—reporters were wholly unknown.

"It may seem scarcely credible that a nation, so full of talent and long before boasting statesmen, orators, and men of letters worthy to be compared with any of Greek or Roman name, should have had a periodical press so utterly disproportionate. We should scarcely believe that in the newspaper literature of Europe before us to prove it. Whilst the Fox, Pitt, Sheridan, and Erskine fulmined in the senate or at the bar, and whilst events were occurring in Europe vying in interest with any in the history of the world, the English newspaper press calmest the only periodical press then existing in Europe, as might have been judged barely adequate to satisfy the intelligence and curiosity of the rustics in a small village. This was the case with almost all the entire provincial press, and the London daily papers were only remarkable from the same condition. Woodfall, Perry, Walter, and Stuart had commenced the great improvement; and the pens of Southey, Coleridge, and Lamb were employed occasionally in their papers. The literary and scientific periodicals of that day, with few exceptions, were on a par with the political Journals. In 1798, Gifford, Canning, and their Tory coadjutors had established the bitter and brilliant *Anti-Jacobin Review*, and, in 1803, the *Edinburgh Review*, on foot by Sydney Smith, Brougham, Jeffrey, and Horner, rendered important service to the Whig party, and gave an extraordinary impulse to literary criticism. Of course, there was then a noble literature scattered from the press in volumes; but even this was most inadequate for the supply of a people possessing the natural capabilities of the English. Mr. Charles Knight, in the postscript of his 'Biography of William Caxton,' informs us, from an examination of the 'Monthly Catalogue of Books,' that from the year 1792 to the end of 1802, the annual number of new books published in Great Britain was 372; whereas Mr. McCulloch, in his 'Dictionary of Commerce,' states that the annual average of the years 1840-46, with 1842, 2149 volumes of new works, and 755 volumes of new editions and reprints (exclusive of pamphlets and periodical publications), were annually published in Great Britain. Thus, in 1802, there was a very great expansion of our book literature within the present century, though not to be compared with the extension and improvement in our periodical literature.

"All those who would look for a people who know more from more direct evidence to be the true one, that until the present century the great mass of the people were uneducated, and therefore unable to avail themselves of newspapers and magazines, even if they had existed. Ability of volumes and description of great education would seem enough new," even in the very low state of popular instruction; but a cheap periodical literature requires the support of numbers, and cannot exist without a reading people. Though knowledge be the great preserver for centuries in England, yet it is notorious that at the beginning of the nineteenth century the great bulk of the working-classes were unable to read; and even among the middle classes the habit of reading was very different from what it is present. It is, therefore, extended education that has chiefly produced our periodical literature, and that periodical literature has in turn stimulated education."

The subject of the present biography was the son of Richard and Jane Baines of Preston, in Lancashire; and was born 9th Feb. 1774, at Walton-le-dale, a village in the beautiful valley of the Ribble, about a mile from Preston. One incident, in his boyhood, determined the bias of his politics. His father wished to set up as a grocer in Preston; but not having served an apprenticeship to the trade, the laws of the corporation prohibited his doing so, under the penalty of fifty shillings per month. This prohibition Mr. Richard Baines disregarded, and became subject to an indictment at the borough sessions, the pecuniary consequences of which rendered his removal necessary. "The knowledge of the persecution his father had suffered from a Tory corporation had an influence on the son's mind in future life."

Mr. Richard Baines became subsequently a cotton-spinner and manufacturer. Edward was first intended for the same business, but he was sent to be a printer, and was apprenticed, at the age of sixteen, to Mr. Thomas Walker, of Preston, who, in 1793, started the *Preston Review*. With this gentleman, however, Edward did not stay until the end of his apprenticeship, but removed, "by last two years with Messrs. Binns and Brown, of Leeds, the proprietors of the *Leeds Mercury*, which was destined, in the course of time, to become his own. In the end of his apprenticeship, he formed a partnership with Mr. Pease, which was dissolved in 1798, and Mr. Baines carried on business separately, and connected himself with the dissenting interest, and a debating club called the "Reasoning Society." Among the members was Mr. John Talbot, whose sister, Miss Charlotte Talbot, a religious young lady, Mr. Baines married.

"When Mr. Baines was the accepted suitor of Miss Talbot, the match was nearly broken off; for Mr Talbot had heard an evil report of the 'Reasoning Society,' and felt some doubts lest his intended son-in-law might be apprehended under the suspension of the Habeas Corpus Act! The fear may seem absurd, for assuredly there has seldom been a man less additionally disposed to any fully practicable acts of treason than Baines. But the fact is mentioned as an illustration of those days of terror. Mr. Talbot actually withdrew his consent from the marriage when it was just about to take place, and on no other ground than that he had young people, having recently had his approval. Mr. Talbot feel themselves bound to sacrifice their happiness in consequence of an alarm which they knew to have no just foundation. They married on the 2nd July, 1798, and Mr. Talbot soon approved of the step, and took the young man into favour."

In the month of March, 1801, Mr. Baines became the proprietor of the *Leeds Mercury*. In the autumn of 1807, the great Yorkshire election, and the defeat of the Hon. Henry Lascelles, by Lord Milton, drew out his talents as a controversial writer; and, at a much later period, his energies were displayed in the detection and exposure of the notorious Oliver the spy. Mr. Baines was also early a free-trader, and supported Mr. Huskisson's measures. In 1824 he resided eight months in London; and during the years 1825 and 1826 he visited Belgium, Germany, Switzerland, Italy, and France. In the year 1833 he became M.P. for the borough of Leeds and West Riding of York, and continued such until 1841. After his retirement from Parliament, he filled the office of a magistrate for Leeds. His death took place, August 3, 1848; an event which drew forth a remarkable manifestation of public sympathy.

Such is the outline of a work which holds up an example to the rising generation, and in its details presents many interesting facts connected with the times to which it relates. It is full of instruction, and ought to be extensively read.

The Irish Land Question, with practical plans for an improved Land Tenure. By Vincent Scully, Esq., Q.C., Dublin. Hodges and Smith, Grafton-street.

The Irish Land Question is one of the most difficult subjects that ever perplexed statesmen and public writers; but it is now nearly settled by the Encumbered Estates Act, and the failure of the population of the agricultural produce. The present race of indebted landlords will be sold up, and the future owners of the land, having a reduced and scanty body of tenants and laborers, will be obliged to act more fairly than their predecessors. The first part of Mr. Scully's book, which treats of the "temporary land question," refers principally to the losses of the existing landlords; and he complains of the "statutes passed within the last few years which have diminished the price of agricultural produce;" and that "the peculiar burdens of the landlords being involved in distress He suggests that a particular tribunal should be appointed to investigate every special case of landlord hardship, which would reduce all the charges on the land in proportion to the reduction of the price of produce. That might have been considered before the Encumbered Estates Act had come into operation, but now it might add to the injustice complained of. We believe, too, that the operations of such a tribunal would have been stopped at the threshold, by a person dreams of compensating the landowners for a natural fall in price, and leaving them all the benefit of a natural rise in price; and the impossibility of distinguishing at any time between the reduction of price caused by statutes, or by improved agricultural processes, peculiar seasons, a general striving after cheapness, &c., must ever make the working of such a tribunal impracticable The parties to the different bargains for the use and ownership of the produce of land may settle such matters by their mutual haggling. The state may abate a own demands on the landowners; no tribunal can'd effect a fair adjustment: and we may, therefore, dismiss all consideration of the temporary land question, because it is decided and inevitable, what the tribunals proposed too late, would have been utterly impracticable if proposed earlier.

As to the permanent land question, no person doubts the necessity of a proper appropriation of the land, and of establishing justice as the rule between all connected with its ownership, occupation, cultivation, and distribution of its produce; nor can any person doubt that the multiplied confiscations which took place from Fortescue's Ireland, and the continual absence of justice subsequently from the relations of land ownership and land occupation, are the main causes of the evils of Ireland—the *sons at orgo maturus*, as Mr. Scully expresses it. But for them nobody can be seen a moment to blame in these latter times as the landowners, who have had legislation in their own hands, who have made laws for their own purposes, and who are now the victims of their own regulations. We cannot pity them, but the future fate of Ireland demands a simplification and an improvement of the laws, justly called "a farrago" by Mr. Scully, which concerns the tenure of the land. "It may be doubted," he says, "whether the old feudal regulations were more injurious to the State and the people than the undigested mass of modern legislation, which now confines the relationship between landlord and tenant in Ireland. He therefore proposes an entirely new arrangement, which, if it be worth anything, should be as applicable to England as to Ireland. In fact, the laws of the two countries on this subject are at present pretty much the same, though they are very imperfectly worked out by the opulent independent English yeomen and by the poor Irish peasantry. We are certain, however, that Mr. Scully's plan would not be favourably regarded in England.

He proposes that a special tribunal shall be constituted, to be called the Land Tribunal. It is to be called into activity only by the united application, in writing, of occupiers and owners, or that of the owner's only being also occupiers. The tribunal, on such an application, is to have a map made of the land, *to ascertain its fair letting value*, and examine the title. It is to declare that the land is to be held under the fee simple. The tribunal is then to create and issue certificates of £25 each, of a first and second class, to the amount of what the owners and occupiers agree is the selling value of the land. The whole value of the land, both to the owners and occupiers, will thus be represented by certificates of £20 each, which will constitute the title to each person's interest in the land, and may be disposed of by them—the tribunal having a power to give these certificates to the owner, as he is the absolute master of the property, or to other parties having claims on the land. All sales are to be made by the land tribunal, which would consist, we presume, only in transferring the certificates from one party to another. In the author's opinion, the conversion of property in land into land certificates of equivalent value, would render it as transferable as personal property. Mr. Scully also proposes that the land tribunal shall be at liberty to create land debentures on the security of the land, not exceeding ten times the amount of its fixed annual value; and he describes these debentures as a material part of his scheme, to reject which would be to reject the whole. It is the nature, then, of a new kind of paper money, a particular kind of paper-money, based on the security of land, as well as a supposed simplification of land tenure. It is a repetition of the old plan of borrowing, to borrow being apparently the soul of an Irish landlord. We own we do not comprehend the system; we cannot see any good mercantile rule for creating debentures, in conjunction with the certificates; nor how it is possible to ensure the land to be of the same value ten years hence as now, upon which the value of security on the debentures and certificates will depend; nor any reason why the value of the respective shares of landlords and tenants at present is to be the perpetual rule hereafter for the value of their property. Any justification of an avowed attempt to subvert the temporary interest of the tenant into a perpetual interest: and not understanding all these matters, we are loth to give an adverse opinion of Mr. Scully's scheme, which concerns a subject which so much requires improvement as the tenure of land in Ireland. We think, however, that it proceeds entirely on the erroneous principle of settling value, the terms of contracts in minute detail, and making sales by Act, all of which can only be done by the most minute interference of Government. Already the law is too complicated, and he would make it more so. He thinks that a fixed valuation by a public tribunal can alone guard against the evil of rack rents; but if the tenants are not in a condition to protect themselves against rack rents, no law can ever give them protection. We admire, as much as Mr Scully, Free Trade in land, but we cannot see how that can be given by a tribunal, possessed of power not to enforce contracts, but to enforce a great number of regulations, each of which is a contravention of freedom. The tribunal itself is contrary to Free Trade. We are afraid that this subject is very imperfectly understood. All that can be required to do, and all that it should attempt, is to determine the conditions on which land should be appropriated and held as private property; and that being determined, the law should be content with enforcing al. bona fide contracts, leaving to the landowner as by other men, without bestowing on him any of the privileges ·each as the law of distress ·which are supposed to be for his advantage, but which turn out to be for his injury. Mr. Scully's plan is, we believe, so erroneous in principle and complicated in detail, as to make a further examination of it unnecessary. The most useful part in the book is the Appendix, consisting of historical information and statistical tables of different periods. Unfortunately, the wrong, which they inform us was committed long ago, cannot be remedied. Nature, indeed, with a kindly hand effaces, though slowly, the evil man does, but it is beyond the power to repair it. It must be endured; and, if we recal, his attempts to remedy it, only, as in the case complained of by Mr. Scully, repeat and extend the evil.

The Spanish Protestants, and their Persecution by Phillip II. By Senor Don Adolphe de Castro. Translated by Thomas Parker. Charles Gilpin, Bishopsgate-street Without.

The progress of the Reformation in Spain in the sixteenth century is one of the most curious and least known points of the history of religion in modern times; and we erethankful to Mr. Parker for the information he has supplied us with concerning it. This book is the biography of a considerable number of Spaniards, men and women, who embraced the Reformed Faith, and, most of whom were persecuted and slain, but it does not give a connected history of Protestantism in Spain. The biography is mingled with numerous anecdotes. Thus we read, that John Mat., the Dean of Gi'vlera, was accredited to Phillip by Queen Elizabeth. was first reproved by the King for speaking lightly of some religious processions at court, and then positively ordered out of the kingdom by the jealous Monarch, for not calling Philip II. was the only Monarch of Europe who defended the Roman Pontiff. An anecdote of a totally different character teaches us that cruel persecution was the vice of the age or of the Spanish character, and not peculiar to Phillip and his inquisitors One gentleman in Valladolid, in 1881, being affronted that his pure Castilian blood should be tainted with heresy, denounced his two young and blooming daughters to the Inquisition as heretics. On his solicitation, they were ordered to be burned alive. From his own estates he brought the wood for burning them; and when they were tied to the stake, he kindled the flames with his own hands, and reduced his two children to ashes. The man was held up as an example to other fathers by the barbarous Inquisitors, who in this manner inculcated the greatest of crimes as a religious duty.

Don Carlos, the eldest son of Philip II., died young. Between him and his father there had been alienative disputes and quarrels for some years Some persons have attributed to Don Carlos a passion for the second wife of his father, Isabel of Valois, to whom he had been betrothed before his father, and his father, on the death of his first wife, had taken to himself. But this legend is more poetical than true. There is no doubt that Don Carlos united a strange mind with a vehement disposition; and he had established some violent connexions with his father's Protestant subjects in the Netherlands, if he had not embraced the Protestant faith. His health was weak, which placed him at the mercy of medical men, as well as much under their care. Whether he possessed or not the talents of Philip II., or died from the want of skill in the doctors, or from natural causes which no skill could avert, is doubtful. It is, however, certain, that while he was at enmity with his father, and placed in confinement, he died; and there arose an assertion in the Protestant countries, that he was poisoned by his father's orders. The author is inclined to adopt the latter opinion, and to affirm that Carlos was murdered because he was a Protestant. As his and especially Isabel's incident is Protestant, Phillip did not like to appear in the presence of Carlos, and yet he wished, consistently with his character, to appear to do something for his son, and, accordingly, he "threw his benediction in to him, or pronounced a blessing on him," at one of the doors of the apartment, over the shoulders of two of his courtiers." The book is just now of peculiar importance, as supplying additional proofs of the length to which a false principle of honour may carry men. In which cases we act from the imagination exclusively, which has complete dominion over the mind, and allows it no test of truth or falsehood but itself. To warn men against its effects, books of this and many kinds are needed, who will know the length to which it has driven the Spaniards, should read the "Spanish Protestants" of De Castro.

Manual of the Anatomy and Physiology of the Human Mind. By the Rev. James Carlile, D.D. Arthur Hall, Fisher, and Co., Paternoster-row.

Dr. Carlile is a modest man, who takes no more credit to himself than he fairly deserves. He calls his book a manual, because it is an outline, without giving the detail the trains of reasoning by which the mental phenomena have been ascertained; and because he has succeeded in providing a useful and instructive book for the educated classes, while he makes no boast of originality, and repudiates all claim to the distinction in general so much coveted by authors, whether right or wrong. Yet a neat, concise, intelligible way of putting a fact or explaining a truth that has before been noticed, so as to give it life in many minds, while it lay before dead and buried in some record or forgotten book, is of more value than originality, or to making a discovery and this Dr. Carlile has done. The [illegible] discover read the fact or the truth in the book of Nature; Dr. Carlile [illegible] in his book, and has life merit, which the first discoverer was born [illegible] the common property of a great number. Thus, his descriptions of [illegible], of memory, of perception, of the faculties of animals, of our bodily [illegible] and of other matters, such as that of the sleep, as the source of our knowledge—of an eternal world, and of the vastness of creation of the means by which minds affect minds, though they contain nothing positively new, are better adapted to make these parts of our knowledge familiar to the reader than the more elaborate works from which he has drawn his materials. We cannot say that all the points in the extensive and abstract subject he treats of are equally and satisfactorily elucidated—we cannot say that many parts are not yet open to controversy; but we can say, that the whole are treated in a plain, concise manner, so as to make Dr. Carlile's a very useful book, if the subject forbids us to hope that it be a very popular one. We forbear from entering into any controversy on particular subjects, while we bear our testimony to Dr. Carlile's general merits. From such publications being now somewhat numerous, it is to be inferred, that the study of the mind is reviving amongst us, which is desirable, as that only can lead to a solution of many important problems connected with education, legislation, and the fine arts. How mind can most efficaciously and advantageously influence mind lies at the basis of all criminal law and all government; and Dr. Carlile shows, in common with many others, that the communication of thought and fact is most influential and most beneficial, when the communication is wholly disengaged from coercion, violence, or threats. In that statement lies the germ of all reasoning against the use of the gallows, or the practice of war. It may be described as the hard, material, unfanciful, unæthereal doctrine, that the grand vindication of the great political and philanthropical doctrine, that love is the soul of the world; and that society can only be kept together and governed as a family is kept together and governed—by love, and not by brute violence. In metaphysics must we seek for the principles on which our political violence. In metaphysics must we seek for the principles on which our political systems can be reformed; and we trust, therefore, that Dr. Carlile's book will help to bring the study of the mind again into fashion. Man is said to be what he has created after the image of God, and only by the study of the mind can we reach the knowledge of the communication of that truth. Experience and Bacon have taught us that the mind is gradually formed—modelled, as it were, by the senses on the inner-life—by the contact of the great, poetical and philanthropical doctrine, that love is the soul of the world; and that society can only be kept together and governed as a family is kept together and governed—by love, and not by brute violence. In metaphysics must we seek for the principles on which our political violence. In metaphysics must we seek for the principles on which our political systems can be reformed; and we trust, therefore, that Dr. Carlile's book will help to bring the study of the mind again into fashion. Man is said to be what he has created after the image of God, and only by the study of the mind can we reach the knowledge of the communication of that truth. Experience and Bacon have taught us that the mind is gradually formed—modelled, as it were, by the senses on the universe; and if that be what is meant by the saying, as the mind of man is universe; and if that be what is meant by the saying, as the mind of man is universe; and if that be what is meant by the saying, as the mind of man is

OFFICIAL STATISTICS OF THE CRYSTAL PALACE.

RETURNS showing for each day, since May 1st to July the 26th, the estimated Daily Number of Visitors to the Exhibition, the Receipts at the Doors, and the largest number of persons in the Building at any one time.

JAMES WADE, *Accountant*

BALLOONING IN FRANCE.—Large crowds assembled on Sunday in the Champ de Mars and at the Hippodrome, to witness two balloon ascents, accompanied by descents in parachutes. M. Poitevin made the ascent from the Champ de Mars, and Monsieur Poutrain made the gigantic descent. After the balloon had risen to a certain height, the cord of the parachute was cut; the parachute descended rapidly for a few seconds, and then spread open: when near the ground it caught in the branches of some trees, but at last reached the earth in safety at the exterior of the Champ de Mars, near the railing of Avenue de Saffren. Madame de Poitevin, who displayed remarkable *sang froid*, then entered her carriage, which had followed her, and drove to the tribune of the President of the Republic, who congratulated her, and accepted the bouquet which she had taken on starting. M. Godard, in the Hippodrom's balloon, took up his brother in the parachute; he cut the cord when he was over the Champ de Mars, but the parachute deviated, and fell into the river. M. Godard, when near the water, jumped in, and swam ashore, dragging the parachute after him. The two ballooning proceeded in a southerly direction, and it is not yet known where they descended. M. Poitevin was accompanied by M. Petin, the inventor of a system of aërial navigation, which he is preparing to exhibit, and M. Godard by several gentlemen.

GUTTA PERCHA WATER-PIPES.—The *Chemical Record*, in its review of the Government documents of Messrs. Rammell and Napier concerning a proposal to supply London with water from the Surrey sands, says: "It is somewhat remarkable, that, in the numerous documents of Messrs. Rammell and Napier, although stress enough is laid upon the poisonous agency of lead pipes and cisterns, and many suggestions are thrown out for the substitution of glazed porcelain and glazed iron, nothing whatever is said about, unquestionably, the very best material for water-pipes that yet has come under the notice of man —we mean gutta percha—a material which, whether we regard it under the aspect of perfect insolubility in water, innocuity, facility of moulding property, power of resisting hydraulic stress, and of junctures, or flexibility, is, we repeat, the most generally eligible material for the construction of water-pipes. Nor is there a doubt, that, in the long run, gutta percha would be cheaper than lead when thus employed. We have largely used gutta percha for water conductors in laboratories, and with the result of rendering unnecessary several stopcocks and branch communications. Our gutta percha pipes is quite flexible enough to turn wherever we desire our water supply, whereas, had lead been adopted, the minor flexibility of that material would have rendered several branch pipes absolutely requisite."

On Friday (last week), at Plymouth, a fisherman named Brat, the master of a trawling sloop, when out in his vessel fishing, fell overboard and was drowned. About four hours afterwards, his son, who was mate of another trawler, and who had not heard of the accident, was hauling up his trawl, which appeared unusually heavy. After some difficulty, however, the trawl was hove on to the vessel, and within it was discovered, to the consternation and dismay of all parties on board, the body of the mate's father.

OPENING OF THE GALWAY RAILROAD.

ON Friday, the 1st of August, this important line of railroad, which divides in a direct line the entire island, and connects its extreme eastern and western points, was opened for traffic.

Though not surrounded with any of the pomp or festivity which usually herald in such events, the opening of the railroad has been looked forward to with deep interest by all parties interested in the prosperity of Ireland, both on this and the other side of the Channel, from the importance of the line in a commercial point of view and its likelihood of eventually becoming the high road over which the intelligence and passenger traffic between this country and America must pass; but, though divested of any public festivity, the event was celebrated with all that generous private hospitality for which the capital of the West is so distinguished. The directors, judges, and other public functionaries were entertained at a sumptuous banquet, given at the Galway Club House by the gentlemen of the county, and the day was everywhere celebrated as one for hope and rejoicing.

MR. HEMANS, ENGINEER-IN-CHIEF OF THE GALWAY RAILROAD.—FROM A PHOTOGRAPH BY CLAUDET.

For the opening of this line in the short period of 18 months from its commencement, a circumstance believed to be unparalleled in railway annals, the Irish public are indebted to the munificence of the British Parliament, which advanced the money for the construction of this great national work, to the energy and noble enterprise of its celebrated contractor, Mr. Dargan, and to the eminent ability and untiring exertions of its engineer, Mr. Hemans, a photograph of whom we present to our readers to-day. Mr. Hemans is the son of Captain Hemans, a distinguished officer of the army, and the well-known authoress, Felicia Hemans, whose name must ever find a home in the hearts of all who love to see clothed in the language of poesy all the exquisite fancy, beautiful feeling, and pure thought of woman. From Chorley's interesting life of Mrs. Hemans, we learn that the subject of this notice was born at the romantic residence of his mother, in Wales, near the old cathedral town of St. Asaph; and, notwithstanding the unceasing exercise of her mental gifts, she devoted many hours each day in the labour, to a woman of elevated mind so dear and holy, of instructing her children, and planting in the young mental soil of her son those seeds which have already brought forth so high an eminence, and bear the blossom of a still higher. Upon leaving his mother's care, Mr. Hemans, after passing some short time with his father in Italy, was placed at a distinguished military college in France, where he passed three years, during which he exhibited all the promise of that distinction he has since attained, having carried away every prize both in foreign languages, science, and drawing, and leaving the establishment with no less than six medals. On leaving France, Mr. Hemans was placed under the guardianship and care of his uncle, Colonel Windus, the excellent and popular commandant, who placed him, after filling some appointment under the Ordnance Survey with much credit, as a pupil under Sir J. M'Neil, then practising in London. In this position he was employed on several Irish and Scotch lines of railway, and on the completion of his time of pupilage was given charge of the Dublin end of the railway to Drogheda, the works of which were entirely confided to him by Sir J. M'Neil. After the opening of that line he was immediately placed in charge of a more extended division of the railway then commencing between Dublin and Cork, and was ultimately appointed by Sir J. M'Neil District Engineer over 50 miles of Cork works.

At this juncture, however, the directors of the Midland Great Western Railway of Ireland, having obtained an act of Parliament enabling them to construct their line to Mullingar and Longford, applied to Mr. Hemans, in August, 1845, to take charge of their works as Chief Engineer. This offer he accepted, and was immediately engaged in preparing plans for the construction of their line, and for its branches and proposed extensions.

During the great depression that all railways laboured under, subsequent to the mania of 1845, but slow progress was made with the works to Mullingar; but on the 28th of June, 1847, the first portion, to Enfield, 26¼ miles, was opened to the public. In the meantime, by the issue of a severe Parliamentary contest, the company had been put in possession of the line to Athlone, and in 1847 those powers were further extended to Galway; in the same year a further portion of the line to Mullingar was opened, on the 6th December, to the public. It was not until the 2nd of October in the following year, 1848, considerable financial difficulties having much retarded the works, that Mr. Hemans could consolidate the directors to open their line to the public on its way to Mullingar, and there for a considerable period all further progress was stopped.

In May, 1849, the extreme distress in the west of Ireland having induced the Government to consider the advantages of giving employment, by the extension of the rail to Galway, a loan was advanced to the company of half a million, to be spent on the line between Athlone and Galway, the company themselves guaranteeing to find the sum of one-third of the cost of construction. This further condition, which then appeared rather startling, was annexed, which was, that the whole line from Mullingar to Galway, 77 miles long, must be completed by the end of December, 1851.

As the works could not commence until land was obtained, in the beginning of 1850, this was considered a difficult task, and was not undertaken without hesitation. The long river, the Shannon and the Suck, and an arm of the sea, were to be bridged over, and some deep bogs to be crossed, besides tolerably heavy earthworks in the county Westmeath. In the latter end of the year, the directors' strong recommendation, secured the services of Mr. Dargan, the eminent contractor, and early in 1850 the works were actually commenced by him, with a large staff of plant and assistants. From this time Mr. Hemans devoted every energy of his mind to the arrangements necessary for the completion of the line in due time. Designs were prepared for the numerous bridges, stations, &c., and for the viaducts over the Shannon, river Tuch, and the great valley of Athlia. All these works were put in active operation during the summer of 1850; and the result has been, that, on the 1st of August, 1851, five months *before* the stipulated time, and at a cost, we believe, considerably *under* the estimate, the whole line from Mullingar to Galway has been opened to the public.

Thus, in about eight teen months since the commencement of the works, a line of railway, 77 miles long, has been opened to the public. The viaduct over the river Shannon is a most interesting and elegant work. The details of the design and the execution of the work are by Messrs. Fox and Henderson, the well-known contractors for the Crystal Palace. They are taken from the original sketches of Mr. Hemans, who decided on adopting the system of cast-iron cylinder foundations in the river, and bow and string girders, as previously invented by Mr. Fox, and erected in England on a smaller scale.

The principal novelty in this bridge is, that there is an opening portion of it in the centre allowing vessels to navigate the river a double pass through the bridge. This is an equilibrium swivel, turning on a large central ring, and opening two spans of 43 feet each simultaneously. The bridge being for a double rail, the part in motion, when opening, weighs 130 tons, and is moved by two men through means of a simple winch gearing. The remainder of the river, which is here near 500 feet wide, is crossed by two openings of 168 feet each, constructed in light wrought-iron girders 20 feet deep; but being entirely of open diagonal work, they have a very light appearance. There are also two land openings on iron girders, 40 feet and 50 feet spans.

The whole, with the exception of the land abutments, rests on cast-iron pillars sunk 13 feet in the bed of the river, and built up inside with solid masonry.

The total weight of iron employed is about 1500 tons.

The bridge over the river Tuck consists of stone piers and hollow wrought-iron tubes, on the principle of the Britannia and Conway bridges, except that the railway is supported by, instead of going through them. These are in three spans of 75 feet each, and are 6 feet deep in the centre. The weight of iron in this bridge is about 130 tons. It was constructed by Messrs. Fairbairn, of Manchester.

The viadnct over the estuary of Lough Athalia is a still more remarkable work than the one over the Shannon, from the circumstance of the Admiralty requiring the swivel opening to be 60 feet wide, for the accommodation of a large class of steamers. A design was made by Mr. Hemans for this bridge also, on the equilibrium principle, opening two spans at once: this was highly approved by the Admiralty, and submitted for competition to several eminent firms, leaving to them the option of the detail method of carrying it out. In this competition Messrs. Fairbairn, of Manchester, were successful, again adopting the principle of the box girder as the main feature of the work. The bridge stands in the centre of a tidal way, subject occasionally to violent gales and high tides; the masonry is therefore of the most solid description. The central pier, on which rests the swivel ring, is 34 feet wide, and the two secondary piers are 10 feet wide each; the side spans are 40 feet each in wrought-iron girders; and the total length of the swivel girders is 160 feet, by a width across the railway of 38 feet. The mass in motion when this bridge opens for vessels is about 300 tons. This is a splendid specimen of the power of machinery, and of the skill now attained in railway-bridge making. Four men at a winch suffice to open or shut the bridge.

The permanent way of the line is exclusively of Mr. Hemans' design and adoption. As a whole, it consists of a combination of bridge rails riveted and bolted to joint-plates, and of longitudinal and cross sleepers, the latter varying in number according to the nature of the ground. A very high rate of speed is attainable on this system with less oscillation than on the old plan of stone blocks or cross sleepers to support the rails.

In connexion with the railway, Mr. Hemans has designed a safety pier for Galway Harbour, which, if carried out, would render it one of the finest in the world.

PROROGATION OF PARLIAMENT.

THE QUEEN'S SPEECH.

Parliament was yesterday prorogued by Her Majesty in person. The Queen went in State by the usual route, and reached the House of Lords shortly before two o'clock. The fineness of the day attracted an immense concourse of spectators by whom her Majesty was loudly and enthusiastically cheered.

The Queen having taken her seat on the Throne of the House of Commons, with the Speaker at its head, having, pursuant to summons, made its appearance at the Bar, her Majesty made the following most gracious Speech:—

"MY LORDS AND GENTLEMEN,

"I am glad to be able to release you from your attendance in Parliament, and I thank you for the diligence with which you have performed your laborious duties.

"I continue to maintain the most friendly relations with foreign powers.

"I am happy to be able to congratulate you on the very considerable diminution which has taken place in the African and Brazilian Slave Trade. The exertions of my squadrons on the coasts of Africa and Brazil, assisted by the vigilance of the cruisers of France and of the United States, and aided by the co-operation of the Brazilian Government, have mainly contributed to this result.

"GENTLEMEN OF THE HOUSE OF COMMONS,—

"I thank you for the readiness with which you have granted the Supplies necessary for the service of the year.

"MY LORDS AND GENTLEMEN,

"It is satisfactory to observe that notwithstanding very large reductions of taxes, the revenue for the past year considerably exceeded the public expenditure for the same period.

"I am rejoiced to find that you have thereby been enabled to relieve my people from an impost which restricted the enjoyment of light and air in their dwellings. I trust that this enactment, with others to which your attention has been and will be directed, will contribute to the health and comfort of my subjects

"I thank you for the assiduity with which you have applied yourselves to the consideration of a measure framed for the purpose of checking the undue assumption of ecclesiastical titles conferred by a foreign power.

"It gives me the highest satisfaction to find that, while repelling unfounded claims, you have maintained inviolate the great principles of religious liberty, so happily established among us.

"The attention you have bestowed on the Administration of Justice in the Courts of Law and Equity, will, I trust, prove beneficial, and lead to further improvements.

"I have willingly given my consent to a bill relating to the administration of the land revenues of the Crown, which will, I hope, conduce to the better management of that department, and at the same time tend to the promotion of works of public utility.

It has been very gratifying to me on an occasion which has brought many foreigners to this country, to observe the spirit of kindness and good-will which so generally prevailed.

"It is my anxious desire to promote among nations the cultivation of all those arts which are fostered by peace, and which in their turn contribute to maintain the peace of the world.

"In closing the present session, it is with feelings of gratitude to Almighty God that I acknowledge the general spirit of loyalty and willing obedience to the law which animates my people. Such a spirit is the best security at once for the progress and the stability of our free and happy institutions.

POSTAGE STAMPS.—At the instance of Mr. Muntz, the House of Commons has ordered to be printed a copy of all the correspondence that has taken place since 1847, between the Lords of the Treasury, the General Post-Office, and Mr. Archer and the Commissioners of Inland Revenue, relative to Mr. Archer's machine for perforating sheets of postage label stamps. The inconvenience which Mr. Archer proposed to remedy—serious enough to persons of voluminous correspondence, and still more so to a postmaster during the last half-hour for receiving letters—is the trouble occasioned by the present mode of cutting or tearing sheets of postage stamps into single heads. For this purpose the inventor's machine, which, it is stated, can be worked by two boys, and by the aid of which a stamp sheet can be perforated in the minutest manner in the direction of the white lines, as to allow the stamp to be instantly detached from the sheet without the operation of cutting. The plan, it was argued, would secure the holding of a stamp to sheets without any gum, while the rough or denial edges given to the stamps would cause them to adhere to the letters much better than when cut by scissors. Mr. Archer, feeling confident in the success of his plan, proposed that the stamps should remain contingent upon the unqualified approbation of the public, the Postmaster-General, and her Majesty's Commissioners of Stamps. The superintending presidents of the inland and London district post-offices thus referred to Mr. Archer's machine, under date the 14th October, 1847:—"The machine appears to be a very clever and useful invention.

* * * We are thoroughly convinced that postage stamps separated by it, having jagged edges, will adhere to letters far better than those cut from the sheet by knives or scissors. * * * We submit, it is most desirable that the invention be recommended to the notice of the Commissioners of Stamps." The machine obtained the approval of the Board of Stamps and Taxes, and of the Lords of the Treasury, and after one or two experiments it was found to answer the purpose for which it was intended. A sum of £200 was proposed to be given to Mr. Archer as an adequate remuneration for his invention, besides a further sum of £400 as compensation for expenses incurred in the construction of the machine. The inventor was dissatisfied with the arrangement, urging that it was inadequate to defray the mere outlay, and proposed (March 26, 1851) to enter into a contract for perforating, engraving, printing, and gumming postage label sheets for £1 15s a thousand less than was then paid for engraving, printing, and gumming them. The agreement with Messrs. Bacon and Petch was to print postage labels at the rate of 6d. per 1000. Mr. Archer proposed to do so, and to perforate them besides, at 4½d per 1000. The original printers reduced their charges to 5d. per 1000 in consequence, and a contract was entered into with Messrs. Bacon and Petch for five years at that rate. Mr. Archer, on the 30th of May, signified to the Inland Revenue Office that it was his intention "to appeal to the honour and justice of Parliament for redress, with the least possible delay."

His Royal Highness the Prince of Holstein (travelling under the name of Major Greenwald), accompanied by his son, visited Liverpool last week, and inspected various institutions there, amongst them St. George's Hall, the Cornwallis-street Baths and Washhouses, the Albert and all the other docks, and the Town-hall, where they partook of a cold collation. Both the illustrious visitors spoke English with considerable fluency, and frequently expressed their gratification which the varied and novel sights afforded them. They left subsequently for Scotland.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 198, Strand, aforesaid.—SATURDAY, AUGUST 9, 1851.—SECOND SUPPLEMENT.

THE ILLUSTRATED LONDON NEWS

No. 510.—VOL. XIX.] SATURDAY, AUGUST 16, 1851. [SIXPENCE.

LONDON AND PARIS.

We this week continue our Illustrations of the festivities instituted at Paris, ostensibly in honour of the Great Exhibition and of the city of London, but, in reality, in honour of the English nation We have already expressed ourselves in terms of high approval of the spirit which dictated the invitation given by the Prefect of the Seine, and which animated the whole Parisian population in the reception of their English guests, and have indulged in some, we think, not unwarrantable or over sanguine anticipations of the good that is likely to result from the interchange of friendly sentiments between two such mighty and once hostile nations. In returning to the subject, we do so, that we may, as far as our own circulation extends, neutralise the impolitic and ungracious attempts of a portion of the daily press to throw ridicule upon the guests who were invited, and consequently upon the givers of what we cannot but consider the most remarkable series of festivities recorded in the annals of any people.

Few persons will, we think, be found of sufficient wrongheadedness to deny that the original idea of the invitation given by Paris to London was a good one, and that the tendency of such displays of generous sentiments between nations whose yet unforgotten feuds formerly held the world in awe, is to aid the mighty cause of human happiness and advancement. If this be conceded, it is surely in bad taste on the part of Englishmen to hint at such a time that the cordiality of the Parisians was misplaced, or to indulge in any ridicule of them because they may have imagined London to be as much London as Paris is Paris, and the Lord Mayor of London to be as great a public officer as the Prefect of the Seine. If they committed a mistake in their

INUNDATION OF THE RIVER AAR, AT UNTERSEEN, SWITZERLAND, ON AUGUST 1.—REMAINS OF THE BRIDGE.

INUNDATION OF THE RIVER AAR, AT UNTERSEEN SWITZERLAND, ON AUGUST 1.—REMAINS OF HOUSES ABOVE THE BRIDGE.—(SEE NEXT PAGE.)

over-estimate of the dignity of Sir John Musgrove, or of the jurisdiction of the corporation of London, their good intention is none the less; and if they lavished honours upon aldermen, sheriffs, and common-councilmen, which would not in their own country have been accorded either to their personal merits or to their public position, it is not for us to find fault. An ambassador may personally and individually be a man of small account, but as an ambassador he wields the dignity and majesty of his nation reside in him; and the Lord Mayor of London, and the members of the corporation who accompanied him on his peaceful trip to Paris, may, as metropolitan functionaries, be of the smallest possible weight and importance; but being on this occasion the representatives of this country—and the best, because the only possible representatives that could be found—they were *de facto* the ambassadors of the people, and entitled to receive all the honour and respect which is fairly attributable to such a high position.

If the city of Paris had simply invited the members of the Royal Commission, the Executive Committee, the Jurors, and the gentlemen by whose efforts the Great Exhibition of 1851 had been made a world's wonder, it would no doubt have done a gratifying act; but when Paris not only invited these, but extended its hospitality and its kindly feeling so far as to invite London, it did an act still more significant and memorable. There is no doubt that the Corporation of London has but a limited jurisdiction—that it is but the nucleus of municipality—that it is in many cases the enemy of improvement—that it has jobbed great jobs—and that, in popular tradition (not always just), its aldermen are men of great stomachs and of little wisdom; but it should be remembered, after all, that, however limited its powers, there is no other municipal authority within the limits of this great metropolis that can be compared with it, either for dignity or for antiquity; and that, if it do not represent to foreign nations the metropolis of Great Britain, there is no other body in existence that can do so. The Corporation of London may have many faults: a world may have grown up around it, with the interests and feelings of which it may not always have identified itself; but it behoves Englishmen to reflect, that this venerable body, with all its real or supposed demerits and defects, is the representative of a system of municipal government to which England owes much of its power, and its people much of their freedom and happiness. For at least six hundred years, the Lord Mayor, Aldermen, and Common Council of London have represented the popular will, in a city which has aggregated to itself, by its wealth, enterprise, and intelligence, a whole congeries of neighbouring towns and cities, and formed a metropolis, which, though not the most beautiful, is certainly the richest and most populous, and possibly the most renowned and most highly civilised, in the world. The Prefect of the Seine, therefore, committed no mistake, as these illnatured critics would assert, in inviting the Lord Mayor and municipality of London to the splendid festivities of the past week: and no one has a right to infer that he was in any respect ignorant of the real powers and true position of the civic functionaries, whom, in the name and on behalf of his own city and nation, he for this once delighted to honour. It is all very well for professed jokers to exercise their harmless vocation at the expense of citizens and aldermen, and to launch their mimic thunderbolts against the civic capacity for turtle-soup and intolerable gluttony; but it ill becomes the sober leaders of public opinion to follow their example upon an occasion like this, and to write with an *animus* which would justify the Parisians in the belief that their guests had been cast before swine, and that the English public were as ungrateful and unappreciating as the municipality of London is represented to be gross and vulgar.

But the best informed among the Parisians were not deceived. They knew well why they honoured, and whom they honoured; and recognised in the honest burghers of London the representatives of a system of free government which they respect and envy in us, and would be but too happy to obtain for themselves. And better, far better, the popularly elected corporation of London, with all its faults and abuses, than the despotism which has made Paris such a municipality as it is. Sorry we should be to see the old corporation of London rooted out, even though it unwisely loves and lives the abominable cattle-market of Smithfield. That it is far from perfect we do not deny; but that it ought to be the nucleus and fountain of the municipal authority, that some day or other must be made to stretch over the two millions and a quarter of people that are crowded within the limits of our actually unmanageable mighty metropolis, we think there are few who have studied the subject who will be found to gainsay. At all events while we at home may find what faults we please with our venerable city, and its ancient organisation, let us do our Parisian friends full justice, not only for their kind intentions, but for the hospitality which would have been singularly incomplete, if it had not included the municipality of London. To sneer and to snarl, are accomplishments as easy as they are ungracious; but we suspect that those who find delight in such exercises of the mental, or perhaps of the biliary organism, would have found better and more prolific occasion for the display of their ill-nature, if the Prefect of the Seine had ignored the existence of the Lord Mayor of London. The functionary who is privileged to invite the Sovereign of Great Britain to his banquets, whatever may be said of his jurisdiction, is certainly a guest worthy of invitation by the civic authorities of Paris.

INUNDATION AT UNTERSEEN.

THE thoroughly Swiss village of Unterseen, situated about halfway between the lake of Thun and Brienz, has just been the scene of one of those destructive visitations which are incident to mountainous countries; the river Aar having inundated the place, and carried away a considerable amount of property, attended by a melancholy loss of life.

The Aar, always a rapid stream, has this season had more than its usual volume of water, owing to the melting of the snows and the vast quantity of rain which has fallen; and, on Friday, August 1, after three days' incessant and heavy rain, it is assumed an alarming appearance. The failure of the upper weir early in the afternoon, by direct ng a vast body of water against a block of houses on one of the islands of which the place is composed, convinced the inhabitants that no time was to be lost; they accordingly commenced removing their goods,—a necessary precaution—for about six o'clock the houses (many of which overhung the water) began to fall. Great exertions were made to stay the work of destruction, by forming artificial banks of fir trees thrown in at the edge of the stream, chained together, and weighted by heavy stones. About seven o'clock one of the abutments of the bridge, near the post-office, gave way, precipitating a number of persons into the boiling flood. The confusion was so great, that no conjecture could be formed as to how many were immersed; nor, at the time this was written, had it been ascertained how many had perished. Our Correspondent had a narrow escape, having but a moment before been on the precise spot that gave way. The landlord of the Hôtel des Alps, H. Holfstetter (a highly respectable man, with many young nieces), are among the drowned; a man and a boy are also ascertained to be lost. The latest reports were afloat; but it seems probable that seven or eight have been carried away. For some hours the utmost alarm was felt by the visitors at Interlachen, as the waters intervening had it been dry between the two portions of the village by the falling of the bridge, and a great many strangers were known to have been on the spot at the time of the accident. These fears gradually subsided, and it is now believed that no stranger has perished. Much damage has been sustained in the higher valleys. At Meyringen, and at the valley of Lauterbrunnen, the bridges are said to have been carried away. There has not been so destructive a flood here for twenty years.

The accompanying Views were sketched on the spot on the day after the catastrophe: one represents the bridge as it appeared at the time; the other shows the houses above the bridge, where the greatest damage was done.

FOREIGN AND COLONIAL NEWS.

FRANCE.

From Paris there is little intelligence of interest this week, the busy world of politics being hushed in the stillness and repose of the parliamentary recess.

According to the usage of the Legislative Assembly of the Republic, a small section of the representatives of the people, consisting of twenty-five members, and called the Commission of Permanence, was elected immediately before the prorogation, to watch over the public security until the Assembly again meet. The names of the members chosen are:—MM. Didier, General Changarnier, Dufour, Sauvaire Barthélémy, De Montigny, Berryer, Vitet, Ponjoulat, De Melun, Passy, Druet-Desaux, D'Olivier, Gouin, Berrardi, De Montebello, Bocher, De la Tourette, Admiral Cecille, Rullière, Hubert de Lisle, Boinvilliers, De Kermarec, De Bar, Gronchy, and De Mortemart. They hold a meeting every second Thursday, but, as yet, their meetings have been merely formal.

A manifesto from the Montagne, under the title of "*Compte Rendu de la Montagne au Peuple*," appears in the Red Republican papers this week, the tone of which is very violent. It gives expression to the delight of the Red party at the defeat of the Duc de Broglie's proposition for a revision of the Constitution, from which result they do not hesitate to draw the inference that the Constitution being now recognised to be sacred, the candidature of Louis Napoleon becomes impossible. They then proceed to bring charges against the Government of the Republic, which are, to a certain extent, perfectly well-founded, for it is quite true that under the present Republican Government there is not only far less liberty than had been enjoyed under the Monarchy, but there is hardly any liberty at all. That system, however, is too contrary to public deliberately adopted with the consent of a majority chosen by universal suffrage, and with the tacit approval of the nation at large, actuated by the belief that the moments is not propitious for renewing institutions which would become factious weapons in the hands of a desperate party, prepared to violate all the principles on which religion, family, and property are founded.

The public treat the manifesto with contempt. A paper of a similar character has also appeared from the pen of Ledru-Rollin, who, with his companions in exile at London, seem to fear they shall be forgotten, unless they do or say something characteristically absurd.

The Hotel of the Invalides had a narrow escape on Tuesday of being burned down. The funeral ceremony of Marshal Sebastiani was in course of arrangement, when one of the flags, captured by the French from foreign armies, which hung from the ceiling, caught fire from the candles on the altar of the chapel, and the flames quickly extending, a considerable number of the flags were burned, but the building was saved.

M. Pierre Bonaparte's horse fell with him on Monday, and broke his leg in two places. He was galloping to get some medicine for a servant, who was ill. The President of the Republic instantly came to him. The fracture is going on well.

The annual distribution of prizes at the Sorbonne took place on Monday. M. Sibour, Archbishop of Paris; M. Baroche, Minister for Foreign Affairs; and Generals Magnan and Perrot were among the spectators in the reserved seats. M. Guizot occupied his former professor's chair.

General the Marquis of Roche Dragon died suddenly of apoplexy on Monday, at the club on the Boulevard Montmartre.

ITALIAN STATES.

In Lombardy, and the Austrian provinces of Italy generally, the discontent of the people has become so universal, and presents so menacing and exp osive an appearance, that Marshal Radetzky has demanded considerable reinforcements; to which application, however, the Government at Vienna are unable to concede, owing to the deplorable state of the Austrian finances.

The occupation of Rome continues to occupy diplomacy. It is said to be again intended to compose the garrison of the city of Neapolitans and Romans, leaving the French to retain possession of a few points along the coast. It appears, however, that the Cabinet of the Elysée is not at all disposed to accept that plan, and has declared its determination to participate in the same measure as Naples in the future occupation, should the other Courts decide on substituting that system, instead of the present occupation.

According to the Paris *National*, since the appearance of Mr. Gladstone's letters, the rage and cruelty of the King of Naples has been stimulated to an extraordinary degree, in support of which statement it cites a long list of fresh persecutions.

GERMAN STATES.

The Germanic Diet have come to a resolution, that, notwithstanding the protests of England and France, the whole of the Austrian state s shall be admitted into the Confederation. The Court of Vienna has also determined to carry out its determination against all opposition.

The Cabinets of Austria and Prussia are carrying on negotiations for the renewal of the treaty relative to the navigation of the Danube, which terminates next month.

UNITED STATES.

The accounts from New York this week are dated the 30th ult. They are of little interest, with the exception of intelligence from Cuba, noticed in another place.

In Philadelphia a large fire is mentioned, by which the cotton and woollen goods' factory of Rex, Jefferson and Washington-streets, Kensington, and the carpet factory of Lorimer and Brinkhurst, in Perry-street, above Phœnix; the six-sto ry brick factory on Washington, above Jefferson-street; three-story brick dwellings on the north side of Jefferson-street, near second; four on the south side of Jefferson-street, as also three brick dwellings on Washington-street, and two or three on Perry-street. The loss is roughly stated at 150,000 dollars, only a portion of which is covered by insurance. The cotton factories are said to have been owned by New York companies.

We have accounts of a severe and destructive storm at Ba timore, Pittsburg, and at other places in that direction on the night of the 26th ult. Hailstones seven inches in circumference were picked up.

At St. Louis the cholera was fast disappearing, and the city growing healthy.

WEST INDIES.

Advices from Jamaica to the 17th of July state that the cholera was increasing in the extent of its ravages in various parts of the island, particularly in Hanover and Westmoreland, whence the accounts are most distressing. The pestilence had also made its appearance in Up-Park Camp, amongst the troops, several of the soldiers having died. The general health of the city of Kingston was not satisfactory, the influenza being very prevalent. Another visit of cholera was feared. The other islands were reported healthy.

Under the head "United States," we noticed, last week, a rumour, prevalent at New York, that a revolutionary movement had broken out in the Spanish island of Cuba. According to the American papers, received this week, Cuba, the accounts from which are to the 22nd ult., was in full insurrection. Puerto Principe, on the south, being the scene of operation. The New Orleans papers declare that the insurrection has proceeded so far that the Government forces have been defeated with the loss of 300 men. Other accounts assert that the Government forces have put down the insurrection, with the loss only of five men. Without seeking to reconcile these extraordinary statements, which, with the present meagre accounts, would be impossible, it is suffice to indicate that the great eagerness of the Americans for the annexation of Cuba, makes them regard every civil there as of a revolutionary character.

The miserable warfare which desolates the noble island of St. Domingo still rages. From Port au-Prince, under date July 15, we learn that another battle, had been fought between Soulouque and Geffrard, near the town of Cotuy, on the 13th, which proved very disastrous to the troops of the Emperor Soulouque, of whom about 900 were slain out of a force of 2700 men. An immense quantity of arms and ammunition fell into the hands of the victors, besides 246 prisoners, among whom are a nephew of the Emperor and nine officers of some distinction

CAPE OF GOOD HOPE.

Advices to the 4th of July communicate the unwelcome tidings that the state of affairs at the Cape is a most unsatisfactory one.

Sir Harry Smith was on the frontiers, but could do little more than keep the enemy in check; what with the disaffection of the native forces, and the non-arrival of a sufficient force from home, he was compelled to act on the defensive only. The general impression was, that without aid from home the conclusion of the war was very indefinite. Sandilli was in his native mountains. His favourite prophet had forsaken him, and joined another chief. Pato remained faithful to the British cause.

The movements and counter-movements of the troops, and their skirmishes with the natives have come up with them, present no features worth noticing. Field-Cornet Gray was killed in one of those petty affairs.

AUSTRALIA.

Accounts to the 8th of April have been received from Sydney. The Legislative Council met on the 28th of March. At the opening of the sess on, the Governor, in a short speech, intimated that he had called the Council together to consider and enact measures for giving effect to the Australian Colonies Government Act of the Imperial Legislature. Copies of the act and of a despatch from Earl Grey, explaining the objects the Government had in view in passing it, had been, his Excellency observed, laid before the Council. He announced that he would forthwith transmit to the Council the bills he deemed necessary to give effect to the act. He informed them that he availed him elf of the presence of the late superintendent at Port Phillip, now Lieutenant-Governor of Victoria, to obtain suggestions respecting the p oper division of that colony. The address of the Council in reply merely contained general protestations of loyalty; a declaration that they watched at the moments from expressing any opinion on the provisions of the Government act, and a promise to give the subjects mentioned by his Excellency their most serious consideration.

The Council did not meet again till the 4th of April, when an electoral bill was presented, read a first time, and ordered to be read a second time that day week. Mr. Wentworth gave notice that he would, on the 8th of April, move for a select committee to prepare a remonstrance against the Australian Colonies Government Act.

Great efforts were being made out of doors to get up an opposition to the Electoral Bill, and more particularly to its provisions for the divi-ion of the colony into electoral districts. The opposition appeared to consist ch efly from the democratic party in Sydney, and to arise from an apprehension that the franchise proposed was too favourable to the stockholding interest.

The delegates from Victoria and Tasmania, to invite the inhabitants of New South Wales to join the Anti-Transportation League, had arrived in Sydney. A grand banquet was given to them on the 3d of April, and on the 7th a great public meeting was held. It was unanimously resolved that the Australian Anti-Convict Association of Sydney should be dissolved, and that all its members should enrol themselves in the League. The sense of the meeting was unequivocally expressed in favour of agitating for an entire abolition of convict transportation to every part of Australia. Mr. Lamb (a member of the Legislative Council), who moved the first resolution, and Mr. Josephson, who seconded, each proposed a subscription of 100 guineas towards the expenses of the League. The Secretary also announced subscriptions of 100 guineas each from another gentleman and from two mercantile firms.

The delegates had explained the arguments are to the 28th of April. The chief feature in the intelligence is the publication of a memorial from the mechanics and labourers at Nelson, sent out as emigrants by the late New Zealand Company, addressed to the Company, and claiming compensation for the treatment they have experienced, and the delusive promises by which they allege they were induced to emigrate.

THE AUSTRIANS IN ITALY.

The following is a translation of a circular of Gorzeskorhawsky, the military and civil lieutenant of the Venetian provinces of Austria, to the military commanders under him:—

"To the military commanders in the office of public order. When you are requested to furnish information respecting any person with the qualification of special, you must exactly supply concerning that person all the following indications:—

"1. His station, place of birth, parentage, age, &c.

"2. His personal description.

"3. His intellectual culture and talents.

"4. His character and humour.

"5. His sentiments in politics, religion, and other matters.

"6 His social po-ition and education.

"7. The estimation in which he is publicly held, and the extent of his influence.

"8. His manner of living—as what he habitually does or omits to do: whether he is much or little at home; and, if he goes out, where he usually goes, with special indication of the names of the public places, private houses, and families he visits; and whether he goes to them in the day or in the night, frequently, seldom, or periodically; also, with what company he ordinarily spends his time.

"9. What are his usual topics of discourse in public places.

"10. With whom he keeps up a correspondence, and whether frequently, seldom, or periodically.

"11. Whether he is in the habit of travelling, where, and on what pretext; and whether he does so frequently, or periodically, or seldom, alone or in company, and by what means or conveyance.

"12. His means of subsistence; whether there is a due proportion between his income and his expenditure; whether he is lavish, economical, or parsimonious; and whether he lives from day to day.

"13. In what special relations he stands to his parents, his family, his friends, and his mistress.

"14. What part he took in the revolution, and whether by actions or only in thought. Was he an enthusiast or a cool-headed calculator? Did he in public or in secret aid the revolution under the mask of neutrality—when, where, and in what spot especially?

"15. If he took no concern in the revolution, did he refrain on principle, and from devotion to his lawful sovereign, or from fear, prudence, apathy, inertness, or calculation?

"16. In the changes of party fortune did he remain always the same, or did he turn as the wind was blowing? And by what facts might his change of sentiment be proved?

"17. In fine, a biographic sketch describing all the antecedents of his history.

"Venice, June 7, 18 1.

"The Military and Civil Lieutenant of the Venetian Provinces.

GORZESKORHAWSKY."

EXPERIMENT WITH A NEW LIFE-BOAT.—MR. WILSON (chairman), Captain PAXTON, Captain SAUMAREZ, R N., Captain PERROTT, members of a committee of the National Shipwreck Institution; Mr. Lang, master shipwright; gunmaker, Birmingham, one of the competitors for the Duke of Northumberland's life-boat prize of 100 guineas; and several naval officers and gentlemen, assembled on Tuesday afternoon at the basin at the west end of Woolwich Dockyard, to witness the buoyancy and facilities for rowing of a life-boat constructed under the superintendence of Mr. Peake. The boat is constructed entirely of wood, and is 30 feet long by 8 feet 3 inches wide, and her draught of water 4 feet 5 inches. The bottom is deeply padded with cork lining; and a band of the same material, covered with prepared canvas, is carried round the outside of her sides. At both ends of the vessel are air-cases in construction, that she may be stu-ted either way by an oar. On each end several air-tight cases have been fixed, and, with the cork, give her a buoyancy equivalent to two tons, that number being of the crew. Previous to the baunge of the boat, the several crews having gone on board, they proceeded a-rowing, a coxswain, or steersman, and ten rowers having gone on board, they proceeded a-rowing, and rowed the boat several times, to show her capabilities for rowing; and they then all sat on one side, to show her stability in the water, and that their whole weight did not bring her down on one side to nearly the edge of the water. The rowers' seats are made pliable, about four inches each in diameter, were taken out of her bottom; but the admittance of the water through the perceptible difference in the immersion, and she was again rowed round the basin with equal facility as on the first occasion. Double the number, in all twenty men, went on board, which gave her an additional weight of a ton and a half or four or six inches; but as she is built to be high out of the water, nearly similar in appearance to the north Sunderland sailing boats, she might be crowned with as many persons as she could hold, and still prove a good sea boat. It was intended to have her filled with water, but that experiment was deferred to a future day, when the carriage making for her at the Royal Arsenal will be ready, and the facilities for moving her on shore and other experiments be made. Lieut.-Colonel Colquhoun, of the carriage department at the Royal Arsenal, was also present on the occasion. His Grace the Duke of Northumberland, the resident of the National Shipwreck Institution, is now every exertion to have life-boats of the most approved construction made, to be placed on the various dangerous parts of the coast where they may be most required, and has, with a view to their efficiency, approved of rules for their management.

REAPING BY MACHINERY.—MR. J. J. Mechi has published a letter dated Tiptree-hall, August 11, in which he says: "The American reaping machine, by McCormick, has been at work all day on my farm, cutting a heavy crop of wheat, very long in the straw, partially laid, and estimated at five quarters per acre. I have arrived at the following conclusions.—That it will act perfectly on level land, and on a standing crop. That it will cut from ten to sixteen acres per day, according to circumstances. That the quantity can depends much on the activity and strength of the man who has to remove it by rake from the board on which it falls. That it will take a man to remove one acre and a quarter per hour. That our open furrows, and deep water furrows are much against the perfect action of the machine. That the paddle-wheels do not in any way injure the corn cut or injure the machine. That the paddle-wheels do not in any way injure the corn cut or injure the machine. That the following modifications in its details will be required where (as in my case) the straw is very long. That it will cut laid corn where it falls towards the machine. That where it falls from it, it is desirable that the corn be cut such paces as to lay it square. That a proportionate number of hands to blind the cut corn will be required according to the crop. That the machine will be cutting all day to-morrow. I should wish to have finished my harvest with it, but the proprietor desires to try it in other counties. In conclusion, I feel a conviction that all our reaping will soon be done by horse or steam machines."

CAMBRIAN ARCHÆOLOGICAL ASSOCIATION.—The fifth annual meeting of the Cambrian Archæological Association is to be held at Tenby, and will commence on Wednesday, August 20. The Earl of Cawdor succeeds W. W. E. Wynne, Esq., as president for the year. The outline of proceedings proposed includes excursions to Penally Church and Cromlech—Castle Heads and Church—Lamphey Palace and Church—Pembroke Castle and Churches—Monkton Priory—Pembroke Dockyard—Narberth and Llawhaddon Castles—Cast e Meherren and Camp—and an examination of the Church, Domestic Remains, Castle and Town Walls of Tenby, and of the Priory and Early Encysted Stone in Caldy. After the close of the meeting, it is proposed to make an excursion by steamer, to St. David's on the 28th, returning on the 29th.

POOR RELIEF.—A Parliamentary return shows that the total number of paupers receiving in-door and out-door relief on the 1st of July last, in the 597 unions and parishes in England and Wales, amounted to 744,360 persons, which, as compared with the preceding year, shows a de rease at the rate of 2 4 per cent. In Wales, at the same date, the number was 68,229, showing a decrease of 9 5 per cent.

On Saturday of last an order was issued by the Lords of the Treasury authorising the grant of a charter to a company formed to run an in dependent line of first-class steam-ships direct from Liverpool to this The company will be entirely composed of the American and General Steam Navigation Company, and the directorate will include some of the first merchants of Liverpool and Manchester engaged in commerce with the Brazils. The line (the shares of which will be limited to £1000 each) will comprise four first-class steamships, with a branch steam-ship to run between Rio and the River Plate; and the departures will be once per month from either end

GREEK BRIGANDS.—Athens journals to the 28th ult. state, that near Marathon a band of twelve brigands had pulled down two houses, and horribly tortured two females by pouring boiling oil into their bosoms. A fe tids act the brigands approached nearer to the capital, and on their way had a conflict with some gendarmes, five of whom they wounded seriously. Near the forest of Achaia, a party of travellers, twenty in number, were attacked by another band, and robbed of their money and effects and three valuable horses; one of the travellers was wounded by a pistol-ball. Near Lamia, a band of brigands, under the orders of a notorious chief, named Chiracon, were attacked by a party of mounted gendarmes. Two of the brigands were killed; the rest made their escape. The gendarmes had two horses killed.

THE TOTAL ECLIPSE OF THE SUN, AS OBSERVED IN SWEDEN BY MR. J. R HIND.

THE accompanying diagrams are illustrative of observations taken during the total solar eclipse of July 28th, at Ravelsberg, near Engelholm, on the west coast of Sweden, to which place Mr. Hind proceeded for the express purpose of observing this rare phenomenon

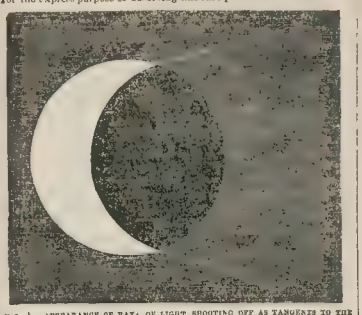

FIG. 1.—APPEARANCE OF RAYS OF LIGHT SHOOTING OFF AS TANGENTS TO THE MOON'S LIMB AT THE CUSPS.

Fig. 1 represents the appearance of rays of light tangential to the moon's limb at the cusps, when about two-thirds of the sun's disc were covered. This appearance lasted about one minute, and then vanished entirely.

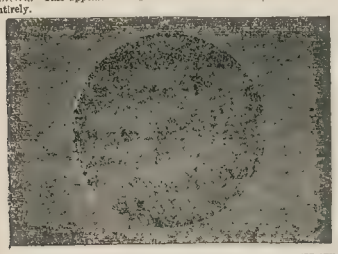

FIG. 2.—THE "BEADS" IMMEDIATELY BEFORE THE EXTINCTION OF THE SUN.

Fig. 2 shows the luminous *beads*, as they are termed by astronomers, which presented themselves immediately before the extinction of the sun, and are attributed by Mr. Hind to the effect of sunshine between the mountain peaks and along the valleys situate near the apparent edge of the moon's disc, the phenomenon thus produced being doubtless exaggerated by some optical cause. At the moment of commencement of totality, three luminous beads appeared to run into each other very rapidly, and all traces of the sun were lost. From the fact of the late Mr. Baily, the English astronomer, having especially directed attention to the visibility of the bright drops, they are generally known at the present time as "Baily's beads."

SUN'S UPPER LIMB.

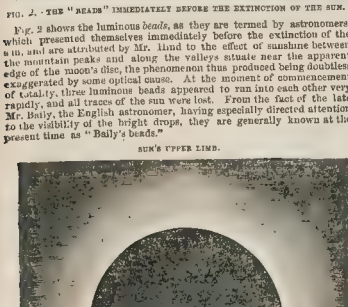

FIG. 3 ROSE-COLOURED PROMINENCES 30 SECONDS BEFORE THE APPEARANCE OF THE SUN.

Fig. 3 exhibits the *corona*, or ring of light, surrounding the dark body of the moon during the total eclipse, and the prominences on the moon's limb. The *corona* was of the colour of tarnished silver, and extended to a distance of about one-third of the apparent diameter of the moon from her border. There was a flickering, or undulating motion in the light of the *corona*, but nothing resembling the circular motion described by some observers in previous eclipses. The prominences were rose-coloured at their edges, but paler in their centres, and a bright violet tint extended along the moon's limb, where a continuous range of inequalities presented itself. The principal projection was situated on the right, or western limb; it was straight throughout two-thirds of its length, but curved like a sabre at its extremity, and, what is most remarkable, *continued visible four seconds after the sun had reappeared*. A little below it was a triangular spot of the same bright rose colour; but precisely detached from the moon's limb. This spot remained unchanged

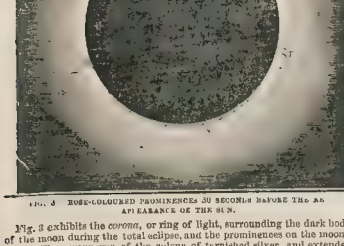

FIG. 4.—THE "BEADS" AT THE END OF THE TOTAL ECLIPSE.

as regards its position in respect to the great projection during the whole time it was visible. Two other prominences were conspicuous—one near the south point, and the other on the eastern edge of the moon; in addition to which, there was a long succession of small projections round the southern part of the moon's limb, as shown in the Engraving. These appearances are usually termed "*red flames*." It is almost certain that they are connected in some way with the sun.

Fig. 4 shows the *beads*, about five seconds before the sun became visible, as a very fine crescent; they were brighter and larger, but less numerous, than before.

THE ANCIENT ORDER OF FORESTERS.

THE annual High Court meeting of this great benefit society, numbering nearly 120,000 members, commenced on Monday week, in Caldwell's large dancing academy, Dean-street, Soho-square, and did not terminate until the following Friday evening. Delegates from all parts of the kingdom were in attendance to represent the various courts or branches of this ancient order. The chair was taken by S. Boyce, Esq., H.C.R., and W. M. Williams, Esq., H.S.C.R., was in the vice-chair. The delegates present numbered several hundred, and they completely filled the lower hall, whilst private members of the society filled the gallery. The objects of the meeting were to take into consideration the altering or making new rules for the next twelve months, and electing the Executive Council for the same period. A great number of the laws constituting the Society were altered so as to meet the wants of the increasing number of members. The managing body, it appeared, had localised the society as an early period of the year, and a smart discussion took place between those parties who were opposed to such being done, but the conduct of the Executive body was eventually approved of by an overwhelming majority. The expense of the managing executive for carrying on such a prodigious society for a year was only £93, and that sum was voted merely as a gratuity to mark the respect the delegates entertained of their services. The society has now between 7000 and 8000 branches, in most parts of the globe, from £100,000 to £150,000 is annually paid to sick members, from £30,000 to £40,000 for funerals, and considerably over the latter sum to widows and orphans, distressed members, &c. The surplus capital of the Order, at the present time, is above half a million. The new Executive Council having been installed into office, votes of thanks were passed to the previous managing officers, and the proceedings, after lasting five days, terminated.

ANNUAL HIGH COURT MEETING OF THE ANCIENT ORDER OF FORESTERS

THE GREAT EXHIBITION.

THE Paris *fêtes* being fairly over, the officials and the attention of the public seem to have returned to the Exhibition with greater zest than ever. Even those amongst the latter who went to Paris to take what share they could get in the festivities of the French metropolis, do not appear to enjoy the interior of the Crystal Palace any the less for a comparison with the splendours of the Hôtel de Ville, or the heat and dust of the Champs de Mars. In short, the Exhibition stands the comparison in everything, but certain indications of faded coverings of counters and crimson cloth, from which the colour is very rapidly departing under the action of the light which is so generally diffused around. It is, however, the practised eye alone which detects this; and to the masses which still come up from the country in crowds, everything is as bright and as brilliant as at the beginning of May. Whether these crowds will diminish or increase, is a problem to be solved; but to all appearance the last day of the Exhibition, whenever that may be, will be a subject of as much solicitude, probably even more, than its open ng day.

Improvements in the arrangements and additions to the contributions are continually making. The Manchester people, of whose display we have had occasion to complain on several occasions, appear at last to be about to make a show of the products of the important district of which it is the centre, and a large trophy-like erection is now in the course of arrangement in a portion of the agricultural department, and at the back of the court devoted to printed fabrics. It appears that this display is intended to make up, in some measure, for the paucity of Manchester products in their proper classes, and that a series of examples of the leading features of the trade of that town is at last to be attempted. In short, it has been discovered that the Exhibition was a greater fact than many of its luke-warm supporters supposed it ever could be; and being astonished at finding that their absence did not generally effect the welfare of the undertaking, however much it might affect their welfare in particular, they have made a virtue of necessity, and do that at the last which ought to have been done at the outset. Money subscriptions to such an undertaking are of little comparative value, unless earnestness and zeal are also displayed in the practical working out of the purpose for which the money is subscribed

The United States, too, are about to make another addition, as from forty to fifty large packages arrived the other day, and the contents will, in due time, find their locat on in the territory assigned to them, but which has been so long vacant from their absence, and we trust that the display will be satisfactory to all parties. Indeed, this constant anxiety to improve and add to former contributions, in every department of the Exhibition, is a sure sign of the impression its success has made n on the minds of those most concerned; and the probabilities are, that improvements and additions will be going on until the day of closing

Her Majesty renewed her visits on the mornings of Friday, the 8th, and Saturday, the 9th. This caused some little hurry in the return from Paris of some portion of the Executive; and Mr. Duke arrived on the first morning just in time to receive the Queen and the Prince on their entrance. The same interest as ever was displayed by the Royal visitors. Portions a ready examined were re-visited, and again carefully inspected, and on both mornings, general rat er than special departments were so cted. It is expected that H Majesty will take the opportunity of paying several visits prior to her departure for Scotland, as before the return n of the Royal family from the north the Exhibition will in all probability be closed.

The discussion as to what the Building ought to be devoted to, appears likely to be an interminable one, since it is generally agreed that it will be retained. Perhaps the recent visit to Paris may suggest that it is the only chance for realising in England anything like those gay and enlivening out-door scenes which the Boulevards, the Champs Elysées, the gardens of the Tuileries, or the Palais National present. Under any circumstances, the question has now a chance of fair consideration; and if the Crystal Palace is to be taken down, it will be because the people did not desire that it should be retained.

The jury business would appear to be quite finished, so far, at least, as the work of adjudication is concerned. The preparation of reports will, of course, be a work of time, particularly as it is intended that the reports of each jury shall, as far as possible, contain a statement as to the present position of the industry which that part of the Exhibition on which the report is made represents. This, if properly carried out, will render their documents of the greatest possible value and importance; and the awards, after all, will be but a secondary matter as compared with the report itself. The French jurors, however, have taken time by the fore-lock, and, instead of keeping the awards to their country "private and confidential," astonished their English colleagues by the publication and sale of a list of many of their medals, which could be had from the "flying stationers" of the Boulevards for a sous. Of course, no one is responsible for the accuracy of the list; but it appears to have been sufficiently near the mark to have astonished those who are cognisant of the facts.

VISITORS FROM CHINA.—The list of foreign visitors to this country, who have been attracted hither by the Great Exhibition, has just received a very novel addition, by the arrival of a Chinese family of rank, per the *Lady Pelham*, direct from Canton. These interesting personages consist of a Chinese gentleman of the name of Ching atai, and his wife Anap, accompanied by her two sisters, and attended by a female domestic. The three ladies possess the genuine small feet constituting the peculiar characteristic of the higher class females in the Celestial Empire. These denizens of the flowery land had hoped to have reached England in time to be present at the opening of the Great Exhibition, but their arrival has been much retarded by contrary winds. Her Majesty has been graciously pleased to convey her Royal commands to the ladies, through Colonel Phipps, that they will take an early opportunity of proceeding to Osborne, for the purpose of being introduced to her Majesty, and they leave London for that purpose in a day or two.

An exact inventory of the Imperial and Royal cabinet of coins and antique medals, at Vienna, has just been drawn up. The total number of pieces is 107 647, of which 26 502 are Grecian, and 30,944 Roman. In the latter the numismatic cabinet of Vienna is richer than all those which exist even in Italy.

THE FETES AT PARIS.

WE published, last week, the letters of several of our special correspondents in Paris, detailing the splendid festivities given by the Prefect of the Seine and the Parisians to their English visitors. We had not space, however, to print all the communications that we received; and now return to the subject with a fuller account of the *Grandes Eaux* at Versailles—one of the most brilliant of all the brilliant scenes that signalized the week, and of the remarkable reception given by the President of the Republic at the Château de St. Cloud.

THE FETE AT ST. CLOUD.

The beautiful *chateau* and park of St. Cloud have often been the scenes of festivity and splendour; but never, we should think, did any of the royal, imperial, and princely occupants of that abode behold such a brilliant and remarkable scene as it presented on Monday. St. Cloud is situated on a bend of the river Seine, in the midst of a finely diversified country, about two leagues from Paris. The palace was originally built in 1572, as a private residence, by M. Goudy, a banker, or financier; but was purchased in 1658 by Louis XIV., and presented to the Duke of Orleans. Vast sums were laid out upon it; the palace was enlarged and decorated; the park was planted by the celebrated Le Notre; and St. Cloud became renowned as one of the most luxurious residences of Royalty. Louis XVI. purchased the *château* from the Orleans family, in 1783, and presented it to Marie Antoinette, who here passed some of the happiest days that were permitted to her in the course of her short and troubled life. Often during the progress of the first revolution must the Queen and her family have gazed from its windows and terraces upon the lovely panorama of Paris stretching beneath her—its white houses glowing in the sunlight or the moonlight—as if in that lovely scene all was peacefulness and tranquillity. In the dawning days of her evil fortune, she shuddered, no doubt, to reflect how deceptive the scene might be; what boiling and raging human passions might be at work amid those tranquil houses and long lines of streets and thoroughfares, and what doleful tragedies might day by day be enacted amid that landscape which looked so lovely and so peaceful. Napoleon shared the fondness of the Bourbons for this residence as much, perhaps, for its convenient proximity to the capital, as for its beauty. The turbulent, treacherous, and excitable city was at his very feet, and the Château de St. Cloud was his watch-tower, whence he could survey, and, if need were, command it. With one of the most momentous critical incidents of his career, the Château of St. Cloud is historically associated, for in the Salle de l'Orangerie were enacted the events of the 18th Brumaire, which made him an Emperor Charles X. resided at St. Cloud when the revolution of July, 1830, hurled him from the throne; and Louis Philippe oftener slept within its walls more frequently than in those of the more gorgeous but less secure Tuileries.

The grounds of the *château* are laid out with great taste, and have the inestimable advantage of possessing fine trees in the full growth of maturity. The long avenues are on a smaller scale than those at Versailles, but are equally beautiful; and the fountains, as in that more celebrated resort, are disposed with a proper regard to the picturesque.

The invitations issued to the English and other guests stated that the President of the Republic would receive them in the *château*, to pass the day from three o'clock in the afternoon until seven; but this arrangement was subsequently altered, in order to afford an opportunity to the members of the National Assembly, who had been invited to attend, without neglecting their legislative duties. It was, therefore, intimated that the visitors would be at liberty to remain as long as should be agreeable to them.

As early as half-past two o'clock equipages were on their way to St. Cloud, and by three o'clock a string of hundreds of carriages pressed through the adjacent villages on their way to the *château*. The road from St. Cloud to the gates of the palace was on each side lined by a dense mass of people who bivouacked on the grass at the road-side with their wives and children, and ate their *pâtés* and drank their *vin ordinaire* to beguile the time. The doors of the *chateau* were opened precisely at three o'clock, and the whole suite of splendid state-rooms were thrown open to the visitors. The company on arrival proceeded to promenade through the saloons, admiring the works of art, and more especially the splendid tapestry with which the walls are covered; but the heat in-doors became at last so excessive, and the attractions of the greensward, and the cool avenues of the park, so paramount, aided as these were by the play of the fountains, and the strains of music amid the trees, that the great majority of the company soon distributed themselves over the park, and the *fête* became what it was intended to be—a magnificent *fête champêtre*. Two bands of music were stationed in the park, and two buffets had been erected for the supply of ices.

At an early hour the President arrived, and proceeded at once to the park, giving his arm to the Marchioness of Normanby. On his approach to the palace, through the dense line on each side of the road from the Place de St. Cloud, he was enthusiastically cheered. At about five o'clock, in a sort of square formed near one of the military bands, after the President had conversed with some private friends, his Excellency

GREAT EXHIBITION FETE AT ST. CLOUD.—REFRESHMENT TENT.

the Marquis of Normanby presented the Lord Mayor of London. The President expressed to him the extreme happiness that he derived from the visit of the chief magistrate of the city of London, and his warm sense of the kind feeling towards France manifested by the English nation. The Lord Mayor acknowledged in suitable terms the honour done to him. The crowd of French visitors pressed around, as on former occasions, to see the Lord Mayor, one and all expressing to each other their surprise that he wore no decorations, and asking the English whether his were a political or a non-political office; whether he were elected annually or for life, and what were his functions. It was an object of general remark among the English visitors, that there were far more military officers than civilians present; and that for each Englishman in the grounds there was at least one French officer, if not more. After walking about the gardens and park, and finding at each step something to admire, whether in the arrangement of the ground, the splendid avenues of lofty fruit trees, with chequered shadows such as Creswick would love to paint, or the unexpected bursting forth of a magnificent fountain, sending up a column of water to the height of 100 or 120 feet, glittering in the sunshine, and arched by rainbows; or coming across groups of well-dressed ladies, scattered among the *bosquets*, in picturesque combinations, forming veritable, though quite unintentional *tableaux vivans* after the style of Watteau; it was announced that the great buffet, or side-board, in the Salle de l'Orangerie was open, and that the heat-oppressed multitude would find a magnificent cold collation spread out for them, with ices, fruit, and wine *à discretion*. A rush was immediately made towards it; but, alas! for the English visitors, the place had been monopolized and pre-occupied. The blue coats and red trousers of the French military filled the whole hall. Neither English gentleman nor English lady had a chance; and with a want of gallantry, sorely belying the ancient character of their nation, these bearded warriors seemed to think of themselves, and of themselves alone. Some of those with whom we were thrown into unpleasant proximity ate as if they had never eaten anything but dry bread and potatoes before, and as if such a collation were an unexpected and delightful novelty; and drank champagne as if it were rare indeed that they had such a chance. Some, again, drank to the health of the English ladies, who, poor souls, had no wine in which to return the somewhat suspicious compliment; and it seemed to us that the brave officers rather enjoyed their own good fortune in being so amply provided with good things, and the bad fortune of others who had not their strength or their impudence, to feast themselves to the disadvantage of their neighbours. As for the Lord Mayor, in whose honour the *fête* was to some extent given, he was obliged to fare in a corner as he best could—unnoticed and unknown, while the brave officers were besieging the buffet, calling out, at the top of their voices, for "a bottle of champagne for the Lord Mayor;" "a fowl for the Sheriffs;" "a *pâté* for an Alderman;" and carrying off by wholesale, amid the laughter of their comrades and of the waiters, the prizes which should have been awarded to the civic dignitaries of London. The supply, it should be stated, was most abundant, and the viands and wines were of the choicest kind; but the space was too small for the immense number of visitors, who could not, we imagine, have been less than two thousand. Hundreds, who had entered the

GREAT EXHIBITION FETES AT PARIS.—THE GRAND REVIEW.—THE PRESIDENT AND HIS STAFF.—(SEE PAGE 214.)

THE GREAT EXHIBITION FETES AT PARIS.—GRAND REVIEW IN THE CHAMP DE MARS.—(SEE NEXT PAGE.)

Orangerie, left it again immediately in consequence of the crowd, and had to wait more than an hour before they could obtain the smallest refreshment. The inconvenience would have been still greater, if about this time a considerable number who had made arrangements to return to Paris to dinner, had not left the palace.

From six to seven o'clock there were fresh arrivals, consisting chiefly of persons whose official and legislative duties had prevented them coming at an earlier hour, but they bore no proportion to the number who had quitted. There was at one time a disposition on the part of the military to get up a cry of "*Vive le Président!*" and "*Vive l'Empereur!*" but this indiscretion was speedily checked by the more judicious friends of Louis Napoleon, and once in a marked manner by the President himself; and, though two or three times faintly revived, the withdrawal of the President put an end to the scene.

Upon the whole, the *fête* at St. Cloud was as gratifying and splendid as any of the series, and will long be remembered with pleasure by those who were present at it, whether French or English.

THE GREAT EXHIBITION FETES AT PARIS.—THE GRAND REVIEW.—BRIDGE OF BOATS AND ATTACK ON THE TROCADERO.—(SEE NEXT PAGE.)

of hills (near the village is the celebrated waterfall of Stock Gill Force, a tributary of the brawling Rothay); proceed from Ambleside to Keswick by coach, passing Rydal, whose name will long be associated with that of Wordsworth; view the Mere, and traverse its pretty vale: arrive at Grasmere, a perfect picture of still-life set in a frame of noble mountains. Silver Horn, Loughrigg Fell, Seat Sandal, and Greatrig are chief among the many which encompass this beautiful scene; and, leaving Grasmere, commence the long ascent to the pass of Dunmail Raise. At the top, the Raise Gap, observe

That pile of stones
Heaped over brave King Dunmail's bones.

Then, turning round to take a retrospect of Grasmere, the lovely and lone, wind the descent from Dunmail Raise, and pass through t e village of Wythebum, at the foot of the mighty Helvellyn; then skirt the rugged rock-bound shore of Thirlmere, "strongly contrasting with Grasmere;" narrow, almost river-like, it yet possesses many beauties. At its head stands the frowning Eagle Crag, and near its foot the Raven Crag. Nearly midway it is crossed by a wooden bridge, forming a pleasing object in the scene. Cross the head of the Vale of St. John, with its celebrated "Castle Rock," described by Sir Walter Scott in the "Bridal of Triermain." The stranger course will have for his imagination excited with hopes of viewing some whilom border chieftain's fastness-hold, if he stumbles accidentally upon that remarkable object as he

Strays
In morning mist or evening maze,
Along the mountain lone,
That fairy fortress often mocks
His gaze upon the castled rocks
Of the valley of Saint John.

Gain a magnificent view of Blencatharn, or (more commonly) Saddleback, stretching easterly from Skiddaw Reach, Castle Rig, and look down the vale of Keswick, or lakes Derwent and Bassenthwaite, with their surrounding mounta ns, one of the finest prospects in England; a tourist has recorded the impression of his first view thus:

I stood upon the Ca te Rig, and viewed
Lake Derwentwater lying far below;
A fairy scene it was, so many-hued,
And bright as burnish'd silver it did glow;
Small speck-like boats were passing to and fre.
Close on the right the mighty Skiddaw rose,
Eastward Blencathar, serf-like, crouched him low:
Against the western sky, in serried rows,
A host of tilled hills in jagged peaks uprose.
Lake Bassenthwaite in all its glory spread,
The Wyt top woods their richest verdure wore:
Enchanting land! My fancy he'er had dreamed
Earth could so much of loveliness bestow,
Meadows like emeralds fring'd the indented shore;
Orchards and cots nay interspersed between;
Keswick, " and Greta's bowers, whose bonthey's lore
Received fresh impulse," seemed to interweave,
Only to add new charms unto that glorious scene.

On Keswick and its innumerable beauties it is unnecessary to dilate. With gu des, carriages, ponies, and boats, the tourist may explore every point and nook, from Skiddaw Mawr to the frowning gorges of upmost Borrow-dale.

Leave Keswick by coach for Cockermouth, skirting the western shore of Bassenthwaite; and charming is the ride of seven miles along the lake side, with the luxuriant Wyde, whose woods on the left; and on the right, across the lake, the lofty mountain range of Skiddaw, Longside, Carlside, and Dod. Near the foot of the lake is the inn of Peel Wyke; and from thence the road leads through a fertile vale to Cockermouth.

This town is chiefly celebrated for its castle, built soon after the Norman Conquest. "After many changes it was garrisoned by the troops of King Charles; but was taken and partially dismantled by the Parliamentarians. The ruins and a portion entire are highly interesting: the gateway tower, displaying the arms of the time-honoured families of Umfraville, Lucie, Multon, Neville, and Percie, is a striking object.

Leave Cockermouth by rail for Whitehaven; crossing the river Derwent repeatedly by wooden viaducts, and obtaining on the way a passing glimpse of Pap Castle, once the s te of a Roman castrum, afterwards occupied by Waldieve, first Lord of Allerdale, and founder of Cockermouth Castle.

Arrive at Workington, a thriving sea-port on the Solway Frith, across whose broad expanse the Scotch coast appears well defined. Harring ton, a small sea-port, with extensive chymical works in its neighbourhood, appears next; and on leaving it, the line skirts the sea shore, beneath huge cliffe, passing Lowen engine-works and the fishing village of Pastow, to Whitehaven, a large and important town, famous for its harbour-piers and collieries extensively worked beneath the sea. The collieries and adjacent lands are the property of the Earl of Lonsdale, whose possessions extend over a large portion of the counties of Cumberland and Westmoreland, of which he is Lord-Lieutenant, and whose principal northern residences are Lowther Castle, in Westmoreland, and Whitehaven Castle, in Cumberland. Leave Whitehaven by rail, passing through St. Bees, with its fine old abbey, Clerical College, and public school, known far and wide by the success of its pupils in obtaining scholarships at Oxford. St. Bees is also renowned for sea-bathing; the purity of its waters, the superiority of the beach, the salubrity of its air, and general accommodation of its inns and private lodgings, throw rank it high among the places of public resort; added to this, the spirit of enterprise is abroad at the present time in furnishing baths of every description in a building adjacent to the beach.

(To be continued.)

MUSIC.

The musical entertainments this week have been confined to the seventh of the London Wednesday Concerts, under Signor Montesh's direction, at the Whittington Club; Mr. Henry Russell's Australian pictorial, as well as vocal, at the Soho Theatre; the English Glees and Madrigals on Wednesday last at Willis's Rooms, with Mrs. Anderson, Miss Williams, Messrs. Francis, Lockey, Land, Robbs, Whitehouse, and Pulham as the singers; and the Whittington Lyric Club last Monday; Mr. Henry Phillips' entertainment at the Adelaide Music Hall; and Messrs. R. and H. Blagrove's sixth and last quartet concert, at the Mortimer street rooms, with Miss Williams, Messrs. R. Barnett, W. Dorrell, Clementi, Boord, and Hausman, on Friday.

Last night's performance of Mendelssohn's "Paul," under Costa's direction, at Exeter Hall, with Mdme. Clara Novello, Miss Dolby; Messrs. Lockey, Whitehouse, and Herr Formes, by the Sacred Harmonic Society, will be noticed in our next week's impression.

Miss Catherine Hayes has been rusticating at Trouville, near Havre, preparatory to her trip to America. She will give a concert at Havre, with Mr. Osborne, the pianist: and will sing at concerts at Manchester and Liverpool on the 28th, 29th, 30th inst., and 1st of September. On the 3d, Miss Hayes will depart for New York, from Liverpool.

The American journals announce the departure of Mdlle. Lind for England, for the 15th of this month

The final meeting for the performance of English glees and madrigals will be held Wednesday, thus terminating a most brilliant series of entertainments, thoroughly national in character and unequalled in excellence. At the last concert nearly 600 persons were present, including a large number of aristocratic auditors.

There is every reason to anticipate a brilliant meeting at the forthcoming Worcester Musical Festival, on the 26th, 27th, 28 h, and 29th inst.

A very excellent undertaking, under the title of "The Orchestral Society," has just been established. The committee consists of Messrs. H. Blagrove, J. Howell (treasurer), Hullah, Lucas, and A. Nicholson (hon. secretary); and it is proposed to give eight annual concerts at St. Martin's Hall, beginning November this, and ending early last in the production of orchestral works of the highest class, and especially for the production of new, unheard, or comparatively unknown compositions." Such a society has been long a desideratum, as the Philharmonic Society has been so exclusively devoted to a limited repertory. The band will comprise twenty-four first and second violins, Mr. Blagrove and Mr. Watkins pri cipals; eight violas, Mr. Hill principal; eight violoncellos, Mr. Lucas principal; eight double basses, Mr. Knoll principal, and the usual complement of wood, brass, and percussion. Mr. Hullah is to be the conductor. In the list of honorary members are nearly sixty distinguished professors, native and foreign, including Madame Viardot, Thalberg, Madame Clara Novello, Piatti, Miss Catherine Hayes, Charles Hallé, Sainton, Benedict, Bottesini, Formes, Meyerbeer, Miss Louisa Pyne, Sam ion, Lindsay Sloper, Miss Birch, Miss Goddard, Miss Kate Loder, Lockey, Phillips, &c.

THE COMMISSIONERS OF RAILWAYS.—On Monday was issued an act of Parliament, which received the Royal assent on the previous week (14 and 15 Vic., cap. 64), to repeal the act for constituting Commissioners of Railways from and after the 10th of October next, the act 9 and 10 Vic., cap. 105, continuing the Commissioners of Railways, is to be repealed, and all the powers, rights, and authorities vested and exercised by them are to be transferred to the Board of Trade, who are to exercise the same. The Board of Trade is empowered to continue all or any of the officers or servants, with the approval of the Treasury, and from time to time, with such approval, to remove such officers or servants. After the 10th of October, one of the secretaries or other officer of the Board of Trade may be appointed to sign documents relating to railways which are to be received in evidence by courts of justice.

THE THEATRES.

HER MAJESTY'S.

On the occasion of Mr. Balfe's benefit, last Monday night, his own comic three-act opera, "I Quattro Fratelli," was produced. When it is stated that this work was the eighth novelty and the twenty-third opera given during the season, it may be safely concluded that Mr. Balfe's herculean labours as musical director and conductor entitled him to a complete relief from the direction and also to the liberal support of the musical public. It is to be regretted that the benefit was not given at an earlier period, not only for the sake of the popular composer, but also for that of the establishment; as there cannot be the slightest doubt, after the brilliant success of Monday's performance of "I Quattro Fratelli," that the charming composition would have commanded large receipts, especially if, as originally proposed, Mdme. Sontag had sustained the part of *Hermania*, so eminently calculated as it is for her powers "I Quattro Fratelli" is one of the three operas written for Paris by Mr. Balfe: its original title was "Les Quatre Fils Aymon," and it was brought out in 1844, as we la s "Le Puits d'Amour," at the Théâtre de l'Opéra Comique; the other work, "L'Etoile de Seville," having been composed for the Grand Opera (Académie de Musique). M.M. Leuven and Brunswick were the authors of the libretto. An English adaptation of "I Quattro Fratelli" was done at the Princess' Theatre, and the German version has been extremely popular at Vienna and other cities. The distribution of the characters here was as follows:—Gardoni, Pardini, Mercurial, Belanch, *Gaston*, *Ricardo*, *Allardo*, and *Rinaldo* (the four brothers); Mdme. Guiliani, Mdlle. Heller, and Mdlle. Lanza, *Isbanda*, *Hermania*, and *Eglantina* (the three nieces); and Mdlle Cruvelli, *Hermania*, the daughter of the *Baron de Beaumanoir* (Massol), *Uberto*, major-domo (Signor Dal Fiori), and *Ivon*, steward to the four brothers (Signor Donzelli). The plot is very incentious and interesting. In the first act, tcire is the return, after a year's absence, of the four brothers of Aymon to the castle of their deceased father, to open the casket containing his will, by which they find that they are penniless, and that they have been sent on their travels to learn the virtue of patience under misfortune: this moment is the text of *Ivon*, a kind of *Culoe* of Sir Walter Scott, in passing off the oldest, *Gaston*, as a rich man, on the *Baron*; next is the mutual recognition of *Hermania* and *Oliverio*, who has had the misfortune to love her whilst the latter was on his travels; and the resolve of *Hermania* to free herself from a vow that she made on her entrance a convent with her three cousins, or to marry at the same time as they did; finally, the departure of *Oliverio*, with his three brothers acting as squires, for the *Baron's château*. In the second act, *Hermania* contrives to bring her three cousins in contact with the three brothers of *Oliverio*, and to marry them off with the same ceremony: this manœuvre she achieves this manœuvre by means of three bowers in a grove by moonlight, is a rich bit of genuine comedy, each brother supposing that he is marrying *Hermania*. In the last act, the success of her scheme is announced by the ringing of the bells in the three hermitages, and she reconciles each cousin to her allotted husband by pouring out his special humour.

Very delightful music has been appended to the incidents: it is one continuous stream of flowing, graceful, fascinating melody, with neat and facile orchestration; here rising into larger city of construction, and anon pleasing by its piquancy and elegance. No meretricious grace of the music is the attraction and the charm of the score: there is no pandering to fashion, no address; the ideas are prolific and car-catching; and scarcely throughout the opera can the attention of the most fastidious of connoisseurs with the three brothers acting as squires, for the *Baron's château*. In the second act, *Hermania* contrives to bring her three cousins in contact with the three brothers of *Oliverio*, and to marry them off with the same ceremony: this manœuvre she achieves this manœuvre by means of three bowers in a grove by moonlight, is a rich bit of genuine comedy, each brother supposing that he is marrying *Hermania*. In the last act, the success of her scheme is announced by the ringing of the bells in the three hermitages, and she reconciles each cousin to her allotted husband by pouring out his special humour.

No meretricious grace of the music is the attraction and the charm of the score: there is no pandering to fashion, no address; the ideas are prolific and car-catching; and scarcely throughout the opera can the attention of the most fastidious of connoisseurs flag. The composer was cheered at the end of every act; and so conclusive was his personal triumph at the close, that the cry and calls of the house were exclusively for Balfe's name and appearance.

The execution was more remarkable for its artistic *ensemble* than for individual excellence: *Hermania* (Mdme. Sontag) was powerful; Mdme. Cruvelli's style, her comedy is stiff, artificial, and exaggerated, and her execution of the florid passages in the opening cavatina, and in the brilliant rondo finale, was pondersome and unfinished. Her second cavatina, and her spirited, sparkling rondo, "Io son fedele," was deservedly applauded; and, narrow, y escaped an encore. Another opening romance, "Ora tarda e nera," with an elegant orchestral under-current, was a graceful air, "Parla bel," with a delicious wood band accompaniments are heard advantageously; and the cantabile, "Sta sera," in the second finale, was expression. Massol developed comic powers, as the *Baron*, of a high order; the *duo buffo* between him and Coletti, in the second act, made quite a sensation, and was re-demanded, but the singers did not accept the encore: the quartet must be drawn to the remarkable grace and ingenuity of the *finale* of the second act, and to the unique, effective termination of this lively and intricate scene, in which poet and composer have so ably co-operated.

The second act of Rossini's "Cenerentola," with the duo, "Un segreto," between Ferranti and Lablache; the septet, and the *vaude finale* of Adam, "Non più mesta," and the *ti ri ri ri* quartet, "Les Graces," concluded Mr. Balfe's benefit programme.

Last night (Friday), the second act of "Il Prodigo," and Balfe's "I Quattro Fratelli," were again appearing for the last time.

Madame Sontag, to the delight of the musical public, will re-appear this evening as *Rosina*, in "Il Barbière."

ROYAL ITALIAN OPERA.

Scarcely a year since, the name of Charles Gounod was almost unheard of in the musical world. If inquiry had been made in Paris, it would have been found that a pupil of the Conservatoire, of that name, had won the second grand prize in 1837, and in 1839 had carried off the first grand prize for a composition; that he had been a pupil of Reicha and Halévy; that he went to study at the French Academy, at Rome; that from that period he was lost sight of, some persons pretending that he had become a priest. M. Gounod, however, it appears, was travelling in Italy and Germany, and was long a resident in Vienna.

He did not rush into print, and it was only towards the close of the season that rumours began to be circulated in Paris of an unknown musician, whose works were likely to make a sensation. These reports assumed soon a substantial confirmation. At the suggestion of Madame Viardot, the director of the Grand Opera gave M. Gounod the commission for an opera, the poem by M. de Carré, founded on Goethe's "Faust." In the meantime, Mr. Hullah, at his third monthly concert at St. Martin's Hall, produced four compositions by M. Gounod. These works gave rise to an animated discussion in our musical circles, and many conflicting opinions were expressed by our critics as to the abilities of M. Gounod. On the 16th of April last, his "Saffo" appeared at the Théâtre de la Nation, in Paris, with Mdme. Viardot as the inspired poetess, Mdlle. Poinsot as *Climene*; Bonnehée, *Faonte*; Mdlle. Pradher, *Alcée*; and Aymès, the *Shepherd*. Although Mdme. Viardot's engagement was limited on the 15th of May, "Saffo" was presented six times; and after Auber's "Zerlina" was brought out, and Mdme. Viardot had left Paris for London, so satisfied was the Parisian management with the impression created by "Saffo," that Mdlle. Masson essayed the part, but unsuccessfully. When we add to this fact, that M. Roqueplan has given M. Gounod a commission to write a new five-act opera, enough will have been stated to prove that M. Gounod's *début* as a composer in Paris has been thoroughly successful.

On Saturday night, the Italian adaptation of the drama of the work of MM. Augier and Gounod was mounted with great splendour. The two scenes of the first and third acts—a square before the Temple of Jupiter; and the Rocks of Leucas, with the temple of Venus in the island in the distance, and the rippling waves on the sea-shore—may be cited as most magnificent specimens of pictorial art, by Grieve and Telbin. The processions and groupings, under the direction of Mr. W. West, were classic and picturesque. In the cast for the principal parts was first-rate musical and dramatic talent, a selection was beyond all praise: the music of Gounod, in the first and last acts, is superb; and, as the libretto advantageously attributes, "Saffo," we fear, will prove a failure. No inspired Orphic poetess could sing such a love-song as "Saffo" and requisite libretto; and, like many other noble productions of the most gifted composers, "Saffo" will perish from the weakness of the poem.

The introduction of the opening scene leads to a reverie, in a religious march in E flat, common time, stately, solemn, and melodiously majestic, finely scored. After the victorious gladiator has passed in his car, *Phaon* (Tamberlik) and *Pythias* (Ambrosini), the former in a divine strain of love, between *Saffo* for her intellect, and *Glycère* for her beauty; and the latter, an old man, tauntz *Phaon* for his double affection. Tamberlik sang a lovely romance in A flat in common time, commencing with a recitative, as expressive a melody as was ever conceived, most delicately instrumented. After this air *Saffo* enters: there is a charming chorus of female voices, and then the character of the poetess is marked in a few bars, "Di Grecia a voi." Anything finer and more characteristic than this brief passage we have never heard—it at once establishes Gounod's fame as a poet, as well as a musician. *Glycère* (Vadaque Castellan) next enters, and there is a quartet between Viardot, Castellan, Tamberlik, and Ambrosini, in which the rivalries of *Saffo* and *Glycère* for the heart of *Phaon* are delineated dramatically, with a picturesque orchestral under-current. An air, interpolated in the Italian version, is sung by Madame Castellan: the audience in particular, in minor, is admirable, but the cabaletta, in B flat, is weak and commonplace. The chorus of male voices, in G major, on the entrance of *Alcæus* (Marali), is very vigorous and characteristic. Then comes the struggle for the lyric crown, in a finale of amazing power. It begins with a hymn by Pythias in F major, large and sonorous, followed by diminished couplets of *Alcæus*, who competes with *Saffo*, to "Liberty." The effect of the crowd enjoining silence to hear *Saffo's* strains, is another happy idea of the composer: her ode, "Hero and Leander," is exceedingly beautiful, the large is perfect, the instrumental imagery is inspired, and the allegro is brilliant and impulsive. After *Saffo's* triumph is proclaimed, the finale winds up with a choral crescendo and *ensemble* in B flat, wine-light time, of imposing grandeur, and the curtain fell amidst general excitement.

The second act, in *Phaon's* residence at Lesbos, opens with a bacchanal chorus in C major, interwoven with which is a very original and striking "Britisl," sung by Tamberlik, in F major, two-four time; after which is a concerted piece in C major, nine-eight time, of the conspirators, who come here to kill the tyrant *Phaon*, *Phaon* winning the throw. The oath of fidelity to the cause, sung by Castellin, Marali, and Tamberlik, with chorus, was redemanded with acclamation, so novel and spirited was the theme. A very remarkable duo between Tamburini and Castel as is next in rotation. It is here that *Glycère* obtains from *Phaon* the secret constituting the list of the conspirators. This duo won universal admiration, the concluding movement being replete with *finesse* and vivacity. A beautiful air by *Saffo*, with chorus, descriptive of her happiness with *Phaon*, is succeeded by a duo, in which *Glycère* compels *Saffo* to promise to abandon *Phaon*, in order to save his life. Then is the trio finale, in which he is thunderstruck at the apparent an aithilitarian of *Saffo*, the despair of the latter, and the triumph of the successful rival *Glycère*. The act, however, long for merry, the audience evidently were disgusted with the scoldings of the rival courtesans for the Greek sobriquet, had no sympathy with this *Phaon Polite*, whom M. Augier had so absurdly cast in the right as to rank his destruction of *Saffo*, and felt a contempt for the part of the imbecile *Pythias*. The composer himself must have experienced the want of interest in his character, as the duo and trio are the weakest in the opera.

The third act, contains some splendid writing of the composer. The air of *Phaon* in A flat, six-eight time, with the second movement in F minor, common time, was admirably rendered by Tamberlik, whose burst of despair on the high C at the close quite electrified the house. The chorus in C minor, common time, of the conspirators bidding farewell to their country, is another of Gounod's grand conceptions. After *Phaon's* departing malediction, the despair of *Saffo* reaches its climax, and a grand scena ensues, beginning with a prayer for *Phaon*, in F major, three four time; at the end of which she sinks (Sckel) here sings an air, in A flat, six-eight time, with chorus, and the instrumental imagery most elegant and captivating. It was fervently encored. *Saffo*, awakening from her swoon, sings for the last time despairingly to her lyre, bidding adieu to the world, and finally to the house. The chorus in C minor, Viardot's acting and singing of this scene was sublime, worthy of her general talents in *Fidès*

If M. Gounod will be unable to give vitality to, and inspire interest in the story of "Saffo," he will only share the fate of Labarre, in 1709; of Rameau, in 1739, of Beccinni, in 1778; of Martini, and Mayer, in 1794; of Reicha, in 1822; and of Paeini, in 1842. Often as the subject has been treated, the sympathies of audiences cannot be enlisted for the love of *Saffo* for one not worthy of her. To deny, however, to Gounod the possession of very extraordinary powers, in the treatment of such a subject, is equally apparent; and as an orchestral writer, his accompaniments are replete with elegance and ingenuity; but, above all, he has a marked individuality of style, distinguishing him from the ordinary composers of the day. Perhaps his forms may be considered too severe; but he was evidently aiming at ancient Greek beauty, and was resolved to steer clear from the modern mode of operatic writing.

On Tuesday, "Saffo" was given for the second time.

On Monday was a subscription night, to replace that of Sept. 6; Meyerbeer's "Huguenots" being performed for the eighth time

On Thursday, "Norma" was played for the fourth time; followed by the last act of Donizetti's "Favorita," with Grisi, Tagliafico, and Mario.

HAYMARKET.

The English adaptation of Adolphe Adam's pretty opera, "La Reine d'un Jour," was produced on Wednesday night, with perfect success. The incidents of the original work are retained, with a new dialogue; but the music is entirely new, and has been composed by Mr. Edward Fitzwilliam, son of the well-known comic singer and of the late Mrs. Fitzwilliam, once of that name. Mr. E. Fitzwilliam is already favorably known in the musical circles by his "Nabob Nabet" and "Songs of a Student," from which compositions every expectation was entertained, that he would take a high and distinguished place as an operatic composer. If he has not quite come up to our anticipations by his present essay, he has most surely made a most promising beginning, and his second production will be looked forward to with much interest. The story of the "Queen of a Day" is a bit unfamiliar to English audiences; it is the old French one of "Partisan," libretto, treating of the schemes resorted to to effect the escape of a Queen of England on the days of Puritan rule, and the perils encountered in the disguise. In the Haymarket version, it is *Sir Henry Vere* (Mr. Stuart), and the love passes of *Lucy Lestaire* (Miss Louisa Pyne), a miller, as the Consort of Charles II., during the days of the Commonwealth, that Monk is organising the Restoration, and by the stratagems of the soldiers of the Protectorate are frustrated, and the real queen lands in Scotland. *Lucy* receives a reward of 5000 crowns, and is thus enabled to marry *Walter Price* (Mr. Harrison), a sailor, who had very nearly espoused, owing to a lover's quarrel, *Cicely Home* (Mrs. Keeley), the niece of *Turnbull* (Mr. Weiss), an innkeeper, a Vicar of Bray in politics, who keeps a portrait of Charles I. and of Cromwell, and changes the pair of pictures as the varying events suggest. A pompous, selfish, avaricious *Lady Shiraz* (Mrs Smith), who comes to pay her court to the supposed *Queen*, is also one of the characters of the drama, the action of which is developed with much ingenuity, especially in the second act, in which the miller assumes the robes of the Queen, excellently acted by Miss Louisa Pyne, whose exquisite vocalisation, also, in the opera, is its main attraction.

As regards the music, its most characteristics it is more that of the drawing-room than of the stage. It is deficient in dramatic impulse and colouring; but there are some very pretty ideas, and the orchestration is elegant if not forcible. Miss Louisa Pyne, of course, had the lion's share in the score: she has a cavatina, "Returning from a foreign shore," with a brilliant *pointe d'orgue* (encored); a graceful ballad, "There is a form that haunts my face;" a florid rondo, "My heart's gaily beating;" a grand scena, "A ship appears at sea," and others. Mr. Caulfield has a song, "Amid the songstars of the grove," and a nicely harmonised duo with Miss Louisa Pyne, "An April day." There were, also, a duo between the latter and Mr. Harrison, "Follow your fancy;" a clever trio, "Gracious Queen;" a choral glee, and two full concerted pieces.

Miss Louisa Pyne was deservedly honoured with a special ovation at the fall of the curtain.

It is quite evident that the disposition of the public to patronise the class of compositions like that of the Opéra Comique in Paris, is strong and sincere; and the Haymarket lessee, by affording our composers the chance of producing one or two such operettas, is materially assisting the art progress in this country, as well as sustaining the financial interests of his establishment.

SADLER'S WELLS.

On Monday Miss Glyn made her first appearance, since her re-engagement, in the character of *Lady Macbeth*. The house was crowded, and the reception awarded to the actress on her entrance most enthusiastic and vehement.

OLYMPIC.

M. Victor Hugo's "Angelo" has been skilfully adapted for this theatre, the part of *Angelo* by Mr. James Stirling, and Miss Fanny Huddart as *Tisbe*, the latter being assumed by Mrs. Stirling and Miss Fanny Huddart as the husband and the lover by Mr. H. and Mr. W. Farren, jun. The performance of all these characters is quite sufficient to their requirements, though in some passages Mrs. Stirling was pathetic, and Miss Howard powerful as *Catherine Diddier*, as *Remadel*, did the "conventional mysterious" respectably. The house was full.

PUNCH'S PLAYHOUSE.

Mr. Angus Reach has contributed to this theatre what he is pleased to call a "dramatic bubble," under the title of "The Shot Tower"—the *locale* of such exaction being the other side of Waterloo-bridge. In this nondescript piece Mr. John Reeve plays a fast man, one *Charley Shiners*, who, now discarding his commercial pursuits, cultivates the trombone; and, having forfeited twenty lodgings for the sake of his favourite instrument, comes here as a spot where he may perform upon it without objection. But a visitor appears, a former fellow-lodger of his, *John Champs*, a farmer, who has come to see the Exhibition; but, bewildered by the bustle of the town, seeks silence in the Shot Tower. The two soon quarrel, and *Champs* gets possession of the key and throws it over the parapet. *Shiners* declares he has killed somebody. Just at this juncture, *Sophy Champs*, the farmer's niece, enters—a romantic milliner, who has sought the same elevated retirement for meditation, and turns out to be the affianced of *Shiners*. The fears of old *Champs* are by this means allayed, and the farce, somewhat abruptly, concluded. On such a piece criticism is needless; it is serve to amuse a vacant hour, its end is answered.

CREMORNE GARDENS.

The amusements of this popular resort have lately embraced a novel attraction, described in the programme as the "Storming of Gibraltar." The situat on of Cremorne, on the banks of the Thames, admirably adapts it for mimic naval fights. A representation of the fort has been thrown up at the south-eastern end of the esplanade, extending upwards of 100 feet into the river, and the fire consists or an attempt to capture this stronghold by a combined naval attack. These vessels are the combined fleets of the Iron and Citizen Steamboat Companies, the directors of which have allowed their crews to attend and take part in the display. The idea was a bold one, and the manner in which it has been carried out is worthy of all praise. The other attractions of the Gardens continue. Franconi's *troupe* increases in popularity, and the round of amusements which greets the visitors of Cremorne, cannot fail to render the place permanently popular

ST. JAMES'S THEATRE.

ST. JAMES'S THEATRE.—The veteran M. Cloup, who has so ably held the stage management of the French Plays, at the St. James's Theatre, for the last twelve years, has announced his benefit for Wednesday next, the 20th instant.

might introduce, have had too pleasant a taste of the practical benefits which have followed a wise course of fiscal and commercial policy, to give their whole hearts and energies to a *doctrinaire* movement in favour of Parliamentary reform, unaccompanied by more solid measures of public utility. It is by no means certain that a dissolution upon that question would present the Minister with a more manageable or favourable Parliament than the present one. What the country chiefly requires is a good Finance Minister; and if the overthrow of the Administration, a dissolution of Parliament, and a new combination of parties shall procure it that advantage, and consign Sir Charles Wood to his proper station, the year 1852 will be a year of business, and show in favourable contrast with 1851. The old watch-word of the Whigs has lost its virtue; and the fiscal reforms of Sir Robert Peel have placed ancient Whiggery at a disadvantage, from which it never can extricate itself, except by a boldness and wisdom as great as his, in the management of the fiscal and commercial affairs of the nation. We can do without Parliamentary Reform; we cannot do without a readjustment of taxation.

COURT AND HAUT TON.

THE COURT AT OSBORNE.

Her Majesty and the Prince Consort, accompanied by the Princess Helena, and attended by the ladies and gentlemen of the Royal household, returned to Osborne on Saturday morning.

The hospitalities of the Court have been continued during the past week to the Earl and Countess of Clarendon and a select circle of private friends of her Majesty and the Prince Consort.

On Sunday the Court attended Divine service in the private chapel at Osborne, the Rev. Lord Wriothesley Russell officiating.

On Monday his Royal Highness Prince Albert, accompanied by the Prince of Wales, crossed over to Southampton, and from thence proceeded to Salisbury by railway. From Salisbury his Royal Highness proceeded in a carriage to Stonehenge, and, after inspecting the druidical remains, returned again to Southampton, and reached Osborne at a quarter before eight o'clock During the absence of their Royal Highnesses, her Majesty, accompanied by the Earl and Countess of Clarendon, drove out in the open phaeton of Osborne.

On Tuesday, her Majesty and his Royal Highness, with the Prince of Wales and Prince Alfred, accompanied by the Earl and Countess of Clarendon, drove out on the road to Newport in an open *char à banc* and four. The Royal party afterwards arrived in a second carriage, and Lord Alfred Paget, Equerry in Waiting, attended on horseback. The Earl and Countess of Clarendon, Lady Caroline and Miss Barrington, Colonel Wylde, and Rev. Mr. Bowyer, and Mr. Birch, had the honour of being invited to dine with her Majesty and his Royal Highness in the evening.

Her Majesty, it is now arranged, will leave town by the Great Northern Railway on the 27th, and remain all night at Doncaster. The Angel Inn will have the honour of receiving the Queen and Court, who will proceed next morning to Scotland.

APPROACHING MARRIAGE IN HIGH LIFE.—His Serene Highness Prince Edward of Saxe-Weimar, nephew of her late Majesty the Queen Dowager, is about to form a matrimonial alliance with the Lady Augusta Gordon Lennox, second daughter of his Grace the Duke of Richmond.

The Marquis of Lansdowne left town on Tuesday, for Bowood-Park, Wilts.

The Chancellor of the Exchequer left Hickleton Hall, near Doncaster, on Tuesday, for Drumsor, near Dunkeld, the seat of the Right Hon. Fox Maule

Sir George Grey, who has lately been seriously indisposed, is about to proceed to Germany for the benefit of the waters.

The Right Hon. Henry Labouchere left town on Wednesday, for Stoke Park, near Windsor.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS have recently taken place.—*Deanery Rural*: The Rev. Edward A. Ommanney, to Chew, Somerset. *Rectories*: The Rev W. Grice, to Tetbill, near Alford; the Rev. George Andrews, to Castor, Northamptonshire; the Rev. John Pope Cox to St. Erwan, Cornwall; the Rev. Henry Godolphin Peter, to St. George-the-Martyr, and to St. Mary Magdalen, Canterbury. *Vicarages*: The Rev. Vernon G Guise, to Longhope, Gloucestershire, the Rev. Edward O'Brien, to Thornton-Curtis, Lincolnshire; the Rev. Richard Allen, to Kensworth, Herts, the Rev. H. T Twells, to Stratford-upon-Avon.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and regard:—The Rev. Henry Atkins, of Leeds, from his lads past the Rev William Rothery, from the congregation of St. George's Church, Mossley; the Rev. J Horton, late curate of St. Mark's, Cheetham Hill, Manchester, from the Sunday-school teachers, on his leaving.

The Rev. John Harding, D.D., late rector of the united parishes of St. Andrew by the Wardrobe, and St. Anne, Blackfriars, has been appointed Bishop of Bombay, in the place of the Right Rev. Dr. Carr, resigned. The ceremony took place in Lambeth Palace.

NEW BUILDINGS.—The thirty-first annual report of the Commissioners for Building New Churches has been presented, and is now printed by order of the House of Commons. It appears that, at the date of the last report, 470 churches had been completed, with accommodation for 498,266 persons, including 291,190 free seats for the use of the poor. Since then, 27 new churches have, by the aid of grants from the funds placed at their disposal, been completed, which provide additional accommodation for 20,313 persons, including about 14,442 free seats; 23 churches are in the course of erection, and plans for 17 others have been approved of. Application has been made from 19 parishes for further church accommodation since the last report of the commissioners.

ETON COLLEGE, CAMBRIDGE.—Eton College chapel has lately received within its walls a very handsome ornamented Gothic font, on the north side of the ante-chapel, and is intended as a memorial of the many amiable qualities of the Rev. Charles John Abraham, B.D., formerly Fellow of King's College, and for many years the resident master in Eton College, and whose departure from this country, about 18 months ago, for New Zealand, will be remembered by many of our readers. It is the spontaneous offering of the collegers alone, and principally of those who were pupils to Mr. Abraham, by whom it has been paid for by means of a subscription, confined, we believe, entirely to colleagers. The font bears the following inscription:—How great a friend testimonium ob multa beneficia a Carolo Johanne Abraham, S T. B. Accepta Deo et Ecclesiæ D D. infusce collegii Scholaris quidam; A. S. 1850.

PROPOSAL FOR A SYNOD FOR THE DIOCESE OF LONDON.—The following has been addressed to the clergy of the diocese of London:—"London, 39, Essex-street, Strand, Office of the Metropolitan Church Union, July 29, 1851.—Rev. Sir,—Considering the progress which the synodal question has recently made in the public mind, as shown, among other symptoms, by the character of the discussion in the House of Lords on Lord Redesdale's motion, the idea has suggested itself that the assembling of diocesan synods, if adopted in the various dioceses, might prove the best, the most peaceable, and the most effectual means of obtaining the revival of the synodal action of the Church in Convocation. Under this impression, the committee of the Metropolitan Church Union (whose main object is to procure the revival of the synodal functions of the Church) feel it their duty to ascertain how far it may be possible to obtain from the Lord Bishop of London the assembling of a diocesan synod of the clergy of his diocese. As a first step towards this object, they have instructed me to communicate with you, respectfully soliciting the expression of your opinion on the subject; and if you are favourably disposed towards such a movement, you will feel obliged by your returning to me the inclosed, with your signature attached. In the event of a sufficient portion of the clergy of the diocese being favourable to such a measure, there will, it is conceived, be no difficulty in making their sentiments known to the diocesan, through the regular ecclesiastical channels, and we are particularly requested by the committee to state, that, while it appears to them that the institutive of such a movement may properly proceed from an association like the Metropolitan Church Union, rather than from individuals, they are most anxious that the movement should not be that of a particular society, and, above all, that it should not assume the character of a party movement. Should your reply to the present communication be of a favourable character, we shall make it our business to inform you of the further steps proposed to be taken in prosecution of the object in view.—We are, Rev. Sir, with much respect, your faithful servants, G. E Biber, G. Roberts, Honorary Clerical Secretaries; G. J. Ottaway, Hon. Lay Sec."

RESTORATION OF THE SEPARATE SEE OF GLOUCESTER.—The petition for this object has been forwarded to the Home Secretary, for presentation to her Majesty. Appended to it are the names of no fewer than 169 of the parish al clergy of the diocese of Gloucester, and 227 churchwardens; besides which there are the signatures of a large body of the nobility, magistracies, and gentry of the county, making a total of more than 1200 names The list might have been increased to a very large extent, had it been the desire of the promoters to display mere numbers; they, however, confined the signatures to those only who personally undertook the object of the petition, and really felt it necessary for its proper being granted

DEAN AND CHAPTER OF WINDSOR.—By a return to the House of Commons, it appears that since the 1st of January, 1850, the dean and chapter have received the following fees on the baptisms of the Royal family:—George IV., £228 14s.; Duke of Gloucester, £318 0s. 8d.; William IV., £224 14s.; Prince Augusta, £225 0s. 8d.; Princess Sophia Matilda, £218 0s. 8d., Queen Dowager, £220 0s. 8d.

About four o'clock on Friday evening week, the steeple of St. Cuthbert's Church Thetford, fell on the roof of the building, carrying away one of the arches and destroying the organ. The building is very old; it is built of flint and freestone, and has been repaired many times.

COUNTRY NEWS.

THE POTATO BLIGHT.—"We are sorry to learn," observes the *Buckinghamshire Gazette*, "that the potato blight has appeared rather extensively in some fields in the parish of Harborne, near this town." The accounts received from various parts of the kingdom during the past week are also calculated to create serious apprehensions for the safety of the crop in other localities. The *Worcester Herald* of Saturday last states that the blight is becoming very frequent in that county, although as yet certainly far from general; but adds, on the authority of a correspondent in Oxfordshire, "that in that county the disease is becoming general." The *Staffordshire Advertiser* also says, "there is reason to suspect that the potato disease is not entire y eradicated. Patches gathered within the last day or two in the neighbourhood appear to be slightly affected; and we have heard of an instance in which the tops have emitted that offensive smell which accompanies the disease." The *Bristol Mirror* likewise states, "that the blight has again made its appearance in different parts of Somersetshire. On Monday last it was discovered at Wells, Axbridge, Banwell, Chew Magna, and other places; but as yet the disease has only reached the haulms, the tubers not being affected. The blight has come upon the potatoes just a month later than it did last year; we therefore hope that all the early crops will be secured; and we hear that many persons are already removing their crops, which are very abundant." The accounts from many parts of Ireland also concur in stating that the disease has manifested itself in an unmistakeable form in that country.

FATAL COAL-PIT ACCIDENT AT BEDMINSTER.—The extensive coal district of Bedminster was on Saturday morning the scene of another terrible colliery accident, by which five poor fellows, while descending the shaft, were killed on the spot, in consequence of the rope by which they were descending into the pit caking. The accident occurred at the Malago Vale Pit. The father of one of the sufferers, an old man, on hearing of the death of his son, fell dead at the pit's mouth

THE POTATO CROP IN IRELAND.—According to the local papers, the manifo-tations of disease in the potato crop are becoming general. In many fields in the neighbourhood of Dub in, especially on the north side, the evidence of its presence may be discerned upon the leaves and stems of the rows of the plant. As yet, however, the potatoes themselves remain in a sound condition, and although it is not to be expected that they will long remain entirely free from infection, the r advanced growth justifies the hope that the general supply will be comparatively good and wholesome. We are glad to learn, from a correspondent in a western county, that the lumper potato, of which only a small quantity has been planted, is the only variety which has yet given indications of decay. All the other kinds are still "as green as a leek." Our correspondent is sanguine in his anticipations of an abundant produce, on the reasonable ground that "we are now near the middle of August, whereas the blight was amongst them last year about the middle of July."

HOP INTELLIGENCE.—The accounts from the various hop-growing districts state, that, on the whole, they have improved, and a moderate crop is anticipated. The east wind has retarded improvement somewhat. Strong grounds are improving, and coming into hop fast; they are looking well and thriving, and will bear a favourable crop, but the sack bines, it is thought, will do very little, for some of them have gone back.

On Tuesday afternoon, at Folkestone, as the daily express train, with 256 passengers, brought over by the *Lord Warden* steam-boat, was proceeding up the incline to the upper station, the shank and hook of the first carriage gave way, thus detaching the whole train from the engine. The carriages ran back with fearful velocity, and it was impossible to stop their progress until they had carried away the who e of the back of the station. Fortunately, the last two carriages were luggage-vans One was comp etely shattered to pieces The passengers escaped with a few slight contusions. The only person seriously injured was a painter, who was at work at the back of the station, from whence he was thrown about thirty feet by the collision.

THE PORT OF BRISTOL.—At a meeting of the Town Council, held on Wednesday, a report was presented from the Dock Committee, which showed that the income of the docks had greatly increased, exceeding the expenditure for the year by about £30.0. The committee recommended that the dues on sugar should be reduced from 3s. to 1s 6d per ton, and that those on tea, coffee, and cocoa should be wholly remitted, a proposition to which the council unanimously assented The foreign tonnage of the port was stated to have exceeded that of last year (and even that of the exceptional year 1849) by near 30,000 tons

COLLISION ON THE GREAT WESTERN RAILWAY.—A railway collision of an alarming character, not attended, however, by fatal consequences, although resulting in severe personal injuries to upwards of twenty persons, occurred on Sunday morning at two o'clock, in a down excursion train by the Great Western Railway. The train was one of those undertaken by the Bristol Association, for the purpose of conveying persons of the working and middle classes, at cheap rates, to and from London, to visit the Great Exhibition, and during its great length was divided into two parts. The first was despatched more than an hour before the other, and got down without mishap; and the second passed Bath, and got on as far as Fox's Wood, just be ore the entrance of the No. 3 Brikington tunnel, where, either through the want of coke, or some mishap to the engine, the train broke down and came to a stand-still. There was a return engine and tender coming from Bath, and after the train had been standing for about ten minutes, it is supposed, through the darkness and by some of the passengers, run into it from behind. The collision is described as being a very violent one; the passengers were thrown forcibly against each other, receiving blows and contusions, and were greatly alarmed. The tender or some of the carriages were very much broken. The engine driver of the Bath train stated that he did not anticipate any interruption, and that he was prevented from seeing the train till too close upon it to avoid running into it by a dense fog rising from the river which runs a-reside of the railroad. The following are the persons injured:—Mrs. Nelsom, of the Pottery, Templestreet, a compound fracture of the tarsals or knee-cap, and a contused and lacerated wound of the right leg; Mrs. Dodd, Colleton-crescent, a contused wound of the head and body; Miss Greenslade, at St. John-street, a contused wound of the temple; Miss Anne Gibbs, contusion of the head; Miss Florence Gibbs, contused knee; Mr. Thomas Gibbs, contused wound over the eye-brow; Mr. Richard Newcombe, bruised legs; Miss Elder, contused arm; Miss Matthews, of Southwell-street, contused wound of the forehead, Miss Evans, contused ancle, and injury of the fibula, supposed to be fractured; Several Cops, both eyes contused; Miss Cha.lacombe, sister of Dr. Chellacombe, contusion of the knee, and front tooth of the lower jaw broken; Mr. Wade, jun., Park street, severe contusions; Miss Wade, front tooth broken; Miss E. Wade, severe contusions; Mr. Thomas Shew, ditto; Mrs. Lloyd, very severe contusions of the head and face. On Monday afternoon the magistrates at Keynsham investigated the affair. The two men, Thomas Coleman, engine-driver, and John Wright, fireman of the Bath train, were brought up in custody. The prisoners were charged under the 17th section of the company's act with having negligently omitted to stop an engine, whereby the lives and limbs of several persons were injured, or might have been injured. Both pleaded guilty to the charge, and were fined, Coleman, £5 or one month's imprisonment with hard labour, and Wright £3, or two months' imprisonment with hard labour.

A FUGITIVE MERCANTILE CLERK.—Messrs. Horton, Simms, and Ball, iron-merchants, of Port-street, Manchester, have been robbed to a very large amount by one of their clerks, named Schofield, who sailed for America in the *Africa* steamer on the 2nd instant, and was followed by Mr. Ball, and the following by Inspector Buckley, of the Manchester detective police force, in the *Baltic*, with power to apprehend him. Schofield occupied a very influent i post in the office of Messrs. Horton, Simms, and Ball, and was entrusted the deputy of Mr. Ball, the managing partner. That gentlemen has been from home, and during his absence schofield received sums amounting to near £600 from his fellow clerks, the whole of which he is asserted to have kept; and it is feared that he has drawn other large accounts which were put into his hands o collect.

THE LATE ELECTION FOR LIMERICK.—The Earl of Arundel and Surrey has issued the following address of thanks to the electors of the city of Limerick:—"11, Carleton-terrace, Tuesday, August 5, 1851. Gentlemen, I must now express to you my deep sense of obligation towards you, the electors of this borrick, for the high position to which you have placed me. I need not here recur to expressions I have more than once repeated, in assurance of my full appreciation of the duties thus honourably imposed upon me. To the gentlemen who composed my committee, and to those who accompanied me on my canvass, I have to offer my best and most cordial thanks for their most delicate and unobtrusive attentions, and for the care with which they invariably saved me from trouble in their anxiety for my personal exertions. To each and all, then, I tender my sincere acknowledgements, and will endeavour to repay them by a reciprocity of similar sentiments and similar regard.—I have the honour to be, gentlemen, your faithful and sincere friend Arundel and Surrey."

THE WATERING-PLACES OF ENGLAND.

MARGATE AND BROADSTAIRS.

LET prosy peers and tiresome M.P.'s betake them to the barren moors and the pleasures of grouse-shooting, with each 12th of August, commend us rather to the sea-side and shrimps, at some pleasant watering-place within a reasonable distance of town. To the Direct Northern Railway, those who choose, with their Joe Mantons and their dogs; give us the Margate steamer, steam up, all hands alive and bustling, and countless cabs pouring in their troops of merry health-seeking passengers. What a host of unusually excited middle-aged gentlemen, and cool complacent-looking ladies of all sorts of ages! what a flock of young gentlemen and ladies, their hopeful progeny: what a perfect torrent of carpet-bags, and valises, and hand-boxes, and baskets, and brown paper parcels!

Poor smoke-dried sea-side citizens! Much occasion have you to thank that great regenerator of mankind, steam, for his good offices to-day: in five hours you will be looking on the mile-long jetty of Margate; whereas, thirty years ago, the voyage of the Margate "hoy" was of uncertain duration, and uncomfortable while it lasted—varying from a dozen hours, under the most favourable circumstances, to three or four days. We need, perhaps, hardly remind the reader of the vivid description of a voyage to Margate given by Defoe, in his inimitable romance of "Robinson Crusoe." If it be not fresh in their memory, let them look to it: it will prove eminently suggestive of the improved circumstances of the age we live in.

We will not stop to describe the oft told incidents of the voyage—how we successively passed Greenwich, Woolwich, Gravesend, the Nore; how the ladies became qualmish at this point, and continued in a questionable and uncomfortable state until their arrival within the pier of Margate, and the welcome cry, "That will do with the engine," told them that they were soon to be on *terra firma* once more. For ourselves, being proof against the qualms of sea-sickness, we can only express our sentiments in few words—perfect indifference, perfect enjoyment; indifference to cares and anxieties upon all matters past and to come, perfect enjoyment of freedom to newly emancipated lungs. Every turn of the paddle-wheel seemed to unwind some portion of the coil of care which a whole twelvemonth of busy life in the metropolis had gathered around us; every puff of smoke carried off something of weight from our mind, till at last, in the short space of half a dozen hours since we left home in —— street, we seemed to have ten-lived a score of years at least.

Sea air and sea bathing are glorious in their effects; and the inland population of all parts of the world will gain much in health and energy and happiness from the facilities which the modern appliances for locomotion have placed in their way for reaching them. "Only skin deep," is a common expression, implying that the skin is a matter of slight importance in our physical condition. The observations of modern philosophers, however, have proved that the skin is a most important organ in the human frame, as important as the digestive functions themselves; and that, unless it be kept in a clean and vigorous state, the latter may be so overloaded as to become paralysed, leading to endless painful disorders. Taking a cold bath at evening, on arrival, as a necessary preparation, a plunge or two into the open sea removes the crust of ages, and sends the blood, with elastic and unencumbered action, through the veins. Added to this, the bracing effect upon the nervous system of what is called "the shock" not very pleasant, it is true, at first—is a consideration by no means unimportant.

But, independently of the cleansing effect of the bath, and the tonic properties of the shock of sea-bathing, there is a positive medicinal virtue in sea air, the properties of which have only been discovered within the last thirty years, which accounts for its invigorating effects, and fully explains the *rationale* of that peculiarly cheerful and amiable aspect which the most be-devilled of Cockneys invariably assumes before the end of his first week's occupation of shell-gathering, in the eternal buff slippers indigenous to all watering-places.

MARGATE.

Margate has long been a favourite watering place with the denizens of the great metropolis, and not without reason. It happens to be the healthiest place in the United Kingdom, perhaps in the world, and its "oldest inhabitant," might probably we do not assert it positive y be the grandfather of the oldest inhabitant of many a low situated, badly drained, badly watered commercial community. This is a fact which it seems has only been ascertained of late years, since the organization of the careful statistical returns of the Registrar-General, and then the writer of a Guide Book, published some thirty years ago, speaking of Margate, says:—

"No situation can be more grateful in summer; but, as the general aspect of Thanet is towards the north and east, and is totally unprotected by ridges or inclosures, during the colder months it is unsuitable and forbidding to those who have been accustomed to more sheltered abodes. The inhabitants, however, seem as healthy and long-lived as in other places."

Now the fact is, as appears by the returns of the Registrar-General, that, whilst the average mortality of England is at the rate of 1 in 45, the mortality in the Isle of Thanet is as 1 in 60; showing a superior longevity proportionably, of about 25 per cent. up n that of the gen ral community, and of 50 per cent. upon that of many communities which are exempt from the average of mortality.

Margate—or Meregate, from its being situated over a small mere, or stream, running into the sea—is the principal town of the Isle of Thanet, which itself is formed by two streams, the Wantsum and the Stour, which flow into the sea. the former a little east of the Reculvers, the latter in Pegwe l Bay, just south of Ramsgate. The soil throughout is chalky, and consequently excessively dry. Rain, therefore, which in low districts often breeds miasma, here is an unalloyed blessing, testified in the old monkish proverb—

When England wrings,
Thanet sings.

We have here spacious sands, a fine pier, and a noble jetty. The sea view is bold and extensive, and the offing is constantly enlivened by the passing of steamers and other vessels, on their voyage to or from various parts of the world. Nor are the usual lounges of a watering-place wanting—the parade of the bathing-machines in the morning, then the market; then the reading rooms; and in the evening, the bazaar, where, amidst the clang of various instruments, the dice are constantly rattling, and there is always sure to be "one wanting to make up the next dance."

In addition to its own attractions, Margate happens to be surrounded by some of the prettiest scenery in the world—genuine English rustic scenery. Innumerable drives, shaded by tree and grove, lead to numberless villages of more or less importance, and some of them of considerable historical interest, gentlemen's seats, &c. St. Lawrence, about four miles off, situated on a hill overlooking Ramsgate, is a place of great antiquity, the tower of the church being of Saxon architecture. Minston, St. Peter's, Broadstairs, are all within a short walk or evening's handling. Once the seat of Charles James Fox, has long been a show place. Half an hour's stroll brings us there, and it is well worth the journey The Reculvers are at a more imposing distance; and, notwithstanding their ancient Roman reputation, we shall be content with the glimpse we get of them from the deck of the steamer, on our way down; for, to say the truth, the "Two Sisters," as sailors call them, are not what they seem, nor what they used to be—the ancient spires having been taken down many years ago, and a building similarly shaped erected in their stead.

BROADSTAIRS,

Compared with Margate, has a small, quiet, retiring aspect. It might perhaps, be called "slow;" but it is much resorted to by those who like a quiet watering-place; and, having once gained an admirer, never loses him. It is a place of considerable antiquity; and, amongst other historical events recorded of it, was a most bloody battle fought between the Danes and the Saxons nearly one thousand years ago. Several barrows containing human remains speak of the number slain. On one of them, Lord Holland, who once resided at Kingsgate, in this neighbourhood, put up a tablet in Latin commemorative of the event, of which the following is a translation.

To the memory of the Danes and Saxons who were fighting for the possession of Britain (soldiers think every thing their own!). the Britons having to fore been perfidiously and cruelly expelled, this was erected by Henry Lord Holland. No history records who were the commanders in this action, or what was the event of it. It happened about the year 800; and that it was fought on this spot is probable, from the many bodies which were buried in this and the adjacent barrow.

We shall close this random sketch with a charming passage from a recent article in *Household Words*, entitled "Our Watering-Place," in which we think we can detect the pen of "Boz" himself, and which will exactly describe the calm beauties of Broadstairs, and its every-day proceedings:—

Sky, sea, beach, and village, lie as still before us as if they were sitting for the picture. It is dead low-water. A couple of boys amount the opening of the cliff, as if it were faintly trying from recollection to imitate the sea; and the world of butterflies hovering over the crop of radish-seed are as restless in their little way as the gulls are in their grander manner when the wind blows. But the ocean lies basking in the sunlight like a drowsy lion—its glassy waters scarcely curve upon the shore—the fishing-boats in the tiny harbour are all stranded in the mud—our two colliers (our watering-place has a maritime turn employing that amount of shipping) have not an inch of water within a quarter of a mile of them, and turn exhausted on their sides, like lank fish of an antediluvian species. Rusty cables and chains, and patched sails, timbers of old hulks and outworn timber defences against the waves, lie strewn about, in a brown litter of tangled sea weed and fallen cliffs, which looks as if a family of giants had been making tea here for ages, and had observed an untidy custom of throwing their tea-leaves on the shore. In truth, our watering-place itself has been left somewhat high and dry by the tide of years

Yet, it must not be supposed that our watering-place is an empty place, deserted by all visitors except a few staunch persons of approved ability. On the contrary, the chances are, that if you come down here in August or September, you wouldn't find a house to lay your head in. As to finding either house or lodging of which you could reduce the terms, you could scarcely en-

WATERING-PLACES OF ENGLAND.

MARGATE.—FROM AN ORIGINAL SKETCH

gaze in a more hopeless pursuit. For all this, you are to observe that every season is the worst season ever known, and that the householding population of our watering-place are ruined regularly every autumn. They are like the farmers, in regard that it is surprising how much ruin they will bear. We have an excellent hotel—capital baths, warm, cold, and shower—first-rate bathing machines—and as good butchers, bakers, and grocers, as heart could desire. They all do business, it is to be presumed, from motives of philanthropy—but it is quite certain that they are all being ruined. Their interest in strangers, and their politeness under ruin, bespeak their amiable nature. You would say so, if you only saw the baker helping a new-comer to find suitable apartments. * * * * * *

We have a pier—a queer old wooden pier, fortunately without the slightest pretensions to architecture, and very picturesque in consequence. Boats are hauled up upon it, ropes are coiled all over it; lobster-pots, nets, masts, oars, spars, sails, ballast, and rickety capstans, make a perfect labyrinth of it. For ever hovering about this pier, with their hands in their pockets, or leaning over the rough bulwark it opposes to the sea, gazing through telescopes which they carry about in the same profound receptacles, are the boatmen of our watering-place. Looking at them, you would say that surely these must be the laziest boatmen in the world. They lounge about, in obstinate and inflexible pantaloons that are apparently made of wood, the whole season through. Whether talking together about the shipping in the Channel, or gruffly unbending over mugs of beer at the public-house, you would consider them the slowest of men. The chances are a thousand to one that you might stay here for ten seasons, and never see a boatman in a hurry. A certain expression about his loose hands, when they are not in his pockets, as if he were carrying a considerable lump of iron in each, without any inconvenience, suggests strength, but he never seems to use it. He has the appearance of perpetually strolling—running is too inappropriate a word to be thought of—to sea. The only subject on which he seems to feel any approach to enthusiasm, is pitch. He pitches everything he can lay hold of—the pier, the palings, his boat, his house. When there is nothing else left, he turns to and pitches his hat, or his rough-weather clothing. Do not judge him by deceitful appearances. These are among the bravest and most skilful mariners that exist. * * * *

So many children are brought down to our watering-place, that, when they are not out of doors, as they usually are in fine weather, it is wonderful where they are put—the whole village seeming much too small to hold them under cover. In the afternoons, you see no end of salt and sandy little boots drying on upper window-sills. At bathing-time in the morning, the little bay re echoes with every shrill variety of shriek and splash—after which, if the weather be at all fresh, the sands teem with small blue mottled legs. The sands are the children's great resort. They cluster there, like ants: so busy burying their particular friends, and making castles with infinite labour which the next tide overthrows, that it is curious to consider how their play, to the music of the sea, foreshadows the realities of their after lives.

It is curious, too, to observe a natural ease of approach that there seems to be between the children and the boatmen. They mutually make acquaintance and take individual likings, without any help. You will come upon one of those slow heavy fellows sitting down patiently mending a little ship for a mite of a boy, whom he could crush to death by throwing his lightest pair of trousers on him. You will be sensible of the oddest contrast between the smooth little creature, and the rough man who seems to be carved out of hard-grained wood—between the delicate hand expectantly held out, and the immense thumb and finger that can hardly feel the rigging of thread they mend—between the small voice, and the gruff growl—and yet there is a natural propriety in the companionship: always to be noted in confidence between a child, and a person who has any merit of reality and genuineness, which is admirably pleasant.

BROADSTAIRS.—FROM AN ORIGINAL SKETCH.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The amount of tonnage registered at the respective ports of Sunderland and Newcastle on the 1st of February last was—Sunderland, 209 273 tons; Newcastle, 192,695; Shields, 125 758. So that this national race for the former port stands thus: London, first; Liverpool, second; Sunderland, third.

Her Majesty has just signified her approbation of the British Ladies' Female Emigrant Society by forwarding £100 in aid of its funds. This society was established not to promote emigration, but to elevate its character by providing for the moral and spiritual well-being of female emigrants, by the appointment of efficient matrons to emigrant vessels, and supplying the emigrants with a Bible and a prayer-book for their use during the voyage.

We regret to learn that Sir George Grey is still suffering from the effects of his recent severe attack. The Right Hon. Baronet was sufficiently convalescent to take carriage airing during the week, but still remains very weak.

The late Dr. Lingard has left his valuable library to St. Cuthbert's College, Ushaw.

A vacancy in the representation of the East Riding of York is caused by the death of Mr. Henry Broadley, M.P., which took place in Charles-street, St. James's-square, on Saturday last. The hon. gentleman was in the 58th year of his age.

According to the *Globe*, since Sir John Romilly took his seat in the Rolls Court, on the 15th of April last, he has cleared off every portion of the business of the court. He has disposed of 90 causes and re-hearings, 101 further directions, pleas, demurrers and exceptions, 32 claims, 3 special cases, 160 petitions, besides short causes and consent petitions. Judgment has been given in every instance, with a single exception, in which it was thought that by delaying a decision the parties may be brought to an amicable arrangement.

The Hon. C. S. Hardinge was on Saturday elected without opposition as member for the borough of Downpatrick.

Mr. Headlam, of the Chancery Bar, M.P. for Newcastle-upon-Tyne, will we understand, be immediately added to the list of Queen's Counsel.

Viscount Mandeville is suffering from the effects of an accident which occurred to his Lordship about a fortnight since, at the Countess of Jersey's *soirée*, where a candelabrum fell upon the noble Viscount's head, and knet him so much, that abstinence from any kind of excitement has been enjoined by his medical attendants.

Mr. W. Bushfield, M.P., continues in a state which leaves little or no reason to hope for his recovery. His strength is greatly prostrated, and it is believed by his medical advisers that he is altogether unlikely to rally. Mr. Bushfield is in his 79th year.

A pension of £200 a year on the civil list has been conferred upon Mr. Silk Buckingham, who has contributed much to literature, especially by his useful records of travel. A pension of £2 0 a year has also been given to Colonel Torrens, the author of several works on political economy. Mrs. Jameson, the authoress of "Characteristics of Women," "The Female Characters of Shakspeare's Plays," &c., has also received a pension on the civil list of £100 a year.

The low fares at which the Midland and Great Northern Railways are conveying passengers to London have stimulated the curiosity of the humbler classes in Yorkshire to visit the Exhibition in a very extraordinary degree. A trip to London and back for 5s is what no one had dreamed of hitherto. Tens of thousands have gone from the West Riding within the last two or three weeks; and not only have persons gone who possessed the pecuniary means, but great numbers have raised the means by pawning watches, blankets, and other articles.

On the morning of Friday week, one of the finest salmon that has been taken in the Tay for several years was caught near the mouth of the river Earn, six or seven miles below Perth. It measured 3 feet 10 inches in length, 2 feet 4 inches round the middle, and weighed 46 lb., being 1 lb. heavier than a large fish of the same species lately caught in the Spey.

A school of design is about to be formed at Limerick, under the patronage and support of the Earl of Arundel and Surrey, Mr. Monsell, M.P., and Mr Wyndham Goold, M.P.

A fire broke out in the town of Armagh on Wednesday (last week), which destroyed five houses, and a great deal of property besides, before it was subdued.

Floods, which occurred in the early part of last week, in the county of Armagh, have proved destructive to property and life. Two women were drowned, and eight bridges were swept away. In several places new beds have been formed by the streams, seriously damaging the growing crops.

The payments out of the Encumbered Estates Court (Ireland) in the last week amount to £9,000, the largest sum distributed in any week since the appointment of the commission, and the whole amount distributed from the commencement appears to have been £1,360 000.

As some youths were bathing on Tuesday in the Thames, off Crawshay's iron wharf, a lad named Kent got out of his depth, and immediately sank. It is supposed he was getting out of the way of a steam-boat which was in sight, and not being able to swim, the swell occasioned by the vessel washed over his head, and the unfortunate youth was immediately carried under some barges. The drags were put in requisition, though not soon enough to save life.

Sir David Brewster has been elected foreign corresponding member of the Imperial Academy of Sciences of Vienna.

A man named Douglass was lately executed at New York, for murder on the high seas. A romantic life of Douglass appeared next day in the *New York Herald*, written by himself; and on Monday a letter was published from him, stating that there was much of it fictitious, and that he had spun a yarn to oblige a messmate. He owed £10 o the messmate, and thus paid him; for the *Herald* gave £10 for the story.

Among the recent arrivals in the Great Exhibition from the United States are a ruling-on lifter and a paging machine, which are considered to surpass everything of the kind now existant. The pen-lifter is a simple contrivance for raising the pens used in ruling account books, and it is calculated to do the work of six journeymen. The paging machine prints on both sides of the sheet simultaneously, and is capable of paging twenty reams per day; whereas the machine at present in use can only print one side of the paper at one time, and a complishes but two reams per day.

The *Limerick Chronicle* states that the Earl of Cardigan is about to retire from the Lieutenant-Colonelcy of the 11th Hussars.

Mr. John Harris, a farrier, of Westgate-street, Gloucester, has a cat which on Tuesday brought forth a kitten of a monster kind. The animal has two bodies united, with eight legs, two heads joined together, but only two ears, and two tails.

It is the intention of the Royal Commissioners to form a museum, containing specimens and drawings of all the objects of interest in the Crystal Palace, to remain as a national record of the Exhibition. With this view they have issued circulars to the exhibitors, requesting them to co-operate in the design.

The Hamburgh Free Trade Association offered last year a prize of 20 Louisdors for the best concise and popular essay on Free Trade principles and their application. The commission has taken several months to compare and weigh the merits of the 28 manuscripts submitted to its judgment, and has now awarded the prize to W. Schmidt, of Stettin. His pamphlet, entitled "Protective Duties or Free Trade," is very ably written, and finds much rapid sale but in a very short time it has already gone through four editions.

Cardinal Antonio Maria Cadolini, Bishop of Ancona, died there on the 1st inst.

The order issued recently by the Admiralty, that no contract mail packet should be built of iron, has been rescinded.

The Lord Advocate and the Lord Provost of Glasgow have appointed a committee to consider the best mode of beginning the preparation of a report on a general scheme of amalgamation of English and Scotch law.

So large a quantity of timber and wood goods generally has been unloaded at the wood docks from the vessels arrived from British North America, that extra exertions on the part of the dock and revenue authorities have been found requisite in order to obtain the measurement and official account of the goods to be in readiness for the quarterage of the 1 ads.

The *Courrier de la Gironde* states that the captains of several vessels, who had taken out a number of females on speculation to San Francisco, had been under the necessity of selling them by auction, in order to defray the expenses of the passage. The plankout among them were knocked down at £4 3s.; the others, according to their youth and beauty, fetched better prices; but the highest sum o earned was £11 8s.

The Duke of Cambridge, Coombe House, near Wimbledon and New Kingston, Surrey. The ricks and stabling standing on the property were destroyed, to the value of £2000.

The *Great Britain* steam-ship, after undergoing a thorough repair, is expected to be fit for sea in about two months. She is now in the Liverpool graving dock, where she has received a new keel, having been formerly flat, and a spacious and splendid saloon has been fitted up on her deck, capable of holding one hundred persons, 375 feet. She will proceed on her transatlantic voyage in October, under the com mand of Captain Matthews, formerly of the *Great Western*, and afterwards of the *City of Glasgow*.

Mr. Arnold, the magistrate at Worship-street, will take the place of Mr. Burrell, in the wo tminster-court at Queen's-square, and will be succeeded at Worship street by Mr. D'Eyncourt, the newly-appointed magistrate of the po ice district.

There has been a meeting between the authorities of the Midland and Great Northern Railway, but no terms have been come to for arranging the rivalry that exists between them, with a view to a return to what are called "paying" fares.

CHESS.

TO CORRESPONDENTS.

PARVUS JULIUS.—To avoid the pro re nata legislation during the progress of a game, you are only to apply to umpires, or Principals, who are bound to act with the rules and regulations.

W. H. A. Nailsworth.—It is no. correct, nor as proceding correctness.

ALEX.—We have not space this week for your letter on the subject of the Chess-critic of *Bell's Life*, but the subject shall not be lost sight of.

STEVENS.—the first will serve as a rather neat but easy enigma. The other two are quite know pat.

PEN-MAN.—The Grand Leicestershire Chess Meeting which we mentioned is now positively fix d for Thursday, the 9th of October next, and will be held in the Assembly Rooms, Calcter

ARMATAGE.—It is gratifying to know that by far the most eminent of the Chess magnates who visited England to take part in the Chess Congress (we mean Major Jaenisch decided in the most positive manner to have nothing whatever to do with the opposition schemes of the London Club and regarded them with the same feelings of disgust which every player of spright and gentlemanly spirit in this country does. 2 A drawn game. 3 Published by Chapman and Hall

A MAN OF THE WORLD.—Our space is too restricted just now to admit of the publication of your letter in it. It is a matter of most indignation B to spend its columns with the enquiries of the Indian Chess Club has turned out. the thing was evidently got up as a matter for an exhibition of the powers of Deving's chess Club; has although the prize of some £ 0 value was magnified into one of £100, few entered, and one competition has proved a most complete failure for the manager.

SOLUTIONS of PROBLEM No 3.3 by M P, Sirius, Philo-Chess, Ardens are correct

SOLUTIONS of PROBLEM No 384, by M P, Rev J T, Rev J S, M of York, Philo, are correct

SOLUTIONS of ENIGMAS by R B of Ashford, St Edmund, Dereton, C J, D of Norwich, S B, Ardens, Rev S L, M tre, *B D*, Occasionals, Julius, are correct

*** We have to acknowledge with thanks the receipt of some admirable games played in Kensington lately between Major Jaenisch and Mr Petroff, and the latter with Mr Schmoff. To the same players we are likewise indebted for some problems of rare excellence, the best of which we shall from time to time make public through the medium of our Chess column.

SOLUTION OF PROBLEM No. 391.

WHITE.	BLACK.	WHITE.
1. Q to Q B 4th (ch)	R takes Q	4. Kt to Q's 2d—Mating next move.
2. R to B 3d (ch)	K to K 6th	either at K B sq or at Q B 4th.
3. B to K 8t 3 (dis ch)	R takes R	

SOLUTION OF PROBLEM No. 392.

It has been suggested by several correspondents, that this problem may be solved in less than the stipulated number of moves, thus:—

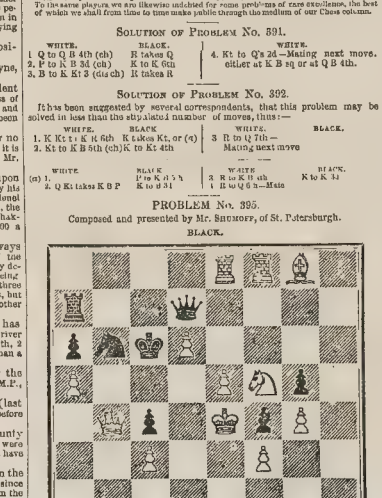
WHITE.	BLACK	WHITE.	BLACK.
1. K Kt 5 K R 6th	K takes Kt, or (a)	3 R to Q 7th—	
2. Kt to K B 5th (ch)	K to Kt 4th	Mating next move	

WHITE	BLACK	WHITE	BLACK.
(a) 1.	P to K 4 5 h	2 R to K 7 th	K to K 3d
2. Q Kt takes K B P	K to Q 3d	3 R to Q B 7—Mate	

PROBLEM No. 395.

Composed and presented by Mr. SHUMOFF, of St. Petersburgh.

BLACK.



WHITE.

White, having to play, compels Black to mate him in four moves.

GAME IN THE CHESS TOURNAMENT.

BETWEEN MESSRS. STAUNTON AND ANDERSSEN.

(*Scotch Gambit.*)

WHITE (Mr. A.)	BLACK (Mr. S.)	WHITE (Mr. A.)	BLACK (Mr. S.)
1. P to K 4 th	P to K 4th	20. K Kt to K R 5th	Q P takes P
2. Kt to Q B 3d	Kt to Q B 3d	21. P takes Q P	Q to K Kt 5th (h)
3. P to Q 4th	P takes P	22. Q R to K R sq	Q R takes Q P (o)
4. B to Q B 4th	B to Q B 4th	23. Q to Q B 3d (d)	Q R takes K P (e)
5. Castles	P to Q 3d	24. K R takes K R P	
6. P to Q B 3d	Kt to K B 3d	(f)	B to Q's 6th
7. P takes P	B to Q Kt 3d	25 Q B takes B	Q R takes Q B (o)
8. Kt to Q B 3d	B to K Kt 5th	26 Q R to K R 4th	K Kt takes Q R
9. P to K 3d	Castles	(h)	(ch)
10. P to Q R 3d	Q to K 2d	27. K R takes Kt	Q takes R (i)
11. P to R 3d	Q B takes K Kt	28. P takes Q	Q R takes P
12. P takes B	Q to her 2d (a)	29. Q to K Kt 3d	Q R to K R 4th
13. K to K Kt 2d	K Kt to K R 4th	30. P to K B 4th	Q R to Q Kt 4th
14 Q Kt to K 2d	Q Kt to K 2d	31. P to Q Kt 4th	K R to Q sq
15. Q Kt to K Kt 3d	K Kt takes Q Kt	32. K R to Q B 4th	K R to Q 7th (ch)
16. K R P takes Kt	P to Q 4th	33. K to K Kt sq	K R to Q 8th (ch)
17. K B to Q R 2d	Q R to Q sq	34. K to K B 2nd	Q R to K B 4th
18. Q R to Q sq	P to Q B 3d	(g)	(k)
19. K R to K R sq	Q Kt to K Kt 3d	35. Q to K Kt 4th	

Black resigns.

(a) From this point Black commenced an attack, which, properly followed up, must have given him the game, we believe.

(b) The move Mr Anderssen appears to have overlooked when he played his K Rook to the 5th

(c) The position is extremely critical for both parties If Black, instead of continuing the offensive, had played P to K R 3d, his adversary might have completely upset all his designs by moving P to K B 3d &c.

(d) His best move undoubtedly

(e) Black might also have played thus, securing two Pawns for the loss of the exchange—

WHITE.	BLACK	WHITE.	BLACK.
23	Q takes K P (ch)	24 R takes R (best)	Q takes R
23 P to K B 3d	Q to her 6th	25. Q takes Q	R takes Q, &c.

(f) Obvious y threatening mate next move.

(g) In proper play, Black would never have failed to see that Kt to K B 5th (ch) was the right move: ex gr.:—

WHITE.	BLACK.	WHITE.	BLACK.
35.	Kt to K B 5th (ch)	36 K to Kt sq, or ♛	Q to her 5th (ch)
Checking with the Kt as K's 7 would not Black the game.			
37. K to R 2d	Q takes B	38. R to K R 4th	Kt to K Th
39 Q takes Q	R takes Q	And Black ought to win.	

(h) White admirably avails himself of the opportunity his opponent's remissness afforded him

(i) He has nothing better left. The 35th move, R takes B, instead of Kt to B 5th (ch), indifferent as at first sight it looks, lost Black a won game.

(k) This was absolutely enforced.

WHITE.	BLACK.	WHITE.	BLACK.
36. K to R 2d	K takes R	37 P takes R	K R to Kt sq, and wins

If White at move 37 play B to Q Kt sq Black can mate in two moves.

THE CHESS TOURNAMENT.

Since the conclusion of the brief and chance-medley matches, a series of more decisive and interesting contests have been commenced by some of the leading combatants. Of these, one of the most important, both on our country man, Mr. Buckle, and the Hungarian, Löwenthal, has already terminated. The score at the end of an arduous struggle giving to

Mr. Buckle	 4	Mr. Lowenthal	 3
	And drawn games ..		

Another encounter of a livelier nature, between Mr. Bird and Mr. Horwitz, will, it is expected, be finished this week, their score up to the time of our writing being

Bird	 2	Horwitz	 2
	Drawn .. .. 3.		

The third contest of high interest on the *tapis* is one between Mr. Staunton, who has partially recovered from his late severe indisposition, and the celebrated Parisian player and author, Major Jaenisch. Of this, three games have been played, and in each Fortune has proved propitious to the English player.

The Commissioners of Woods and Forests have issued orders for a new uniform to be worn by the gatekeepers and constables belonging to the Parks and Kensington Gardens. The hat is to be the same as that worn by the Metropolitan Police, with a gold band; green frock-coat, with gilt buttons, and the letters V. R. on the collar; and black trousers, with a broad red stripe. They are all to be numbered, and when a charge is given there will be no difficulty in finding the same constable when required.

CONDUCT OF RAILWAY OFFICERS.

A charge has been investigated at considerable length on three or four different occasions within the last fortnight, at Greenwich Police Office, before Mr. Secker, in which Lord Ranelagh on the one side and some railway porters and a Sergeant of the Metropolitan Police on the other, mutually accused each other of violent conduct at the Greenwich Railway station, on Sunday night, the 3rd inst.

The nature of the complaint will be understood from Lord Ranelagh's evidence on Wednesday last, when the matter was finally disposed of, at least as far as the police office jurisdiction was concerned. It should be observed, that a charge was brought against Lord Ranelagh, of unlawfully and wilfully obstructing the railway officers in the execution of their duty, on the occasion referred to, which was investigated and dismissed at a previous hearing. On Wednesday last the counter charge of assault, preferred by his Lordship against the railway officers and the policeman Carpenter, was gone into.

Lord Ranelagh sworn. He said:—I r side at 4, Park-place, St. James's. I was at Greenwich on Sunday, the 3d of the month, dining with a party of ladies and gentlemen. We left a little before ten, to catch the train. I was never more sober in my life. It was the same with the rest of the party. We arrived at the station at ten or five minutes past, and took out our tickets. We went to the place of waiting. There was a great press of persons. We were pressed on by the crowd behind. I had Mrs. Ashton Smith on my arm all the time. I had a cane in my right hand. When I got to the barrier, rail way offi cers were closing it. The lady was between the barrier at the time. She had partly got through. On their endeavouring to close the gate, I put my arm forward to prevent their closing the gate on the lady, but I believe that was unnecessary, for the crowd behind would have done it. I did not strike any person. Widdows was the first to seize me. He seized my collar. He immediately after Police retired me by the collar. I did not strike any person with my cane. I was pu-hed against the wall. I struggled and said, "Leave me alone. I shall strike you." I did not strike. There was a considerable scuffle. My friends interfered and said, "Let him go; he used no violence." The lady was on my arm. I was taken inside the barr er. The railway constable never let go his hold till he brought me into the road. Carpenter then came up, and said he was a police-sergeant. Carpenter seized me. I said then, "Let me go," and my friends said, "Let him go, the gentleman did nothing." When we were half-way down the steps Carpenter desired Price to let me go, but Price would not. I did not place myself against the wall and square at him. I did not strike any person on the head or eye. I said repeatedly "Leave me go." Some person said, "You struck the constable." I said, "I did not strike any one intentionally, nor do I mean to do so." I did not make use of the expression attributed to me. I was naturally excited. There is a mistaken impression that I was at the barrier at the time. I was twenty yards from the barrier, but was forced on to it by the crowd behind. I was pinned against the wall when Carpenter came up. I lost my gold pin, and my neckcloth was partly torn off.

The magistrates decided on sending the case before a jury, and the parties were bound over to prosecute at the Central Criminal Court, under penalties of £20 each; and the defendants were ordered to find bail in £50.

The case against Carpenter was dismissed.

Lord Ranelagh wished to know whether, as he was determined to go on with this matter, though at great personal inconvenience, he could get a summons against Carpenter. He wished to have him included in the indictment.

Mr. Secker said that would not be necessary, when the case went before the grand jury, he could be included.

THE GREAT EXHIBITION FETES AT PARIS.

BREAKFAST AT THE HOTEL DE VILLE.

On Wednesday morning week the Prefect of the Seine invited the Lord Mayor, the Court of Aldermen, the Royal Commissioners, and the principal persons connected with the Exhibition, to a *déjeûner à la fourchette*, in the magnificent room at the Hôtel de Ville. At ten o'clock the traces of the ball of the previous night were sufficiently removed to admit of the reception of visitors for this fresh entertainment; and an extensive suite of rooms was prepared, through which the party, amounting to about eighty gentlemen, strolled in fresh admiration of the splendours of Paris and the hospitality of the municipal body of that great city.

On this, as on previous occasions, the numerous points of historical interest attracted attention, and, the party being smaller, the effect was perhaps more striking. Collected in the magnificent rooms, but hardly attracting attention in so vast a space, might be seen the principal municipal officers of Paris and London, the men whose exertions have rendered the Great Exhibition successful, and those who have done all in their power to assist the Exhibition by inducing their fellow-countrymen to send to England their objects of greatest beauty and greatest value.

Towards eleven o'clock the breakfast was announced, and the party adjourned to the noble saloon, where, after the dinner of Saturday, the comedy was performed, and which the present Prefect of the Seine has done much to render interesting by the style of decoration he has introduced. This room is rendered historical by the illustrations it presents of the different periods of the city of Paris—from that when the city first rose into a small importance under the Romans, to that of its greatest political importance and splendour. In the noble room the guests were soon assembled, and seated themselves without confusion round a table capable of accommodating several more than were present. The table was covered with a plateau and other decorations prepared for Charles X., and well illustrating the condition of the arts under that reign. The china and porcelain were of the most exquisite beauty; the figures and salvers, of silver gilt, of singular taste, and everything in perfect harmony and good taste.

Amongst the guests seated round the Prefect and Lord Mayor, were Lord Granville, the Chairman of the East India Company, several others of the Royal Commission, the members of the Executive Committee and their staff at present in Paris, and the principal officers of the city of Paris, besides several of the mayors and many other persons of great interest in the history of the recent political events. M. Dupin, the brother of the president of the Assembly, and M Sallandrouze, the Commissioner of France for the Exhibition, were also present. An admirable band was placed at one end of the saloon, which played from time to time several English and Irish, and some French airs, and everything was conducted in the best manner.

The breakfast included a singular variety of the most *richerché* dishes, prepared in a manner which a Parisian *cuisine* alone could suggest: we subjoin the *carte*, as giving some idea of this most elegant and sumptuous entertainment. The wines were in perfection; and we may mention here, that on this, as on the occasion of the dinner on Saturday, all the principal wines were obtained direct from the growers, and were of the very finest quality that could be procured.

Potages—Purée de Conti, Printanier, Consommé jambon York, rosbif aux légumes, tête de veau tortue. Entrées.—De poulets Marengo, salmis de faisans, côtelettes pressé à la purée de pommes de terre, noisa de veau chicorée, petites tasses de vol, mayonnaises de homard. Relevés.—Contre-filets—Escalopes de lapin, gaiantine, corned abondance, baba, hure de Troyes, tertine bérac, coupe garnie, biscuit historié Rots.—Dindonneaux truffés, soles frites, faisandeaux rôtis, perdreaux et cailles. Entremets.—Haricots flageolets, timbales macaroni, gelées de fruits, choux-fleurs Parmesan, puddings, crêmes vanille. Horsd'Œuvre.—Melons, ognes, asselettes sandwich. Dessert.—Corbeilles fruits et ananas, assiettes de pâtisserie, compotes, girandoles bonbons, corbeilles fruits rares, café, thé, crème, vins fins.

Immediately after the more solid part of the *déjeûner* had been done justice to by the guests, the Prefect of the Seine, the host on the occasion, rose and very briefly proposed the health of her Majesty Queen Victoria; and while the whole party were acknowledging the toast in the usual way, the band performed most admirably the air of "God save the Queen." No sooner was this concluded, than Lord Granville, with great tact and neatness, proposed, in almost the same words, the health of the President of the Republic, which was of course similarly acknowledged, but without any special notice. This toast was immediately followed by music, and conversation soon succeeded and became general. No other toast was given, and nothing could be more quiet and satisfactory than the whole arrangement. Soon after the health of the President had been drunk, the party separated, wandering once more, and for the last time, through the rooms of this noble palace, fit to be the resort and habitation of the first officers of the principal city of France, and affording a wholesome lesson to the officers of the Corporation of London, who, on this occasion, appeared as representatives of our metropolis, but who, not being accustomed to act in that capacity, somewhat assumed the cold and uninterested air of quiet and satisfactory than the whole arrangement. Soon after the health of the President had been drunk, the party separated, wandering once more, and for the last time, through the rooms of this noble palace, fit to be the resort and habitation of the first officers of the principal city of France, and affording a wholesome lesson to the officers of the Corporation of London, who, on this occasion, appeared as representatives of our metropolis, but who, not being accustomed to act in that capacity, somewhat assumed the cold and uninterested air of quiet and satisfactory than the whole arrangement.

The illustration upon the next page shows one of the superb Palladian staircases of the Hôtel de Ville, graced with Ionic columns supporting the arches; the spandrils, soffits, and ceiling enriched in every part with gorgeous sculpture. During the recent *fêtes* some fine orange trees were placed upon this staircase; and their natural beauty presented a refreshing contrast to the profusion of overwrought art with which they were surrounded.

THE GREAT EXHIBITION FETES AT PARIS.

THE GRAND REVIEW.

(Continued from page 203 of the ILLUSTRATED LONDON NEWS *of last week.)*

WITHOUT going into the detail of the military operations, we may sketch the general notion of the plan, and the general lay of the ground:—The Champ de Mars is a huge open dirty space, bounded by trees on two sides, and stretching in the form of an oblong square from one of the *façades* of the Invalides to the Seine. Opposite the centre of it a substantial stone bridge, the Pont de Vienne, crosses the Seine, not far from the westernmost angle of the Champs Elysées; and above this bridge, on the opposite bank, the ground, rising in steep heights and ridges, is called the Trocadero, and this was the place of battle. One army was supposed to be stationed in the Champ de Mars, the other on the heights of the Trocadero. The former were the attacking body. The bridge of Vienne was supposed to be well defended by the troops occupying the heights beyond it, so that it became necessary for the assailing army not only to attack the regular bridge, but to throw a bridge of pontoons over the Seine, so as to attack the Trocadero troops in front and flank. The manœuvre accomplished, and the regular bridge forced at the same time, the battle was to be waged among the slopes of the Trocadero, until the invading party, beaten back, re-crossed the bridge, pursued by their opponents, and the engagement was to end in a pitched battle in the Champ de Mars

Ere noon the field of battle was skirted by deep ranks of an eager but orderly crowd. On the heights of the Trocadero every available point was occupied. Housetops literally peopled for hundreds. Every elevated garden was converted into a pile of scaffolding, tenanted by enthusiastic spectators; and even the distant Arc de Triomphe was alive with visitants, for the most part armed with telescopes and *lorgnettes*. In the Champ de Mars, a row of "tribunes," or stands, had been erected on the western side.

About three o'clock, the troops, having arrived from their respective barracks, began to take up their stations—one body in the Champ de Mars, the other on the opposite heights.

From the station which we occupied, the different bodies of horse and foot could be described making their way almost simultaneously from every part into the dusky space of the Champ de Mars, the firelocks and bayonets of the infantry glittering like thickets of needles in the sun, and the helmets and cuirasses of the cavalry making a still braver show. On the other side of the river, the motions of the opposing troops could be dimly descried, the glancing of their accoutrements distinguishing them from the dusky masses of the crowd, who were stationed on every available ridge and eminence. The Champ de Mars was frequently occupied by a formidable *corps d'armée*—the artillery and infantry drawn up nearest the bridge, and the cavalry behind. It was understood that the President of the Republic was to leave the Elysée half after three o'clock; and shortly before four the most far-seeing *lorgnettes* enabled their owners to recognise him as heading a brilliant staff of officers, English, Prussian, and Tuscan, as well as French, and riding slowly along the quay. Presently he entered the field and advanced along the stand. His dress was that of a general officer. The President bestrode a noble animal, and sat him like a thorough horseman. The staff which followed was brilliant in the extreme, comprehending representatives of every French cavalry regiment, and many belonging to foreign services, among which were conspicuous the round helmet, horse-hair plume, and bright red coat of our own Life Guards. The President as he rode along was warmly greeted from the tribunes. He had been but a few minutes in the field when operations commenced, and the first rush of light infantry was made across the bridge, supported by the fire of field artillery from both the lower and the upper sides. Into the minutiæ of the hour-and-a-half campaign it would be useless and uninteresting to enter. The preconcerted engagement went according to stipulation; the artillery on both sides of the river kept up a roaring fire; the attacking columns, supported by field-pieces and cavalry, rushed cheering across the bridge, and the roll of the musketry swelled upon the breeze like the continuous rattle of drums. The heights of the Trocadero were thus contested for about three-quarters of an hour, the firing being incessant, and the moments of the struggle exceedingly rapid, when the attacking party began to give way. Their drums and bugles sounded the retreat, and they re-crossed the bridge, covered by the fire of the artillery, while regiments, as yet unengaged, advanced to receive the enemy on either flank. Some very brilliant cavalry movements ensued, the quasi-retreating party sweeping the bridge with their field-pieces, and then retiring, covering the movement by rapid charges of cavalry as the head of the enemy's column debouched from the bridge. After this, precisely the same manœuvres were gone four times repeated. First, the *tirailleurs* engaged each other; then those of the attacking but repulsed party recreated, and the two lines of artillery opened their fire. Thus supported, the cavalry dashed out; their opponents formed into squares and repulsed them, still, however, retiring, and allowing the sharpshooters and artillery to come again into play. But this stereotyped arrangement was contained the whole of the strategy. Not a new or unexpected movement was made; the first brush being the exact counterpart of all the rest—sharpshooters, cavalry, infantry, and artillery taking their turns like machines, and repeating over and over again the same detail of manœuvre.

The mock battle having terminated, the contending armies united their strength, and defiled in long and magnificent procession before the President's tribune—arms presented and hands playing—marching thence, attended by crowds of military enthusiasts, to their respective barracks.

The generals in command of the troops were General Carrelet, who occupied the Trocadero, and General Guilabert, whose forces were stationed in the Champ de Mars. There were twenty-two battalions and two squadrons under the former, and fourteen battalions and two regiments of cavalry, with two squadrons of the Garde Républicaine under the latter. On the ground were several English officers mounted, including Sir T. Burgoyne, Captain Streatfield, Lieut. Lumley, and the Hon Captain Fitzroy, Colonel of the Hon. Artillery Company. The French staff was a most brilliant one, and there was a large attendance of Austrian, Prussian, and other officers. The Piedmontese army was represented by Colonel d'Angrogna, and the Marquis of Saint-Marsano, the Count de Robilant, and Count Bentivoglio; General Dembinski, General Messaros, Prince Czartoryski, and many other foreign officers and Generals were on the field.

The accompanying illustrations represent the President and his Staff; the Bridge of Boats and the attack of the Trocadero, and the battle in the Champ de Mars.

CALENDAR FOR THE WEEK.

SUNDAY, August 17.—Ninth Sunday after Trinity.
MONDAY, 18.—Seattle died, 1803.
TUESDAY, 19.—Length of day 14 h. 21 m.
WEDNESDAY, 20.—Robert Bloomfield died, 1823.
THURSDAY, 21.—Blackrock shooting begins.
FRIDAY, 22. Warren Hastings died, 1818.
SATURDAY.—American War commenced, 1775

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 16, 1851.

A REVIEW of the Parliamentary session, of which our last week's impression recorded the close, will not impress with much admiration either of the great parties that at times support, or at times oppose, the Russell Ministry. The Government itself cannot look back upon the session with much satisfaction; for the most notable thing it has done has been to carry an anti-papal measure far more stringent than it intended, and thus to place itself in a difficulty with regard to the other question of civil and religious liberty, to which it pledged itself after the first election of Baron Rothschild for London, and which was again forced upon its notice by the election of Jew Salomons for Greenwich. Yet, after all, the session has not been entirely barren. The abolition of the Window Duties is a boon of which the good results, though they will be slow in manifesting themselves, will be none the less sure and valuable on that account—and which will be cheaply purchased even at the expense of a house tax. The principal duties that at the present time fall upon the Legislature do not so much resolve themselves into questions of making good new laws, as of abolishing bad old ones. Nearly all the great reforms that have lately occupied the serious attention of the country have belonged to the last-mentioned class. The repeal of the Test and Corporation Acts, the repeal of the Corn Laws, the repeal of fiscal impositions, that injuriously affect our trade and commerce, the repeal of the Navigation Laws, the repeal of the Window Duties—these are the enactments for which the country has principally had to thank the Legislature in recent times. The first, though the most flourishing state of its revenue, procured us something in this beneficial way; and its work to be done in the session of 1852 must be of the same kind, if it is to be of any service to the country. To free commerce from the trammels that still impede its healthful and vigorous development—to untax the energies of the people—to cheapen and to simplify the administration of the law—to relieve the dissemination of political and social knowledge from a fiscal burden that brings but little to the revenue, and renders the education of the people a matter of difficulty, if not of impossibility—and to readjust our whole financial system upon a basis that shall secure stability to our institutions, while it bears with an equitable weight upon all classes that are able to support it—are the tasks which must by degrees be accomplished. It must be admitted that all the tendencies of our recent legislation have been in this direction, and that even the last session was not wholly unproductive.

Yet it is evident that a busier and more important period is approaching. The Ministry has no strength in the House of Commons, and must either go out of office before the re-assembling of Parliament from sheer exhaustion or want of cohesion, or it may live till February next only to be defeated on the first important measure it may choose to bring forward. Lord J. Russell is, of course, aware of the insecurity of his position, and fully impressed with the necessity of strengthening it; and rumour, judging from the probability of the case (as well as from the scanty promises that have fallen from the lips of the noble occupier of the Premier's bench), asserts that his Lordship will employ the months between August, 1851, and February, 1852, in preparing a new measure of Parliamentary reform, on which to stake the existence of his Administration. Yet it may be doubted whether this of itself will be a wise course of policy, or one that will satisfy the people. Lord John Russell must not depend entirely upon so sentimental a cry. The conclusion for Parliamentary Reform is not so warm as it used to be. The time of the decade has gone past. The age is more practical and less theoretical than it was twenty, or even ten years ago; and, if not utterly indifferent to an extension of the suffrage, the ballot, and the shortening of the duration of Parliaments, is far more interested in the great question of taxation, which looms before all men's eyes, in large proportions, as the paramount question of our time. No class of the people cares one straw for the existence of the present Ministry; and the small class that would be likely to nurture the suffrage through the instrumentality of any new Reform Bill that Lord John Russell

A FEW DAYS IN THE LAKE DISTRICT.

WINDERMERE.—FROM THE ROAD BETWEEN BOWNESS AND AMBLESIDE.

A FEW DAYS IN THE LAKE DISTRICT

The following short description of a tour through, or rather circuit of, the Cumberland Lake District, is intended for those only whose time, or rather circumstances, prevent them making a lengthened sojourn, to wander where fancy directs, and, like the honey-bee, cull sweets from every flower. To the tourist who has time and means, "Black's Guide-book" will pioneer into many otherwise hidden glens, solitary tarns, mountain passes, and places of historical and other interest. To it we are indebted, even in this hurried guide, as a means of refreshing our memory, and somewhat analysing the kaleidoscopic scenery we have been whirled through.

From east, south, and north—from the shores of the German Ocean, and almost from the "Land's End to John o' Groat's," the tourist may travel by rail, and alighting at the Bothwaite station of the Kendal and Windermere Railway, suddenly find himself in a land of surpassing loveliness. From the hotel opposite the station he will have a splendid view of Windermere and its mountain scenery; and from thence he may step on board the *Lady of the Lake*, or *Lord of the Isles*, and steam along the placid waters; or he may proceed by omnibus to Bowness, and from thence, with a pleasure-boat, thread the islets of Windermere, and view its ever-changing panoramic scenery—the villages and rustic cottages on its shores, its perfect combinations of the elements of landscape, "mountain and valley, wood and water," or he may wander through the neighbouring lanes, and

SADDLEBACK.—FROM THE ROAD BETWEEN AMBLESIDE AND KESWICK.

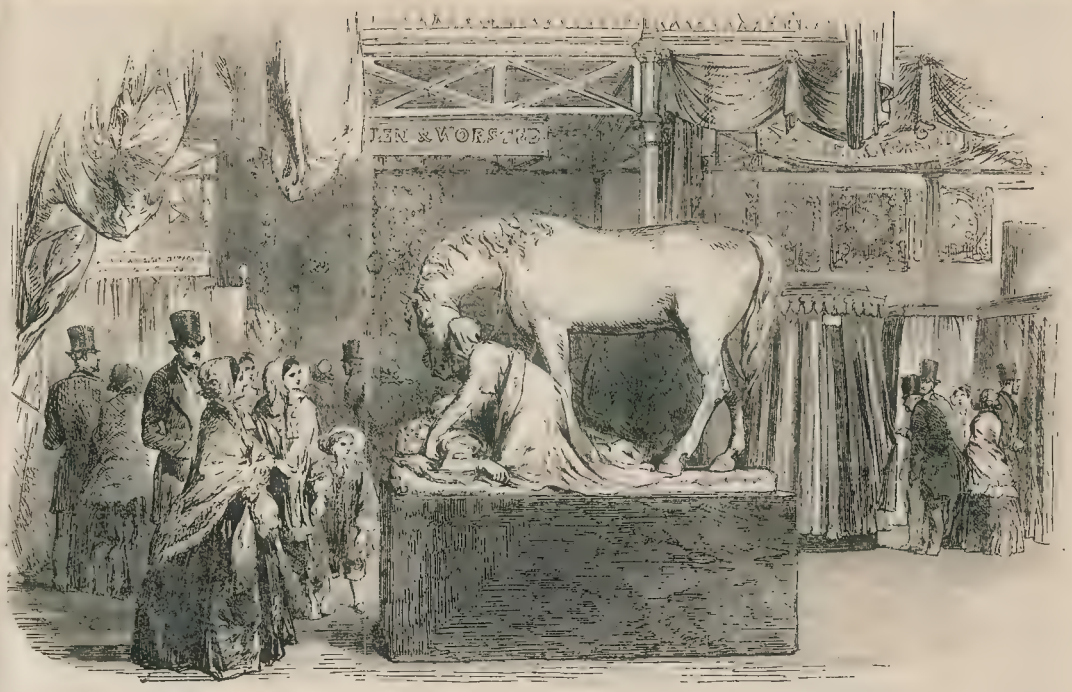
hold converse with rustic ignorance or polished refinement; for around him is a galaxy of talent of the *literati* and lovers of the arts, who there seek a respite from the turmoil of the world without.

Returning from Bowness, the traveller will take the road to Ambleside; and a few yards before he reaches the main road between Birthwaite and Ambleside, he will be delighted with Professor Wilson's favourite view of the "River Lake," the view which we have engraved. Far up beyond the head of the lake are seen Langdale Pikes, easily distinguished by their conical form. To their left, in the extreme distance stands Bowfell, with Great End (the great end of Scawfell) in its rear. The dark mass in the left centre is Wetherlam; and again to the left of that, the head of Coniston Old Man breaks through the clouds Crossing the main road, the traveller may visit Ellery lately the Professor's house; or he may return by the high-road, a short mile, past a new and pretty church to his inn at Birthwaite.

From Birthwaite the tourist will take coach for Ambleside, following a road exhibiting enchanting scenes at every turn: now overshaded by noble trees—now emerging on the lake shore, and commanding distinct views of the Pikes of Langdale and Scawfell—now a foreground of meadow-lands and intersecting hedge-rows, scattered mansions, surrounded with tasteful plantations, shrubberies, and lawns, each an elysium of beauty. He will pass Lowwood inn, and there view the lake stretching away into far distance; then forward to Ambleside, with its acclivited streets, itself an amphitheatre amidst an amphitheatre

DERWENT-WATER.—FROM SIR JOHN WOODFORD'S GROUNDS.

GREAT EXHIBITION FETES AT PARIS.—HOTEL DE VILLE.—THE GRAND STAIRCASE.



THE GREAT EXHIBITION.—"THE MOURNERS," BY LOUGH.

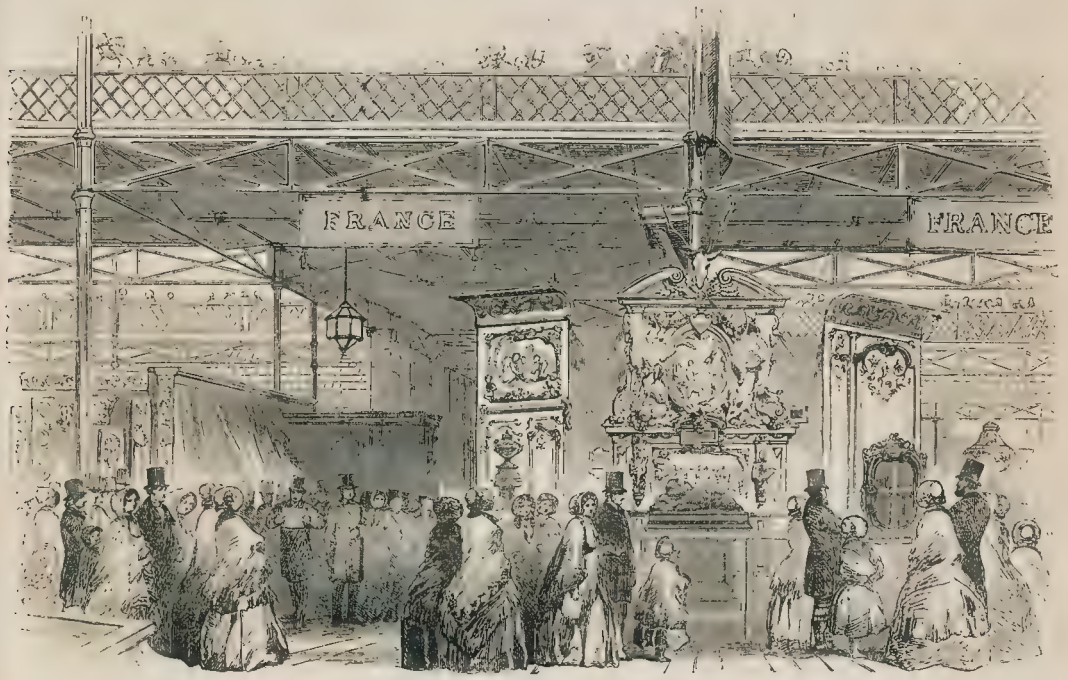
VIEWS IN THE GREAT EXHIBITION.

The pictures presenting themselves to the eye of the spectator as he wanders through the principal avenues of the Great Exhibition, are endless in variety, and of inexhaustible interest. We have engraved many of them, from time to time, each having its own peculiar and recognisable features of beauty; and, perhaps, upon the whole, these Views will, in after time, afford the most agreeable and telling reminiscences of a great national event, which will probably remain without its equal in the page of history. The Views which we have engraved for our present Number are taken from two distinct portions of the Building. The first represents a portion of the British Nave, in the woollen and worsted department, where, amidst the wonderful and important products of our industrial skill, stands Mr. Lough's plaster group of "The Mourners"—a work full of touching sentiment, which, if we mistake not, strikes a sympathising chord in the hearts of many of the thousands who daily behold it; though, at the same time, we must be permitted to say, that, for many reasons, it is a subject better adapted to the painter's than the sculptor's art.

The other Engraving represents a portion of the French department, the surrounding objects being chiefly decorative works, and various productions in *carton pierre*, *papier maché*, and other like materials. The invention and taste which our neighbours of France display in works of this character call for the highest commendation.

A desperate encounter took place a few days ago between the crews of a Greek ship and an Austrian ship which were moored in Newport Dock, Bristol. The two vessels were lying alongside of each other, and, through some misunderstanding, since Sunday the crews had been continually quarrelling. On Monday they met in Pilgrewilly, and had a regular fight with long knives. The police and inhabitants, fearing such deadly weapons, were reluctant to interfere. After fighting for some time, and cutting each other in a dreadful manner, Superintendent English arrived, and, with assistance, took twenty-eight into custody. Four of the combatants were severely stabbed, and a fifth is not expected to live, as he received a dreadful cut in his bowels, dividing the intestines. The men in custody appeared before the magistrates on Wednesday, when two were fined 40s. each, 19 fined 10s. each, and seven discharged.

Fatal Accident at Ramsgate.—On Saturday last, Ramsgate was thrown into a state of great excitement by the death of two individuals under the following circumstances:—About half-past nine a gentlemen was bathing, and having got considerably out of his depth, was unable, from the extreme violence of the waves, to regain his footing. The sea was unusually rough, and the rain pouring down in torrents. The proprietor of the machine which he had just quitted, who was a first rate swimmer, plunged in, with his clothes on, and endeavoured to save him. With great difficulty he succeeded in pushing him in towards the shore, but the exertion was too much for him, and he let go his hold and was seen no more. His wife and three of his children were on the beach, and rent the air with their shrieks. Several individuals rushed into the water, and succeeded in bringing the unfortunate gentleman to the shore, but he expired within a few minutes. Meantime a man lashed a rope round his waist, and plunged in after the "machine" man, but he was himself drawn in to all appearance dead. Animation was, however, at length restored. The boats and drags were put into requisition to find the body of the unfortunate machine man, but without success.



THE GREAT EXHIBITION.—VIEW IN THE FRENCH DEPARTMENT.

METROPOLITAN NEWS.

PUBLIC DISPENSARY, LINCOLN'S-INN.—On Tuesday, a quarterly meeting of the governors of this institution was held at the Dispensary, Carey-street, at which Mr R. Twining presided. During the past year 5592 patients have received medical and surgical aid from the dispensary, of whom 1101 were visited at their own homes. The number for the last quarter was stated to be 1389 patients, of whom 246 were personally visited by the medical officers of the institution. The affairs of the charity were described as very satisfactory, although the recent removal of the dispensary from Bedford-row-mews, and consequent adap ation of the premises in Care-street to the purposes of the institution, had caused a considerable addition to the usual annual outlay.

PUBLIC BATHS AND WASH-HOUSES.—On Monday evening, a public meeting of the parishioners of St. George, Southwark, took place at "the Crown," St. George's-circus, on the subject of the erection of baths and wash-houses for the parish. A paper on the financial prosperity of institutions of this character in Whitechapel, St. Martin-in-the-Fields, and Marylebone, was read, and a resolution was proposed, to the effect that the ratepayers were of opinion that great benefit would arise to the inhabitants by the introduction of public baths and wash-houses, and they therefore recommended their adoption in the parish of St. George, pledging themselves to support the measure when brought forward in vestry. The resolution was opposed, and an amendment moved, admitting that the establishment of baths and wash-houses in the neighbourhood would be attended with much advantage to the community, but that it was not expedient for the parish alone to entertain the erection and maintenance of such an establishment. After some discussion on the necessity of the parishioners undertaking the building of the baths and wash-houses without the assistance of other parishes, those who were against the original resolution contending that the scheme would be a perpetual drain upon the poor-rates, both the resolution and amendment were put by the chairman, when there were 23 in favour of the amendment, and 18 only for the original resolution, which was thus lost.

LONDON RAGGED COLONIAL TRAINING SCHOOL OF INDUSTRY.—The second annual report of this institution, printed by the inmates, has been issued this week. This charitable establishment is not to be confounded with the popularly known ragged school, which assembles the young for periodical and occasional instruction; having a special object, it is unconnected with any society or union, and is sustained entirely by voluntary contributions. The London Ragged Colonial Training School is an institution, the only one of its kind, for affording an asylum to such male juvenile offenders and vagrants, from the age of 16 to 20, as are anxious to reform. Such offenders, when discharged from prison without provision made or opportunity for them to return to honesty, are obliged to resort to stealing or begging for subsistence, and unless their mind they may be inclined to amend. To afford a test of this disposition, applicants are uniformly submitted for a night to a diet of bread and water only, not being permitted to mix with the other inmates until the following day. A limited portion of the time of the inmates is occupied in learning or exercising useful arts, and in receiving instruction. As the means of the committee permit, the young men are sent out to the colonies, and the statements of both reports as to their course there are extremely satisfactory. One young man, who had been a thief and a vagrant eleven years, and during that period had been imprisoned thirty-two times, made application for admission in 1849, having neither cap, shoes, nor shirt. He was received and remained in the school until March, 1850, when the kindness of a benevolent lady enabled him to emigrate to the United States. He has written several letters to the governor, in one of which he states that he is in a situation earning 40 dollars a week; he has saved 150 dollars, and was married the last month with a young Englishwoman, who had saved 300 dollars of her earnings. He proposes becoming a subscriber to the institution. None of the inmates are recommended for emigration before they have had a twelvemonth's training. The committee are anxious about providing the means of emigration for the future, as it is now with great difficulty they can meet the daily demands of the institution. The house and training school are open free for inspection every day, at 13 and 28, St. Anne's-street, Westminster.

METROPOLITAN IMPROVEMENTS.—It is intended, simultaneously with the completion of the New Record Office, now in course of erection on that portion of the Rolls estate between Chancery and Fetter-lanes, to form a sitable and commodious approaches to the new buildings, as follows —The first from the end of Stonecutter street, Farringdon-street, crossing Shoe and Fetter-lanes, at right angles, and passing the north front of the Record Office, near the present Rolls-buildings, to Chancery-lane, thence along Carey-street, which is to be widened and improved, it will then diverge a little in a northerly direction, and terminate at the junction of Lincoln's-inn-fields with Long Acre. The second will commence at Little Turnstile, Holborn, and passing along the west side of Lincoln's-inn-fields, will cross the first-mentioned street at Care-mark, forming a fork at this point; one branch will run direct into the Strand near St Clement's Church, and the other crossing Holes, Houghton, and Newcastle-streets and Drury-lane, will terminate in the Strand at the corner of Catherine-street. The third will commence at the corner of Fetter-lane, Holborn, running south-easterly to the corner of Farringdon-market in Shoe-lane, and thence in a south-westerly course to the corner of Fetter-lane in Fleet-street. Fetter-lane will be widened and improved as far as the new building extends from Fleet-street.

WESTMINSTER IMPROVEMENT COMMISSION.—A circular has just been addressed to the inhabitants of Westminster, by Sir Edwin Yeamon, the chairman of the Westminster Improvement Commission, inviting their co-operation in a proposal to erect a statue of her most gracious Majesty in that portion of the vacant space between the Abbey and Victoria-street, to be called the Sanctuary, looking eastward towards the new Houses of Parliament. The immediate pedestal, it is suggested, will be decorated with a picturesque treatment of Royal arms, and two ornamental gas lamps, which will be continued as to produce an architectural effect. The foreground will be laid out in grass, rusticated, and will rest on a platform of two steps. The height of the proposed statue will be 18 feet, and the cost (as agreed upon by Mr. Bell) will be £1000.

MODEL LODGING-HOUSES IN WESTMINSTER FOR THE LABOURING CLASSES.—The Westminster Improvement Commissioners, having opened Victoria-street, feel most strongly that their next pressing duty is to endeavour to provide better homes for the labouring classes who have already been removed from their former wretched abodes by the recent improvements. With this view, they, for some time, used their utmost exertion to form a joint-stock company, for the purpose of erecting lodging-houses on a large scale; but the public will were very reluctant to subscribe to such institutions, owing to a general belief that the shareholder would reap little or no return, and would, unless protected by charter or act of Parliament, be involved in dangerous liabilities. At the same time, however, the commissioners learnt that the large builders are prepared to lay out capital to any extent in the erection of any kind of buildings if they can only succeed of remunerative rents being obtained. Under these circumstances it occurred to them, that if a small sum were raised by persons interested in the question, whose object would be not to build, but to rent a lodging house from the builder, it might be the means of proving to the public how easily comparatively small investments may be so made as to yield a high and safe remuneration to the subscribers, and, at the same time, to induce builders to lay out large sums in erecting similar dwellings for the working classes. As an illustration of their meaning, they have every reason to believe that, with a capital only of £2000 (one-half of which they will undertake to raise among themselves), they can carry out the following plan:—They are prepared to devote as a site for lodging-houses a piece of land in Caxton-street, capable of laying convenient by to the south of Victoria street, and having a front of 140 ft., and a depth of 100 ft. On this they can arrange with a builder for the erection of lodging-houses capable of accommodating 90 families, or 360 persons, at a cost, on condition that a tenant shall be found to take a lease of the property for a term of 99 years (or longer, if required by the subscribers) at a yearly rent of £258, and to pay a premium for the same of £1000. This will leave a balance in hand of £900 out of the £2000 for current expenses and contingencies, and the position of the subscribers will then be as follows:—90 dwellings, let at 5s. per week, will produce an annual income of £702. Deduct from this will be:—rent, £258; rates and taxes, £80; water, £10; repairs, management, &c., £100: total, £448. Balance, 221. Total, £936. Thus the proprietors will be enabled to divide amongst themselves 6 per cent upon their original investment of £2000, and to lay by a reserved fund of £101 a year. At the same time no liability whatsoever will be incurred by any except the trustees, to whom the lease may be granted, and the commissioners will undertake to their forward willing to hold that office for the benefit of the subscribers. The accommodation for the above mentioned rent of 5s. a week will be two good rooms, a watercloset, and a scullery, for each family—being a very great increase on what the working-man can now obtain at a similar price. It is obvious, however, that two rooms are insufficient for any but a very small family; but it is found that if some of the sets of apartments are enlarged, and those containing three rooms let at 5s. a week, and others containing four rooms at 6s., the return to the subscribers will not be less than that shown in the estimate already given. The comm sioners have also assent-tined, with great satisfaction, that if all the above-mentioned rents were increased 1s. per week, the profits of the tenants would still derive very great benefit from the proposed buildings. If these views are correct, it is obvious that the above plan will enable those who are interested in the subject, by a comparatively trifling subscription of £1000 in addition to £1000 offered by the commissioners, not only to provide a accommodation for a great number of poor families, but to prove a very important point, that even

NAVAL AND MILITARY INTELLIGENCE.

THE GOVERNORSHIP OF MALTA.—The appointment of Lieut.-Col. Reid, C.B., to the Government of Malta has been already noticed. The gallant colonel will not, we believe, proceed to Malta until the termination of his duties as chairman of the Executive Committee at the Exhibition. The Governorship at Malta, will, in the meantime, continue to be administered by Gen. Ellice, the commander of the forces in the island.

MILITARY FORCE IN LONDON AND VICINITY.—The following are the regiments and battalions at present quartered in the metropolis and its environs:—Cavalry—1st Regiment of Life Guards, Albany Barracks, Regent's Park; 2d ditto, Knightsbridge Barracks, Hyde Park; Royal Horse Guards (Blue), Wilton-place; 1st Royal Dragoons, Regent's Park; 4th Light Dragoons, Hampton-Court; 8th Hussars, Kensington and Hounslow; 17th Lancers and Royal Horse Artillery, Woolwich. Infantry—1st battalion Grenadier Guards, Windsor; 2d battalion ditto, Knightsbridge; 3d battalion ditto, Sc. Scots' Fusiliers, Tafalgar-square; 1st battalion Coldstream Guards, Tower of London; 2d battalion ditto, Wellington Barracks, S. James's Park; 1st battalion Scots Fusilier Guards, Portman-street Barracks; 2d battalion ditto, St. John's-wood Barracks, Regent's Park; 2d battalion 23d Royal Welsh Fusiliers, London and Canterbury; 38th ditto, Connaught Rangers, Canterbury; 50th Royal Queen's, 54th ditto, and 95th ditto, Portsmouth; 1st battalion Rifle Brigade, Dover; 2nd battalion ditto, Kingston and Canterbury; Royal Foot Artillery, Royal Engineers and Sappers and Miners, and Royal Marines, Woolwich. Besides the above are the enrolled Chelsea out-pensioner battalions, who can always be called out, if required, within twenty-four hours.

Five soldiers, who were implicated in the riots of the 24th of June last at Edinburgh, were brought to trial on Thursday week and sentenced to six months' imprisonment.

Captain Knight, now superintendent of military prisons in Canada, is appointed superintendent of the convict prison at Portland, in succession to Captain Whitty, promoted to be a member of the board of Government prisons in London.

INFANTRY OF THE LINE.—There are now at home, or on the voyage homeward, 40 regiments; in India 24; in other Queen possessions, 4; in the Mediterranean 12; in the West Indies and Bermuda 6; and in British North America 7, and two reserved battalions. The total strength of the British infantry regiments abroad is 60,332 officers and men.

Lieutenant Edward Griffiths, R.N. (1815), who, in consequence of the zeal and ability he displayed while superintending the removal of free Negroes from the coast of Africa to the West Indies, was appointed by Earl Grey to the office of Superintendent of Liberated Africans, and Emigration Agent at St. Helena, has been compelled to resign his situation owing to bad health, and has returned to England, having been relieved by Commander Rochfort Boyle. Lieut. Griffiths, while in command of the *Barretto Junior*, accompanied Sir John Franklin to the edge of the ice, and was highly complimented in Sir John's despatches for the discharge of his duty in reference to the expedition. As the Admiralty promoted Lieutenant Power, who commanded the transport attached to Captain Austin's expedition, we trust soon to be enabled to congratulate Lieutenant Griffiths upon the same distinction.

BENJAMIN WEST.—The great picture of this celebrated artist, on the subject of Penn's treaty with the Indians, is about to be removed to Philadelphia; previous to which it is lodged at Mr. Catlin's Indian Collection, where we had the pleasure of seeing it a few days ago. It will well repay a visit, especially as there will be no future opportunity of witnessing it in this country.

WOOL — NATAL.—We learn from a private letter, just received from Pieter Maritzburg, that the trade with the Orange River Sovereignty and the interior is steadily extending, and there will, probably, be an additional outlet for British manufactures in the former quarter. There has already been about 2000 cwt of wool brought to the Pieter Maritzburg market; and it is hoped the export of this important staple will continue to increase.

THE BRITISH MUSEUM.—This establishment will continue to be open daily (Saturdays ex cepted), during the month of September next, from the hour of ten to five. It will be entirely closed during the first week in October. After that time the collections will be open as usual to the public, on Mondays, Wednesdays, and Fridays.

A letter from Christiania, Norway, July 31, says:—"M. Stephenson, the English engineer, has just arrived here with three other gentlemen, viz., Messrs. Bidder, Merrit, and Earl. They are about to undertake the construction of the railway between our capital and Lake Mjoesen. The engineers of this place gave them a grand dinner yesterday, at the Freemasons Lodge."

"SAVE ME FROM MY FRIENDS."—From the Paris papers, we learn that M. Thiers is at the present moment the victim of a curious species of imprisonment. He has a ball-sister named Madame Eisert, who lives over a *table d'hôte* in the Rue Basse du Rempart, where her custom was to distribute cards with her own hands among the guests, on which her relationship to M. Thiers was mentioned. She has lately removed to the Rue Drouot, on the corner of the Boulevard des Italiens, and, encouraged by the success of her cards, she has exhibited a painted board outside her house, with the inscription, "M. Monsieur, sister of M. Thiers, formerly a minister, keeps a table d'hôte at 3 francs, and 2 francs 50 cents per ladies." Crowds of people assemble to gaze at this unusual association of ideas. The police were asked to remove the board as a public scandal, and great was the astonishment at their refusal, when Madame Eisert produced a permission from the Prefect of Police for the very announcement in question. People then went so far as to say that the Government adopted this measure to annoy the ex-ministers in augmenting the difficulties; however, that Madame Eisert having complied with the police regulations, and paid a certain tax, has a legal right to advertise her calling in this way, subject only to the interference of the police if the passengers in the public streets and on the board should be of a nature to disturb the public tranquillity. The police have now made a compromise with Madame Eisert. They have made her erase the words "formerly a minister," and to substitute the more informal phrase "a friend of M. Thiers." The navigation of the incongruous conjunction of a great minister with a small *table d'hôte* seems to have succeeded, for the crowds have dispersed.

CONVICT DISCIPLINE AND TRANSPORTATION.—The proposal of Earl Grey to send into the colony of New Zealand a body of men under the name of "exiles," but who are really convicts with unexpired tickets of leave, should the inhabitants be willing to receive them, has been rejected by public meetings held at New Plymouth, New Munster, and Wellington. The colonists decline the favour intended by the Colonial Office, on the ground that, although the introduction of such persons might be advantageous in augmenting the supply of labour, it would diminish the existing security of property, and by deteriorating the moral character of the settlement, prevent respectable families in Europe from emigrating to New Zealand. The inhabitants of New Munster declare that they view the proposition with the greatest alarm and disapprobation, as they apprehend that the natives would be contaminated by their communication with convicts. The members of the Evangelical Alliance at Wellington declare that, while, by the proposed measure, the benevolent exertions of many years would be neutralised, a vastly increased expenditure would be required for the protection of property and the administration of justice. They therefore deprecate the proposed measure, and have memorialised Earl Grey to that effect.

ATTEMPTED ASSASSINATION.—A deliberate attempt at assassination was committed on Saturday evening, at the London-bridge Wharf, by an American, named Henry Page, on a Frenchman named Hache. It appears that Page was acting as an out-porter at the Café Français, on Fish-street-hill, kept by Mr. Raworth, where he fell in love with Mr. Raworth's daughter, a pretty fascinating young widow. A correspondence was carried on between them till M. Hache came to reside at the house, when he also took a fancy to the widow, and Page was discarded. This had occurred about four months past he became intimately excited against M. Hache, and on Saturday he followed him down to London-bridge, where he shot at him with a pistol. Fortunately the ball did no further injury than passing through the coat, and lodging in a thick wall. Page afterwards attacked M. Hache with the butt-end of the pistol, and endeavoured to knock his brains out. He was, however, immediately seized by a policeman and taken to the station-house. About two hours after he had been locked up he made a desperate effort to force his way through the iron bars hanging by his braces to the grating of the cell-window, but was cut down. Two policemen were placed in the cell, to prevent any further attempts upon his life. On Monday he was brought before the Lord Mayor for examination at the Mansion House, when the above facts were given in evidence. The Lord Mayor, having given the usual caution to the prisoner, asked him whether it was his wish to say anything. The prisoner—"I have only to say, my Lord, that the individual who stands there (pointing to the prosecutor) has been the ruin of me completely. He has, by twenty different means, resorted to measures calculated to injure my character in the opinion of those who respected me, and are those whom I respected. He has ruined and blasted my prospects for the future." The prisoner was then committed for trial at the Central Criminal Court, upon the charge of attempt at the prosecutor with intent to kill and murder him.

A pauper, employed in making soup at the Listowel Union Workhouse, fell into the boiler on Wednesday, and was so much scalded as to die in a few hours after.

MONETARY TRANSACTIONS FOR THE WEEK.

(From our City Correspondent.)

After the dissolution of Parliament, there is rarely an extent of business done in the various Stock markets for several weeks, unless some striking political event gives an impetus to speculation. The past week affords an illustration of the foregoing remark, for the conquest of the Plate has been almost solely in connection with the settlement in their comparatively unimportant dealings, trifling fluctuations have occurred, as well as the confined amount of operations. Monday's prices were 99⅞ for money, which the setting on Tuesday did not affect during that day; and although some slight activity prevailed on Wednesday, Consols declined ¼ per cent., closing with a downward tendency. Absence of business has since rendered the Market weak; for, as the unfunded debt is a shade higher, it cannot be attributed to any increased demand for Money. Bank Stock maintains its high quotation, and the heavy Stocks are supported. At the close of the week's operations, the official list gives the following 4 cents prices:—Bank stock, 213½; Reduced, 97⅛; Consols, 99⅛; New Three-and-a-Quarter per Cent. Annuities, 99⅛; Long Annuities, to expire Jan., 1860, 7⅞; India Stock, 260½; India Bonds, £1000, 58 p.; Ditto, under £1000, 58 p.; South Sea Stock, Old Annuities, 96⅛; Consols for Account, 96⅛; Exchequer Bills, £1000, 50 p; £500, 50 p; Small, 50 p.

The only circumstance of interest in the Foreign Market has been the decline in Mexican, in which the most systematic jobbing periodically occurs, the public usually paying for the venture. Attention was directed, in our City correspondence of the 19th of July, to the readiness of the Bulls, which, it was said, would be "banged," in consequence of the large amount of Stock always attainable. This operation has been successfully practised during the preparations for settling the present Account. For on Monday's prices of 20½ a 21 the Bulls sold £1 Stock at 20⅞ 30 was registered. On Wednesday, 29⅛ was the last price; but on Thursday 28⅛ became the closing price of the Account, ultimate, however, becoming 29. A few large bodies have been sold to manage this, taking advantage of the alarm to quietly become buyers at the lowest quotations themselves. The small amount remained by the last packet, and the impression that the Mexican Exchequer is the assignee would be the fact; but, on the other hand, it must be remembered that the indemnity money is yet payable, and consequently included in the present price. Sardinian Scrip is for quite as good as on Monday. Peruvian is firm, at a trifling reaction, also on Monday's quotations. The Market is slightly influenced by the settlement, prices at the close being:—For Danish Bonds, 1825, Five per Cent., 105; Exquisor Bonds, 3⅞; Mexican, Five per Cent., ex. Jan. Coupe., 29½; Ditto, Account, 29⅛; Peruvian Bonds, 5⅞; Ditto, five per Cent., 90¾; Ditto, Deferred, 42⅜; Portuguese, Converted 1841, 33½; Russian Bonds, Four-and-a-Half per Cent., Small, 101⅛; Ditto, Four per Cent., Certificates, 93⅜.

Shares are not quite so great at the close of the Account, which has proved rather *bullish*. The sale by Bill continues on the principal lines continue, however, to be freely in advance of the corresponding week of last year, affording a *bond fide* reason for the support and improvement of prices. Closing quotations are:—

Caledonian Shares and Stocks.—Aberdeen, 10; Aberdeenshire, Nottingham, Boston, and Eastern Junction, 4¾; East Anglian (£25 paid), 7; Eastern Counties, 6¾; Eastern Union, B and C, 3⅜; East Lancashire, 12¾; Edinburgh and Glasgow, 23; Great Northern, 10¾; Ditto, Halves, A, 9¾; Ditto, B, 12¾; Ditto, Great Western, 84; Ditto, £17, 14¾; Lancashire and Yorkshire, 69¾; Ditto, West Riding Union, 8¾; Leeds and Thirsk, 11; London and Blackwall, 6¾; London, Brighton, and South Coast, 69¾; London and North-Western, 121¾; Ditto, Quarter, 25⅝; London and North-Western, Fifths, 5¾; London and South-Western, 83¾; Manchester, Sheffield, and Lincolnshire, 37; Midland, 40¾; Ditto, £50, 13⅜; Newport, Abergavenny, and Hereford, 1; Norfolk, 17¾; Northern Counties Union, ½; North British, ⅞; North Staffordshire, 7⅞ x in.; South-Eastern, 23; South Wales, 27¾; York, North-Midland, and Berwick, 18¾; Ditto, G. N. E. Purchase, 5; York and North Midland, 17¾.

LINE LEASED AT A FIXED RENTAL.—Leeds and Bradford, 102¾.

PREFERENCE SHARES.—Great Northern, 1½.

FOREIGN.—Central of France, 17⅞; East Indian (£16 paid), 16⅛; Great Indian Peninsula (£3 10s. paid), 4; Namur and Liege, 6, Sambre and Meuse, 3⅜.

THE MARKETS.

CORN-EXCHANGE.—Very small supplies of English wheat have been received up to our market this week, owntwise as well as by land carriage; yet, owing to the favourable accounts respecting harvest operations and the general appearance of the potato crop the demand has ruled heavy, at a further decline in the quotations of nearly 1s per qr. Foreign wheat has met a very dull inquiry, at the same amount of reduction. About 100 quarters of new wheat have appeared on sale, in very middling condition. The barley trade has been inactive at barely late rates. The same observation may be applied to malt. No material change has taken place in oats, but beans, peas, and flour have been offered on lower terms.

English—Wheat, Essex and Kent, red, 38s to 42s; ditto, white, 38s to 45s. Norfolk and Suffolk, red, 36s to 40s; ditto, white, 38s to 42s; rye, 22s to 24s; grinding barley, 21s to 24s; distilling ditto, 25s to 27s; malting ditto, 30s to 36s; Norfolk and Lincoln malt, 46s to 50s; brown ditto, 44s to 47s; Kingston and Ware, 50s to 56s; Chevalier, 58s to 60s; Yorkshire and Lincoln, 48s per bush; oats, 20s to 24s; potato ditto, 18s to 22s; Tellow ditto, 16s to 18s; ditto, white, 20s to 22s; beans, old, 30s to 32s; ditto, new, 28s to 30s; ditto, old, 30s to 32s; ditto, old, 30s to 32s per cwt. Lord Annly, at 26s to 28s for fine delivered. Town tare 2 per cent. Foreign tare 3 per cent.

Tallow.—A steady business is doing in New P.Y.C. on the spot is quoted at 39s 6d; and old, 37s 9d per cwt. Town tallow is in moderate request at 37s 6d to 38s per cwt.

Oils.—Although the demand is less active, the late improvement in the quotations is fairly supported.

Spirits.—We have a fair inquiry for West India rum, at full prices. Choice marks, 4s to 4s 2d; ordinary good, 3s 9d to 4s; fine, 4s 2d to 4s 4d per gallon. Brandy is very dull, at late rates. Brit li made spirits scarcely, at 2s 9d to 2s 9d per gallon.

Hay and Straw.—New meadow hay, 42s to 52s per load; old, 55s to 84s; new clover, 72s to 84s; old ditto, £3 10 to £4 10s; and straw £ 1s to £1 10s per load.

Coals.—Hull-way, 14s 6d; South Pontefract, 15s 3d; Tanfield Moor, 15s 6d; Eden Main, 15s 3d; Lambton, 14s 6d; Lumley, 15s 6d; Stewart's, 14s 9d; Killoe, 14s per ton.

Hops.—The accounts from some of the plots have been rather more favourable the demand is somewhat brisker, and prices are supported. Mid and East Kents, 3 to 4 cwt £3 0 to £5 5 0; Weald of Kent ditto, £3 0 to £4 15 0; Sussex ditto, £2 10 to £4 10 0; Farnham, £5 5 0 to £6 6 0; Bavarian, £3 0 0 to £5 5 0; Yearlings, £2 0 0 to £3 3 0.

Potatoes.—The supplies coming in on the increase, the demand is heavy, at from £3 to £4 per ton.

Smithfield.—For each kind a sick the demand has ruled inactive, and late rates have been scarcely realised.

Beef, from 2s 8d to 3s 6d; mutton, 2s 6d to 3s 10d; lamb, 3s 10d to 4s 10d; veal, 3s 8d to 4s 8d; pork, 3s 6d to 3s 8d per 8 lb to sink the offal.

Newgate and Leadenhall.—The general demand has been for a very depressed state, at late prices only.

Beef, from 2s 8d to 3s 6d; mutton, 2s 4d to 3s 8d; lamb, 3s 6d to 4s 10d; veal, 3s 8d to 4s 8d; pork, 3s 6d to 3s 8d per 8 lb, by the carcase.

ROBT. HERBERT.

THE LONDON GAZETTE.

FRIDAY, AUGUST 8.

WAR-OFFICE, AUGUST 8.

19th Regiment of Light Dragoons, Cornet J. M. Towsley to be Lieutenant, vice Mac Mahon 19th Regiment of Foot, Ensign H. J. Langton to be Paymaster, vice C. J. Langton.

Royal Canadian Rifle Regiment, Captain R. Pakenham to be Captain, vice Cotton.

ADMIRALTY, AUG. 8.

With reference to the plans of naval retirement which appeared in the *London Gazette* of the 4th of June, 1841, and to the promotions of officers which appeared in the *Gazette* of the 1st instant, the undermentioned Commander in the royal Navy has been promoted to the rank of Captain with seniority from 26th July, 1851, and placed on the Reserved Half-pay List of the Royal Navy, viz. C. Kidd, Esq. R.N.

COMMISSION SIGNED BY LORD LIEUTENANT

Cinque-ports Regiment of Militia, Thomas Jones, Esq. to be Major, vice the Hon. H. G. Sp ncer, dec'eased.

BANKRUPTCY ANNULLED.

R. BRISCOE, Liverpool, draper.

BANKRUPTS.

S. CHURCHILL, Crag street, Poplar, and T. CLADE, St. Thomas road, Mile-end Old Town, coal dealers. J. LACHAU, Great Ormond-street, glassblower. J. BLAKEMAN, Leverington, Wisbeach, cooper. H. HAWES, Regent street and Stafford-row, draper. I. ISAACS, Somerset, Minories, jeweller. W. E. FOLLIT, Chelsea, gentleman, carver and gilder. J. FRANCK, 18, Poland-street, Oxford-street, cabinet maker. J. PEARCE, Bridport, Dorsetshire, silk dyer. J. SMALLEY, Hulme, Manchester, spirit merchant. W. SPEAR, Hull, ale broker. H. ROBINSON, Bishopwearmouth, Durham, ship builder. J. ATKINSON, Liverpool, linen draper and commission merchant. W. CUNNINGTON, Kingston-upon-Hull, shipbuilder. C. P. BENYON, Leicester, maltster. J. PERCIVALL, Market Deeping, Lincolnshire, shoe dealer.

SCOTCH SEQUESTRATIONS.

J. CRAWFORD and CO., Glasgow, merchants. LIDE and CO., merchants and shipbrokers. A. SCOTT, Ayr, ale and porter factor.

TUESDAY, AUG. 12.

BANKRUPTS.

R. SEYMOUR, Downham Cambridgeshire grocer. J. VEVERS, Ironmonger-lane woollen warehouseman. T. PIPER, Laurence Lane City wholesale stationer. J. H. PHILIP, J. H. CLAYTON, E. A. WYNNE, and J. LUMSDEN, East-India merchants. Messrs. ferguson brothers, F. MILLER, Hippodrome Stables, St. John's-wood, and Phoenix-park, near Dublin, livery-stable keepers. R. LEAF, Essex, near Ratcliffe, ship builder. R. JACKSON, Hackney, timber merchant. H. MOTT, Bear-alley, Bishopsgate-street, City, tailor and draper. J. REWTON, Sculcoates, Yorkshire, grocer and tea dealer. J. CUNNINGHAM, Swinton-hill, Berwickshire, farmer.

SCOTCH SEQUESTRATIONS.

T. BUCHAN, Dundee, grocer. J. J. CUNNINGHAM, Swinton-hill, Berwickshire, farmer.

BIRTHS.

On the 5th instant, the lady of Major Sarzin, of a son.—On the 30th ult. the Hon. Mrs. Howard Lipyeatt, of a son and heir.—On the 5th instant, the wife of the Rev. Charles Mallet, of a daughter.—On the 8 h instant, the wife of Captain Keyt, 85th Light Infantry, of a son.—On the 10th instant, the wife of the Rev. Walter Kelly, of a daughter.—On the 10th instant, the wife of the Rev. Henry Smith, of a daughter.—On the 7th instant, the wife of the Rev. Hearle Smith, of a daughter.—On the 10th instant the wife of Sir John Maclaurin, of Kinfauns Castle, Perthshire, N.B., of a son.—On Tuesday, the 12th inst. at Bewley Worcestershire, the wife of James Bancks, Esq. of a son.—On the 10th inst. at Oak Cottage, near Truro, Cornwall, the lady of J. Fowler Tyrrell, Esq. of a daughter.—On the 5th inst. at 25, Dorset-square, the wife of F. Durant Deane, Esq. of a daughter.

MARRIAGES.

On the 12th inst., the Rev Richard King, of Pentre-ch, Lancashire, to Charlotte Dendas, youngest daughter of the late Command er Bathurst, R.N.—On the 12th inst. the Rev. Alexander Stewart Leslie, Minister of Bourtreehill, to Annette Sybil, youngest daughter of Thomas Hebburn, Esq., late Inspector Commander Aberdeen district.—On the 8th inst. at St. Stephen's Church, Hammersmith, James Edward Dickinson, Esq. M.R.C.S., to Henrietta Caroline, youngest daughter of the late Rev J. W. Hughes, M.A. of Trinity, and rector of St Clement's, Oxford.—On the 7th inst. by the Rev Walter Kelly, at St James's Church, Paddington, the Rev Walter J Whiting, A.M., chaplain in the R.N. C's service, to Mary Elizabeth, daughter of Henry Harvey, Esq. of Regency-square, Brighton.

DEATHS.

On the 8th inst., Thomas Robert or, Esq., late of the Royal Navy aged 77.—On the 8 h inst., Mr. A. G. Grainger, of the House of Lords.—On the 9th inst., Sarah relict of the said Captain Thomas Keyt, Esq. of Dunley Castle, Hants, and the last surviving member of her age.—On the 8th inst. Mary Tennant, the wife of Mr. T. Mason.—At Castlebar, county Mayo, on the 8 h inst. Anne Jane, the beloved daughter of Thomas Simpson, Esq., Inland Revenue Inspector, most sincerely regretted by her relations and acquaintances, aged 21 years.

THE VEGETARIAN SOCIETY.

A GREAT gathering of abstainers and vegetarians took place on Friday, the last inst., at the Freemasons' Tavern, in the Grand Masonic Hall, usually appropriated to festivities of another order. The meeting was announced as a *soirée*; but what kind of collation was served, which had a more ornamental appearance than a banquet of more *resistance*. The vegetarian course consisted of savoury pies, bread and parsley fritters, moulded ground rice, blancmange, cheesecakes, and fruit, all of which dishes were crammed with an evident relish by the company who filled the several tables, and whose healthy appearance bestowed the benefits to be derived from the innocent regimen. When this practical demonstration of the resources of vege etarism was over, Mr. Brotherton, M.P., who presided on the occasion, proposed the first and only toast of the evening. "The Queen;" and her Majesty's health was drunk with loud acclamations in iced water, milk, tea, and coffee; and the national anthem was sung with great favour and enthusiasm by the company. A poem was then read by one of the members of the society, and the various lines as they were read were sung by a company of singers, supported by the melodiously inclined among the guests. The chairman proceeded next to address the company, and after stating his diffidence, as he suspected that many of them then and there present were not vegetarians, he proceeded to say that the vegetarians advocated a total abstinence from the flesh of animals, and in doing this they were aware that they addressed themselves to a flesh-eating nation and that nothing was more difficult than to change national tastes and habits. They had to contend with three antagonists, viz with custom, prejudice, and appetite. These met them with the question—"Why abstain?" He (Mr. Brotherton) in his turn would ask—"Why eat?" Men ate meat because their forefathers ate it—it was a custom, but custom was every day schooled by progress and experience. The reasons, indeed, for abstinence, were various, and well deserving the attention of parliament. The greatest judgment of the greatest number was the great problem of the statesman. To attain that end, there were various means proposed, such as poor-laws, police, peace societies, &c.; but the master means were that in addition of correcting the drunken habits of tremendous cheapness of the nation. Abstinence from intoxicating liquors would produce a sober nation. Men who killed no animals, would refrain from handling themselves together in the conflicts of trade. This, he knew, was flying in the very face of custom; but custom had at all times sanctioned all absurdities, as a reference to the curiosities of the history of civilisation, in all climes and ages, would amply show. Slavery, duelling, and capital punishments, had all been sanctioned by custom. The Spaniards had their bull-fights, and the people in the island of Skewes, in Cornwall, ate rats smothered with onions. It was the same with frogs in France, and coat was made of the skin of the panther. Some would eat it raw, and the taste for it was a vicious taste. The vegetarian system, on the contrary, was sanctioned by the law of nature; for anatomy showed that there were made for fruit and herbs, and, if men lived according to the dictates of nature, he would live in enjoyment and health. Nature, scripture, and the practice of the wisest and best, in all ages, were in favour of vegetarianism. It was good for individuals, good for families, good for communities. It was, moreover, economical. There was more nutriment in two-pennyworth of peas than in a shilling's worth of meat. He (Mr. Brotherton) then commended the system from a 42 years' experience, and he asked the public to give it a fair trial. He was followed by Mr. Simpson, the President of the Vegetarian society, who endeavoured to refute the argument as to the less consumers of animal food have tested their practice; and he defended the nutritious qualities of vegetable produce. Chicken broth, it had been proved, was more indigestible than pea soup, and new bread stood on a level with mutton chops. The vaunted meat fare of old England was very innocuous, and very long in digesting; and if meat would perforce condescend to that animal, of which it had been observed that it was carved under the old law, and never blessed under the new" (laughter)—he could say it was the pig's (great laughter)—if they would condescend to that most scrofulous and nasty animal (shouts of laughter)—why they must be content to carry it in their stomachs longer than the unstarked fruitarian. Mr. Sharp (a gentleman, that not one member of the Vegetarian Society, which mustered up to 718, had died of the cholera, or other distempers. The company were further addressed by the Rev. John Metcalf, and the Rev. Mr. Wolf, of Antwerp, of whom it was said that they had travelled 2000 miles to be present on the occasion, and who strongly recommended the adoption of a vegetarian system of diet.

DINNER OF THE CANYNGES SOCIETY, AND THE ARCHÆOLOGICAL INSTITUTE, AT BRISTOL.

In our Journal of last week, we reported the proceedings of the Archæological Institute at Bristol, to the dinner held on Thursday evening in the Victoria Rooms at Bristol, in conjunction with the banquet of the Canynges society, at the splendid rooms which had been tastefully decorated for the occasion; and the guests numbered about 220 lad es and gentlemen.

The dinner, which was provided by Mr. Pomeroy, of Clifton, was of a most elegant and *recherché* character; the wines were supplied by Messrs. Pullin and Co., of Bristol, and Mr. Hotham Hotel. J. S. Harford, Esq., of Blaize Castle, presided; and Mr. Cooper occupied the chair.

During the entertainment, the Clifton Subscription Band played several airs. On the removal of the cloth, after the usual loyal and introductory toasts were duly responded to.

The Chairman proposed "The Royal Society of British Antiquaries," and coupled with it the name of one of its Vice-Presidents, Bishop Wilberforce. (Cheers.)

The Bishop of Oxford thanked the company sincerely for the honour which they had done him. On his own part, and also on behalf of the Society, he proposed "Success to the Canynges Society." (Cheers.) The Lord Bishop then referred to the exertions of the Canynges society in furtherance of the restoration of Redcliff Church. He was happy in the thought that he had come down among them to be present at the celebration of the anniversary of the Canynges Society—(Cheers) and to encourage those who were doing that true and good work which the Society were endeavouring to accomplish. Since he had been here, he had been told that the names of the most respectable citizens of this ancient city who had been prominent in the work, and none more so than the honoured Mayor of the city, who had been chosen year after year to fill the highest post, for those virtues which ought to recommend a man to the esteem of his fellow-citizens. ("Hear," and cheers.) The Right Rev Prelate concluded by proposing success to the "Canynges Society."

Mr. Harford, one of the boarders of St. Mary Redcliff, then read the report of the committee on the state of the Redcliff restoration, and announced a further donation of £50 from Mr. Harford, the president, and the collection at the church, after the sermon, £90.

Mr. Harford was then re-elected president; and then proposed "The Royal Society of Literature, and the health of Mr. Hallam, the historian;" for which that gentleman returned thanks

The Chevalier Bunsen, who was received with loud cheers, then proposed "The Universities of England, and the health of Dr. Whewell, Master of Trinity, Cambridge."

Dr. Whewell acknowledged the toast, and the honour which had been paid him an the Universities.

Dr. Harington also returned thanks on behalf of the University of Oxford, and expressed the regret of the Vice-Chancellor of that learned body at not being able to be present.

Sir Charles Anderson proposed "The Society for Promoting a Knowledge of Ancient and Medieval Architecture," with which toast he coupled the names of Mr. Britton and Mr. Godwin, the restorers of St. Mary Redcliff.

Mr Britton, who was most cordially received, thanked the company in an apt, report le address.

The chairman next rave the toast, "Nil Desperandum" (Cheers.) "Nil Desperandum" had followed up that motto and principle with by successive donations to the Canynges Society, to the amount of £1800. They were left in total ignorance of his name, and also of everything connected with him. He was one who delighted in the luxury of doing good, and promoting great and beneficent works, without seeking that honour and celebrity which, if he were known, would justly attach to his name.

Several other toasts were drunk, including the "Health of the President," proposed by the Bishop of Oxford; and the proceedings terminated.

The accompanying Illustration was sketched by Mr. Colebrooke, Stockdale, during the dinner.

SOIREE OF THE VEGETARIAN SOCIETY, IN FREEMASONS' HALL.—(SEE PRECEDING PAGE.)

THE ILLUSTRATED LONDON NEWS

No. 511.—VOL. XIX.] SATURDAY, AUGUST 23, 1851. {TWO NUMBERS, 1S. WITH LARGE SHEET, GRATIS.

THE LIBERTIES OF EUROPE.

LIBERTY and Independence are passions among the three great nations of Continental Europe. France clamours loudly for the first, while Italy and Germany clamour as loudly for them both. But does France, which loves liberty with a madness or an enthusiasm proved by the blood and tears of upwards of sixty years, really understand what the word means? or are Italy and Germany better fitted than France to appreciate and enjoy the freedom which they crave, or the independence which is the day-dream of their most ambitious and generous spirits? We may be permitted to doubt, in all these instances, whether the struggle which now rages over Europe with more or less intensity, is not the commencement, rather than the close of a series; and whether each of these celebrated nations has not a great deal to learn and to suffer before the mass of the people can hope to exercise even the commonest rights of free citizenship. There seems to be something wrong with them all. There is an impatience which spoils the best laid schemes, and frustrates the most admirable intentions; and an ignorance of the first principles of popular tranquillity and social progress, which renders all government practically impossible, but that species of government which is effectual with mankind in the rudest state—the government of brute force.

It is somewhat humiliating in this highly polished Europe, instructed as it should have been by the wisdom of four thousand years, to make such a confession. But the truth is as we state it. Scarcely three summers have passed away since the kingdoms of the Continent were shaken to their foundations by a succession of popular insurrections, bursting one after the other like the reverberations of an alpine thunder-storm. Nation after nation, which either smarted under the yoke of domestic oppression or of foreign misrule, or imagined that it had grievances calling for so perilous a remedy, overthrew its Government and sent its King and Ministers into exile. In no case has the result been satisfactory. If we cast our eyes over the political map, we see that everywhere a fierce warfare has been carried on in the name of public tranquillity; that the middle and upper classes, frightened at some more horrible vision than ever before took shape amid the clouds and smoke of revolutions, have united against the anarchists and the popular heroes of the *carrefours*; and that the people—in the widest sense of the term—who, before that era of social hurricanes, were to some extent free to think, to write, or to speak, have been deprived of the little liberty they enjoyed; and that a stern, unflinching, if not sanguinary despotism, has been established upon the ruins of the past. In the midst of an age more highly civilised than any other of which the annals of mankind offer us any record, the sword has become the supreme arbiter of mundane affairs. The cities of Europe are filled with armed men, their walls bristle with cannon or with bayonets, war-banners flaunt in the public squares, the music of the drum and the trumpet is heard above all the ordinary bustle of populous places, and men are so occupied with warfare, or with the fear of it, that the cultivation of the fields and the gathering of the harvest is left to the women and the children. What hope is there of the liberties of any nation that keeps up an army of half a million of men? Every year, every month, nay, every week and day, that such a mighty multitude is maintained at the public expense, and prevented from employing its skill and industry in the rational and useful occupations of life, is a stumbling-block laid in the way of present and future happiness and freedom. Such is the state of France—such is the state of Germany—and such, with the difference that the armed men are, for the most part, foreigners, and not natives—is the state of Italy in 1851.

In the case of France, the worst feature is, that the people do not consider this formidable army as any particular nuisance. The national vanity is flattered at the idea of such a splendid military force; and every man of mature age either is, has been, or will be a soldier. In addition to this, he feels like a soldier. When this is the sentiment and practice of the people—when the notion is almost universally spread amongst them, that the victories of Napoleon are the events which reflect the highest lustre upon the French name, and make them the foremost nation in the ranks of the world—and when we add to this the equally significant facts, that they have nothing else to be proud of; that they are what may be called a "self-contained" people; that their commercial resources are in an inverse ratio with their military operations and resources; that they have overthrown without building up; and that they have scarcely an institution that is a quarter of a century old, we see at a glance that French liberty may be much spoken of, but must be little understood. In fact, we are afraid that every Frenchman interprets "liberty" to mean liberty for his individual self, but the slavery of every other person whose theories or practice might interfere with his own; and we are impressed with the sorrowful conviction, that France is, after all, but a semi-barbarous nation, splendid, no doubt, but rotten and unsafe; having all to learn and much to endure before it can be really fitted for the enjoyment of equable and rational liberty.

The condition of Germany is almost equally humiliating to those who look to the social progress of Europe. A military despotism has succeeded to anarchy; and the phantom of a Democratic and Social Republic, which has scared the rulers of the people, and infected the bulk of the middle class with a preposterous alarm, renders the despotism of the sword comparatively easy, by lending it the support of all those classes which have anything to lose by change or commotion. Even the German Fatherland—that ideal unity, so beautiful in songs and in theory—loses its attractions when this grim spectre is evoked; and Germany keeps up a multitudinous army against herself, and postpones indefinitely the freedom which such an assemblage of intelligent nations has a right to expect.

The case of Italy is different, and perhaps more deplorable;—for the French and the Germans, if they suffer a despotism, have imposed it upon themselves. The tyrants of France are, at all events, Frenchmen; and those of Germany, Germans. Not so in the fairest portions of Italy, where the oppressors are foreigners, and infuse an additional bitterness into the draught of the popular de-

THE ROYAL VICTORIA YACHT SQUADRON REGATTA.—THE "FERNANDE" AND "ANACONDA" PASSING RYDE.—(SEE NEXT PAGE.)

gradation. In Italy there is such an array of swords and bayonets, that it would seem as if the "whole duty of man" were to enact the soldier, and that the more useful business of life—to plough, to till, and to reap—was the sole duty of woman. Freedom is impossible in such countries as these; and independence, though it may have an existence, externally considered, is of little value when purchased at such a cost.

There is in reality but one country in Europe where men do men's work, and that is our own. The military mania does not afflict the English; and hence, in our fortunate position—surrounded by seas that enemies dare not overpass—we have leisure and opportunity to labour and to think, to increase the sum of human enjoyment and human knowledge. Our former military prowess has cost us so dear, that we have no desire to exhibit it again, but are well contented, amid the evergreen laurels formerly won, to turn our attention to nobler things—to consolidate the liberties we have gradually acquired, and to extend our name and fame, our wealth and our influence, over every portion of the globe.

It is the misfortune of the nations of Europe, that their social and political education is so incomplete, that they cannot imitate such an example; and that the impatience, the impulsiveness, the turbulence, and the ignorance of the people, render them, to a great extent, unable even to understand what they mean by the freedom for which they have struggled so long. Doubtless, they will learn something of it by and by. Such stupendous armies as they maintain must inevitably become burdens too mighty for them to bear; and national bankruptcies will, unless a change take place, be as frequent in a short time as revolutions were in 1848. Deficits increasing yearly in amount will open their eyes, and a new phase of needful experience will develop itself before them. As yet, the revolutions, attempted or accomplished in past times, have done nothing for the Continent but to transform the bulk of the male population into soldiers, and the bulk of the female population into hewers of wood and drawers of water. There is always a retribution for misdeeds or mistakes, and a financial crisis will be one of the means of retribution for this. That it will be the only one, is scarcely to be expected.

THE ROYAL VICTORIA YACHT SQUADRON REGATTA.

SCHOONER MATCH FOR THE £50 CUP.

THE great feature of the Regatta was the above match on Friday (yesterday week), the most striking point of which our Artist has depicted on the preceding page.

The only race on the card (the second £50 Prize Cup not having filled, the *Gondola* only being entered for the same) was the £50 Prize Cup for fore and aft schooners, the property of members of the Royal Victoria Yacht Club, the course being from the starting vessel to the westward of the two red buoys off the Brambles, round the Calshot light-vessel, thence passing to the eastward of the chequered and white buoys off the Brambles, then round the Nab light ship, always passing outside the No Man and Sandhead buoys; and in completing the course the second time, the yachts to pass between the starting vessel and the pier. The yachts' crews to be limited to sailing regulations No. 12, and the sails to be limited to those usually carried on a wind. No allowance for tonnage. The yachts entered for this race were as follows:—

Yachts	Tons.		Owners.
Princess Olga	50		Thomas Rutherford, Esq.
Fernande	125		Major M. Martyn.
Bianca	31		C. Webster, Esq.
Arrow	101		Sir Charles Ibbetson, Bart.
Benita	65		Colonel W. L. Freestun.

Some of these yachts have attained considerable celebrity, particularly the *Fernande*, belonging to Major Mountjoy Martyn; and, as the object was to class together vessels whose powers were as nearly as possible uniform, the *Princess Olga* and the *Benita* were withdrawn.

At eleven o'clock it was finally determined which should be the contending yachts, and soon after the undermentioned appeared at the starting station:—

Anaconda	101		Sir Charles Ibbetson, Bart.
Fernande	125		Major M. Martyn.
Bianca	31		C. Webster, Esq.

At a quarter-past eleven the signal gun was fired from the flag committee's vessel, and the start was effected. The yachts proceeded to the eastward instead of the westward, in consequence of the state of the tide. The *Anaconda* got away first the gallant style, followed closely by the *Bianca*, but it was soon apparent that the *Fernande* could fairly get under weigh. This delay was of no great moment as far as the *Bianca* was concerned, for, on proceeding towards the Nab Light, the small schooner was soon overhauled, and the *Fernande* reached the second place. When within about a mile of the Nab, the *Anaconda* was at least a mile ahead, and there was apparently about the same distance between the *Fernande* and *Bianca*. They kept this position for some distance, but on reaching the point the *Fernande* recovered a great part of the distance between them, and on passing Ryde Pier the *Anaconda* was closely pressed by her rival the *Fernande*, being scarcely more than half a minute ahead, and using all sail. This is the point illustrated by our Artist. The *Bianca* was now out of the question, and the contest between the two was continued with great vigour round the red buoys of the Brambles and the Calshot light-ship, the vessels barely balanced a march has been rarely witnessed. They kept company together in this manner on their return, and when opposite Ryde Pier they were stem and stern. They arrived at five minutes past four, thus completing the first round in four hours and forty minutes. They both were going gallantly for the second time towards the Nab, the *Fernande* afterwards slightly taking the lead. They had passed the station about ten minutes, when the squadron of vessels who followed the sailing yachts were joined by the celebrated American yacht, *America*, who dropped them one by one. At five o'clock the *Fernande* rounded the Nab for the second time, having completely established herself in the lead; and when within about five miles of Ryde, on her return, she was leading nearly a mile ahead of the *Anaconda*, and with every prospect of maintaining her position; but it should not be omitted to be stated that during the greater portion of the distance to the Nab the difference between them was scarcely to be distinguished.

ROYAL YACHT SQUADRON REGATTA.

THE vessels of the Royal Yacht Squadron commenced their annual trial of skill and speed in sailing, on Monday, at Cowes (Isle of Wight), with the most favourable weather, which lasted throughout the week. During the morning, the fleet of yachts cotted the Solent and Medina, several of them being dressed in their colours, which gave the place a gay and animated appearance. The following yachts were at the station:—*The Pearl*, the Marquis of Anglesey; *Alarm*, J. Weld, Esq.; *Capricorn*, Vice-Commodore C. M. Talbot, Esq., M.P.; *Petrel*, the Earl of Ilchester; *Maria*, *Elizabeth*, *Ione*, *Water Lily*, *Erminia*, *Stella Brilliant*, *Osprey*, *Constance*, *Camilla*, *Arrow*, *Norna*, *Seagull*, *Turquoise*, *Gipsy Queen*, *Eagle*, *Wyvern*, *Susan*, *Seagull*, *Aurora*, *Destiny*, *Arrow*, *Ariel*, *Caiman*, *Gondola*, *Spider*, *Cygnet*, *Talisman*, *Fernande*, *Mariana*, *Osprey*, *Dolphin*, *Arrow*, *Wanderer*, *Fawn*, *Fairy*, *Gazelle*, &c.

The principal race of the day was HER MAJESTY'S CUP, by Royal Yacht Squadron cutters, from 80 to 100 tons.

At 10 h 57, the following yachts started:—

Yachts.	Tons.		Owners.
Gondola	57		W. Woodhouse, Esq.
Freak	90		W. Curtis, Esq.
Bacchante	80		B. H. Jones, Esq.
Arrow	84		T. Chamberlayne, Esq.

The vessels which were also entered and did not start were the *Lavinia*, 75, Twizden Hodges, Esq.; M.P.; the *Gauntlet*, 65, William Peacock, Esq.; and the *Lavrock*, 65, Captain C. H. Williams, R.N. The course was from the starting-vessel, moored off Cowes Castle, proceeding eastward, passing Norris Castle, Osborne House, Ryde; and round the Nab Light, returning by the same route, and from thence proceeding westward round a vessel stationed off Yarmouth, returning and finishing at the starting-vessel. The course was about 60 nautical length. At starting, there was a gentle breeze blowing from S. by S. E., and the *Arrow* was the first vessel fairly to get under way, and soon took the lead. The station-vessel at Cowes was passed in the following order:—

	h.	min.	sec.
Arrow	3	48	0
Freak	3	51	45
Bacchante	4	12	50

On arriving off this point the *Gondola* gave up and took no further part in the contest. The yachts came in as under:—

	h.	min.	sec.
Bacchante	9	57	0
Arrow	9	39	0
Freak	9	45	0

The *Bacchante* was then declared the winner, and the prize, which is a splendid massive silver urn and cover, was presented to B. H. Jones, Esq., the owner, on Wednesday.

At about five o'clock in the afternoon, the *Fairy*, Royal steam-yacht, with the Royal standard of England floating from the mast, was seen proceeding from the direction of Osborne, and it was soon made known that her Majesty and the Royal children were on board. The vessel then entered the Channel, and proceeded slowly to the westward between the fleet of yachts and the Club-house. Her Majesty was on deck, and appeared to be highly pleased with the numerous trim vessels lying at the station. She courteously acknowledged the marks of loyalty with which she was received. The *Fairy* then proceeded up the West Channel to allow her Majesty an opportunity of witnessing the progress of the yachts. Soon after seven o'clock the *Fairy* returned from her short cruise, and proceeded direct to Osborne.

On Tuesday evening the annual dinner of the members of the squadron was held in a spacious saloon, erected in front of the Club-house, and was very numerously attended. The Right Hon. the Earl of Wilton, Commodore of the Royal Yacht Squadron, was in the chair, supported on his right by Major-General Lord Adolphus Fitzclarence, and on his left by the Marquis of Ormonde; and amongst the company were the Marquis of Conyngham, the Right Hon. Lord Exmouth, Lord Desart, Admiral the Hon. Sir Bladen Capel, K.C.B.; Rear-Admiral Prescott, Captain Blackwood, H.S.H. Major Harvey, Lieut. Aplin, R.N.; Commodore J. C. Stevens, &c. A. Stevens, Esq.; Colonel Hamilton, and W. Herbert Saunders, Esq., of the American yachts, and members of the New York Yacht Club; Oliver Hill, Esq.; Thomas Chamberlayne, Esq.; Andrew Fountain, Esq.; James Lyon, Esq.; C. M. P. Talbot, Esq., M.P., Vice-Commodore of the Club; T. Beauchamp Seymour, Esq.; W. B. B. Ponsonby, Esq.; Sir H. Reid Hoghton, Bart.; Thomas Greig, Esq.; W. More, Esq.; Capt. Marsham, R.N.; Commander Crespin, R.N., of the Royal steam yacht *Fairy*; J. Beardmore, Esq.; George Benttick, E. q., &c.

Several excellent speeches were made during the evening; and on the health of the commodore and officers of the squadron, the toast of *success* being proposed, it was warmly responded to by Colonel Hamilton, who dwelt at great length on the necessity of maintaining a cordiality of feeling between the two countries. The gallant Colonel's speech was listened to with great attention, and he announced his rest amidst loud and general cheering.

On Wednesday the race was for a cup, value 100 guineas, the gift of his Royal Highness Prince Albert, for large class schooners of the Royal Yacht Squadron of 140 tons and above. The course was from a vessel moored off the club-house, proceeding eastward, passing Norris Castle, Osborne House, Ryde, and round the Nab Light, returning on the same route, and from thence proceeding westward round a vessel stationed off Yarmouth, returning and finishing at the starting vessel.

At a few minutes after ten o'clock the following vessels appeared at the starting station:—

	Tons.		Colours.
Beatrice	161		White, blue border.
Constance	218		White flag, bloody hand.
Capricorn	213		Blue, yellow, and red.
Gipsy Queen	160		Red and white striped.

The *Wyvern*, 205, the Duke of Marlborough, was entered, but did not appear at the starting vessel.

At half-past ten, all being in readiness, the signal gun was fired, and there being a tolerable breeze from the westward, the yachts soon got under weigh. The *Beatrice* being to the windward, was the first to cant round, which she did in quick time, and was soon on her way with the lead; next followed the *Gipsy Queen*, after her the *Capricorn*, and the *Constance* at the rear, but a fair match of the *Constance*. The yachts stood on down to Yarmouth, the *Gipsy Queen* taking the lead. On rounding the boat off that place, the time stood as follows:—

	h.	min.	sec.
Gipsy Queen	5	1	0
Beatrice	5	17	15
Capricorn	5	25	10
Constance	5	34	0

A good breeze from the westward then set in, which enabled the yachts to beat up well against the tide. The *Gipsy Queen* kept right on the mid-channel, and made good way. The *Capricorn* hugged the north shore too much, and unfortunately got ashore between Sowley and Spits Bay. The *Beatrice* and *Constance*, on entering Gurnet Bay, kept to the northward, under the land, to avoid the tide, and fell considerably astern. The *Gipsy Queen* eventually arrived off Cowes Castles, at 24 minutes past 7, three-quarters of an hour ahead of the second vessel. There is some talk of a cup sic, regulations not having been complied with.

The town of Cowes was very full of company during the week; the weather was beautiful, and it was the general opinion that so many yachts were never at any former period seen at that station.

A grand regatta ball took place on Thursday evening, which was numerously and brilliantly attended.

NATIONAL SPORTS.

If we look at the number of meetings, next week will be a busy one. The meetings, however, do not promise anything very imposing; and Epsom is the only spot likely to have any charms for the metropolitans. It takes place on Wednesday and Thursday, with an in proved, but, as we have already intimated, not by any means a brilliant hill of fare. Barnet and Scarnbrugh commenced on Monday; Gosmouth, Derby, and Tunnion, on Tuesday; and Lynn and Stirling on Thursday.

REGATTAS.—On Tuesday, the Tower, Windsor and Eton, and the Royal Western Yacht Club; Wednesday, the Norwich, Richmond, Worcester, and Perth; Friday, the Torbay and Wigtown; and Saturday, the Glasgow.

CRICKET FIXTURES.—Monday, at Stamford, Trentham Park, and Copenhagen House; Tuesday, at Malton; Wednesday, at Streatham and Sevenoaks; and Thursday, at Southwell Ilkeston.

TATTERSALL'S.

MONDAY.—The run was almost exclusively on Nancy, who found so many admirers for the great events at York, that she became first favourite for each. If we add that Hernandez, who had receded a couple of points, again became the premier for the St. Leger, we shall have said all that is necessary in the shape of introduction.

AUGUST YORK MEETING WEDNESDAY.

By the various lines of railway, an immense number of passengers have been conveyed to the city of York, and the streets during the forenoon were almost impassable. If numbers, therefore, will ensure success, this will be one of the most brilliant meetings ever held at York, and that it will not want good sport, and plenty of it, to make it so the following fields and betting transactions, and attested many hundred spectators. The race extended from Hunger ford stairs, to and round a boat off the Victoria Tower of the House of Lords, back to and round the Themes Police-ship off Strand Lane, and on to Hungerford-bridge. Penal Leat:—Churchman and Geoffrey (blue), 1; Tough and H. Westwood (yellow), 2; Bancroft and Brathwaite (pink), 0. The prize was a purse of sovereigns, subscribed by the residents of the vicinity.

STEAM TO INDIA.—The Bombay papers received this week state that the *Messenger*, with the mails of the 7th of June, reached Bombay on the 2d of July, having occupied 24 days 13 hours on the transit. This is the fastest mail by 37 hours, the fastest sere ce by three days, that has ever reached India; yet from Suez the rate of steaming was not more than nine and a half every month with a strong wind in favour, at twelve knots, the speed now attained by many of the Peninsular Company's steamers, three days would have been saved. The present speed is mostly due to the improvement, by a bonus, of the transit through France. The railway would make the mails to pass through Egypt in eight in place of sixty hours, as at present; and with these two sources of acceleration alone, the transit from England would be shortened by four days, and the mails transmitted on an average of three weeks, giving return of post for eight months in the year from all parts of India. The Peninsular and Oriental Company's steamers begin in september plying from Bombay direct every second month: they will be of great importance to these bringing goods overland, the war-packets at present carrying nothing but samples and packages, and charging for these the most extravagant prices.

The final sentence of the law was carried into execution on Tuesday morning upon the body of Mary Emily Cure, who was found guilty, at the last assizes held at Ipswich, of poisoning her husband, James Cure, in the parish of Stonham Aspal, a small village distant twelve miles from Ipswich. She refused to make any confession, and protested her innocence to the last.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Parliamentary recess transfers the interest of political news from the capital to the departments, where we find several of the provincial councils are passing resolutions in favour of the revision of the constitution, notwithstanding the recent Parliamentary decision against that measure: whilst the Reds are doing everything in their power, particularly in the eastern and eastern departments, to disturb the public peace and agitate men's minds. They created a serious riot this week at Laurac, in the department of the Drome, on the occasion of the celebration of the *fête* day of the patron saint of the parish, when the Socialists were so tumultuous that the gendarmes entered the building in which they were assembled on the pretence of putting a stop to such conduct. Their appearance, however, excited the feelings of those seated at the tables, who immediately shouted, "A bas les Blancs!" "Vive Ledru Rollin!" "Vive la guillotine!" "Vive les Rouges!" The gendarmes then arrested two of the ringleaders, and, while conducting them to prison, the rioters, who had received an accession of force from the people, pelted the officers with stones; so that it became necessary for the latter, in self-defence, to fire on the mob. The military were called out, and order was at length restored. These village *fêtes* are found to promote sedition, and, as they are increasing in violence, the Prefect of Ardèche has interdicted any further meetings in his department during August, September, October, and November.

A commission has been appointed to inquire into the affair. Several of the rioters are in custody. It was intended by their companions that an attempt should be made to release those arrested; but the appearance of the soldiers damped the ardour of the rioters, and they abandoned their design.

The public peace was also disturbed at Aix on the 10th by some individuals singing seditious songs. Four or five persons were taken into custody.

The *National* has published a document, seven columns long, in the name of the "*Comité Démocratique Européen Espagnol-Italien*," signed by the said committee, Lamennais, Joly, Mathieu (de la Drome), Schoelcher, Bianqui, Berthoion, Lasteyrie, and Michel (de Bourges). These gentlemen do not sign on behalf of a committee composed of French, Italians, and Spaniards—they are the whole committee. M. de Lamennais' only title to speak on the part of the Italians consists in his being an ex-priest of the Church of Rome. M. Joly has no nearer connexion with Spain than such as may be derived from his being one of the representatives of the Pyrenees. The writers, however, make out sufficient to satisfy themselves, they say: "By reason of their geographical position and their affinities of origin, of instruction, of ideas, of language, of interests, the Latin nations, France, Italy, and Spain seem to be the natural elements of this central focus, around which new elements will become grouped as fast as the necessity of unity shall make itself be felt, and as circumstances favour, favour we have effectively now. There will be, as it were, the point towards which converge in the evolution of the physical man the multiplied and divine organs of which the harmonious union forms the living body in its perfect integrity." The wildness and inconsistency Abbé de Lamennais, to whose pen this absurd *brochure* is ascribed, admits the propriety of the principles of property, family, and religion; and with regard to religion, the gentleman professes his latest invented creed, which, although it cannot be expected to last longer than any of his numerous vagaries in the same way, is worth noticing as a curiosity:—"Religion in our minds is the bond between man and God, and of God in one another; it is consequently the *ensemble* of the laws of intelligence and of love; it is progress without limits in science, in rights, and duties by the natural development of the free thought and the free conscience; it is the principle best calculated to secure perfect to society, as well as to individuals, of the holy maxims of universal brotherhood, one of which there is no life; it is in the bosom of peace, an eternal growth in the good and the beautiful."

It is the insane conduct of such dreaming visionaries that brings the noble cause of true liberty into contempt, and gives to the oppressors of the people a pretext for heaping them of freedom.

The President of the Republic has given 1000f for the relief of the inhabitants of the Isère, who have suffered by the late inundations.

The Electoral Union has dissolved itself. It was composed of Legitimists, Orleanists, and Bonapartists; but, as they are no longer united in object, it was thought advisable to separate.

M. Carnot is said to be the candidate that will probably be selected by the Mountain party for the Presidentship. The *Ordre* warmly supports the candidature of the Prince de Joinville.

The operatives of Paris have commenced preparations for the selection of candidates to be brought forward at the next election.

UNITED STATES.

Advices to the 7th instant have been received from New York, according to which the insurrection in Cuba was spreading in all quarters. It was said that the Spanish Consul-General, Concha, had been recalled. General Logue was stated to be about to sail from the United States for Cuba, followed by a number of men with arms. A "mass meeting" was held at New Orleans, where great excitement and enthusiasm on the subject prevails. There was much excitement also in Mexico. Several volunteers left that city on the 2nd instant, for Cardenas, and immense numbers were preparing, in the interior of North Carolina and Alabama, to join the insurrectionists. The United States government was, however, taking the most active steps to prevent any such interference, and preventing hostile expeditions to Cuba. The latest intelligence received in the States from Cuba, state that Trinidad and Villa Clara had taken side with the Spanish Government, and the Government of Havannah had declared that the Spanish rule is represented as general, and the young men of the first families were said to be on the side of the patriots.

From California we have accounts to the 3rd of San Francisco, July 1, by which we learn that the city had, for the sixth time in its short existence, been visited by another terrific fire, on June 22, whereby thirteen squares and parts of five others were destroyed between Pacific-street and Broadway and Clay-street and Montgomery-street. It was supposed to be the work of an incendiary. Several lives had been lost during the progress of the fire, and the total amount of losses is said to be over 4,000,000 dollars. The process of re-building had, however, already commenced. The accounts from the mines were encouraging, especially in the rotten quartz diggings. The prospects of the crops were good.

The Virginian State Convention for the revision of the constitution have reported an amended form of that instrument, which is to be submitted to the decision of the people on the 23rd of October next. The new constitution is highly democratic in its character, surpassing in that respect any previous fundamental law of the ancient commonwealth. Every free white male citizen of the age of 21 years is to enjoy the right of suffrage without regard to property qualifications. The judges of the several courts are to be elected by the people, and may be removed for cause by the Legislature. At the same time the provisions of the new constitution for the maintenance of slavery are of quite a stringent character.

Jenny Lind had returned from the north to New York, and it was expected that she would take her departure for Europe without giving any more concerts; but reports as to her intentions were conflictory.

WEST INDIES.

The usual monthly mail brings accounts this week from Jamaica to the 29th ultimo.

Cholera was still at its deadly work in the interior; and in many parishes where it had disappeared in July, and was carrying off its victims daily, the malady baffling the skill of the doctors.

From the other islands there is no news of interest. The *Bermudian* publishes a report of the crops, which promise to be abundant. It is "coming out strong" as a potato producing country, and that slot is now actively competing with native growers in the New York market, one of the cheapest and most extensive vegetable markets in the world, in the articles of potatoes, onions, and tomatoes. This is certainly a new return to be made of the products of the paragraphs mentions the superior quality of the potato, as well as the abundant return from seed planted.

INDIA AND CHINA.

Accounts by express, in anticipation of the Overland Mail, dated Bombay, July 5, Calcutta, July 3, and Hong-Kong, June 23, have reached town during the week.

The most prominent feature of the news thus conveyed is the number of shipwrecks noticed, both in India and China. The ship *Parsee Merchant* was lost on the coast of Oman on the 10th of June. The crew were all saved by a pilot boat. Another was luckily close by at the time of the wreck. On the 13th of June the Belgian ship *Philomene* was totally lost in the Hooghly. The crew were saved by the *Andrew Henderson*. The ship *Chebar* also was lost, off the coast of Batavia, on the 12th of May. Nine vessels have been wrecked, with pilgrims from Mecca, and the loss of very many lives; also the *Charlotte*, an English vessel crew all saved.

On the coast of China the following disasters took place; viz. severe injury to her Majesty's ship *Salamander* on her passage to Amoy; the dismasting of two merchant vessels, and damage to others, shortly after leaving Hong-Kong harbour; discovery of the direful sufferings of the crew of the barque *Serpent*, of Liverpool, that vessel having been wrecked in September last on the south coast of Formosa, where 20 of a crew of 31 were murdered under circumstances of extreme barbarity, the remaining eight being either drowned in an attempt to reach Hong-Kong, the three survivors making up the complement; loss of the brig *Velocipedeen* on the Pratas shoals; total loss of her Majesty's steam-ship *Reynard*, also on the Pratas shoals, that vessel having been sent, in company with her Majesty's ship *Pilot*, to rescue the shipwrecked men of the *Velocipede*; running ashore of the United States sloop of war *Marion*, on the coast of Formosa, when *en route* from Singapore to Amoy; capture of the brig of war *Lorcha* Sylph (close to Hong-Kong) and murder of all hands; unsuccessful attempt of the Portuguese corvette *Dom Jose II.* to reach Singapore, being obliged to return to repair damage, arrival at Hong-Kong of the Spanish frigate *Ville de Bilboa* for the purpose of being docked and supplied with a new false keel, having lost the old one by striking on some coral rocks on a recent occasion.

The only part of India which is not in perfect repose is the Deccan, in which all sent mues to fall into fearful anarchy, confusion, and insolvency. The Arab troops in his Highness the Nizam's pay are troublesome and mutinous, his treasury empty from extravagance and mismanagement, and his enormous debt to the East India Company daily increasing. This latter amounts to 80 lacs of rupees, or £850,000, and, as an indication of "the beginning of the end" of the present order of things, it is under consideration from the Court of Directors on the Governor-General having been invested by the result at Hyderabad, to take and keep possession of certain parts of the Nizam's dominions,

unless he repays at once the moneys due to the Government of India, with interest at 6 per cent. The districts of country about to be abandoned are, he said, all those on the other side of the Sabina River, Bachera, and Naldroog, besides Berar.

A subscription has been set on foot at Calcutta for building a sailors' home worthy of the port, and we are glad to find that upwards of 30,000 rupees have been collected in a very short time. Many of the individual contributions are extremely liberal.

The ragdad so long prevalent of the state of the health of European troops in India is now beginning to give way. The bulk of the Europeans in the Bengal army are now quartered in the hill stations in the north-west provinces. Barracks, for the accommodation of a large body of European troops in the Neilgherries, at an elevation of 7000 feet above the sea. Investigations are in progress at Bombay to ascertain the practicability of a sanatory at Mocrundhur, at elevations of above 4000, be the more suitable station, or whether it might not be judicious to adopt both. The expensive barracks built for Europeans at Hyderabad in the Deccan are now untenanted at that locality, and none but natives be ever quartered away from the coast, unless in case of emergency. At Bombay the Colaba barracks, long notable for their liability to fever, are to be abandoned, and quarters built for the troops in the fine range of Chilcombay Hill, near Bareli, six miles from the fort, and 200 feet above the sea close by. The railway is on one side, the best accomodation at Sewree on the other.

From China we learn, with respect to the rebellion against the Tartar dynasty and the present occupant of the Imperial throne, that the Tartar Prime Minister Sa-shang-ha had left the capital for the seat of war, had halted on the borders of the Honan province (the old adjoining Kwang-si), whence he writes to the Emperor that he finds himself surrounded by rebels to sovereign authority, whom it is necessary to put down before proceeding further. Tah-tung-ha is said to be sick. Of the other commissioner we hear nothing. Wei-lan-tai, lieutenant-general of Tartar troops at Canton, left his garrison about a fortnight ago with the intention of coalescing with the commissioners.

The pretender Emperor is reported to be stopping at Sin-chau, a departmental city in Kwang-si, having a water communication with Canton, from whence it is distant about 200 miles. In a letter from one of his followers, we find it stated that Teen-teh is himself at the head of the rebel forces, whom he led to victory "In the middle term of the third month of the present year" (about three months ago), "when 10,000 of the Government troops were destroyed, being hemmed in in a narrow pathway through a wood in a mountain pass." Having been duly proclaimed emperor, Teen-teh dates the commencement of his reign from the month of September of last year, and has published an almanack, which his emissaries are distributing in various parts of the empire. In Kiang-si, the province between Hunan and Fokien, great demonstrations are made in his favour.

ASCENT OF MONT BLANC.

The following extract from a letter received from Mr. Albert Smith, who has succeeded in effecting the perilous ascent of Mont Blanc, conveys an idea of the difficulties of the feat:—

(To the Editor of the ILLUSTRATED LONDON NEWS.)

"Permit me to trespass a little on your valuable space, while I inform yes of our successful ascent of Mont Blanc, on Tuesday and Wednesday, the 12th and 13th inst. I was accompanied by Mr. Percy Sackville Wyndham, Mr. Christopher Floyd (a cousin of Sir Robert Peel), and Mr. Phillips, of Christchurch, Oxford. We started from Chamouny at half-past seven in the morning, with sixteen guides, and almost as many porters, and crossing the Glacier des Bossons, arrived at the Grands Mulets rocks, where we were to sleep, above the level of perpetual snow, at a quarter-past four P.M. Here we made our bivouac, having brought up wood for a fire, and stopped until midnight, when we again set off, with lanterns (as the moon was not up), and reached the grand plateau at four in the morning. This is where the party was swept away by the avalanche during Dr. Hamel's fatal attempt in 1820, and we hurried to keep dead silence as we crossed. Finally, after a good deal of danger and fatigue, we all got safely to the summit at half-past nine on Wednesday morning, without a cloud to destroy the wondrous view. Mont Blanc had never before been invaded by such a large party. The return was accomplished in much less time, but the danger was greater, through an unexpected thaw on the glaciers below the Grands Mulets. However, the whole party got to Chamouny at half-past six in the evening, where we were welcomed with great illuminations, and every kind of demonstration the inhabitants (who had watched us all the way with telescopes) could command.

"On the night of the ascent Sir Robert Peel was at Chamouny, and invited all the villagers to a supper, to drink to our successful return."

ANOTHER ACCOUNT.

CHAMONIX, August 14.

This quiet alpine valley has for the last week been in a most unusual state of activity and excitement. About seven days ago the people learnt that three students from the University of Oxford and an English author were getting themselves into condition for attempting the ascent of Mont Blanc. Guides and travellers were arriving on the qui vive, and the adventurous party were regarded with much interest wherever they went. On Tuesday morning, at seven o'clock, all the preparations being complete, the party set out from the Hôtel de Londres. It included Mr. Floyd, and his son of the same name, and cousin of Sir Robert Peel; Mr. Phillips, a third Oxford man, and Mr. Albert Smith, with 16 guides, 15 porters, and a number of aspirants for the post of guide, who attended the voyageurs and their paid party for the purpose of hearing the route to the summit of the mountain. After their departure telescopes were fixed from the windows of the inn, and in other places, to watch the progress of the adventurous party, who

PEACE, TEMPERANCE, AND BOND OF UNIVERSAL BROTHERHOOD FESTIVAL, AT HARTWELL, BUCKS.

world. The seam of coal found is 3 ft. 10 in. thick, and the best for coking purposes. The proprietor of these new works is the contractor for supplying all the coal used on the Great Western Railway for coke. Notwithstanding the immense progress making here in mining adventure, what has been done, compared to the immense field still untouched, is best summed up in an expression of Sir Henry de la Beche some years ago, when surveying geologically this county, "This mineral basin," said Sir Henry, "has hitherto only been scratched."

HARTWELL FESTIVAL.

The tenth annual gathering of the friends of "Universal Peace, Temperance, and Brotherhood," at Hartwell Park, near Aylesbury, Bucks, took place on Wednesday and Thursday, the 13th and 14th instant. The weather being propitious, the festival was attended by great numbers of both sexes, and the beautiful park was teeming with animation and gaiety. The interesting mansion, formerly the residence of Louis XVIII. of France while in exile, together with the grounds at various points, exhibited the flags of all nations, in harmony with the design of the festival, viz. "*Peace and good-will among men.*" The business was conducted by a committee of Aylesbury and the vicinity, much to their credit for the order and the gratification of the meeting.

On these occasions Dr. John Lees, F.R.S., &c., opens his mansion and his park for the accommodation of the numerous visitors; and, with a cordial hospitality and generous concession to the public, as well as his friends and neighbours, diffuses, by his countenance and example, the spirit which the name of the festival expresses; an example duly appreciated by the liberal and benevolent, and one which it were to be wished more generally pervaded the higher class to which the learned Doctor appertains.

"Aylesbury, with a population of 6000 souls, possesses not an inch of ground for the recreation of man, woman, or child." This beautiful spot, within two miles of the town, is, therefore, resorted to with eagerness, on the announcement that its gates are opened for two happy days of festivity and intellectual and benevolent attractions.

On Wednesday afternoon, as the accompanying Sketch represents a large and well-conducted assembly was seated before a platform extemporised out of several farm waggons, and sheltered by suitable awnings, in case of need, from our variable climate.

The business commenced under the presidency of a gentleman from Amsterdam, M. Suringar, distinguished in his own country for works of benevolence in which he has expended a considerable fortune. He spoke mostly in English, recommending the objects of the meeting, and observing, that the great duty of man is "to give and to forgive." The intemperate has nothing to give, and the quarrelsome is unforgiving.

Dr. Lee welcomed his friends, neighbours, and visitors to the festival; adverted to the progress of the cause of peace since their last meeting, by the opening of the Crystal Palace, by the pacific character of the late Royal speech, by the great Peace Congress of London last month, and by the impression made on the minds of all classes among us, as particularly exemplified by the eminent astronomer, Mr. Hind, naming his last new planet "Irene," or "the Planet of Peace." The learned Doctor then touched on the progress of the temperance movement in the United States, France, Germany, Norway, and Sweden, as well as in Great Britain. In connexion with further remarks on the bond of universal brotherhood, so zealously promoted by Elihu Burritt, he introduced to the meeting a great work by Mr. Leone Levi, on the establishment of a code of international law, patronised by Prince Albert, Lord Harrowby, and other persons of high distinction—a work of important influence in the advancement of the peace of nations.

Several gentlemen then successively addressed the meeting, until five o'clock, when there was an interval for taking refreshments in the spacious booths on the ground, and for various sports and recreations among the young people, who all heartily and thoroughly enjoyed their holiday. The proceedings were enlivened by an excellent band of musicians from Thame.

In the evening, speaking was resumed, and the festivities of the day were concluded by the ascent of a handsome fire-balloon, which careered its brilliant way through the sky with intelligence to town and country of the peaceful issue of the day; while the very heavens themselves testified to the same event by one of the grandest pyrotechnic displays we ever witnessed—a magnificent towering alpine cloud, illuminated with awfully grand corruscations and flashes of lightning, indicating the presence of a storm, which was afterwards known to have burst with great violence over the country no further distant than five miles.

The following day was occupied in a similar manner to that just described.

The persons who addressed the meetings rose as follows:—The Rev T. Fyne, A.M.; Dr. Lovell, Mr. Lockhart, Rev. Amos Dusser, of Ohio United States; Mrs. Hiram Tracey, from Columbia; Mr. Adams, o Luton; Mr. Chamerovzow (secretary of the Aborigines Protection Society); Mr. John Houghton, Mr. Elihu Burritt, Mr. Charles Gilpin, of London; Mr. Gamble, of Berkhampstead; Miss Ann Knight (Society of Friends); Mr. J. Gibbs, Rev. Joshua Turnbull, A.B.; Dr. Camps, M.D. James Yates, Esq., A.M., F.R.S.; W. H. Black, Esq.; Rev. H. Richard (Secretary of the Peace Society).

A great variety of topics, as well as of eloquence, was thus secured, and the great and sacred cause of peace, sobriety, and brotherly feeling in the human family was, no doubt, much promoted by the festive gathering.

FETE IN CELEBRATION OF "WINNING THE COAL," ON THE RHONDDA BRANCH OF THE TAFF VALE RAILWAY.

THE WAR IN KAFFRARIA.—KAFFIRS ATTACKING INFANTRY IN KEISKAMMA GORGE.—(SEE NEXT PAGE.)

THE ROYAL BELGIAN YACHT CLUB.

This superb cup, presented by his Majesty the King of the Belgians to the Royal Yacht Club, was sailed for by luggers, schooners, and cutters,

CUP PRESENTED BY THE KING OF THE BELGIANS TO THE ROYAL BELGIAN YACHT CLUB.

on Wednesday. The prize is of elegant design, by M. Durlet, of Antwerp; and has been executed in silver-gilt, beautifully chased, by M. Dufour, silversmith to the king, at Brussels. The bowl, or rather tazza, bears representations of sailing matches, and is surmounted with the civic arms and other insignia. The cup is placed upon a circular pedestal, bearing the Belgian crown and the legend "Royal Yacht Club Belge," which the designer of the cup has erroneously inscribed for "Yacht Club Royal Belge."

EXTENSIVE FIRE AT RICHMOND, AND DESTRUCTION OF PROPERTY

On Saturday morning, between the hours of one and two, the town of Richmond, in Surrey, was thrown into a state of the utmost alarm and confusion, in consequence of the sudden outbreak of one of the most serious fires that has occurred in that locality for many years: and although an immediate and abundant supply of water was obtained, yet the flames continued to rage for hours. This terrible disaster originated on the premises of Mr. Andrews, a fancy bread and biscuit baker, situate in Upper Hill-street, about a quarter of a mile beyond the Castle Inn, and on the opposite side of the road. Within 100 feet of the house were two large chapels, one belonging to the Independents, and the other to the Roman Catholics.

The outbreak was discovered almost simultaneously by a police constable of the V division, who was on duty in the street, and Mr. Andrews, the owner of the premises. Before the policeman had time to spring his rattle, he found that Mr. Andrews was aroused from sleep by a loud crackling noise in the house. He instantly jumped out of bed; a loud crackling noise in the house. He instantly jumped out of bed; huge volumes of heated smoke, accompanied by showers of sparks, were mounting towards his bed-room. Mr. Andrews aroused his wife and family, consisting in the whole of six persons. By desperate exertions the residents were enabled to rush through the smoke, and they succeeded in gaining the street; but they had scarcely done so when the flames shot forth from every window in the premises, and quickly fired the workshops of Mr. Webster, a cabinet-maker, next door, and in a few minutes the workshops and the front premises were in a blaze. Mr. Webster, who was confined to his bed with illness, was unable to get up; but several persons rushed through the smoke and heat, and succeeded in carrying him out into the street.

The two engines belonging to Richmond parish were, as soon as possible after the outbreak, on the spot, and, plenty of water being obtained, they were called into immediate requisition; and, shortly afterwards, those belonging to Twickenham parish attended, and were likewise set to work. The persons in charge of the engines, seeing that it would be impossible to save any portion of Mr. Andrews' premises, at once set to work, and did all they possibly could to cut off the further extension of the fire in the direction it was then taking, towards the premises of Mr. Luckett, a carver and gilder, and the two chapels in the Vineyard. In a very short space of time Mr. Luckett's workshops presented a general

RUINS OF THE FIRE AT RICHMOND, ON SATURDAY LAST.

blaze, and the flames were carried by a stiffish breeze through the side windows of the Independent Chapel into the midst of the edifice; when the pews and other wood-work took fire, and the flames rose through the roof so high in the air as to light up the country for many miles distant. Seeing the great danger that the adjoining (Roman Catholic) Chapel was exposed to, as well as several other premises, a mounted police-officer was dispatched to London for additional assistance. The moment the express arrived, the brigade engine from the Southwark Bridge-road station, under the direction of Mr. Henderson, the foreman of the southern branch of the London establishment, with a body of firemen, started off for the scene of conflagration.

The firemen and engine belonging to the West of England Insurance Company, under the charge of Mr. Connorton, were also despatched to render assistance. Upon reaching the spot a fearful wreck presented itself, for the whole of Mr. Andrews' premises, together with the workshops of Mr. Luckett and Mr. Webster, as well as the spacious chapel belonging to the Independents, were nearly levelled with the ground, and the flames were still ascending many feet above the house-tops. The whole of the firemen from town, as well as those belonging to the local engines, worked in a most praiseworthy manner for several hours, when they at length got the fire safely extinguished. The total loss must reach many thousand pounds. The whole of the beautiful fittings in the chapel, together with the organ, are consumed. The property of Messrs. Andrews and Webster was insured; Mr. Luckett uninsured; chapel insured

THE KAFFIR WAR.

In our Journal of last week we recorded the state of affairs in Kaffraria, to July 4. The Engraving upon the preceding page illustrates the mode of warfare pursued in this protracted struggle. It shows an incident in the attack of the Colonial Forces under Colonel Mackinnon, from a Sketch received last week from Mr. Thomas Baines, of Graham's Town. We gather from the despatch, dated from near Uniondale (Niveris) Mission Station, December 24, 1850, that Colonel Mac Kinnon marched from Fort Lee, at daybreak, on the following force:—4th Regiment—3 officers, 236 rank and file; 73rd Regiment—2 officers, 71 rank and file; C. M. R.—7 officers, 167 rank and file; Kaffir police—2 officers, 90 rank and file. The Colonel proceeded up the valley of the Keiskamma, meeting with the most friendly conduct on the part of the Kaffirs until within about three miles of the station. He had particularly cautioned the officers and men to molest no one on the march, and not to fire unless attacked. Whilst passing through a narrow rocky gorge of the Keiskamma, where the men could only proceed in single file, a fire was opened on the column by Infamy the Kaffir Police and Cape Mounted Rifles having already passed the spot. The fire was most resolutely maintained for a considerable period, and the nature of the ground was such that the troops could not dislodge the Kaffirs until they had sustained a severe loss, and the C. M. Rifles and Kaffir police could not be used in any way to turn the flanks of the attacking party. Assistant-Surgeon Stuart, C. M. Rifles, 1 corporal and 9 privates of the 6th Regiment, and 1 corporal of the 73d Regiment, were killed. Brigade Major Bisset, C. M. R., and Lieut. Catty, 6th Regiment, were wounded severely (not dangerously); 5 privates, 6th Regiment; and 2 privates, 73d Regiment, were also wounded.

The troops at last succeeded in clearing the bush and rocks of Kaffirs, and in killing a considerable number. The Colonel then proceeded to the neighbourhood of this station, as affording a good clear ground for an encampment, and because he was anxious to afford protection to the Missionary. The Colonel describes the conduct of the troops and Kaffir police to have been admirable; and every possible aid was received from the officers commanding the different corps, viz. Lieutenant-Colonel Napier, commanding Cape Mounted Rifles; Captain Robertson, 6th Regiment commanding the Infantry; and Superintendent Davies, commanding the Kaffir police. The services of Major Bissett, Brigade Major, were most valuable.

CALENDAR FOR THE WEEK.

SUNDAY, August 24.—Tenth Sunday after Trinity. St. Bartholomew.
MONDAY, 25.—David Hume died, 1776. Herschell died, 1822.
TUESDAY, 26.—Prince Albert born, 1819.

GUY'S.—THE MEDICAL SESSION COMMENCES on the

FIRST of OCTOBER. The Introductory Address will be delivered by DR. BENJAMIN ELLIS BABINGTON, F.R.S., on the First of October, at Two o'clock.
Gentlemen desirous of becoming Students are first satisfactorily to make out their claims and conduct. They are required to pay £40 for the first year, £40 for the second year, and £40 for every succeeding year of attendance; or the sum of £100 in one payment will entitle a Student to a perpetual ticket.
Dressers, Clinical Clerks, and Resident Obstetric Clerks, are selected according to merit from those students who have attended a second year
Mr. CLARKE, Apothecary to Guy's Hospital, is authorised to enter the names of Students, and to give further information if required

NEW ZEALAND.—FOR PORT LYTTLETON, WEL-

LINGTON, and NEW PLYMOUTH, the first ships sail in MARCH, and afterwards in APRIL and MAY, from every month. Apply to JAMES MACKAY, Jun., 7, Bank-buildings, Lothbury, London. Return Tickets issued at reduced rates. Parties may secure their passages by paying a deposit of £5 per adult, which will be returned if the vessel is not despatched. Each adult is allowed 20 cubic feet of luggage free. Persons not intending to proceed to the Colony may have their luggage warehoused at moderate charges. Further particulars may be obtained at the Office of the New Zealand Company, 2, Adelaide-place, London-bridge.

BADEN-BADEN.—Season of 1851.—This year, as usual, the

Season, which commences on the 1st of May, and terminates on the 31st of October, will be enlivened by many new and attractive arrangements. The Conversation Rooms have been redecorated, with a splendid concert and ball saloon attached to them. The gaming tables have been renewed, and augmented by several. The Concerts and Promenades are arranged daily of the most varied and distinguished character. The Theatre will be opened on the 1st of May, and the Direction is engaged. It is also in contemplation to establish a Casino for the reception of Ladies and Gentlemen, with Reading-rooms, &c. The Baden Railway is likewise open. The Hotels will be found fully equal to the accommodation of visitors, and the charges moderate in short, by Regimen, Recreation, and the Genius Loci, a most healthy resort.

MONDAY, AUGUST 25, THE GAMESTER, APARTMENTS, and the ALHAMBRA. 25, The Duke's Wager, Apartments, and the Alhambra; 26, Love in a Maze, Apartments, and the Alhambra; 28, The Wife's Secret, Apartments, and the Alhambra; 29, Two-fib Night, Apartments, and the Alhambra; 30, The Duke's Wager, Apartments, and the Alhambra.

ST. JAMES'S THEATRE, King-street, St. James's.—Under the direction of Mr. BARNUM, of New York.—First appearance in England of KATE and ELLEN BATEMAN.—Mr. Barnum respectfully announces to the Nobility, Gentry, and the public generally, that he has succeeded in securing the express of Miss Kate Bateman to their notice those talented and juvenile dramatic performers, Kate and Ellen Bateman, only 8 and 6 years of age, both of whom are Tragedy and Comedy. To give due effect to their representations, he has secured the services of a talented and efficient dramatic company. On MONDAY NEXT, the 25th inst., will be presented a Comedy, in three acts, entitled THE CAPTAIN IS NOT A MISS. To be followed by the FIFTH ACT of Shakespeare's Tragedy of OTHELLO. Iago, Mr. Barnum; Othello, Mr. Bond; Desdemona, Miss Bateman. Grand Pas Espagnol, "La Manola," by Mdlle. Therese Cushnie and M. Milano. After which, an entirely new piece, to be entitled the YOUNG COUPLE. Charles de Bonville, Ellen Bateman; Henriette de Vigny, Kate Bateman. On each evening will be a new Ballet Divertissement from LA VIVANDIERE.—Doors open at Seven o'clock. the performance to commence punctually at Half-past Seven. Stalls, 5s; Second Seats, 4s; Pit, 3s 6d; Amphitheatre, 2s; Private Boxes, 21 1s 6d, and 1l 8s. Private Boxes Stalls, and tickets may be secured at Mr. MITCHELL'S Royal Library, 33, Old Bond-street; and at the Box-Office of the Theatre, which is open Daily, from 1 till 5 o'clock.

THEATRE ROYAL, DRURY-LANE.—Enormous Success.—

Patronised Nightly by crowded and Fashionable audiences.—Under the management of Messrs. BRAHAM and HARRIS.—The Public are respectfully informed that the ENGLISH OPERA COMPANY, the Principals comprising Miss Cawse, Mr. Wilbye Cooper, Mr. H. Corri, Mr. Manvers, and Mr. Weiss, with the Wild Horse, Mons Loisset, and Young Bedzies, having resolved to visit the Provinces previous to their departure for the Continent, will positively remain in London a short period longer. The routine of Classical Scenes of Equitation highly exhibited in the Arena of All Nations, presents an array of talent never before witnessed in England.—Attention is directed to the present reduced Scale of Prices.—Dress Circle, 3s; Boxes, 2s; Pit, 1s 6d; Gallery, 1s. Upper Gallery, 6d.

ASTLEY'S ROYAL AMPHITHEATRE.—Proprietor and Manager, Mr. W. BATTY. 5th Night of the unprecedented career of MAZEPPA, or, the Wild Horse! The present extraordinary success fully warrants the Proprietor in announcing its repetition for every evening until further notice. On MONDAY, AUGUST 25th, and during the Week, Lord Byron's Spectacle of MAZEPPA and the Desert Steed; to be followed by Batty's unrivalled and solique Scenes of the Circle, introducing the highly popular company of unrivalled artistes. To conclude with the Grand Divertissement, to be terminated with a Laughable Afterpiece.—Box-office open from 11 till 4.—Stage-manager, Mr. T. Thompson.

THE most attractive of all Exhibitions in London is BATTY'S HIPPODROME, KENSINGTON, opened every day at Five o'clock.—The wonder of the daring feats performed has astonished all the town and country; for the fasturing manner the Resuscitation Equestrians have performed in the principal cities of this country would be indeed Mr Batty to assure his patrons that nothing shall be wanting on his part to retain the public favour, and support the new arrangements. Mr. HAMPTON to make TWO ASCENTS in his magic floats BALLOON the Rob-go-bragh. The first will take place on TUESDAY, August 26th, and on every Monday, Wednesday, and Friday.
On THURSDAY there will be a grand DAY PERFORMANCE, embracing all the talent. Doors open at One, to commence at Two precisely.—The Performances in the Evening, as usual, at Six o'clock. Admission: To Private Boxes, £1 1s; Reserved Seats, 3s; First Class, 2s; Second, 1s. Third, 6d.

ROBIN'S 294th, APPEARANCE.—Unprecedented and

fashionable success nightly, before delighted and overflowing audiences, at the Egyptian Hall, 232, Piccadilly, opposite the Haymarket.—At Eight o'Clock every evening, M. and Madame ROBIN will perform, for one hundred nights, their inimitable SOIREES FANTASTIQUES and FANTASTIQUES, with an entirely new Programme, which contains all the divisions performed by command before her Majesty the Queen, at Windsor Castle, in the Theatre Royal, on the 25th of April.—Every Wednesday, at Half-past Two o'Clock, a Morning Performance.

SYRIAN LADIES and MUSICIANS.—The First Syrian

Performers who have appeared in London (the SYRO-LEBANON COMPANY) recently arrived from Aleppo, and are performing, every evening, in the SECOND SALOON, (the large oriental instrument), and meets Tents from the "Arabian Nights," at the large original DIORAMA of the HOLY LAND, EGYPTIAN-HALL, at 8 and 8.—Admission, 1s; Pit, 1s 6d; Stalls, 2s 6d. Egyptian-Hall, Piccadilly.

THE WORCESTER MUSICAL FESTIVAL.—Under the

immediate Patronage of her Most Gracious Majesty the Queen and his R yal Highness Prince Albert.
This Festival, for the Benefit of the Widows and Orphans of Clergymen in the Three Dioceses of Worcester, Hereford, and Gloucester, will take place in the NAVE of the CATHEDRAL, and up to the COLLEGE HALL, WORCESTER, on TUESDAY, the 26th of AUGUST next and the three following days.
On Tuesday Morning, Grand Choral Service, with Tel's's "Process and Responses," Handel's "Dettingen Te Deum" and "Jubilate," and a selection of Anthems. On Wednesday, Mendelssohn's Oratorio "Elijah;" Beethoven's "Sanctus," and Handel's "Hallelujah Judgment;" and on Friday, "The Messiah." There will be Three Grand Miscellaneous Concerts on the Evenings of Tuesday, Wednesday, and Thursday, the 26th, and Thursday, the 28th of August, comprising selections from Mendelssohn's "First Walpurgis Night," Beethoven's "Mount Olive," Spohr's "Jessonda," F. Mori's New Cantata, "Fridolin," and Weber's "Euryanthe."
Principal Vocal Performers:—Madame Castellan, Miss Birch, Miss Dolby, Miss Williams, Mdlle Sidi-Cruvelli, Mr Phillips, Mr Lockey, Mr Machlin, and Mr Hobbs, Principal Instrumentalists, Conductor, Mr Done.
The Midland Railway Company have assented to convey persons attending the Festival for One Fare to and from, the Tickets to be available through the week of the Festival.
A Special Train will leave Birmingham on Wednesday, Thursday, and Friday Mornings at 8s 30m, calling at the intermediate stations.
The London and North-Western Company have assented to issue Day Tickets from London and intermediate stations, available through the week of the Festival.
Tickets for the Festival, Single Seats, Western Gallery, 2s 6d; Aisles, 5s; Area, 10s 6d; Nave, 10s 6d; Transept, 15s; Choir, 21s; Reserved Seats, 25s. Tickets for all the Performances, £3 each, and Tickets for each Performance, £1 each.

THE CARTOONS of RAPHAEL, in the possession of Mr.

LOUDMANOFF, which have produced so great a sensation are EXHIBITED DAILY (only for TWO WEEKS, at the MUSIC HALL, Store-street, Bedford-square, from 10 till 4.—Admission, 1s.

THE HOLY LAND is at the EGYPTIAN HALL.—The only

Great sacred Diorama of the HOLY LAND and JERUSALEM, exhibiting the streets of the Holy City, the Mountains of Judea, and the Valley of Jehoshaphat, Pool of Siloam, Mount Zion, the Site of Solomon's Temple, Jews' Place of Wailing, and the Holy Sepulchre, with magnificent Views of Jerusalem; and accompanied by grand Sacred Vocal Music. Daily, at 12, 3, and 8 o'clock.—Gallery, 1s, Reserved Seats, 2s; Stalls, 3s 6d.—Only at the ST. GEORGE'S GALLERY, HYDE-PARK CORNER.

THE GREAT EXHIBITION and the ROYAL POLYTECHNIC INSTITUTION.—

ALL the MOST INTERESTING OBJECTS in the GREAT EXHIBITION will, in turn, be LECTURED ON at the ROYAL POLYTECHNIC INSTITUTION.—The present Lectures are by J. H. Pepper, Esq., on the Minerals and Base Metals in the Great Exhibition; by Mr. Barrett, assisted by Mr. Bachhoffner, on the recent Total Eclipse of the Sun, with splendid Diagrams, showing the appearance which actually occurred on the line of Totality. The great economy of Cooking by Gas explained. A Lecture on the History of the Harp, by Frederick Chatterton, Esq., with Vocal Illustrations. Two Series of splendid Dissolving Views. Diver and Diving Bell, &c.—Admission, 1s; Schools, Half-price. Open daily from Half-past Ten till Five, and every evening from Seven till Half-past Ten.

ZOOLOGICAL GARDENS, REGENT'S PARK.—The

URAN UTAN, presented by the Governor of Singapore, is exhibited DAILY, from TWELVE to SIX o'Clock; together with the ELEPHANT CALF, and the HIPPOPOTAMUS, presented by his Highness the Viceroy of Egypt. The band of the First Life Guards will perform, by permission of Colonel Hall, at Four o'Clock, on every SATURDAY, until further notice.—Admission, ONE SHILLING; on Monday, SIXPENCE.

THE GROTTO, in OATLANDS-PARK, WEYBRIDGE, constructed by the Duke of Newcastle, at a cost of £40,000, can be viewed only on Saturday, Sunday, and Monday afternoons. Trains from Waterloo-bridge.

INCLUDING
AN EXHIBITION SUPPLEMENT,
PRICE ONE SHILLING,
IS PRESENTED
A SHEET OF SKETCHES IN LONDON, GRATIS.

Next week we shall illustrate the *America*, Schooner at Cowes; the Stephenson Banquet at Bangor; the Inauguration of the Nantes Railway; the New Victoria-street, &c.

L'EDITION FRANCAISE.

L'ILLUSTRATED LONDON NEWS, en FRANCAIS.

Renferme dans son Numéro de SAMEDI, 23 AOUT, toutes les nouvelles les plus intéressantes dans la politique, la littérature, les arts, le théâtre, &c. On y trouvera aussi divers articles de fonds et de détail, ainsi qu'un Chronique de l'Exposition. Le plupart de ces articles sont accompagnés de belles Illustrations.
Tous les Numéros qui ont paru depuis le commencement ont été réimprimés. On peut se les procurer séparément, ou réunis en un brochure, avec une couverture magnifiquement illustré. Prix du Cahier, contenant Douze Numéros et une magnifique Vue du Palais de Cristal tirée à part, 6 shillings.
NOTA.—Les Propriétaires de l'ILLUSTRATED LONDON NEWS croient devoir faire observer ici, que le Journal Français publié sous le titre ci-dessus n'est point une traduction de l'Edition Anglais, mais bien une publication avec rédaction toute séparés et dirigée à Londres par des écrivains de la presse Parisienne.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 23, 1851.

SINCE the conclusion of the war in the Punjaub, the news from India has, generally speaking, been of a satisfactory character. If unexciting in a newspaper sense, it has by no means been unimportant. The shrewd, sensible, but stinging reproof of the Commander-in-Chief to those Anglo-Indian officers who lived beyond their means, and thought it no discredit to do so—and the personalities, in more questionable taste, addressed by the same eccentric hero to the Governor-General—have formed the most prominent topics of the papers and letters which the Overland Mail has brought us. All the rest has been a record of peaceful improvement, of the gradual consolidation of our power, of the development of the internal resources of a vast empire, and of the extension of commerce; scarcely varied even by a rumour of a less agreeable complexion, unless an occasional squabble on the remote frontiers with the hill chiefs be considered an exception. The latest intelligence, which reached this country at the beginning of the present week, is somewhat different, and announces another extension of our territory at the expense of a native Prince, and our possible involvement in hostilities with the numerous and ambitious, as well as daring and needy soldiers that swarm in his dominions. The chief ruler of the large and important territory known as the Deccan, or the South, and who is commonly designated by the title of the Nizam, or the Administrator, has long been indebted to the East India Company for services rendered at a time when the Deccan imperatively required our aid. That debt now amounts to upwards of one-third of the total revenues of the country, and is annually increasing. The Nizam's exchequer is represented to be in a state of hopeless insolvency, and the general condition of the Deccan to be the worst which it is possible to conceive. The country is over-run with Arab and other soldiers, who have not received their pay for many months, and who in consequence are not only troublesome and mutinous and difficult to restrain, but who occasionally relieve their wants by single or combined acts of highway robbery and spoliation. "Where the carcase is, the eagles will be gathered together," and, allured by the hope of plunder and the scent of bloodshed, the banditti of war, and all the unscrupulous and discontented spirits who would delight in an opportunity to imitate the example of the Afghans and the Sikhs, and to strike a blow against our supremacy in India, flock into the Nizam's territory, and by their proceedings open or cover, create an impression that mischief is impending. Whether the Nizam encourages the idea, that by the result of a contest he might avoid paying the heavy debt which he owes the Company, and satisfy, at the same time, the claims of his rebellious soldiery, is not at present apparent; but the Governor-General, acting upon instructions from England, has determined to bring matters to a crisis by the formal confiscation of a portion of his dominions. "The country thus to be taken consists," as we are told by a daily contemporary, obviously receiving official information, "of a tract of territory between the Khistna and Tumbooddra rivers, a part of Beraz, the northern province of the Nizam's dominions, and some frontier districts on the line of the Godavery and the Bheema rivers." The revenues of these districts, which are represented as fertile and susceptible of great improvement, are estimated at about thirty-five lacs of rupees, the Nizam's debt to the British Government being eighty-four lacs. The British officers designated by the Governor-General for the administration of the ceded province are Captain Meadows Taylor, Mr. Dighton, and a third gentleman not yet named. Thus widens the circle of British rule in India. Thus we are compelled to annex the territories of tributary princes; and in self-defence, no less than in the general interests of the civilisation and good government of a magnificent empire, we are constrained, whether we like it or not, to swallow up in the great and greedy vortex of our dominion every semi-barbarous power within the limits of our influence. This portion of the Deccan having been annexed, the remainder will, sooner or later, be sure to follow. The ultimate consummation will probably cost us much trouble, and be accompanied by an effusion of blood as well as of treasure; but that it will tend to the improvement, civilisation, and happiness of the sorely misgoverned territories of the Nizam, there can be no reason to doubt. It is possible that the rumours of the last mail upon this subject are premature; but the catastrophe, though it may be delayed by the policy or the forbearance of the Indian Government, will not be averted. The fate of Scinde and the Punjaub will be the fate of the Deccan; or like causes will not produce like results, and the past history of India is no guide to the comprehension of the future.

SKETCHES OF LONDON IN 1851.

(*See the Large Sheet of Engravings given with the present Number.*)

Of all the wonders which will strike the stranger on his visit to "The World's Fair" of 1851, there is not one greater, more unique—not one which in after time he will look back upon with more lively feelings of interest and admiration, than "the Great Metropolis" in which that Fair was held: its miles upon miles of solid brickwork; its miles upon miles of streets, teeming with life and excitement in the great industrial struggle; its bold old river, bearing on its bosom the spoil of the wide world's industry; its broad acres of park land and public gardens, crowded with joyous holiday-makers or giddy idlers; finally, and in a

word, it is two millions and a half of inhabitants a population as numerous as that of some European kingdoms, all going on their way, and making their way upon the simple principle of "minding their own business," all supplied, through various voluntary but unerring channels, with daily food and raiment, and all housed, somehow or other, either at their own or the public expense, at night. Wonderful world: to which the whole world cannot produce an equal; world full of wonderful wealth, and exalted virtue, and bright talent; world loaded with poverty, and degraded squalor, and fearful crime!

We this week present our readers with an extra sheet—a kaleidoscopic view of some of the principal scenes of the London traffic in the first and second weeks of August; scenes which many from far distant parts have recently visited, or are now visiting, for the first and only time in their lives. And often, if we mistake not, will many of these, in after years, look with pleasure upon this memorial of an eventful passage in their lives, the essential features of which, as they will remain without parallel, will never be wholly effaced from their minds.

In the central compartment we have a general view of the Bank (on the left), the Royal Exchange (in the centre), and the Mansion House (on the right), as seen from the Poultry. This is the heart, from which the great arteries of life diverge on every side—this, in short, is the starting-point of at least 2000 out of the 4000 or 5000 omnibuses, which each make their eight or ten journeys a day through the town, so that there are at least fifteen or twenty thousand omnibus arrivals, and as many departures at this point in the course of a dozen or fifteen hours; to say nothing of private carriages, hack cabs, carts, waggons, and other horless other conveyances: the resulting scene of confusion may be better imagined than described. This is also the goal to which your men of business, whether merchants or shipowners, little general salesmen, or bill-brokers, or stock brokers, or bankers, or bill discounters, direct their steps—many of them with anxious hearts—at nine o'clock every morning throughout their lives, returning to their homes between four and five. In the compartment above, we have "the silent highway," as old father Thames was once called; now, perhaps, the noisest thoroughfare of the whole, groaning and hissing with its daily load of countless steamers, some trim and outward bound, some working their way with ponderous action to Rotterdam or Hamburgh, others flitting lightly up to Battersea, Putney, and Hampton Court. To the left is Hyde Park Corner, a well known land-mark now for many years to which the civilised world is heading for the Great Industrial Exhibition of 1851: and here notably our artist has seized the moment when the whole host of omnibuses and vans and other vehicles various and strange are pushing on their way towards the Crystal Palace, a goodly phalanx of them lining the path on either side. Here, high towering in the midst, is the great bronze statue of the Iron Duke, over the gate at Constitution Hill, [illegible] At the [illegible] represent the charming purlieus in Hyde Park, north of the Serpentine, the Crystal Palace forming a charming object in the background—a spot where, at five o'clock daily, throughout "the season," men of business and men of fashion mingle with the fairest beauty of the land, and forget for the moment the cares attendant upon the making and squandering of fortunes. Lastly, to the right, we have Kensington Gardens—as fair and ambrosial a retreat as poet's fancy ever pictured—a veritable *Arcadia in urbe*, graced and enlivened at eventide, particularly on the days when the band plays, with gaily disposed groups of pedestrians, such as Watteau loved to paint.

Such is a bustle of struggling industrial London—such the giddy vapouring of idle, holiday London—such some of the diversified materials which constitute "Life in London!"

COURT AND HAUT TON.

THE COURT AT OSBORNE.

On Friday, the 15th, the Queen and Prince Albert gave their annual entertainment in honour of the Prince's birthday, to the labourers and workpeople employed on the estate at Osborne; also, to 130 seamen, boys, and Royal Marines of the Royal yachts, and the Coast Guard men. Her Majesty and the Prince and the Royal Family were present, and witnessed the rural sports.

On Saturday, the Duchess of Sutherland and Lady Constance Gower left Osborne for London.

On Sunday, the Court attended Divine service in the private chapel at Osborne, the Rev. W. Prothero officiating.

On Monday morning four Chinese (three ladies and a gentleman), dressed in the costume of their country, arrived at Osborne from London, accompanied by an interpreter, and had the honour of being introduced to the Queen and Prince Albert. In the afternoon the Queen and Prince and the youthful Princesses embarked on board the *Fairy* (accompanied by the Earl of Liverpool), and proceeded nearly to the Needles, to witness the regatta of the Royal Yacht Squadron.

On Tuesday morning, Prince Albert, accompanied by Dr. Lyon Playfair, and attended by Colonel the Hon. A. Gordon, left Osborne to preside at a meeting of the Royal Commission at the Great Exhibition Building in Hyde-park, where the Prince arrived at half past eleven o'clock: the meeting broke up at four, when his Royal Highness left on his return to Osborne. He was met at Southampton by the Queen and the Royal Family in the *Fairy*; and the Royal party returned to Osborne at seven o'clock.

HER MAJESTY'S VISIT TO SCOTLAND.—The Queen, who will leave Osborne on Wednesday, is understood to have expressed her intention to arrive at the King's-cross station of the Great Northern Railway at half-past one o'clock in the afternoon. Her Majesty will take luncheon at the station, and depart thence at two o'clock. At Lincoln her Majesty will, without leaving her carriage, receive an address from the corporation of that city. The Royal train will reach Doncaster station at about half-past six. Here her Majesty will leave the Royal carriage, and proceed to the Angel Hotel, which has been engaged for her accommodation, and where she will remain during the night. At nine o'clock on the following morning her Majesty will journey on to Holyrood, between which place and Doncaster the Royal train will stop only for the engine to take in water. A temporary station is to be provided at Holyrood, to enable her Majesty to cross over to Holyrood House, without going through the city. Her Majesty will sleep at Holyrood, and, on the following morning, return to the railway through the temporary station, and proceed to Stonehaven, which has this year been selected in preference to Cupar Angus as the terminal point of her Majesty's railway journey. In consequence of the route from Stonehaven to Balmoral being better than that from Cupar Angus to the latter place. The Royal carriage of the Great Northern Railway will run through to Stonehaven.

EMBARKATION VISIT OF HER MAJESTY TO MANCHESTER.—It is announced that her Majesty the Queen has been graciously pleased to intimate her intention to visit Manchester, on her return from her sojourn in Scotland. It is expected that her Majesty and her husband Prince Albert will be received by the corporation from the north, on the evening of Wednesday, Oct. 8. The Earl of Sefton will have the honour of receiving the Royal guests at his Lordship's residence, Croxteth Hall. On the following morning, the Queen and Prince Albert will visit Liverpool, and port of Liverpool, and his Royal Highness may probably inaugurate St. George's Hall. Her Majesty and Prince Albert will leave Liverpool in the course of the afternoon, and arrive in the evening at Worsley New Hall, the recently erected mansion of the Earl of Ellesmere, on a short visit to the noble Earl and his Countess. On Friday, Oct. 10, both her Majesty the Queen and his Royal Highness Prince Albert will receive the Manchester address. Here also their sister borough of Salford, where loyal addresses will doubtless be presented to the Queen. The Royal party will return to Worsley in the evening, and, so far as is at present known, will leave Lancashire for London and Windsor on the morning of Saturday, Oct. 11.

VISITORS TO HAMPTON COURT PALACE AND KEW GARDENS.—On Wednesday a return to Parliament was printed, showing that during last year there were 231,119 visitors to Hampton Court Palace, and that the Royal Botanic and Pleasure Grounds at Kew the number was 179,647. The grounds are, by a recent arrangement, open to the public every day in the week during four months in the year, from the 12th of May to the 14th of September, between the hours of [illegible] a.m.

CUSTOMS DUTIES.—The Board of Customs, having had under their special consideration the expediency of empowering the landing surveyors at the respective stations in London to permit the entry of entries in case in which the amount of duty is inconsiderable, and there is no reason to suspect fraud: and the board being of opinion that landing surveyors should, as an experiment, measure, in cases in which they were fully satisfied that no fraud was intended, allow the entry of entries as follows, viz.: when the difference of duty does not exceed ten shillings on goods detained for having been undervalued; when the difference of duty exceeds ten shillings, but does not exceed twenty shillings, provided the amount of under valuation be not more than fifty per cent; and when the amount of duty in quest on does not exceed ten shillings in cases of goods entered under a wrong denomination, or under such circumstances as may be specified in the proper entry—orders have been issued to the officers to govern themselves accordingly, the landing surveyors submitting to the board a return monthly, showing the particulars of the several cases.

MR. BOTHWICK, the gentleman who left Egypt by Mr. R. Stephen son to arrange with the Viceroy some preliminary matters regarding the railway between Alexandria and Cairo, has returned to England, having settled all things to his entire satisfaction, and having even received the first instalment of the sum which is to be paid to Mr. Stephenson.

There is living at Holbeach, Lincolnshire, a watchmaker, named R p n, completely blind. He is a first-rate hand at his business, and a treat surprise is to observe with what ease he can take to pieces and piece together again watches of the most delicate mechanism. Some years ago R p n was robbed, and the property taken consisted of watch wheels, hair-springs, and other tiny things belonging to the trade. The thief was traced, and convicted at Spalding sessions, the blind man having sworn to his property by feeling.

METROPOLITAN NEWS.

SEIZURE OF THE [illegible] ROAD.—At the weekly meeting of the St. Pancras board of guardians, on Tuesday, Mr. Churchwarden Baker in the chair, the following letter, brought by a special messenger from the Master of the Horse, was read:—

Royal Mews, Pimlico, Aug. 19, 1851.

SIR,—I am directed by the Master of the Horse to acquaint you, that, on the occasion of the Queen's journey to Scotland, on the 27th inst., her Majesty will pass from Baker-st. reet, along the Hampstead, to the Great Northern Railway, and I am to call your attention to the necessary state of the roads in the neighbourhood of King's-cross, in order that the [illegible] may pass in safety and without delay by the Great Northern Railway.

I have, &c.,
J. LAWRENCE, Esq., and Superintendent
of St. Mary Cerne, St. Pancras Parish.

Mr. Bird, the parish surveyor, assured the vestry that the wood pavement of that part of the Pentonville-road in his parish was in such a condition that it would be unsafe to allow it to be open another day for carriage traffic, and that if the authorities kept it open it would be dangerous to limb and life, and would expose them to an action for damages in the event of any accident happening. After a lengthened discussion, Mr. Cooke, the vestry clerk, was directed to return an answer by the messenger, to the effect that the breach of contract by the Wood Paving Company rendered the road so dangerous that it would certainly be closed to carriages, and that, therefore, her Majesty could not pass over it on the day in question. In consequence of this decision, a deputation from the omnibus proprietors waited upon the vestry on Wednesday, with a memorial praying that the thoroughfare should not be entirely closed, but that one-half should be paved at a time. Mr. Elliot, one of the deputation, stated, that he was a proprietor of the Kentish-town and Camden-town omnibuses, and if the route was closed, it would involve a daily increase of mileage of 2400 miles, besides the extra expense of tolls, which would amount to £40 per week. They already paid twenty guineas per week toll to the Wood-bridge, which sum they were going to be called upon in consequence of [illegible] cars-bridge closed. There were 200 omnibuses on the road. The chairman stated, that, although the Board of Directors had decided that it should be closed, he thought it would certainly be advisable to open it while the weather remained dry. The application should be taken into consideration, and everything done that could be to obviate inconvenience to the public, or unnecessary loss to the proprietors of public vehicles. The deputation thanked the vestry and left.

THE CANON OF DURHAM AND THE EVANGELICAL ALLIANCE.—On Wednesday, as soon as the Evangelical Alliance—a body of Protestant Christians of various denominations—had entered upon its first session, the chairman (Sir Culling E. Eardley, Bart.) introduced the Rev. Dr. Townsend, Canon of Durham, in account of whose self-imposed visit to the Continent he undertook, with a desire to find a basis for the whole christian [illegible] ation of Christendom, has lately been given to the world. The rev. doctor having briefly explained his views on the subject of the union of all sects of Christians, expressed the desire that the Alliance would select five brethren to associate themselves with five of different denominations, to come to his house and remain for a week or so, to consult together on the question.—"How far is a union of all Christians possible?" The rev. gentleman was answered with the utmost cordiality, and the proposition will be immediately considered.

PUBLIC RECORDS.—The [illegible] and will be forwarded to the Master of the Rolls, as the official keeper of all public records, in order that literary men engaged in historical or antiquarian researches may have access to them from the less now required at the Rolls Chapel, at the Tower, at the Chapter House, Carlton Ride, &c. The Master of the Rolls returned a favourable answer to this memorial, which was signed by Lord Mahon, President of the Society of Antiquaries; by Lord Stuart de Rothesay, Lord Braybrooke, Lord Londesborough, the Bishop of Oxford, Mr. Macaulay, Mr. Hallam, Dean Milman, and a long list of well known literati. That answer was taken into consideration at a meeting of the sub-cubers to the memorial on Monday last over which Mr. Payne Collier presided, when several resolutions were unanimously agreed to, expressive of the gratitude of all men of letters, especially of those engaged in the historical investigations for the concession thus made, and with so much alacrity, on the part of Sir John Romilly. It appears that, until the new record offices are completed, some temporary arrangements are to be adopted, under which all persons who are not making professional searches on behalf of clients, but who are employed *bonâ fide* in the acquisition of historical information, shall be entirely exempted from the payment of any money for facilities afforded in the various situations where records are now deposited. When all these documents shall hereafter be brought into one collection, the Master of the Rolls has undertaken to make new and permanent arrangements upon the subject. It will be obvious that an important step has been thus gained, and that what has hitherto been felt by men of letters as so great an inconvenience and so severe a hardship, will ultimately and ere long be removed.

FIRMROSE-HILL PARK.—The Commissioners of Woods and Forests have this week issued orders to fill up the different hollows in Primrose-hill Park, in order that the lower portion may be converted into a cricket-ground. The want of a public spot for the exercise of the game of cricket has long been felt (it being forbidden in all the other parks): the spot selected for the use of cricketers exceeds fifty acres; it will be railed in, and persons appointed to tend it. A spacious carriage-drive has been formed from the Hampstead-road, through the grounds of Chalk Farm [illegible] to the Regent's-park, and will be opened this day. A number of gravel walks have been laid down, and seats placed for the accommodation of visitors. It is also intended to plant this park with trees and shrubs similar to the inclosures, St. James's-park. The police appointed to it for the first time on Wednesday, in their new uniforms—green coats, with red embroidered collars, inscribed with their respective numbers, and the initials V. R.; the trowsers are blue, with red stripe down the outer seam, the hats similar to those worn by the metropolitan police.

BLACKFRIARS-BRIDGE.—The works rendered necessary by the sinking of one of the piers of this bridge are nearly completed, and it is expected that the carriage traffic may be resumed in a few days. The whole of the temporary weight of timber which caused the sunken pier has been removed, together with the heavy walls on either side, thus reducing the bearing on the foundation of the pier by several hundreds of tons. These massive [illegible] ds by a strong wooden stage or platform, made by crossing and interlacing of large logs of hard wood, which for their preservation have been steeped in gas-tar and other antiseptic solutions. On the top of this platform the [illegible] ds of stone work apparently be any change in the bridge, as the works will be entirely excluded from the public view, and the stage will be between the ordinary pavement and the crown of the arch. The cost of these alterations will not exceed £1500.

EXTRAORDINARY BURGLARY AT THE CITY BRIDEWELL.—On Monday morning it was discovered, at the City Bridewell, Bridge-street, Blackfriars, that, during the preceding night, a party of burglars had obtained admission into the prison by scaling the outer walls, and had succeeded in carrying off several articles or plate. On Oxford, one of the constables of the institution, going down stairs early that morning, he perceived a number of men in the yard, a party, consisting, at the least, of three persons, had entered two of the houses in the court-yard—one belonging to himself, the other to Ambrose, a fellow constable of the same prison. The burglars, it is supposed, got into the yard by mounting over the wall in Dorset-street, Salisbury-court, and dropping into the burial-ground. Thence they got over the back premises and stabling, and finally entered the house by the window of the kitchen, which they obtained access to, and which they opened without any difficulty. Having got into the house, they commenced the following actions of plate: A silver tankard, on which was engraved, "The gift of Coonel Newton to Louisa Ochil, the 3d of June, 1840;" another silver tankard, the inscription same as the former, the inscription unknown; a pair of silver sugar-tongs, marked "J. O. M.;" a silver tea-spoon, marked "T. O. L.;" two silver caddy-spoons, initials unknown; a silver tea-pot was also found doubled up, which, it is supposed, had been dropped by accident by the thieves; a silver [illegible] probably thinking it might not be silver. From the other house they stole a pair of new boots. A piece of board was found under the wall, which the thieves had made use of in assisting them to get over; but, to enable them to effect this, a ladder must have had placed on prison ladder against the inner wall, and, therefore, had no difficulty. The authorities of the prison are of opinion that the robbers had been previously confined therein, and well knew the various houses in the yard.

EXTENSIVE FIRES.—On Tuesday evening, shortly before seven o'clock, the vicinity of the Pool at Rotherhithe, on both sides of the Thames, and even up as far as the City, was lighted up by a conflagration in the patent fuel manufactory of Mr. Batchelor, situate near the Plough bridge, in the Lower Deptford-road, between the Commercial Docks and the Thames Tunnel. The Rotherhithe and London and Greenwich Coast Guard, on first discovering the scene the whole range of premises, which covered nearly an acre of ground, was in a blaze. The manufactured fuel comprised a mass of peat and small coal and other substances. Some of it was in the form of cakes, and steeped in a solution of naphtha, rosin, and tar, of which material there was an enormous stock. Adjacent to the shed in which it was stored were the rectifying house and other buildings employed in preparing the solution, as well as those of tar, rosin, &c., so together forming as inflammable a range of property as could be well conceived. How the fire originated could not be satisfactorily ascertained. The workpeople left the premises at their usual hour, apparently safe, and the only persons employed on the premises were two labourers in the service of Messrs. Hughes, naphtha manufacturers, whose premises are contiguous, observed a light proceeding from the sheds in Mr. Batchelor's factory, and in a few minutes the whole was traveled up, rapidly and fired the entire building. The authorities at the Royal dockyard at Deptford promptly sent the engine of the *depôt* to the spot; and on the arrival of the London Brigade, under the direction of Mr. Braidwood, the chief master of the district, a vigorous effort was made to subdue the immense flaming mass. Water, however, only seemed to encourage the violence of the flames, and the firemen, therefore, withdrew, and directed their operations to preserving the adjoining buildings. The fire continued burning all night. The destroyed premises were not insured.—On the same night, at half-past twelve o'clock (midnight), a destructive fire broke out in the neighbourhood of Knightsbridge green, and was attended with considerable loss of property. It originated in a double back house in the joint occupation of Mrs. Allum, confectioner, and Mr. Cuthbertson, bookseller and stationer, situate at No. 3, Brompton-road. The inmates fortunately escaped without injury. Although the engines from Knightsbridge Barracks, with a quantity of soldiers, were on the spot within a few minutes of the outbreak, it was impossible to arrest the progress of the flames, and the premises were for the most part destroyed. Some of the adjoining houses sustained injury. Part only of the property was insured.

WATERLOO MODEL.—The magnificent model of this battle, executed by the late Captain Siborne, has just been deposited in the museum of the United service Institution. The model represents the overthrow of the French army, and is taken at the time that the Imperial Guard made its last effort to retrieve the fortunes of the day. It contains 190,000 figures of lead. It occupies a space of 24 feet by 22, and the fine gallery that has been erected for its reception reflects the highest credit on the architect of the Institution, Mr. G. L. Taylor. We understand that the model has cost the institution £6000, which large sum has been year by subscribed for the purchase, so as not to interfere with the general funds.

THE EXHIBITION POLICE FORCE.—A very handsome silver tea-pot has been presented to Mr. Superintendent Pearce, by command of the Queen, as a mark of her Majesty's appreciation of the constant zeal, intelligence, and discretion shown by this officer when in attendance upon her Majesty on the occasions of the Queen's frequent visits to the Exhibition. Two handsome gold watches have also been given to Inspectors Beckerson and Lester, as a mark of approval of their attention in the discharge of their duties when in attendance upon her Majesty and the Prince, on the occasions of their visiting the Exhibition; and a third gold watch is also given to Inspector O'Brien by the Prince of Wales, as a token of appreciation of his great attention when in attendance upon his Royal Highness and Prince Albert at the Exhibition.

BIRTHS AND DEATHS.—The births of 774 boys and 726 girls, in all 1500 children, were registered in the week ending Saturday last, August 16, in the metropolis. The average number in six corresponding weeks of 1841-50 was 1396. The return of deaths for the week ending last Saturday find cates a further and considerable increase in the mortality. In the third week of July the deaths in London were only 873; in the three following they were 1010, 1104, and 1206—they rose to 1061. The last number must be considered to represent a high mortality even for London, where the conditions of health are not the most favourable, and at a period of the year which experience has steadily taught us to be extremely fatal to the human race. The deaths of last week were more than in any of the corresponding weeks of the ten years 1841-50, with the exception of that of 1847, when they were 1108, and that of 1849, when cholera raised the total deaths to 2330. The classification of ages shows that the present increase of mortality arises from complaints amongst the young; for of the 1061 persons who died last week, 565, or more than one half, were not older than 15 years. On referring to the table of fatal causes, it is at once perceived that the epidemic class comprises the largest proportion to the returns of the week, 342 cases, or nearly one-third of the total number, being enumerated under this head; and that disease was also fatal in 186 cases, the predominant disease amongst epidemics. The progress of diarrhœa, dysentery, and cholera is shown by the following numbers registered under these heads in the last six weeks—namely, 62, 91, 97, 138, 251, and 342 (last week) 190. In the Borough-road sub-district, at 2, Taylor's-place, William street, on the 13th August, the daughter of a journeyman farrier was choleraed to death in a few hours, aged 2 years, 5 months. With reference to this cutter, aged 5 years, died of "convulsions arising from worms." With reference to this case, and a former one, the Rev. J. B. Sorving, from the congregation of St. Luke's, Cafford, Yorkshire.

COLONIAL BISHOPS.—Arrangements have been completed for the immediate establishment of a mission in the Bureau for the whole of the Eastern Archipelago. It has been currently stated that the first Bishop of the new see will be the Rev. C. F. Cullis, M.A., principal of the Church Missionary College, Islington. Arrangements are also making for erecting new bishoprics in Islington. Arrangements are also making for erecting new bishoprics in Australia, Sierra Leone, and the island of Mauritius. It is believed that one of the new bishoprics will be offered to the Rev. Dr. Mortimer, head master of the City of London School, a liberal in politics, and evangelical in religious matters.

LIBERAL DECISIONS.—After the consecration of St. Matthew's Church, in Leeds, on Wednesday week, the Rev. Dr. Hook, the vicar, stated that he had in his power to offer £400 for the endowment of St. Thomas's Church, now in the course of erection, on condition that £1100 additional be also raised for the endowment fund before the expiration of six months. He also stated that he had it in his power to offer £1000 for the erection of a church in the west end of the town, on condition that, within twelve months, a sufficient sum for the completion of the church be raised. He also added, on the same condition, that he would offer £1000 to St. Jude's, Hunslet. Both these new districts lately be could offer £1000 to St. Jude's, Hunslet. Both these new districts lately be owed under Sir Robert Peel's act. The name of the donor has not transpired.

THE ECCLESIASTICAL COMMISSION.—A parliamentary return has been issued this week (obtained by the Marquis of Blandford) showing the leases granted since 1838 by which it appears that the property, consisting of lands and houses in possession of the Ecclesiastical Commissioners, whether by lapse of time, surrender, or the end of the year 1849, was 2381 messuages and 24 lease or purchase, to the end of the year 1849, was 2381 messuages and 24 leases or purchase, to the end of the year 1849, was 2381 messuages and 24 leases or purchase, to the end of the year 1849, was 2381 messuages and 24 leases

NORTHUMBERLAND HOUSE.

INTERIOR OF NORTHUMBERLAND HOUSE.—THE GRAND STAIRCASE.

One of the most gratifying and hopeful signs of our time is a disposition beginning to manifest itself in high quarters to relax that habitual reserve, and to qualify that cold exclusiveness in which our aristocracy have too long indulged as an hereditary principle, and to extend civilities to a larger world, with whom, in former days, they were taught to think they could have no reciprocity of sympathies. Another gratifying sign of an age advancing in civilisation—civilisation of the noblest and most useful kind, based upon extended knowledge and good feeling—is the manner in which these favours are received and improved by the public. We are no longer "Quelli bestie di quelli Inglesi," which an Italian writer described us as, in the brutal tyrannical time of Henry VIII., who in vain sought to induce Raffaelle to visit his Court; we are no longer the habitual defacers of monuments and public works, from an Apollo Belvidere down to a wooden bench in the Park, which not a generation ago we were said to be, and the reputation of which caused us to be looked upon as Goths and Vandals, and watched with fear and trembling, whenever we darkened the threshold of the *virtuosi* at home or abroad. No, thank Heaven! Education has sown good seed amongst us, and enlarged feelings of self-respect, and mutual respect and mutual good-will, have sprung up amongst us, and much stupid jealousy and prejudice, and misgivings about the fruits of the tree of knowledge have been cast to the winds, and dispersed like a summer's cloud beneath the rays of the resistless sun

But we are not now about to write a homily; we have only ventured upon a few general reflections which occurred to us the other day as we walked through the stately halls of Northumberland House, one of the oldest and most interesting of the *penetralia* of our aristocracy, belonging to one of the proudest and most exclusive of that aristocracy, but which, with the most kindly and generous feeling on the part of the present noble possessor, has for some months past been thrown open to the public in aid of the great and good objects of the international congress of 1851.

The invitation was promptly responded to by the public; and the crowds passing through the rooms, the crowds still collecting round the ancient portal in the Strand, on the three days a week appointed for their admission (there have been, we understand, 10,000 or 11,000 visitors a week, on an average), have testified to the "triumphant and unequivocal success" (as the play-bills have it) of the quiet, rational entertainment which his Grace of Northumberland has been the first to offer. We have only to add, that we hope his example will be followed by many of his fellows; and that, with a right appreciation of the value of the magnificent works of art which circumstances have made their own, they will find that they do not enjoy half their fruit till their instructive and humanizing influence has been extended to their humbler neighbours.

It is not, however, so much as a picture-gallery, as for its individual history, that Northumberland House claims our attention, although it contains, amongst several works of merit and value, some few of extreme interest. We shall begin with the history and description of the building itself.

Northumberland House—formerly successively known as Northampton House and Suffolk House—stands on the site of an ancient Hospital or Chapel of St. Mary, founded in the time of Henry III., by William Mareschall, Earl of Pembroke, on a piece of ground which he had given to the Priory of Roncival, or De Roscida Valle, in Navarre. That chapel was suppressed among the alien priories in the reign of Henry V., but was afterwards restored to the fraternity by Edward IV. After the final dissolution of religious houses, its site was granted by Edward VI. to Thomas Carwarden. The estate afterwards came into the possession of Henry Howard, Earl of Northampton, Lord Privy Seal, who erected a splendid mansion, called, after him, Northampton House, in which he died in 1614. By his will it passed to his kinsman, Thomas Howard, of Walden, Earl of Suffolk, when it received the name of Suffolk House. Finally, by the marriage of Algernon Percy, Earl of Northumberland, with Elizabeth, daughter and heiress of Theophilus, the second Earl of Suffolk, about the year 1642, it became the property of the former family, and has since acquired the name of Northumberland House. On the death of Jocelyn Percy, the son of Algernon last mentioned, his only daughter, Elizabeth, became heiress to the estates; who married, 1682, Charles Seymour, the proud Duke of Somerset. The issue of this marriage, Algernon Earl of Hertford and seventh Duke of Somerset, succeeded on the death of his male parent in 1749, and was created Earl of Northumberland in the following year, with remainder, failing issue male, to Sir Hugh Smithson, Bart., the son of his only daughter; which Sir Hugh Smithson was created Duke of Northumberland in 1766, and was the grandfather of the present Duke, and of his immediate predecessor. It will be observed, from this genealogical sketch, that although the present noble owner is the lineal descendant of the first founders of Northampton or Suffolk House, their inheritance has thrice devolved through female branches in the course of a couple of centuries.

The edifice originally consisted of three sides of a spacious quadrangle, the fourth remaining open to the gardens and river Thames. Bernard Jansen was the architect of the principal part; but the *facade* towards the street was the work of Gerard Christmas, who designed Aldersgate, which was rebuilt in the same reign, namely, that of James I. At that period the principal apartments were on the Strand side; but upon the accession of Algernon, Earl of Northumberland, who could not bear the noise of the street, he caused a fourth side to be added (which included the state-rooms) towards the river, under the direction of Inigo Jones. The entire pile was built in a mixed style of architecture, and had dome-crowned towers at the angles (in the Dutch style), two of which, on the street side, still remain. Evelyn, in his "Diary," under date June 8, 1658, records a visit to Suffolk House, and says:—"The new front towards ye gardens is tollerable, were it not drowned by a too massive and clomsie pair of stayres of stone, without any neat invention."

There is a drawing by Hollar of Suffolk House from the river side, with the "new front" added, which has been copied by Wilkinson and also by Brayley (in his "Londiniana"), which we engrave, as a memorial of interest both as regards topographical history and the great architect engaged upon the work. It was in a conference held in one of these apartments between the Earl of Northumberland, General Monk, and some of the leading men of the nation, that the Restoration of Charles II. was proposed and planned.

Inigo Jones's river front, whatever its merits or demerits in the eyes of Evelyn, exists no longer, although we have no record of the period of its removal. All that is certain in connexion with this building is, that, upon the succession of Sir Hugh Smithson, in 1749-50, he began to make very extensive alterations and additions to it. Amongst other things, he built two new wings to the garden front, above one hundred feet in length; faced the side of the quadrangular court with Portland stone, and nearly rebuilt the whole of the front near the street. The centre part, at the top of which is a tablet bearing the date (1749) when these improvements were made, only received some trifling alteration, and may be considered as a valuable remnant of the original pile, and a sample of the magnificence of our forefathers. On the top is a lion passant, the crest of the Percys, cast in lead.

Speaking of the building as it at present stands, the dwelling part of

NORTHUMBERLAND HOUSE.

INTERIOR OF NORTHUMBERLAND HOUSE.—THE GRAND GALLERY.

the noble family is the southern or garden side of the quadrangle. The entrance opens upon a vestibule 82 feet long, and more than 12 feet in breadth, ornamented with Doric columns. Each end communicates with a staircase, that at the left or east end being the state one. This staircase, which was built by the elder Cundy, is extremely handsome, and until the erection of that at Sutherland House was considered the handsomest in London. It is spacious and well proportioned, the steps and decorations in white marble, the balustrades a rich scroll pattern, brass gilt; the pillars around are in marble, the capitals of the Corinthian order, being executed in bronze. (See Engraving.)

The rooms on the basement floor are spacious and handsome, without ostentatious display—just such as an English nobleman would [illegible] for the entertainment of his friends, with the substantial hos[illegible] of the table. On the drawingroom floor a different style prevails; the of architecture and fittings of the several rooms being of a highly decorative character. The principal drawingroom is most lavishly ornamented, and presents an unique specimen of the style of decorative interiors of the last century. The walls are in stucco of rich crim[illegible] faced with glass; mirrors and gilt mouldings in fanciful tracery dividing it into compartments of various forms: interspersed are a great number of beautiful medallions from the hand of Angelica Kauffman; and the ceiling is painted after the Italian fashion of Raffaelle and his followers, a work restored some years back by Adam, of the Adelphi. The furniture of this splendid apartment is of appropriate richness of character; and the effect of the whole, when lighted up, must be truly magnificent. Beyond this state dining-room is the Tapestry-room, a snug-looking apartment, hung round with tapestry designed by Zuccarelli, and worked in Soho-square, in 1753, at some establishment since abandoned; and this [illegible] feet long and 27 [illegible] is arched, and is supported upon Corinthian pillars with a rich cornice, all highly gilt, is decorated in compartments with paintings after the Roman school. (See the Engraving.)

Having now to speak of the works of art and *vertù* in Northumberland House, we beg to be allowed to commence with those in the State Gallery, which are of peculiar interest. The paintings, which extend the whole height and length of the walls, are cartes, and admirable ones too, after some of the finest works of Raffaelle, Guido, and Annibale Caracci; the principal one on the side facing the windows being after the famous "School of Athens," of Raffaelle, by Mengs; on either side of this are the "Presentation of Cupid and Psyche," and the "Marriage Feast of Cupid and Psyche," after the same great master, by Pompeio Batoni. At the two ends of the gallery are copies of A. Caracci's "Bacchus and Ariadne," by Constansi, and Guido's "Aurora," by Massaccio.

"The School of Athens," by Raffaelle, is so interesting a work, and so worthy the consideration of the student, even in the form of a copy, that a few observations about it may be acceptable. The original forms the decoration of one of the walls of one of the rooms in the Vatican, which were painted by Raffaelle, at the command of Julius II. The subject is intended to personify the spirit and practice of "Philosophy," as the other three respectively are dedicated to "Theology," "Poetry," and "Justice." The school of "Philosophy" is that of Athens, the background appropriately being a rich architectural hall or portico, which is supposed to have been after a design by Bramante, a flight of broad steps conducting towards the foreground, and giving opportunity for disposing the groups at different heights. At the top, and in the midst, are Plato, Aristotle, and Socrates: Plato is represented pointing upward, an attitude in accordance with his spiritual doctrines Aristotle points to the earth, implying that truth must be obtained by investigation and experience; while Socrates is impressively addressing the listeners near him. Lower down we have the Sciences and Arts represented by Pythagoras and Archimedes, Zoroaster and Ptolemy the geographer; and, in the midst, alone, neglected by all, avoiding all, sits Diogenes the Cynic. The last-named figure is admirable for its foreshortening. Raffaelle has introduced a portrait of Bramanti, the architect, in the person of Archimedes; one of Perrugino, his master in the art of painting, appending his own as humbly following him. Nothing can surpass the grandeur, variety, and force of character developed in this masterly production, which must ever remain a marvel and a type of excellence in pictorial art. Those who wish to scan the steps by which Raffaelle made his way to the completion of this and others of his frescoes, may find fac-similes of his original studies in Otley's "Italian School of Design," a copy of which is in the British Museum.

The most important original picture in the Duke of Northumberland's collection is the portrait group of the "Cornaro Family," by Titian, which was bought by Algernon, Earl of Northumberland, in the reign of Charles I., from Vandyke, for one thousand guineas. It is perhaps the most interesting of the portrait works of this great master in England—rich in colour and breathing with intellectuality. There is another picture by the same master, comprising portraits of "Cardinal Sforza and Machevelli." In the little dining parlour is a "St. Sebastian," described as by Domenichino, but which Waagen speaks of as by Guercino, and we rather incline to his opinion. The principal figure in study and colouring is of the bold marked character which we note in the works of the last-named artist; the *chiar' oscuro* in the left [illegible] er, through which Diocletian's rubicu[illegible] scan relaxing, is also a marked sample of the *treat*[illegible]. Guercino was an influential supporter. The sky in the right, with the angels descending with crowns and palm-leaves, is of a softness and richness of tone which might have come from the hand of Domenichino.

SUFFOLK HOUSE ABOUT 1650, FROM A DRAWING BY HOLLAR, IN THE [illegible] ANTIQUE

We must now briefly enumerate some of the other works which particularly struck us as deserving of notice. In the parlours:—"The Adoration of the Shepherds," by G. Rasano: a perfect specimen of this master's florid colouring and minuteness of finish; Schalcken, a girl with a candle, screening the light from her face—a trick of art once much admired, and here excusable on account of the richness and delicacy of the handling; Canaletto—two views of Westminster-bridge whilst in process of building: fine samples of this painter; and one of "Alnwick Castle." Several Bruegels; one "A Fête Champêtre," including a group of stately dames and cavaliers dancing to the music of a band of amateur performers, a hawking party, &c.; Salvator Rosa, a soldier buying bread; Mabuse, a curious portrait of Edward VI., with a long inscription; Caravaggio—"Christ crowned with Thorns;" Palaxedes—two domestic subjects, exteriors, very gracefully treated; Ruysdael—a canal view, with a barge; Kalf—a kitchen scene; and (in the large dining-room) a Rubens, inscribed with his pastoral subject; two very fine by Franz Snyders, a fox and a deer-hunt.

Up-stairs, besides the Titians before mentioned, Lancelli—"Prometheus Bound;" Vandervelde—a very clear and liquid water piece: two or three by Varjoyen; Teniers, a wonderfully delicate little picture; a very fine Ruysdael; Dobson—a portrait group of Sir Balthazar Gerbier, Sir C Cotterell, and the painter himself; Stone—portraits of old Stone and his son; portrait of Napoleon when First Consul, by Philips, a fine likeness; several family portraits, by Vandyck, Wissing, Hudson, Phillips, Grant, &c.

The style of decoration and furniture is chiefly of that splendid character known as that of "the Empire," itself founded upon classic models.

Amongst the articles of *vertu* which fill the rooms are several cabinets inlaid and embellished with genuine japan, carvings in ivory after Teniers' pictures, and others; articles in or-moulu, &c. In the centre of the State Gallery stands a magnificent vase in Sèvres china, richly gilt, and painted round with the "Capture of the Cupids by Diana and her Nymphs," which was presented to the late Duke by Charles X., on the occasion of his Grace representing the British Sovereign at the coronation of the first-named monarch.

MUSIC.

SACRED HARMONIC SOCIETY.

Mendelssohn's oratorio, "Saint Paul," was performed on the 15th instant, at Exeter Hall, under Mr. Costa's direction. This sublime work, although inferior in popularity to "Elijah," contains his most original conceptions, being more strongly marked with the individuality of his style; and with the increase of musical knowledge, the beauties of "Paul" will be more fully recognised. It is a noble effort of genius: the noble overture is a highly finished specimen of the oratorio form: nothing can be more stately than the brief introductory movement, in which the theme of the chorale, "Sleepers, awake!" is recognised, and more thoroughly artistic than the allegro in A minor, in the rugged chorale. It was admirably executed by the orchestra. The choruses and chorales were sung with devotional intensity, and with a keen perception of the composer's intentions. The "Stone hin to death," in C minor, was rendered with much power. The "Oh! happy and blest," with its lovely orchestration, was quite picturesque in the interpretation. Equally as masterly was the "Arise! there;" and as impressive was the "Sleepers, awake!" with the wondrous responses of the brass band. The elaborations in the "Oh! great is the depth" were successively contrasted by the soloists. The elegant barcarole in G, six-eight time, "How lovely are the messengers," went beautifully, the trebles particularly distinguishing themselves The solemn grandeur of the finale, "And not only unto Him," was also duly appreciated by the zealous executants.

Madame Clara Novello's interpretation of the soprano part was dignified, classic, and consecrations. In the air "O rest in the Lord," Mendelssohn has in form and idea, ar d in the air "I will sing," she made a deep impression; and her delivery of the recitatives was in the highest school of declamatory intelligence and power. Miss Dolby's exclamation in the contralto part is well known and appreciated, as also Mr Lockey's excellent reading of the tenor pieces. Herr Formès displayed considerable energy, but his style requires more refinement to be completely impressive.

Handel's "Messiah" will be performed next Friday.

ENGLISH GLEES AND MADRIGALS.

There was another full and fashionable attendance, on Wednesday afternoon, at Willis's Rooms, for the consolidated performance of the third series of English glees and madrigals. Horsley's "By Celia's arbour," Lord Mornington's "O bird of eve," and Macfarren's quaint madrigal, from his clever opera, "Charles II." "Maiden fair, go a-wooing," were the encores. The other pieces in the programme were Gibbons's "Silver Swan," Smith's "Blest pair of syrens," Webbe's "When winds breathe soft," Horsley's "Now the storm begins to lower," and Cooke's "Shades of the heroes." Mrs. Endersohn, Miss Williams, Messrs. Francis, Lockey, Hobbs, Land, Whitehouse, and Philipps were the executants. We learn that this unrivalled glee party will make a tour in the provinces in autumn. Our impression is that it will be too slow to appreciate the speciality which has created such a veritable sensation in London this season; and we hope, for the sake of English art, that the programmes will be as judiciously selected as here, above all, that there will be no departure from the essential feature of this novel and attractive undertaking—namely, a selection from the best glees and madrigals of our own composers.

MUSICAL EVENTS.

Under the patronage of the Duchess of Somerset, the Duke de Ossuna, his Excellency the Prince of Anglona, and his Excellency Don Xavier Isturitz, a new grand Spanish opera, called "Marcella, or the Deserter's Secret," written and composed by the very clever guitarist, Don Jose de Ciebra, was rehearsed on Thursday night, at the Hanover Rooms, the principal parts sung by Miss Louisa Tyrie, Madame De Lorzano, Signor Marras, Madame F. Bodda, Cabaris, and Graham, jun. Signor Filetti was the conductor. It is stated that this work has been expressly composed for the Theatre of Madrid. When "Marcella" is produced on the lyric stage there, we will give a notice of the plot and music.

Amongst the arrivals from the Continent, are those of M. Fetis, the musical historian; and Signor Ricordi, the great music publisher of Milan. It is to be regretted that the distinguished critic, M. Fetis, has arrived so late a period, as he will be unable to hear the best orchestral and chamber performances, and will not be in a position to judge of the vast progress London has made in music since his accounts of musical matters.

Mr. Benedict, the pianist and composer, arrived in town on Monday, after a year's absence in the United States, as conductor of the Lind concerts. It is stated that Mr. Barnum has cleared £70,000, Mdlle. Lind £40,000, and Mr. Benedict, £8000, by the last nine months' trip. Signor Biletta, the basso, came back with Mr Benedict, and Mdlle. Lind is expected at the end of the month. Madame Thilon and Mr. Hudson left London for New York last Tuesday.

Miss Catherine Hayes arrived in London on Tuesday, from her villa in Normandy. She is engaged to sing at three farewell concerts at the Free Trade Hall, in Manchester, on the 23th, 29th, and 30th instant, and on the 1st of September. Her final appearance will be at the Theatre Royal, Liverpool, on the 2nd of September, as she embarks on the 3rd in the *Pacific* steamer, for New York, accompanied by Mr. Augustus Braham, Herr Mengis, and Mr. Lavenu.

Mdme. Viardot and Signor Tamberlik will sing at the Gentlemen's Concert, at Manchester, next Mond y; and at the Philharmonic Hall, Liverpool, on Tuesday. Madame Sontag will sing in Liverpool on the 3rd of September.

The Worcester Musical Festival will commence on Tuesday, and end on Friday. There will be four morning performances at the Cathedral, and three evening concerts at the College Hall. Madame Caradori Allan, from the Royal Italian Opera, and Mdlle. Cravelli, from Her Majesty's Theatre; with Misses Birch, Dolby, Williams, Messrs. Lockey, Sims Reeves, Machin, and Herr Formès, will be the principal singers. The band and chorus will be on a large scale. Mr. Henry Blagrove is the leader of the orchestra. Handel's "Messiah," "Samson," "Dettingen Te Deum," and "Jubilate; Spohr's "Last Judgment;" and Mendelssohn's "Elijah" and "Walpurgis Night." Mr. F. Mori's "Fridolin," Weber's "Euryanthe," &c., are included in the attractive week's programme.

Silas, the composer, and Ernst, the violinist, are in Switzerland.

M. Conneau has left London for Paris, to complete the five act work he is engaged to compose for the Grand Opera

The Duke of Saxe-Coburg's opera, "Casilda," was produced in Vienna on the 16th instant, the Emperor's birthday, the chief part sustained by Staudigl. The work has already met with the greatest success at Berlin, Gotha, Dresden, &c.

CREMORNE GARDENS.

The plan on which these gardens are conducted succeeds admirably. The naval *fêtes* are, in particular, attractive. The fifth of these was celebrated on Wednesday night: the subject was the storming of Gibraltar, in which the Spanish Admiral, the Count de la Torres, lost 3000 men. The attack was not en this, as on former occasions, managed by means of the boats belonging to the Iron and Citizen Steam-boat company; as most of vessels properly fitted up for warlike exploits came sailing on the full tide, and experienced a hot reception from the Governor of the fort. The effect was splendid; the siege and the explosion of the mine were extremely grand; and the music at the conclusion, triumphantly accompanying "God save the Queen," crowned the exhibition with admirable *éclat*. There were present full 6000 spectators, including many members of the aristocracy.

DIORAMA OF THE HOLY LAND, EGYPTIAN HALL.—A novelty of a striking character is announced at this popular establishment. A group of thirteen or fourteen Syrians (including ladies), in their native costume, will accompany the exhibition with music and tales—the latter by a hunchback, stated to be learned in such matters; thus, by the aid of vivid pictures, completing the illusion of the scene.

THE THEATRES, &c.

HER MAJESTY'S.

A remarkably crowded house, for the advanced period of the season, signalised the welcome return of Mdme Sontag, on Saturday night, in the part of *Rosina*, Rossini's sparkling and witty "Barbiere." Her first entrance was hailed by the popular songstress greeted, and most exquisitely did she sing in return for her rapturous reception. On the encore of Rode's variations, she substituted Alary's charming Polka from "Le Tre Nozze," and again was the audience excited to fanaticism by the brilliancy of Sontag's unrivalled florid feats. The great basso Lablache was in no less ordinary vein for the delineation of *Bartolo's* nervous irritability: Lablache was in every situation, his colloquies on the stage and the orchestra being often brought to a stand-still by the spontaneous salhes of the colossal comedian, who evidently revels in the character of the jealous and passionate guardian

At the end of the season, Madame Sontag will make a tour in Germany, and afterwards join the Italian company under Mr. Lumley's direction in Paris. Next year, her engagement in London will be brief, as she has accepted terms for a Transatlantic trip of some duration. Lablache, at the close of Her Majesty's Theatre, will depart for Naples, to join his family, and will return to the Théâtre Italien, in Paris, in December.

Madame Barbieri Nini repeated, for the fourth time, on Tuesday, her magnificent performance of *Lucrezia Borgia*. This great *artiste* will create an immense sensation in Paris, when she makes her *début* at the Italian Opera, in the winter, at the request of her many friends. Had the gifted vocalist has made her appearance here so late in the season. What a delight would it have been to have watched her in all the varied parts of her repertoire—what unmingled gratification to have listened to the purest and noblest school of Italian vocalisation; to have been able to enjoy, without alloy, the consummate finish and precision of her style, accompanied as it is by profound dramatic feeling! If the management could have concentrated the interest of the public on Sontag, Barbieri Nini, and Alboni (as a contralto only), how many useless engagements of secondary artists of low pretensions might have been saved; and the subscribers, with such a tirade of *artistes*, and Lablache, Coletti, Sims Reeves, Calzolari, and Gardoni, as tenors and basses, could not have wished for a more effective and attractive *ensemble*.

Morari's "Nozze di Figaro" was presented for the third time on Wednesday, as a subscription night, in place of Saturday, August 30.

On Thursday, Scribe and Thalberg's "Fiorinda" was presented, for the sixth time, with the *divertissement* of "Il Prodigo."

Last night, Beethoven's "Fidelio" was announced.

This evening (Saturday), Mdlle. Cerito, the celebrated *danseuse*, will make her first appearance this season, after an absence of some years. She is announced for Tuesday next, only dancing, therefore, twice, being the last night of the subscription.

To-night, also, Madame Sontag resumes her original character of *Maria* in "La Figlia del Reggimento." On Tuesday, the last night of the subscription, "Anna Bolena" will be revived for Mdme. Barbieri Nini. Four farewell nights will be given: Wednesday, Thursday, Friday, and Saturday, at the fashionable prices. Mdme. Sontag will appear in "Sonnambula," on Wednesday, and Mdme. Barbieri Nini in selections from a favourite opera. On Thursday, "Don Giovanni" will be performed.

ROYAL ITALIAN OPERA.

Meyerbeer's "Robert il Diavolo" was given for the sixth time, last Saturday night. Owing to the sudden hoarseness of Herr Formès, Signor Reche had to complete the part of *Bertramo* in the last act.

On Tuesday night, Mr Hart's "Il Flauto Magico" was represented for the fifth time. Owing to the command of Her Majesty (in the presence of Madame Castellan, Signor Marlo, and Herr Formès, with Mr Costa, at Monday night's concert at Osborne, these *artistes* arrived at so late an hour on Tuesday that the commencement of the performance was delayed for some time. The opera, however, went off with amazing spirit, and was magnificently executed: Ror cent'druderieras *Papagena* keeping the house in a perpetual state of merriment. Mdme. Castelli as *Papagena* is one of the most humorous delineations, and the style in which Miss Louisa Pyne sang the intricate divisions in the two airs of the *Queen of Night*, brought down thunders of applause. Formès was in splendid voice, and sang *Sarastro* even to the triumphant delight of Mr Costa. The prominent part in the trifling part of *Papagena*, by the genius of Viardot, is one of the most attractive features of the *ensemble*.

On Thursday night, Meyerbeer's "Prophète" was repeated, for the seventh time. Mdme. Viardot will make her final appearance this season next Thursday, in the same opera, being the last night of her engagement. She will go to Paris, to study her new character in Scribe and Halévy's "Wandering Jew," which is in preparation at the Grand Opera in Paris.

Last night (Friday) was a subscription night, in place of that for Tuesday, Sept. 2. Rossini's "Otello," with Grisi, Ronconi, Tagliafico, Castelli, Polonini, and Tamberlik as Othello, "Il Segreto di Wedder," and "Don Pasquale," with Mdme. Castellan, Mdlle. Bertrandi, Meraiti, and Formès constituting the programme.

The subscription season will terminate next week. "Don Giovanni" will be given to-morrow (Saturday).

SURREY.

The English adaptation of Meyerbeer's "Huguenots" was revived, with great success, last Monday night. *Valentine* was especially sustained by Miss Romer, *Marguerita* by Miss Annie Romer, and the *Page* (charmingly sung) by Miss Poole. Mr. Travers was *Raoul*, Herr Kuchler *Nevers*, Mr. Corrie *St. Bris*, Mr. C. Romer the Huguenot soldier, and Mr. Bertrand *Marcel*.

SADLER'S WELLS.

Last Wednesday week, Miss Glyn appeared in her favourite character of *Nancy*, in "Fazio," and gave a performance, pathos, and a taste significant of a marked improvement in her style, which is now approaching maturity. On Friday and Saturday she repeated *Lady Macbeth*. Miss Glyn's performance of this anguished by its intellectual power, originality of outline. One of its chief attributes is the melancholy which comes over her in the third act, and in which she ascribes her own thick-coming fancies to her Lord, who, so far from courting solitude, as she thinks, has been conferring with the assassins about the purposed murder of *Banquo*, and who, having recovered entirely his self-possession, now resumes his mask over the wily, scheming mind, expressly exculating the Queen from his royal councils, and hypocritically advising her to show marked courtesy to *Banquo* at the banquet, when all the while he knows that his victim cannot attend it. This restraint and confidence she will be fully marked by the representative of *Macbeth*; the chance would then stand out in bold relief, and contrast with the depressed and subdued manner of the homicidal woman, on whom remorse has already begun to do its terrible work. All this was most finely suggested by Miss Glyn's quiet and dejected method of indicating this most subtle situation. Only once she looks up, and speaks with spirit. On *Macbeth's* suggestion that his "Fiance Hire," the old murderous spirit revives for one single instant—

But in them Nature's copy's not eterne

This line uttered, her mindpasses returns, and scarcely leaves her even in the banquet scene, where it is, indeed, interrupted only by her necessary attention to the extraordinary conduct of her husband. But after all everything is lost upon guests, it comes back again to such an extent as to cause a reaction in *Macbeth*, who forgets his fit, brags of his boldness, and resolves to "know by the worst means the worst." His determination is—

Strange things I have in head that will to hand,
Which must be acted ere they may be scanned

Such is the relative position of *Lady Macbeth* and her Lord at this turning-point of the tragedy, and thus prepared for are the madness and suicide of the guilty somnambulist. Miss Glyn's last scene was, as usual, so spiritually acted as to leave all other interpretations of it unnatural and unintelligible to discuss.

On Monday, "Hamlet" was revived, but without Miss Glyn in the part of *Gertrude*. She had, we understand, declined to act the character, on the ground of some verbal understanding with Mr. Greenwood, the lessee of the theatre, that she should not be called upon to support a *rôle* so offensive to her as that had always proved. This, we regret to add, has given rise to a serious difference between the parties concerned in the management: no section, indeed, that it is understood that Miss Glyn's further connexion with the theatre is impossible. The policy of her returning to a suburban stage was doubtful, and her sudden removal from it may be considered as a most fortunate. Under any circumstances, however, whether they understand it or not, the later keep in mind, look puzzled, and think it is not always so cold in England as they have been taught to believe. Our visitors from the provinces always keep together in clusters, just as I noticed the other week the Londoners did in Paris; and sometimes half-a-dozen of the jolly old gentlemen taken up with the whole folks of Mudfog or Bullocksmithy, who keep up a series of telegraphic communications with each other all through the performance, and shout their mutual criticisms from end to end of the bench at the fall of the drop-scene. It is to be hoped that the comfortable tide of prosperity now being enjoyed by the numerous establishments will produce some extra exertion on their parts as the winter season approaches. Rumours of changes and chances begin to be rife. Mr. Bunn had not, up to within a few days, actually taken Drury-lane; but his lesseeship was considered as certain, and the matter is probably by this time arranged. Operas and spectacle drama are talked of as to be the cards of the new management. In musical circles, efforts to get up an exclusively English Opera-house are, if not made, at least talked about. Rumours are not wanting to the effect that the manager of the Haymarket and Adelphi will at the close of the lease of the former house confine his exertions to the theatre in the Strand. Meantime, *on dit* that both Mr. Webster and Madame Celeste visit the States for a season. The Princess' will not shut up until the close of the autumn summer season. At that period, the probability is, that the Keans and Keeleys will dissolve partnership.

In common with many other Londoners, I saw a few days ago the President of the French Republic, as such, for the first time. It struck me that very much of the interest which he has at present arises from London. He certainly looks a great deal older than any of his portraits—older, more haggard, and more care-worn. His features have set, and become more deeply and coarsely marked; the eyes have sunk; and no doubt are more cautious and sleepless than ever. Deep rigid furrows around them. Indeed, there probably never was a position more beset with cares, toils, and worries than that which is now occupied by the chief magistrate of France. The sad, thoughtful look of his face is very characteristic. It has a gloomy brooding air, betokening the habit of continuous inward thought and speculation. At present the destiny of the President is said by the best informed people in Paris to be trembling in the balance. No one can guess how matters will go on the second Sunday of May. "The great probability," said a *rusé* old French politician to me, "is that everything will depend upon the tone and tem,er of the people for a week or two before the election. The waving of a feather, the turning of a straw, may then, when the feelings of the country are on the full stretch, give rise to a fast-spreading whim which may either drive Louis Napoleon headlong from power, or bear him on to a new and a splendid lease of office from which only another revolution will dethrone him.

A. B. R

TOWN TALK AND TABLE TALK.

EVERY 12th of August a wonderful phenomenon occurs in this metropolis. The anniversary in question is, as every one knows, or ought to know, the opening day of the annual slaughter of the grouse. Up to midnight of the 11th the moor fowl is a sacred bird. The law hedges them round with its protection, and the Manx Mycroft, at least something as truly national. To shoot grouse, means to go to Scotland to achieve the feat. You may, no doubt, pursue the animal and fill your game-bags on many a nearer moor, as you may sometimes catch whales about the Orkneys, or porpoises about London-bridge. But, generally, if you want porpoises, you go at least as far as Margate; if you want whales, you take a pleasant trip to Davis's Straits. And, in like manner, if you want grouse shooting, you take a Scottish moor, and establish yourself in a wilderness which shows with twinkly and bloom with heather-fed mutton. How comes it, then, that, five or six hundred miles having to be traversed by the great majority of the dead grouse, they should be found in coveys in all the markets of the metropolis just about the hour that the first victims of the season are tumbling, in the grey dawn of the morning, before the murderous double barrel? How comes it that you may have grilled grouse to breakfast in Belgravia, Camden-towns, Tyburnia, Tottenham-court-roadia just at the time that the dwellers on the slopes of Ben More, or Ben Cruachan, or Ben Macdui are sending the savoury carcasses of the first-fruits of the feathered harvest of the heather? Can it be that all the stricken birds fly, with a foreknowledge of their destiny, and a miraculous speed, direct to Hungerford or Leadenhall, and drop down dead in order due upon the counters of deeply-laden poulterers? The idea is hardly entitled to conviction upon the face of it. Of course, I exclude the injurious suspicion that the birds have been unfairly dealt with that their time of liberty and safety has been illegitimately abridged—that rascally poachers have been at work a week before the 12th that snares and nets have been spread, and silent sir-guns brought into the field, all to save the Londoners from the dreadful catastrophe of having to wait forty hours longer for grouse at a guinea or so a brace. Of course, such an injurious suspicion never crosses one's mind. Our tradesmen are too highly respectable, and their customers are too highly respectable. What! break the law! They would as soon think of breaking heads or windows. It is legal, thoroughly legal, to eat grouse at breakfast on the 12th. Here is the act, section, chapter, all regular and formal. "Well, then, what then?" What more do you want? Why, you freaks in the county, I should like to know? I'll bring an action against any man who says I do. Break the law, indeed! Hand me over that other back; and I think, too, I could manage the wing—it looks tender; with the smallest portion of that toast and white sauce."

Ballooning seems to be becoming a more favourite amusement than ever, both here and in Paris. M. Poitevin, who is the French Green and something more, has been most properly checked by the authorities, after having succeeded in a great number of ascents, the whole turn-out clung to a monster balloon. In future, the taking up of animals is forbidden in our neighbours' realms, and it would be well if some similar demonstration were to be made *chez nous*. It appears that, with the independent of the great majority of the public and highly-start from all the great metropolitan gardens, whole constellations of minor fire-balloons are launched from the smaller places of public resort, and often from the yards and house-tops of amateurs. To these instruments of soaring living freights are attached, in the shape of hapless cats and monkeys, who are left aloft to enjoy the rapture of the descent, not of the homely below, but of being burnt by the combustion of the machine or smashed by its fall. In one particular suburb of London, much favoured of nervous old bachelors and retired respectabilities in the pursuit of quiet lives, it appears that the descent of much of the combustible surrounding on the roofs or the little patches of garden ground, is become quite a matter of course. "Another monkey!" never excites the least surprise; and the announcement of a "tom cat, in a wire cage, just fallen into the area," is received with an ordinary growl. Nothing, however, approaches to the nuisance which has been commonly offered by the sacrificers of the unlucky four-footed aëronauts, for the recovery, dead or alive, of the animals in question; and the consequence has been, that each fire-balloon freighted with its Tom or its Rover has a grand rabble rout of attendants, who chase it beneath, and who, upon the descent of the wretched voyagers in some quiet old fogey's front garden, leap by scores over the railings, trample down the very joy of the proprietor, in the shape of tuoshias and rhododendrons, and fight round the unfortunate biting monkey, or the shrinking scratching cat, like the Greeks and Trojans about the body of Patrocius.

The theatres continue to be crowded to suffocation. This is a good time for the managers, but a bad time for authors. As in the trade-winds ships go on for weeks without changing a single sail, so theatres are at present bowling before the gale of the crowds of strangers without finding it requisite to change a single bill. I never remember so long a period unmarked by anything like novelty at the playhouses. Entertainments, which in the normal condition of London would be played to empty benches, are mightily applauded by peopling of tit-bulks, who stand the swelter with a pluck which would dishonour to niggers. Hardly a true bred Londoner is to be seen in at least pit or boxes. The grand mass are country folks, with now and then a sprinkle of foreigners. The former subject everything, whether they understand it or not, to the later keep in mind, look puzzled, and think it is not always so cold in England as they have been taught to believe. Our visitors from the provinces always keep together in clusters, just as I noticed the other week the Londoners did in Paris; and sometimes half-a-dozen of the jolly old gentlemen taken up with the whole folks of Mudfog or Bullocksmithy, who keep up a series of telegraphic communications with each other all through the performance, and shout their mutual criticisms from end to end of the bench at the fall of the drop-scene. It is to be hoped that the comfortable tide of prosperity now being enjoyed by the numerous establishments will produce some extra exertion on their parts as the winter season approaches. Rumours of changes and chances begin to be rife. Mr. Bunn had not, up to within a few days, actually taken Drury-lane; but his lesseeship was considered as certain, and the matter is probably by this time arranged. Operas and spectacle drama are talked of as to be the cards of the new management. In musical circles, efforts to get up an exclusively English Opera-house are, if not made, at least talked about. Rumours are not wanting to the effect that the manager of the Haymarket and Adelphi will at the close of the lease of the former house confine his exertions to the theatre in the Strand. Meantime, *on dit* that both Mr. Webster and Madame Celeste visit the States for a season. The Princess' will not shut up until the close of the autumn summer season. At that period, the probability is, that the Keans and Keeleys will dissolve partnership.

In common with many other Londoners, I saw a few days ago the President of the French Republic, as such, for the first time. It struck me that very much of the interest which he has at present arises from London. He certainly looks a great deal older than any of his portraits—older, more haggard, and more care-worn. His features have set, and become more deeply and coarsely marked; the eyes have sunk; and no doubt are more cautious and sleepless than ever. Deep rigid furrows around them. Indeed, there probably never was a position more beset with cares, toils, and worries than that which is now occupied by the chief magistrate of France. The sad, thoughtful look of his face is very characteristic. It has a gloomy brooding air, betokening the habit of continuous inward thought and speculation. At present the destiny of the President is said by the best informed people in Paris to be trembling in the balance. No one can guess how matters will go on the second Sunday of May. "The great probability," said a *rusé* old French politician to me, "is that everything will depend upon the tone and tem,er of the people for a week or two before the election. The waving of a feather, the turning of a straw, may then, when the feelings of the country are on the full stretch, give rise to a fast-spreading whim which may either drive Louis Napoleon headlong from power, or bear him on to a new and a splendid lease of office from which only another revolution will dethrone him.

A. B. R

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Excursion and return tickets are now issued by the Royal West India Mail Packet Company. Persons can visit Madeira, or any of the places included in the West India Mail Packet scheme, in the company's packets; and if they embark on board any of the homeward packets within a x months from the date of issue of their return tickets, a considerable saving is effected.

We learn from the Gaboon River, in West Africa, that the French have founded a new fort and establishment on a point called the Maison Carrée, and where there are already several European houses. Hitherto the French trade in the river has been a mail, but now there is a port for catching the hippopotamus. A French bishop named Beaslen presides over the Roman Catholic missions, and is called the Bishop of the Gaboon.

It is an extraordinary fact, stated on authority, that there is at the present time a more numerous Irish population in the United States of America than there is in Ireland itself.

The Vienna paper, *Lloyd's*, announces that Austria is in treaty with Sardinia for the engagement of a convention on the subject of a railway. The line to be constructed by Sardinia will, it is added, go from Turin to Milan.

We regret to state, that, as the lady of Sir W. Jolliffe, Bart., was stepping ashore from the barge of Captain I. Lyons' yacht, at Cowes, lately, she slipped and broke the cap of her knee. Her Ladyship was carried to her residence, and Drs Davids and Hoffmeister immediately called in; but it is feared that it will be a long time before she will be able to walk again.

At Southampton, a seizure was made on Thursday evening week, by Mr. Witt, one of the tide surveyors of her Majesty's Customs, of the smack *Louisa*, of Shoreham, Captain Joseph Lewis, with three men, named David Bradley, Francis Hemery, and James Hatcher. The smack came into Southampton Water laden with oysters, but under the oysters were found 36 tubs and 24 flagons of brandy. The men have been sentenced by the magistrates to six months' imprisonment. The smack, with its contents, is worth upwards of £300.

On Monday evening a public meeting of the ratepayers and inhabitants of St. Andrew parish was held at the New Vestry-Rooms, King's-road, Pancras-road, when the question of the consolidation of the various paving boards that now exist in that parish were discussed, and resolutions in favour of the plan were adopted.

Mr. P. Demetrakarakos, a late member of the Chamber of Deputies at Athens, as repre entative of Sparta, and a barrister of the courts of law in that capital, is at the moment in London, commissioned, it is said, by the Greek merchants and shipowners who have experienced great losses by the blockades and seizures of Admiral Parker, to lay their case before English counsel, and to take the opinion whether they can bring their claims for indemnity before the English court of equity. Amongst the claimants who have deputed Mr. Demetrakarakos, are the two brothers Menides, the one a senator, the other a deputy, both shipowners of the island of Spetsa; and Mr. Orlando, from the island of Hydra.

In consequence of the decision of Mr. Secker in Lord Ranelagh's case, the following notice has been posted up, by order of the directors of the South Eastern Railway Company, at the London and other stations:—"Notice.—To prevent confusion, tickets are available only for trains in which there is room, which is to be determined by the company's officers."

From Java, in the East Indies, we learn that cholera, after making most fearful ravages, has greatly subsided. Throughout the Dutch possessions it is estimated that from 12,000 to 13,000 were attacked during the late visitation, of which number fully one-half perished.

The *Java Courant* of June 25 notices a very curious phenomenon at Sourabaya, where four dessas of the district Sumanap had been visited by a great number of green caterpillars, which destroyed the leaves and young and ripe fruit of nearly 3000 cocoa-nut trees.

The sum of £1500 was paid out of the Encumbered Estates Court (Ireland), last week, to Archbishop M'Hale, from the produce of the sale of the estates of the late Robert Dillon Browne, Esq., in the county of Mayo; and Dr. Egan, the bishop of Waterford, from the produce of the sale of an estate of £13.0 from the sale of the estates of John O'Connell, Esq., of Grena, county of Kerry.

The committee on life-boats have presented their report to his Grace the Duke of Northumberland, and the premium of £100, which had called forth a great amount of talent to the competition, has been awarded to James Beeching, of Great Yarmouth.

The United States sloop of war *Dolphin*, has been fitted up for a scientific expedition. One of the objects is to obtain soundings, if practicable, from the Bermudas to the coast of England.

A sad occurrence took place on Friday, last week, in the belfry of St. Mary's Church, Monmouth. In the course of the afternoon the bells rung a merry peal in honour of the judges opening the commission. After a short interval, the ringing, which had been suspended, was resumed; when one of the ringers, named Jones, finding that something obstructed the machinery, went up to ascertain the cause, and was horrified to discover the mangled body of his younger brother under the bell. The upper portion of the poor boy's skull was comple ely shattered in, and the back part of the head was cleven in two, and the brains bespattered the roof. The poor little fellow seems to have introduced his head into the bell, which he was doubtless viewing just at the moment his brother pulled.

The *Galway Vindicator* says:—"As the grouse season approaches, a large number of tourists are daily arriving in Connemara, to enjoy the sublime and picturesque scenery of our mountain highlands. Each down coach from Dublin is well filled with passengers, and a more than ordinary bustle seems to pervade our streets in consequence of the great influx of strangers since the opening of railway."

The acceleration of the Irish mail leaving Kingstown every evening at half-past seven o'clock will commence on the 1st of October, and not on the 1st of September, as was expected. The steamer at Chester will start at 8 P.M. instead of one o'clock P.M., as at present.

At the Marylebone vestry, on Saturday, a vote of thanks was unanimously passed to Sir Benjamin Hall, Bart., and Lord Dudley Stuart, the representatives of the borough, thanking them for the zealous discharge of their duties during the past session of Parliament.

From a return issued this week, an account is given of seizures and prosecutions by the Excise of adulterated tea, tobacco, pepper, and coffee. In the year ending the 5th of January last there were 1 seizure of tea and 1 prosecution; of tobacco, 12 seizures and 13 prosecutions; of pepper, 7 seizures and 7 prosecutions. No seizure or prosecution for adulterated coffee by the Excise in the same period.

A return has been printed of the number of days on which the House of Commons sat in the session of 1850, from which it appears that the House sat on 120 days, for 921 hours 2 minutes, 56 hours of which were after midnight. The average time of each sitting was 7 hours 46 minutes 30 seconds. The longest sitting was 14½ hours, on the 14th July; and the shortest on Saturday, the 29th of March, when it sat for a quarter of an hour only. The number of entries in the vot s was 1947.

On Saturday, in the Insolvent Debtors Court, an order for hearing was issue. in the case of Mr. Joseph Stammers, late lessee of the Marylebone Theatre. Mr. stammers was the manager of the Wednesday Concerts, at Exeter Hall, and through his speculations in those concerts he became insolvent, and was discharged under the act on September last. Soon afterwards he became lessee of the Marylebone Theatre, which he carried on for some months, and to that speculation his present appearance is attributed. The debts appear from the schedule, to exceed £3000, and many members of the theatrical profession are creditors for balance of salaries. The hearing of the case is appointed for September the 5th.

Malt-rot fair, the greatest of its kind in Scotland, perhaps in Great Britain, took place on the 12th inst. The encampment of the regular traders in refreshments extended far nearly half a mile along the base of the hills. A part-coloured group of gipsy tents formed a sort of suburb to the canvas town. Nearly 100,000 lambs were offered for sale, and, for the most part, changed owners, at most satisfactory prices. It was the best fair known for several years.

The coroner's inquiry into the late fatal colliery accident at Bellminster has terminated in a verdict of mans aughter against Moses G. Stewart, the manager, and Henry Pillinger, the bailiff, who were committed on the coroner's warrant, and at once taken into custody.

At Penrith, on Saturday, the execution of Henry Groom took place on the public scaffold, erected in front of the county gaol, before an immense concourse of persons. Groom was convicted at the recent assizes of the wilful murder of John Ayton, who was shot while proceeding to pay rents due to the on the employ of the Earl of Leicester. The culprit, since his condemnation, has confessed his guilt.

Edward Lawes, Esq., is appointed Chairman of the Commissioners of Sewers, under the late act for renewing the commission for another year.

Mr. William Ayshford Sandford is appointed Colonial Secretary for Western Australia, in the room of Mr. Thomas Falconer, resigned.

Mr. Yate, late of the Bombay Artillery, has been appointed secretary to the Pasha of Egypt.

A terrific tornado lately visited the districts of Ohio and Pennsylvania (U. S.), which are contiguous to each other, levelling the forests for many miles, tearing down or unroofing houses, killing cattle, and in some few instances destroying human life.

About 400 clerks, connected with 105 assurance companies, have addressed a requisition to the directors, requesting them to close business at two o'clock on Saturday, "confident of the practicability of the plan, and fully sensible of the advantages which its adoption will confer."

The total quantity of cotton wool imported into the United Kingdom in the year 1850 amounted to 653,576,801 lb. against 726,469,012 lb. in 1849, and 713,920,161 lb. in 1848. Of the whole quantity imported in 1850, 493,153,112 lb. were from the United States of America, 30,259,982 lb. from Brazil, 18,531,474 lb. from the Mediterranean, 118,872 742 lb. from British possessions in the East Indies, 228 9.3 lb. from the West Indies and British Guiana, and 2,990,658 lb. from other parts. The importations from the British East Indies have increased from 76,836,815 lb. in 1849 to 118,872,742 lb. in 1850.

Arrangements were being made in Boston, when the last accounts left the United States, to give a banquet in honour of Mr. T. B. M'Manus, whose recent escape from Van Diemen's Land has been already noticed.

CHESS.

TO CORRESPONDENTS.

D D. Leamington—The pieces known as "the Staunton Chessmen" seem to increase in favour, and their superior p wer all others is now almost universally admitted. In India, in Russia, and in America, they are rapidly superseding the clumsy old patterns; and, in time, we expect to find one form of chessmen and one system of chess in nation adopted throughout the civilized world. Some of your p oblems have merit. Plenty, Mowbil, or Leadenhall-street, and at the Polyt chnic Institution, you may rely on as genuine

W. T. or. Rd ubergh—Your opponent cannot claim a drawn game "because he has only his King left." With such forces as you mention checkmate can readily be given.

HENRY—The back volumes of the *Chess Player's Chronicle* are obtainable at Hastings, the publisher, Cathy-street, Hastings.

SIGMA. KING—The admission to the St George's Chess Club (three guineas per annum) entitles the members to admission at all times to the Polytechnic Institution, and the use of a spacious and well supplied library and reading-room. Candidates for admission should send their names and addresses to E Lough ton, Esq. 5, Cavendish-square

C F A.—We are sorry to say they are quite below our standard.

M W A. Bagshot—We will look the game over again shortly, and try the result of your suggestion.

W. TAYLOR—In all the matches of the Tournament now pending or to be played, victory will be decided by the substract in each who first wins seven games.

ALEX. DEMETRIUS—The whole series, as it stands at present, is a special, a clause of falsehoods *Subscribers* to the Tournament can and could obtain cards of admission to see the play, on applying to the proper office; and the amount of fund announced by the secretive of the handsome subscription from India, exceeds by nearly a hundred pounds the estimate of your Irish loving scribe

G. HORNASTLE—Applications for tickets to the Lime Judrice Chess-gathering should be made to A. B Ellsworth, Esq. Hon. Sec. Amongst the Caissa

R R of Ashford, VERE ST.—Now under consideration

H HOLMES—Not above to make in two moves

LEDBURY CHESS CLUB—To oblivion

LATHE—We quite agree with you, that, of all the new designs for chess pieces which the success of the "Staunton Men" has brought to light, those called the "Philidor Chessmen" are the least to be commended! Instead of being an improvement on the old pieces, they are a ill more cumbrous in shape, and with no one quality of usefulness to redeem their want of beauty

22. Q takes R	Q takes Q	45. Q Kt to Q 8th	B to Q R 3d
23. P takes Q	Kt to Q B 5th (ch)	46. Q Kt to Q B 7 h (ch)	K to Q Kt 3d
24. K to Q B sq	K takes R	47. Q Kt to K 6th	P to Q R 4th
25. K R takes B	P to Q B 3d	48. Q Kt to Q 8th	P to Q R 5th
26. P to his 3d	P to Q 4th	49. K Kt to K Kt 4th	P to Q B 6th
27. P to K 4th (e)	K Kt to K R 3d	50. K R to his 6th	B to K 8th
28. Q R to K R 7th	K Kt to K B 4th	51. K Kt to Q 3d (h)	R takes Kt
29. K R to his 3d	K Kt takes Q P	52. P takes B	Kt to K 6th
30. K Kt to Q 8 5th	B to Q R 3d	53. K takes P	K takes Kt
27. Kt to Q R 6th	R to Q 2d	54. P to Q 4th	Kt mates

(a) This is now admitted to be better than the old move of B to K Kt 5th.

(b) Finely played. Tempting Jack to take P with Pawn, that he may then play Q Kt to his third, attacking the Bishop, and afterwards take the P with his Q Bishop, preventing Jack's Queen from ever again to play at all effectively.

(c Black evidently directed and studied the move of his adversary's last move

(d) White seems to have purposely shunned and the Pawn, as part of an ingenious combination by which he hoped to gain the adverse Rook P then with the check of his Kt at Q B 5 h. If we mistake not, however, he omitted to calculate that Black could afterwards take a Bishop in return, at his K R 4th. By this oversight he loses the exchange, but he makes ample amends for the r ss, if error it was, in his subsequent play, which is of the very highest order

(e) Instead of this move, which admitted the opening of the Kt into the heart of the field, he ought to have played Kt to Q B 5 h directly, rather than three moves later.

(f) The ill effect of Black's 23d move is apparent in the time lost with his Knight, which he is now moves returns to the same square, after having accomplished nothing

(g) The beginning of an ingenious combination, which confined the Black King inextricably to the end of the game.

(h) Fatal. By playing Kt to Q 7th (ch), he might probably have drawn the game.

CHESS ENIGMAS.

White, playing first, mates in three moves.

THE GREAT EXHIBITION.

THE past week has been one of an average character, so far as the number of visitors is concerned, but it has been of more than usual interest as regards the future arrangements of the Exhibition. The Royal Commissioners met on Tuesday for the last time prior to the departure of the Prince for Scotland, and many important points were duly discussed and finally settled—the question as to the date at which the Exhibition is to close, and whether or not any ceremonial should attend the conclusion of the most remarkable event of ancient or modern times in relation to the future social relations of mankind. The date is now fixed for the 11th of October; but it has been decided that no ceremonial, properly so speaking, shall take place, but that a meeting of the Royal Commissioners and the Exhibitors shall be held on the 15th, to receive the reports of the juries, and transact any business appropriate to the occasion. We cannot but think that this is an unwormy close to so mighty an act as the Exhibition has proved to be, and that it would, indeed, have been more in accordance with the general feeling of the people of this country, and certainly more expressive of the high aims and achievements of the work thus consummated, to have solemnly closed the Building and shut up its contents from the general gaze by a public thanksgiving within it, as it was thought expedient and appropriate to speak it by public prayer and blessing; and we trust that on consideration this will yet be done, inasmuch as the eminent success of the undertaking can be best expressed by such means.

The meeting to be held on the 15th October will doubtlessly be full of interest. Foreign commissioners, jurors, exhibitors, local committees, and honorary sergearies are all to be invited; and, after the reports of the juries, so far at least as the awards are concerned, have been published in the *Gazette*, the distribution of the medals will commence in accordance therewith, since it must be quite obvious that a public distribution on any one occasion would be totally impossible from the large number of recipients; and to offer any mockery for this honour would make those invidious distinctions against which the efforts of the executive of the jury department have so determinedly struggled. It may be a question, however, for consideration, whether the formal presentation of a list of those exhibitors in each foreign country to whom prizes have been awarded, may not with propriety be presented to the commissioner representing that country; and that similar duty may be presented, or rather returned, to the chairman or vice-chairman of each jury, being an Englishman, of the British exhibitors rewarded in the class on which that jury adjudicates. This would be as formal a recognition as the presentation of the medals awarded to each individual exhibitor.

In addition to the medals to be presented to those exhibitors whose merits have been recognised by the juries, it is intended to mark the services of the jurors by presenting each with a medal. The three cards, of which engravings have already appeared in the ILLUSTRATED LONDON NEWS, will be disposed of as follows:—The one after the design of M. Bonnardel will constitute the one popularly known as the "Great Medal" but which, in fact, will be only voted by the council of chairmen in special cases and not as intended to mark degrees of excellence; although, as a matter of course, it includes excellence of the highest character. But out a distinct class of merit, such as great novelty of adaptation or invention, &c. The medal designed by Mr. R. Wyon will constitute the prize medal of the Exhibition, and mark merit without descending into the question of degree. The third of these heads, for which premiums were awarded last year, that designed by Mr. Adams, will be the one given to the jurors, as a reward indicated. In addition, however, to these medals, it is intended by the Royal Commission to strike two others—one to be presented to the exhibitors, and another to mark the sense of the services rendered by the various officers, local committeemen, honorary secretaries, and others to the Exhibition. In short, there is to be a bold attempt made to reward and please everybody; the latter being an achievement worthy of attempting by those who got through so many difficulties and apparent impossibilities. Certificates, too, are to be issued, and copies of the reports of the juries distributed as permanent memorials to all who have worthily assisted in the undertaking. When or how all this is to be done, is a question more easily asked than answered.

The important questions as to the retention of the Building, and the purpose to which its surplus proceeds are to be devoted, have yet to be agitated and considered. This is quite certain, that the Royal Commissioners do not consider that they are in any way empowered to spend one penny in the prosecution of its early history of a Winter Garden. All they have to do is to pay Messrs. Fox, Henderson, and Co. for the use of the Building to the time at which they vacate it; therefore, its purchase for any public purpose must be at the cost of the public; otherwise the Government, having done nothing, in its capacity as a Government, for the Exhibition, except give a tardy sanction and ensure a site for the Bal dung, has no claim upon the funds or a body like the Royal Commission for its keep in carrying out any after scheme but strictly in accordance with the conditions on which it is power it holds was given. Several propositions are already made for the appropriation of the surplus. An influential member of the Executive Committee, Mr. Fuller, publishes a pamphlet advocating the endowment of schools of design; proposals are afloat for a museum based upon those articles which exhibitors are willing to contribute, or which may be purchased. The question is, however, whether some plan, embracing all the propositions now floating about, might not be matured, and a university of art, science, and manufacture established, and endowed with this surplus, making more complete our schools of design and our scientific societies, in the promotion of skill in manufactures, and giving an opportunity for the recognition of talent in every such directions which does not now exist, by placing living science on an equal footing with dead literature. The latter is recognised and rewarded in our universities—the former nowhere. But this university should be open in its honours to all nations, and be as cosmopolitan as the Exhibition, from which it might now spring; it would stimulate our young men into greater and greater exertions, inasmuch as the Frenchman and the German would have the facility of running away with the honours, if their English competitors did not meet them fairly in the field, fully prepared to stand the test of learning and talent to which they would be subjected. The establishment of such an institution would be in strict accordance with the functions of the Royal Commission. These points will have to be gravely discussed ere long; and it is time the public at large began to think about them.

The numbers attending the Exhibition during the week have been the same as usual. The Building is always well filled, but no serious inconvenience from overcrowding ever occurs. The patrons of schools still continue to ring up the attendant children; and, on Thursday, 1355 children were brought from Woolwich to Westminster Bridge, and then formed into procession, and, with a band of music and flags flying, marched through St. James's-Park and Hyde-Park to the east end of the Building, the procession reaching from that entrance to Hyde-Park Gate, Piccadilly. These were the united schools of various denominations from Woolwich, Plumstead, &c., and consisted of the schools of the Established Church, Roman Catholics, Wesleyans, Primitive Methodists, and others. After visiting the Exhibition, they assembled at the East end transept, at the east entrance, and were there regaled with refreshments, sang "God save the Queen," and after forming along the banks of the Serpentine, proceeded to the steamer, which awaited their return to Westminster Bridge.

The elder children (to the number of nearly 300) of the St. George, Hanover-square, Parochial Schools, South-street, were taken to the Exhibition on Wednesday last, under the kind auspices of the Misses Westerton, they were admitted at the early hour of eight o'clock in the morning, thus affording the children one hour's prambulat on through the Building before the usual influx of visitors. The children returned to the school room by five o'clock, where substantial refreshments, and tea, cake, &c., were provided for them, the whole expense being defrayed by the voluntary contributions of the parishioners.

The visit of the Indian princes to the Exhibition has created considerable interest and astonishment, for which anything of peculiar interest attracts them, a "whoop" of a startling character was raised as an outward sign of best wishes. Our readers were made aware we find that it is a custom practised in the Indian dress, which had been placed by Mr. Catt on the large bridge in the American department, and been destroyed, as stated, by the freaks of a drunken woman; and after looking at the pictures representations of their countries, and ascertaining the cause of their removal from their place of honour, the chief pronounced something like a moral on the evil influences of "fire-water."

It now remains to be seen whether the positive announcement of the date of closing will cause the expected influx from the country of those who have not yet seen the Crystal Palace, since seven weeks is the limit of time allowed for them to realise all the wonderful things of which they have heard and read so much.

STEAM COMMUNICATION BETWEEN GLASGOW AND NEW YORK.—LAUNCH OF THE "GLASGOW" STEAM-SHIP.

THE river Clyde, which is celebrated as the cradle of steam navigation in this country, continues to enjoy a high reputation for the number and splendour of its steamers. On Saturday last, a magnificent addition was made to its already large stock in the launch (from the building-yard or Messrs. Tod and M'Gregor) of the *Glasgow*, the first of a great line of steam-ships intended to connect the chief manufacturing city of Scotland with the commercial capital of the United States.

In the accompanying Illustration the vessel is represented at the moment she is about to leave the stocks. The building-yard of Messrs. Tod and M'Gregor is situated at the junction of the Kelvin with the Clyde, a couple of miles below Glasgow harbour. A large concourse of spectators filled the banks of the river on the occasion, and at the time appointed (about four o'clock in the afternoon) the new liner glided into the Clyde in the finest and easiest manner imaginable, amid the cheers of the assembled thousands, the booming of cannon, and to those who happened to be stationed near it in the yard, the music of an instrumental band.

The ship was christened by Miss York, daughter of Deacon Convenor York; and immediately thereafter, a streamer, bearing the name *Glasgow*, floated from her topmast; while both fore and aft the British union jack, the American banner, and many gaudy flags fluttered in the breeze

The *Glasgow* is a three-decker, on the screw principle, with four masts; and, besides being beautifully modelled, is as strong as iron plates, bars, straps, and rivets can make her. Over all she is about 2000 tons burthen; her engines are 400 horse-power; and she is to be commanded by Capt. N. Stewart, late of the Cunard steamers, and formerly commander of

LAUNCH OF THE "GLASGOW" SCREW STEAM-SHIP, AT THE MOUTH OF THE KELVIN, ON SATURDAY LAST.

the *Rajasthan*, well known as a passenger-ship between London and Bombay. Her main deck is 255 feet in length and 36 in breadth; she can accommodate 160 passengers upwards of 60 of these in the cabin, and, under a pressure, fit up for more. She is constructed to carry from 500 to 600 tons of coal, and a cargo of about 1800 tons. The height between the main deck and the spar deck is 7 feet 6 inches, and she is to be fitted up in a style of the first elegance, while nothing is to be neglected which may add to the comfort and convenience of passengers.

This large and superb steam-ship is, we believe, owned chiefly in Glasgow, and is to be under the management of Mr. M. Langlands in that city, and Mr. M'Symon in New York. She is to make her maiden trip across the Atlantic on the 16th of next month.

"THE QUEEN OF A DAY," AT THE HAYMARKET THEATRE.

Mr Edward Fitzwilliam's new comic opera, "The Queen of a Day," has quite established itself in public favour. Our Artists have supplied an illustration of one of the most amusing incidents in the second act; it is, after the *Queen of a Day* (Miss Louisa Pyne) has made herself known as *Lucy Lovelace*, the milliner, to her lover *Walter* (Harrison); and *Sir Henry Vere* (Mr. Stuart) and *Timothy Tormentil* (Weiss), the innkeeper, are astounded at the *Queen's* familiarity with a sailor.

SCENE FROM THE NEW COMIC OPERA OF "THE QUEEN OF A DAY," AT THE HAYMARKET THEATRE.

TESTIMONIAL TO SIR ALEXANDER BANNERMAN.

A very handsome silver table service has just been completed by Messrs. Smith, Nicholson, and Co., Duke-street, Lincoln's-inn-fields, for presentation to Sir A. Bannerman, by the inhabitants of Aberdeen. The Candelabrum here engraved is the centre-piece of the service, and bears the following inscription:—

Presented to
His Excellency Sir Alexander Bannerman, Knt.,
Lieutenant-Governor of Prince Edward's Island,
By his Friends and Constituents in Aberdeen,
In testimony of their sense of the great and effective services he had rendered on many occasions to their city during the fifteen years he represented them in Parliament, and the great regard and affection they entertain for his personal worth and character.—1851.

Sir Alexander Bannerman has lately been appointed to the governorship of Prince Edward's Island; and in the *Charlottetown Advertiser* we find the following evidence of the great satisfaction which the appointment has given to the Islanders:—"We regret (says the *Advertiser*) that the lateness of the hour renders it impossible to give in to-day's paper the details of the journey of the Lieutenant-Governor to the west, or a lengthened description of the reception which awaited his Excellency and lady; the tale will speak for itself when published, and the addresses will give evidence of the enthusiastic gratitude felt by the whole western population for what the people call the 'boon of civil liberty,' which her Majesty has bestowed on this part of her colonial empire. We are aware that party writers always incur the risk of overstating the success of the views of which they are the advocates, but we defy language to detract from, or enthusiasm to exaggerate, the scene of universal and heartfelt joy and congratulation which awaited his

CANDELABRUM OF A SILVER TABLE SERVICE PRESENTED TO SIR A. BANNERMAN.

Excellency wherever he went: we have said universal, because the few lingering malcontents, who would yet presume to strive against the will of a whole people and their gracious Queen, have, as to some, been already converted to more patriotic sentiments, whilst others, from very shame, have on this occasion joined the ranks of those who have given so generous and confiding a reception to Sir Alexander Bannerman and his lady, not only as the organ of the Queen's gracious intentions, but as one determined and capable of carrying them out with justice and impartiality. Never in this island was such a scene of loyalty exhibited as awaited the progress of the party on their westward tour.'"

A FEW DAYS IN THE LAKE DISTRICT.

CONISTON WATER, FROM WATERHEAD.

(*Continued from page 217.*)

On by rail to Lillafield, or two miles further to Lea Scale station, where there is an excellent hotel and vehicle for hire, by which the tourist may proceed to Calder Abbey, situated in the Vale of and close to the river Calder; the site, like all the monastic buildings of the period, has been well chosen: fertile holms, sheltered by wooded hills, a trout-stream and other adjuncts to the refectory, form one of the many bygone charms linked with the Black Monks of Calder. The ruins are highly interesting surrounded by noble trees, the foremost of which is the linden, trailing its branches on the mossy lawn; the rapid river, the quiet village, and the wooded banks contrasting well with the sombre ruins. . . Return to rail, and proceed to Broughton, passing the little seaport of Ravenglass, and obtaining occasional glimpses into Westdale, Miterdale, and Eskdale, with the ranges of Scaw Fell and Corney Fell; then skirting the base of Black Coomb, the tourist finds himself on the shore of the Duddon Estuary, and there the view scarcely may be surpassed: across the Duddon are the Furness Fells, and the extensive slate quarries of Kirby; on the left is the rich seignory of Millow, its old baronial castle and relic of feudalism in the gallows-stone, inscribed—

Here the Lords of Millow exercised jura regalia.

The Black Coomb range forms a background to Millow; and, as the train proceeds, a lovely vista—the "sweet Vale of Ulpha," watered by the "cerulean Duddon"—opens to view; while, in front, Coniston Old Man, Walney Scar, and other noble mountains, form one of the finest views in the Lake District. Cross the Duddon, by an immensely long viaduct, and enter Lancashire, and, shortly, the neat little village of Broughton, in Furness. Broughton contains nothing of importance except "the Tower" (the seat of — Lawrey, Esq.), situated on a lofty and wooded eminence adjoining the village, from the roof of which is a most extensive view of the Duddon Estuary, Walney Island, &c.

CALDER ABBEY.

Leave Broughton for Coniston by coach, the road alternately ascending and descending over finely undulating ground, and commanding views into the vale on the right, and the hills around Coniston waterfoot. Pass through Tower Kirkhouse: in this neighbourhood topiary gardening (viz. trimming shrubs and trees into fantastic forms) still prevails; one garden by the roadside displays a ship with sails, a house, obelisks, urns, &c. On entering the village of Coniston, the scene suddenly changes from comparatively sylvan, to wild grandeur; on the left towers the immense summit of the "Old Man," backed by Longscar and Wetherham; in front are the deep passes of Yewdale and Tilberthwaite, and to the right the Lake and wooded hills beyond. After passing the village the new Waterhead Inn attracts the eye, both from its excellent site, extent, and noble appearance; it is in the Elizabethan style, and built with the slate rock of the district. Near the head of the Lake, on the west, is the fine "Old Hall" of the De Flemings, with its tall round chimneys looking down on the venerable structure. On the opposite shore stands Tent Lodge, once the residence of the celebrated Miss Smith, and recently of Tennyson. At the head of the lake—embayed by lofty hills, terraced heights, sweeping lawns, and noble trees—stands Waterhead House (J. G. Marshall, Esq.) Leaving the Vale of Coniston, the coach ascends a considerable eminence, from which the view is exceedingly grand. Arrive at Hawkshead, an ancient market town, near the head of Esthwaite water, containing some curious

BASSENTHWAITE WATER (SKIDDAW BEYOND), FROM WYTHOP WOODS.

old buildings—the most remarkable of which are, St. Michael's church, standing on a rocky eminence, and the Grammar-school at which Wordsworth was educated. Leave Hawkshead for Ambleside—Loughrigg-hill in front—cross the Brathay, and re-enter Westmoreland—pass through the village of Clappersgate, cross the Rothay to Ambleside, and proceed to Birthwaite railway station, thus completing a hurried three or four days' circuit of the Lake district. Or even in two days, by going round by coach and rail may be made from Borthwaite to Borthwaite again. But these are not all our lakes. Let our tourist rest upon the marge of Windermere, and we will be his guide again, leading him to other beauties.

THE TIDE OF POPULATION.

SOME additional census returns, lately laid before Parliament, enable us to state in some detail, though the returns are not yet complete, the course which the tide of population is taking. It is far from overflowing the land equally; but in some places rushes up like the bore at the mouth of the Severn, at others spreads itself smoothly over the surface, and from some places it retires. Thus, we have already informed our readers, the flood in the metropolis has set in at the rate of 21 per cent., or the people have increased from 1,948,369 in 1841, to 2,361,640 in 1851. But, though parts of the metropolis have increased more rapidly than any other places of which returns are yet made, the whole metropolis has not increased so fast as the county of Durham. Of all the great districts of England, Durham has, in fact, increased the most, viz. 26 per cent.; Lancashire comes next, 22 per cent.; Monmouth, 20; Warwickshire 19, Staffordshire 18, Herefordshire 17, Cheshire 15, York, East and West Ridings, 14; Northumberland 13; and the increase declines in Berkshire to 5 per cent., Herefordshire 5, Somersetshire 2, and Shropshire 1; while in Wiltshire the population has diminished 7-10ths per cent.; in Montgomeryshire, North Wales, it has also declined 3; Essex, Suffolk, and Norfolk, is the next to the easternmost, 7 per cent.; then follows the South Midland division, including Middlesex (extra-metropolitan), Hertford, Buckingham, Oxford, Northampton, Huntingdon, Bedford, and Cambridge shires (8 per cent.); the South-Eastern division, including Surrey (extra-metropolitan), Kent (extra-metropolitan), Sussex, Hampshire, and Berkshire, 10 per cent.; the North Midland division, including Leicester, Rutland, Lincoln, Nottingham, and Derby shires, 10 per cent.; the Welsh division, including Monmouthshire, North and South Wales, 11 per cent.; the West Midland division, including Gloucester, Worcester, Hereford, Shrop, Stafford, Worcester, and Warwick shires, 12 per cent; the York division, including only the three Ridings, 13 per cent.—the average of England; the Northern division, including Durham, Northumberland, Cumberland, and Westmoreland, 16; the North-Western division, including only Cheshire and Lancashire, 21 per cent.; the same in the metropolis. Thus, we see, the population runs to great heads in the metropolis, in the north-western and northern parts of England; that it reaches the general level in Yorkshire, glides away in the middle and east, and sinks in the south and west,—the whole of that district being much below the level,—till it subsides in the absolute decline of Wiltshire.

Unfortunately, the returns of occupations are not made, and we are unable to distinguish the persons who are engaged in rural, from those engaged in manufacturing and commercial industry—one of the most important pieces of information we usually gather from the Census. We may notice, however, that the principal increase of the population is in the sea-ports of Liverpool and Lancashire, in manufacturing districts of Lancashire and Cheshire, in the coal districts of Durham, Northumberland, and Stafford, and generally wherever coal is found, manufactures established, or commercial ports exist. In Somersetshire and Dorsetshire the small increase, and in Wiltshire the decrease, is spread pretty uniformly over the surface of the respective counties; but in Devonshire there is a large increase of a town population. Out of 31 353 added to the people since 1841, 22,336 live in Plymouth and its suburbs alone. Other towns, too, have increased in Devon; and we may conclude at once that little or no increase, if not a diminution, has taken place in the rural population of Devon. In Sussex, another county chiefly rural, the whole increase has been 36,417; but the town population, of Brighton, Hastings, and Lewes, is the increase

COUNTRY NEWS.

HOP INTELLIGENCE.—From the *Maidstone Gazette* we learn that in some places a considerable improvement has taken place in the appearance and prospects of the crop, owing to the genial weather during the past week. The best grounds, and those which did not positively retro-rade, have shown a very sensible improvement, and will certainly produce some hops. Those grounds which had turned black, still remain in a sickly state. Another week of fine weather may, however, have some effect on them, although more than a sprinkle of hops in such grounds is probably impossible. On Monday an extensive Mid. Kent grower sold 300 pockets in the Borough at a high price, and generally the trade is improving.

COLLISION ON THE LONDON AND NORTH-WESTERN RAILWAY.—On Sunday morning a collision took place between two luggage trains that were coming up to London, at a curve of a line situate between Harrow and Wilsdon. About three o'clock one of the luggage trains, owing to a live cinder from the engine falling into the trucks, caught fire; and on stopping at the place to extinguish, the other luggage train came up and ran into the stationary train with great force. Some of the trucks were thrown over the embankment, others were smashed to pieces. The necessary precautions were at once taken by those in charge of the respective trains to prevent further accidents, and men were despatched with signals down the line to stop the two passenger trains which were due in London shortly before five o'clock. The officials at Camden town sent down an engine with about 100 of the company's porters to clear the line. No person was injured.

RAILWAY TRAIN ON FIRE.—At an early hour on Tuesday morning, a goods train on the Lancashire Railway, whilst on its way to Blackburn, was discovered to be on fire; and, though the train was brought to a stand immediately, and all possible exertion used to disconnect the carriages, the flames extended to five of them, doing considerable damage. It is said from the engine is supposed to have fallen on a waggon loaded with hemp, and the contents of this, and two loads of cloth on adjoining waggons, with loads of cotton waste on two other waggons, became entirely destroyed. Some goods upon a sixth carriage were a good deal scorched.

HIGHWAY ROBBERY AND ATTEMPTED MURDER.—A very daring case of highway robbery and attempted murder was brought before the magistrates at Bristol on Tuesday. The prisoner was a ferocious-looking fellow, named Williams, and the robbery and violence were committed on the person of John Godwin, Esq., who resides at Arbour Villa, Cotham New-road. It appeared from the evidence taken, that Mr Godwin, who is 75 years of age and in delicate health, had been taking his accustomed morning walk towards the Downs, and at between ten and eleven o'clock he was returning across the field-path, which runs through the carriage-road, which is open to the public, and which runs through the pleasure-grounds of Redland-court, when a powerful athletic fellow came suddenly behind him, and grasping him over the face with both of his hands, so as to cover his eyes and mouth, kicked at the back of his legs, threw him violently on the ground, and robbed him of his watch and spectacles. The old gentleman made a feeble attempt to cry for help; upon which his assailant, who was busy at his pockets, struck him violently about the head, doubtless with the intention of murdering him; and, having red-ced him to insensibility, he made his escape across the fields, and succeeded in getting off with his booty. The attack was seen by a man, named Wm. who lies seriously hurt at his residence, was of so sudden and ferocious a character as to render him wholly incapable of giving any description of his assailant; but the robbery was witnessed by a young man named Hawkins, who gave such a description of the robber as led to his detection. It is believed that one or two other offences of a serious nature will be brought home to him. The magistrates attended at Mr. Godwin's bedside to take his deposition, and the prisoner has been committed for trial.

DESTRUCTIVE COLLIERY EXPLOSION NEAR NEWCASTLE.—On Monday night, one of those disastrous explosions so frequent of late years occurred in the coal-mining district, took place at Washington colliery, which is about two miles from the Washington station on the York, Newcastle, and Berwick Railway; and we regret to say, that it has resulted in the premature death of from thirty to forty persons. Between four and five o'clock in the afternoon of Monday, about sixty men went down into the pit on the night-shift, and everything seemed to go on regularly until about half-past eleven o'clock, when the inhabitants of the neighbourhood were aroused by a loud explosion, like unto the report of which large masses of people rushed to the mouth of the pit to render all the assistance that lay in their power. The head-overman was aroused, and, in company with a few of the miners, he descended the pit, and found several dead bodies, very much burnt and mutilated, near the cross cut way. They discovered that the explosion took place in the "whole" working, where about thirty men were employed, and that the other sixty men, who were then working in the "brokings," were uninjured. No language can describe the intense grief and horror of those who, on the first report being given, rushed to the spot, and remained in a state of wild bewilderment, as they gazed upon the dead bodies of their husbands, children, and fathers. Three hours passed away in the most painful suspense before any of the bodies were brought to the bank. Almost immediately after the explosion took place, two furnace-men, desirous of being instrumental in saving the lives of their comrades, went down to render assistance; but the after-damp was so strong that they were brought up again almost dead: one of these have since died. The other is still confined to his bed, but is entertained of the recovery of the other. At three o'clock, when only a few of the bodies had been recovered, it was found necessary on account of the after-damp to put out the furnace before any hope of rescue could be done. This was effected by a water-fall down the upcast shaft, which put out the furnace by nine o'clock. During the night the crowd hourly increased, and a number of viewers from neighbouring collieries also arrived and rendered very valuable assistance. Throughout Tuesday, from nine o'clock in the morning, corpses were at intervals extricated; and up to seven o'clock from twenty-eight to thirty had been brought to bank, and placed in the engine-house, seven of which the evening there yet remained, it was supposed, about ten bodies in the pit. An impression generally prevails that the pit is badly ventilated, and many were heard to say that such an accident had been expected for several weeks. A coroner's jury has been summoned to investigate the circumstances under which the casualty took place.

FATAL COLLIERY ACCIDENT.—On Monday morning, in the Pottories, an explosion took place at the Quarries' Coal mines, belonging to John Ridgway, Esq., master potter, of Cauldon-place. About seven o'clock, one of the "butty" colliers (Ralph Hancock) entered the pit with six other men to commence work, when a quantity of gas which has collected in the workings of the pit produced an explosion. Hancock had provided himself with a safety lamp, but his fellow sufferers had only unprotected candles, and hence the accident. The shock occasioned by the explosion was tremendous. The other workmen, who were engaged in different sections of the mine, were completely appalled; and even those at work in the adjoining pits heard a rumbling noise, which to their experienced ears conveyed the fearful intelligence of the disaster. For some time it was impossible to enter that portion of the mine in which the accident took place. Four men who first essayed this task, were taken out in an apparently lifeless state, the foul gass had completely overpowered them, but by timely aid being given on the spot they were soon restored. On resuming the search for the survivors, if any, the bodies of four of the sufferers were brought up in a most frightful state of mutilation, and quite dead. The search was continued, and about 12 o'clock the other three bodies were discovered in the same state. Mr. Ridgway, on hearing of the accident, immediately hastened to the scene, in company with Mr. Scott, a surgeon, of Shadon, but unhappily this latter gentleman's skill was unavailable. The names of the unfortunate men are—Ralph Hancock, a "butty;" Edward Forrister, a turnaman; John Goodfellow, a boy employed in the mine, George Simmer, a turnaman; and William Hopkins, Thomas Jones, and George Mountford, colliers.

MR. W. R. Quarry, a young man, lost his life at Hastings on Sunday morning, while bathing with six or seven other persons. The sea was sobbing, and when the gentleman came out of the water they missed Quarry. He was about three minutes before, standing with the water breast high, and occasionally dipping. Boats and drags were put into requisition, but without avail, and although every exertion has been made, he has not been found. It is supposed that the deceased sank in some soft mud, and that his body is now embedded in it. The spot in question is the site of a subterranean forest, and the sands are very treacherous, owing to the presence of decomposed vegetable matter.

INGENIOUS DEVICE.—Captain Hovey, of the packet-ship *Devonshire*, which arrived in New York on the 3rd instant, reports that there was no sickness among his passengers (emigrants) on the voyage out, except one man, who, it appears, came on board affected with the small-pox. As soon as this circumstance became known to the captain, the patient was placed on the stern-boat, hanging at the davits, several feet from the ship. Over the boat a tent was erected covered with tarpaulins. Here the patient was nursed, and attended by the physician and officers of the ship. He is now quite well, and he never left his romantic domicile during the whole course of the passage. This timely precaution, taken by Captain Hovey, prevented the disease from affecting any of the other passengers.

ADULTERATION OF GREEN TEA.—From investigations published in the *Lancet* respecting the adulteration of black tea the conclusion arrived at are, that the great bulk of black tea reached the consumer in a pure state, and unadulterated with foreign matter. The result of the inquiries respecting green tea, however, lead to a more unsatisfactory conclusion, for there is a very strong reason to believe, notwithstanding the evidence to the contrary, that there really exists no such thing as "genuine green tea." Thirty samples of green, on imp ortation from China, were examined, and there was not a single leaf in any of these samples which had not received its green colour by artificial means; and the materials used in the colouring process were shown to consist of Prussian blue, mineral green, verditis, arsenite of copper, Dutch pink, chromate of potash, bi-chromate of potash, chrome yellow, chalk, gypsum, and soap-stone or French chalk, some of which are calculated to have an highly injurious effect upon the human frame, and some of a poisonous nature. This state of things would be remedied by the reduction of the duty on tea.

A letter from Vienna in the *Cologne Gazette* states that there is great agitation in Servia, and that an insurrection is expected.

The opening of the triennial Belgian Exhibition of Painting, Sculpture, and the Fine Arts, took place on Sunday, at Brussels, in presence of the King in person, and of a most brilliant suite. His Majesty was received by the burgomaster, M. de Brouckere, and, after going through the various rooms, expressed his great satisfaction at what he beheld.

NAVAL AND MILITARY INTELLIGENCE.

INSANITY IN THE ARMY.—Out of the number of men discharged from the service, and left Chatham this week, 8 were labouring under insanity They had all served abroad.

HIGHLAND REGIMENTS.—An order has been issued for the five kilted Regiments—viz. the 42d, 78th, 79th, 92d, and 93d Highlanders—to wear in future as a forage cap the Glengarry bonnet, instead of the one hitherto in use. This change does not affect those Highland corps wearing trowsers—viz. the 71st, 72d, and 74th—who are to continue the old forage cap.

MILITARY FORTUNE.—The property of the late General Sir Willoughby Gordon, Quartermaster-General to the forces, has been attested under the sum of £270,000

EAST INDIA PENSIONERS.—The Court of Directors have refused to adopt a proposition for forming an invalid *dépôt* in this country, on the same principle as the one belonging to the line at Chatham, because they consider it would be an additional expense, without any benefit to the funds or the Company or their army in general.

THE GOLD COAST CORPS.—The selection has been made of the officers of the regiment to be stationed on the Gold Coast, and their successors will shortly be appointed. The corps is, we believe, to be Light Infantry.

VISITORS TO WOOLWICH DOCKYARD.—The following is a return of the number of foreigners who visited Woolwich Dockyard in the week ending August 16, 1851:—French, 357; Prussians, 199; Belgians, 101; Netherlanders, 21; Bavarians, 36; Hanoverians, 18; Austrians, 22; Saxons, 22; Viennese, 19; Swiss, 14; Wirtemburg, 10, Germans, 2; Sardinians, 15; and Americans, 6—making a total of 831. The number of British subjects who have visited the dockyard from the 1st to the 16th of August was 27 338; and including the foreigners, giving an average of upwards of 2000 visitors daily.

HUNGERFORD-HALL, STRAND.

THE fish portion of Hungerford Market has undergone a metamorphosis. Having proved a failure, some capitalists (M. Burnget, of Paris, and others) French and English) conceived the idea of altering its design and converting it into bazaars and theatres, for the sale of fancy articles and the exhibition of dioramic, panoramic, and other novelties. At the Strand entrance is a theatre, covered in under the management of Professor de Walduck, to the disp ay of phantasmagoria. The gentleman has, we are told, devoted thirty years to the study of optical illusions, and the range on which he purposes to produce them is extensive. They will include historical portraits, mythological fabulence, and traditional examples of magic, calculated to remind the spectators of ancient superstition. M de Walduck will be assisted by Mr. Cary, the eminent optician. The theatre, however, is not yet opened, though it is expected that its portals will be completed and opened next week. Adjoining to this theatre is an elegant saloon for refreshments, and retiring rooms for ladies. The bazaar and illuminated avenue will no doubt prove highly attractive. The external appearance of the hall towards the Strand is handsome. The centre or entrance hall is 160 feet long. The gas illumination, is, by a clever contrivance, made to concentrate the light on the goods arranged on the stalls on each side, and thus the

Who for Forty Years was a Member of the Society of Friends "One of the most curious books we have seen for a long time."—Atlas. "Extraordinary publication."—John Bull. "We have opened this book with real curiosity, and have not been disappointed. It bears undoubted marks of truth."—The Critic "Is deeply open and avowed, and the method by which it seeks to attain its object is equally open and fair."—Tait's Magazine "This very odd and amusing book. There is a great deal of curious information respecting the discipline of the Society."—Morning Herald. "A very clever, long and complete exposure."—Warder "Contains many characteristic glimpses of Quaker disciplina and manners."—Spectator "Will repay a perusal. The incidents are droll to an extreme degree."—Britannia Dublin: SAMUEL B. OLDHAM, 8 Suffolk-street London: R. B. SEELEY and WHITTAKER and Co.

UNIQUE AND EXTRAORDINARY CALIGRAPHIC PUBLICATION Just published, in Lithography, and Dedicated to all Nations, a Calligraphic Gem of the Nineteenth Century, GOD. By DERZHAVIN, the Russian Poet. The original Calligraphy, designed and executed in twenty-four hours, by JOHN CRAIK, W.S., Edinburgh, Calligrapher to the Queen, has been beautifully Lithographed by Messrs. MACLURE and MACDONALD, Glasgow, Lithographers to the Queen. This unique publication consists of eleven spacious pages and title-page, forming four additional pages to the size of the ode in the original. His object was to develop, as far as possible, and in a way hitherto unattempted, the resources of the calligraphic art. The Work is handsomely bound in various coloured enamelled paper boards, with morocco backs, and a rich cuticle pictorial and calligraphic design in gold

THE CHEAPEST AND BEST WEEKLY PERIODICAL EVER PUBLISHED PRICE ONE PENNY. THE LONDON JOURNAL, a Weekly Epitome of Instruction and Amusement, has now obtained the largest circulation of any periodical in the world, and the sale of 170,000 of each number is a sufficient guarantee for the merit of the publication. One of the leading features now distinguishing THE LONDON JOURNAL is an entirely new romance, replete with interest and pathos, entitled "Amy Lawrence, the Governess's Daughter," in which shall be read by every lover of the pure and beautiful in domestic life. The narrative is interspersed by engravings in the style of excellence for which the "London Journal" has ever been distinguished. There are also now being published weekly a series of articles, instructive of "How to SPEAK the FRENCH LANGUAGE" with a full set of Lessons, Exercises, Dialogues, and General Rules. Scientific Notices, interesting details of "adventure by flood and field," and a variety of papers on miscellaneous subjects. In the pages of the "London Journal" will also be found Engravings of the principal works of art exhibited in the Crystal Palace, accompanied by elaborate descriptions. Much care has been bestowed in the selection of subjects which shall be interesting to the young, in detail, so that the "London Journal" may, at a future period, be entered a work of reference of the Great Exhibition of 1851 London: G. VICKERS, 324, Strand; and all Booksellers in the Kingdom.

City of London Pianoforte Warehouse (Maker to the Queen), 78, Bishopsgate-street Within, opposite the Marine Society.

PIANOFORTES for SALE or HIRE at CHAPPELL'S, 50, NEW BOND-STREET.—A new Stock of New and Second-Hand Pianos, by Erard, Broadwood, Collard, &c., for sale or hire. Instruments by less reputed makers, at the lowest prices. Any person having a piano for sale less than one year old, may have it exchanged, by giving a piano for one less than one year old. Pianos, chosen by a perfectly new instrument from the factories of any of the best makers. Old pianofortes taken in exchange. A large stock of the best harmoniums, by Alexandre, of Paris, from Fifteen to Forty-Guineas. City of London Pianoforte Warehouse (Maker to the Queen), 78, Bishopsgate-street Within, opposite the Marine Society.

PIANOFORTES.—PAPE'S celebrated CONSOLE PIANOS, the most powerful, the most durable, and at the same time the most elegant BOUDOIR PIANOS ever made. Since the appearance of these beautiful instruments large numbers have been sold; and the high recommendation with which they have been favoured is perhaps the best proof of their merits. Each instrument being spared to give them those finished qualities which distinguish so particularly the productions of Mr. Pape's manufactory, may be seen and tried, as well as the new patent Grand, Square, and Table Pianos, at Pape's Pianoforte Depot, 104, Regent-street, opposite the Polytechnic. New and Second-Hand Pianos by other makers for Sale or Hire. Instruments exchanged and repaired.

PIANOFORTES at Manufacturing Prices.—Messrs. WORNUM, 27 25, and King William-street, London-bridge, beg to inform their friends and the public that they have reduced the price of their Pianofortes, in rosewood, satin, walnut-tree, or wood cases, to 25 guineas each. The full compass of instruments are 6½ octaves (C to A) in compass, combine all the latest improvements, and possess a rich and powerful quality of tone, with sweetness of tone, and finished with the same care and attention that has hitherto so distinguished the manufactory during the last fifty years, and exchanged if not approved of.—A variety of Second-hand Pianofortes, by Broadwood, Collard, and other makers, at £10 and double and single-action Harps, by Erard, from £10.—N.B Every description of musical instrument tuned, repaired, and taken in exchange.

DIATONIC FLUTE.—By Royal Letters Patent.—This instrument retains the old system of fingering; it is the principle of the Flute, but differs from it in many other Professors of eminence, testimonials of whom respecting the numerous advantages possessed by the Flute, will be forwarded free. —Manufactory, 135, Fleet-street. A. SICCAMA, Patentee.

EXHIBITION, CLASS XXIII, NO. 74. THE PATENT SHANNE EVENING. HARDING'S PATENT has been suggested by the necessity for the frequent removal of Waistcoat Buttons, affording an easy method of changing from a full dress vest, with perfect security, to a plain, and is superior to all other fastenings, being complete in itself. To be had of all Button-sellers: G and J. WEST, 130, Oxford-street, late Lewis and Co. Patentees. The Patent is also applied to Studs, Pins, Brooches, &c.

"Divide about the broad bride-cake, And all the broad land." TENNYSON.

WEDDING BREAKFASTS, DINNERS, and BALL SUPPERS provided by Messrs. PURSSELL, Cornhill, at the most fashionable style in which they can be had, at the hire of plate, china, glass, &c. Bills of fare sent for any number required. An elegant assortment of Bride-cakes ready for selection

TO LITHOGRAPHIC ARTISTS and AMATEURS.—CHARLES MARION begs to inform them that he has now on SALE an excellent STOCK of LITHOGRAPHIC MATERIALS, from the first French houses, at very reduced prices. Chalks, as per dozen: Stencil, 4d per inch; Stone Ink, 1s per oz.—Depôt for Lithographic Artists' Materials, 46, Rathbone-place, Oxford-street.

VICKERS'S GENUINE RUSSIAN ISINGLASS, in leaves of Extra Thickness, containing 1 oz., 2 oz., 4 oz., or 1lb., may be obtained retail of the Chemists, Grocers, and Italian Warehousemen, and wholesale of the Patentee, 31, Little Britain. The recent discovery that isinglass is frequently adulterated with gelatine has induced V. to submit to the public this made of securing to consumers a pure and unadulterated article.

THE PARAGON COUCH, price Three Guineas, in solid Rosewood or Walnut, unequalled in elegance, durability, and comfort, and universally adapted for the drawing-room, boudoir, or dressing-room. The elasticity of seat and back is given as equally as possible to the reclining figure, and the whole is on quite a new principle. In the same Show-rooms are to be seen the largest assortment of modern Household Furniture in the world. Fall Suites, in Rosewood, Walnut, Oak, Mahogany, &c., from Five Guineas to 145, 146, and 147, Tottenham-court-road. Established ten years on the present site.

OLD FEATHER BEDS RE-DRESSED and PURIFIED by STEAM with Patent Machinery.—This process of dressing not only removes all impurities, but, by expanding the feathers, the bed is rendered sweet, pure, and wholesome. Any deceased much fuller and softer. Charges for dressing, 3d per lb Old mattresses re-made and re-stuffed. Bed and bedding purified and returned, carriage free, within five miles. HEAL and SON'S LIST of BEDDING, sent free by post, contains the prices of Bedsteads, sent free by post on application at their factory, 196 (opposite the Church), Tottenham-court-road.

PARASOLS.—EXHIBITION.—The great inconvenience of carrying a Parasol for several hours in the Building has induced MESSRS SANGSTER to make them smaller than ever, yet strong. They can be closed in a moment, and put in the pocket of the dress if required.—W and J Sangster, 140, Regent-street; 94, Fleet-street; 10, Royal Exchange; 75, Cheapside.

Price 30s. cost. LESSONS in MILLINERY and DRESSMAKING.—Mrs. BARRETT, 4, Upper Berkeley-street, Portman-square, continues to teach the Art of Dressmaking on the most finished style, in SIX LESSONS, for Half a Guinea. Hours from Seven till Nine.

NEW SHOW-ROOMS for BEDSTEADS.—HEAL and SON have erected some extensive warerooms for the purpose of keeping every description of bedstead. In from their stock will be found a very large assortment of Portable Bedsteads, for servants' use, to the handsomely ornamented tubular pillared canopy, as well as bedsteads of every intermediate shape and price. The bedsteads their rooms are suffici ently extensive to allow them to fit up a Bedstead, both in polished deal and mahogany, of four-post, canopy, and French, and also of japanned bedsteads.—In fact, it keep in stock every sort of bedstead that is made; and they have also a general assortment of furniture chintzes, damasks, and dimities, so as to render their stock complete for the furnishing of bedsteads as well as bedding; and without attempting to compete with the prices at which the lowest class of furniture is sold, and which is fit for no useful purpose, their new stock will be found to be priced on the same principle by which their bedding trade has during the last thirty years been so successfully attended; and the goods, whether of a plain and simple pattern, or of a handsome and more expensive character, are of well-seasoned materials, good workmanship, and warranted. Heal and Son's list of bedding, containing full particulars of weights, sizes, and prices of every description of bedding, sent free by post on application to their factory, 196, opposite the chapel, Tottenham-court-road.

WOOD CARVING.—To be SOLD, price 25 Guineas, a Large Quantity of CARVING by GIBBONS, in the shape of Queen Anne consisting of Wreaths, Fruit, Flowers, Heads, Figures, Arms and Accoutrements Scrolls, &c. Apply to J. TAYLOR, 59, Great Russell-street, Bloomsbury.

A rich and costly assortment of Gold Chains, Albert, Guard, and Fancy Chains, weight in the regns. English and foreign Watches, Clocks, and Chronometers cleaned, mainsprings, 1s; jewelled holes, 6d each; crystals, 2d. Plate, Diamonds, &c., purchased or taken in exchange. Messrs. Hawley pay respectful attention to the Trade, and the public, that they have no connexion with any House assuming their name.

GOVERNMENT ANNUITIES.—ST. CLEMENT DANES BANK for SAVINGS, and GOVERNMENT ANNUITY INSTITUTION, 340, Strand, corner of Wych-street, Strand. The Trustees and Managers of the Bank continue, as agents for the Government, to grant Annuities on the most favourable terms, for £1 to £50 is sixteen pence not possessed of an annual income of £150. Persons residing in any part of the United Kingdom may purchase Annuities on the same advantageous terms as at the Office. The public, especially females, will derive great advantages in purchasing Annuities through the medium of this Office. Prospectuses and tables of the cost may be had upon application at the Office, or will be forwarded by post, upon receipt of 4d by letter, post paid. Open for granting Annuities daily, from Ten till Three. The amount paid to the Government for the purchase of Annuities granted through the Bank during the quarter ending 5th April is £18,487; the total amount paid to the Government exceeds £437,782. Savings Bank open for the receipt of Deposits, Saturday and Monday Evenings, from Half past Six till Half past Eight o'clock, from Eleven till One. Interest payable to Depositors is £3 per cent. per annum. August, 1851. W. T. WOOLCOTT, Actuary.

TO PRESERVE LIFE IN SHIPWRECK. LAURIE'S PATENT INDIA-RUBBER LIFE-FLOATABLE MATTRESSES (NOT INFLATED), PILLOWS, LIFE BELTS, and sundry buoyant articles. S. W SILVER and CO., Sole Licensees. Every Ship and Mattress is sold and guaranteed in the water for an indefinite period, and at a small increase on the usual cost of those in common use. Also, Lauries Patent Life-Floatable Cots and Cradles for persons. The Life Belts are preventives to sinking, the cheapest yet submitted, and are made in the form of an inner tube case of canvas. Thus, every Sailing Vessel, Steamer, Yacht, Boat, or craft of any kind, and every person on board, ought to be furnished with these clever articles, which are made in the widest variety from the most luxurious to the most inexpensive. Department for outfitting Cadets, Clergymen, and Cabin Passengers generally. Naval and Military Uniforms, and Clothing for Home use, at 66, and 67, Cornhill. Importers of Waterproof Cloths, Tweeds, &c., with the patronised Penelo Manogues, 66 and 67, Cornhill

THE SECOND EDITION of Dr. Griffin, 4 Bishopsgate-street, opposite the London Tavern, where a comfortable 5l out for a four months' voyage can be procured, and everything else, including a Staking-Preventive Mattress.

EXHIBITION SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS

No. 512.—VOL. XIX.] SATURDAY, AUGUST 23, 1851. {TWO NUMBERS, 1s. WITH LARGE SHEET, GRATIS.

THE GREAT EXHIBITION.

SCULPTURE.

UPON making a general survey of the works of Sculpture of all Nations in the Great Exhibition, and revising the memoranda we have jotted down from time to time in regard to them, we find that we have yet much to notice in this interesting department, which we shall endeavour to do justice to without further delay, lest, as the season is drawing to a close, we should not have another opportunity.

We shall begin with Power's Greek Slave, which has been thrust forward in such a prominent position, and upon which king mob has lavished so much wild and unmeaning encomium. We took leave to aver, in a few lines published on the 9th inst., that we did not join in the admiration bestowed upon this work, briefly suggesting the grounds of our disapproval. As we are aware that in so doing we run counter to the opinions of the majority of the critics of the day, we may be permitted to add a few more observations, to explain, perhaps to justify, our position. First, the figure is ill studied: of course, the proportions of beauty are, to a great extent, matter of taste or opinion; but, without laying claim to infallibility in these matters, we aver that the figure of the Greek Slave, as it is wide from the ideal beauty of the antique, would, upon an average of suffrages, fail to establish its claims with the present generation of beholders. It is a lengthy, leggy figure below; square and high-shouldered in the upper part: the flesh has none of the plumpness and softness, the attainment of which is the triumph of the sculptor's art; the arms, particularly the left one, unduly spare. Secondly, the attitude is constrained and inelegant. The figure is made to lean with the right hand against a post, just a very little too low to allow her to remain in an upright position: the consequence is, that there is a departure from the ordinary repose of nature, without a sufficient object, and an awkward outline on both sides of the figure, but particularly on the left. It must not escape remark, neither, that, in carrying out this ill-judged conceit of attitudinizing, the artist, whilst he has shown its effects very prominently in the lower parts of the back, has overlooked it entirely in the right arm and shoulder. The attitude is constrained an inelegant, because it wants naturalness — because it wants unity of purpose: the arms drawn one way, the head turned abruptly to the other; so that there is no seeing the full face but with a side view of the figure, and that side, as a point of view, subject to many objections, and *vice versâ*. For the head itself, we cannot consider it by any means beautiful; to us it is certainly not pleasing: it is too square; the forehead too prominent for female beauty; the eyes too much sunk for any expression—and, of all shades of expression that of softness, which is the attribute of womankind (in marble); and the profile, as it is the first view generally taken of this head, is unfortunately its least agreeable aspect: the nose sharply pointing outwards and upwards, instead of pursuing the direct line from the forehead, so as to preserve the oval form; the chin prominent and lengthy from the starting-point at the neck; and, to make the matter worse, and to complete the extravagance of the outline, the hair drawn up in a stiff hard knot, when a few loose loops falling half way down the neck would have done much to relieve the harshness of the general expression. The artist has bestowed much pains upon the little Greek cap, which with her other raiment, the unhappy slave has very neatly displayed upon the rest against which she leans; but we think she would be puzzled to wear such a head-gear with her present mode of *coiffure*.

GROUP OF SILVER FROM RUSSIA.—(SEE PAGE 252.)

And now a few words about the incident supposed to be characterised in this production. Not to run the risk of doing injustice, we will copy the official description affixed to the statue:—"The figure is that of a young and beautiful Greek girl, deprived of her clothes, and exposed for sale to some wealthy Eastern barbarian, before whom she is supposed to stand with an expression of scornful dejection, mingled with shame and disgust." A very interesting case, truly, but one the knowledge of which deprives the work of that legitimate charm "which attaches to the nude figures of ancient art, wherein an obvious innocent unconsciousness of *dishabille* prevents all compunction on the score of propriety." The official account is particular to inform us of the accurate identity of the Greek costume, and the little cross; but adds, "the chains on the wrists are not historical, but have been added as necessary accessories." Necessary to go beyond the truth to realise the whole of a very painful conception, which, we submit, in its most offensive incident—that of the denudation itself—is "not historical!"

To conclude, the Greek Slave is a poor *refacciamento*, with alteration, but without improvement, of the "Venus di Medicis," with a story attached to give it a relish. It is a bad beginning for American art, on all accounts; which must produce something more *genuine*, if it intends to take rank with the schools, bygone and to come, of Europe

Proceeding now to the British Sculpture Room, we find a "Nymph Startled," in marble, by Behnes, which exhibits none of the meretricious coyness and other objectionable characteristics of the work we have just noticed at such length. The figure is cast in a good wholesome mould; the attitude graceful and animated, without affectation; the flesh soft and smooth; and the general finish of the work in every respect satisfactory. We must also admire, for the purity of its treatment, a whole-length marble figure, lightly draped, after the antique fashion, by T. Campbell, entitled "Portrait of a Lady as a Muse." These two are by far the best things of the kind in

the room. Sharp's "Boy and Lizard" is a pretty conceit prettily carried out. The sitting statue of Flaxman, by the late M. L. Marshall, is a fine specimen of portrait sculpture, replete with dignified ease and high intelligence.

And while upon the productions of British art, there are several, which, though located in the Italian department, we may properly claim, being the work of English hands. Of these, the two Nymphs, by the late lamented Richard Wyatt, justly claim pre-eminence, not only here, but perhaps above all other works of the same class in the Exhibition. It may be proper to observe, that these works have been added since our first notice on British sculpture, on the opening of the Exhibition, was written, or we should then have claimed them with avidity for the honour of our country. There is a beach convenient to the spots, so that we may sit down and contemplate these graceful studies at leisure. Remark in both the symmetrical proportions, the exquisite softness of the flesh surfaces, the winning simplicity of the attitudes, the smiling beauty of the faces, more particularly as regards the full round speaking eye of the smaller one; the classic proportions of the heads, set off and adorned with tresses light, wavy, and picturesque in form and disposition; examine the careful finish of the whole, and you cannot hesitate to set these down as works evidencing the highest genius, and the nearest approach to artistic perfection. Close beside these has lately been introduced a figure entitled "Highland Mary" (see Burns), by E. E. Spence, a work not without merit, but tame and without speech, as compared with her two lovely neighbours. This figure is fully, indeed, somewhat heavily, draped, a great plaid shawl hanging down her back, and nearly touching the ground.

Pursuing our way into the Roman department, we find many efforts, in various styles and of various degrees of merit. An "Iconic Statue," by M. Lawrence Macdonald, is a heavy, cold, unintellectual study, upon which more labour has been bestowed than the subject was worth. A "Ceres," by John Gott, is of the commonplace order of prettiness. "Love Triumphant," by Angelo Bienaimé, is a foolish conceit, consisting of a Cupid on a lion's back. Benzoni's group of "Pysche trying to keep Cupid from carrying the gift of beauty to Venus," is a cold and artificial affair, considerable pains having been bestowed on the heads. Rinaldi has a large theatrical-looking group of "Rinaldo and Armida," in which the female figure, arrayed in Turkish costume, is finished with considerable roundness and softness, whilst the knight is *stiff* as buckram, in coat of mail; the buckler, leggings, and helmet being brought to a degree of polish which speaks highly of labour bestowed. Cardwell's group of two little boys with a bird's-nest, busy feeding their feathered captives, is one of many puerile productions, both in the Roman and Tuscan departments, which are attributable, perhaps, more justly to a low standard on the part of the persons at fault than of art itself. In the front of the Tuscan chamber has recently been added a very vigorous and characteristic bust of "Lorenzo the Magnificent," by Costole, of Florence. Sad falling off in matters of art since his day!

Of the art of many-climed Austria we have spoken at some length in a former Number; the bold and startling productions from the Zollverein (Kiss's "Amazon," the "Bavarian Lion," &c., to wit) we have also sufficiently illustrated from time to time. We may remark generally of the Zollverein states, with Prussia at their head, that in art they exhibit the crudeness almost inseparable from new efforts, when there are no old examples, no traditional principles to guide the hand. The subjects chosen are too often of a base order, unworthy of high art, and are sometimes treated with an extravagance intolerable to an educated taste. It may be sufficient to point to one very glaring example of both these errors. Fortunately, it is not a very prominent one in the present Exhibition; though, in Berlin, where the original of the work exists in marble, it is vastly popular—indeed, has received the highest honours. In an obscure passage in the rear of the Zollverein department, will be found by those who are curious to search for it, a cast of a Bacchante on a Panther, after the original in marble, by T. Kalide, "sculptor and professor of arts." Nothing can be conceived in worse taste, or executed in more bold defiance of the proprieties. The Bacchante, a coarse, heavy figure, is dead—that is, is intoxicated, and lies sprawling on her back on the top of the panther, who licks up the dregs of liquor she left in her cup. The artist seems to have taxed his ingenuity to make the most of the most offensive features of such a subject, and we think he has succeeded.

Moving into the French department, we find, at the entrance of the Gobelins Room, a somewhat similar subject, though certainly not so flagrantly carried out, by Glesinger. Here the Bacchante, having evidently indulged too freely in her favourite juice, is lying asleep in an attitude of wild *insouciance*, not upon the back of a panther, but upon a bed of vine leaves and grapes. The treatment is less indecent than that of M. Kalide's figure, and the execution masterly in many respects; but still it is of a sensuous character, which neither derives interest from the medium through which it is presented, nor adds dignity to the art employed upon it.

Still in France, we are struck with some very wonderful melo-dramatic scenes in plaster, by Lechesne, which attract a crowd of gazers in the middle of the Nave. In the centre we have a woman fast asleep under some straggling branches of trees, whilst an eagle, with tremendous breadth of wing, is pouncing upon her naked infant, who blubbers pitcously, but hopelessly. On either side are two exemplifications of canine fidelity and sagacity. In the one we see a tremendous snake about to dart upon a little urchin, who, terrified, crouches behind a large dog of doubtful breed; in the other group we see that the young gentleman's confidence has not been misplaced, for there lies the venomous reptile, with his head bitten clean off, whilst the little boy overwhelms his deliverer with his caresses.

M. Etex has several works which exhibit talent and originality of conception in various lines: his two large plaster groups in the Nave—the one representing a family bereaved by the cholera, the other the family of Cain after the murder of Abel—are certainly vigorous efforts, albeit somewhat chargeable with extravagance. His "Hero and Leander" is good in execution, though his figures, particularly the female, are of a heavy mould. Several minor works by the same hand, including some bas-reliefs, have considerable merit.

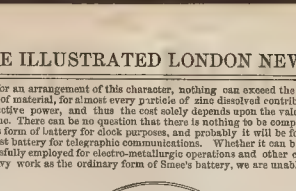
On the left hand, on entering the Gobelins Room, is a group, by A. de Bay, of Eve with her two children, Cain and Abel, in her lap, whom she hugs to her bosom, clasping her hands round her knee, whilst she seems to indulge in a reverie as to their future fate. There is something very pleasing and striking in the conception, which is ably carried out. At the base are slightly sketched bas-reliefs of the temptation by the serpent, the sacrifices of Cain and Abel, and the first murder, which explain and give character to the work.

The "Orpheus and Procris" of M. Ramus is a group of some merit, and with considerable expressiveness.

In general, the works of the French school, unequal in individual merit, are interesting, and mark the existence of an educated school, though one in which the classic models have frequently been forgotten. Amongst the few works in which classic treatment has been aimed at, we must mention with commendation Lemaire's Psyche, with the butterfly, in marble, extremely graceful; and Pradier's bronze group of Venus, half kneeling, and whispering Cupid, and the same artist's Phryne, which stands in front of the entrance of the Gobelins Room.

THE EXHIBITION VOLTAIC BATTERY.

In former Numbers we have described and figured Shepherd's clock; but on the present occasion we must give a short notice of the novel form of voltaic battery which is employed as a source of power, and which our readers may observe in the gallery of the South Transept. This form was devised by Mr. Alfred Smee for this clock, and contains numerous adaptations of scientific principles. The negative plate consists of a strip of platinised silver, the platinum being used in the finely divided state, in which Mr. Smee first discovered that most metals had the singular power of facilitating the evolution of the hydrogen; and the visitor may observe a constant stream of infinitely fine bubbles of gas continually rising to the surface of the fluid. The positive pole consists of pieces of the thinnest rolled zinc immersed in mercury. The reason for using this zinc is, that, in the process of manufacture, the purest zinc is used for that purpose, whilst the baser portion is used for the thicker plates. The use of the mercury is to prevent local action by the adhesion of the hydrogen to its smooth surface. It is of very great consequence to place the porous pot in the right place. If it were placed at the bottom of the solution, during the action of the battery it would become incrusted with crystals of sulphate of zinc, which would effectually prevent any further action. By suspending it, however, at the upper part of the solution, the salt falls eventually to the lower part of the solution, and becomes uniformly diffused through the whole fluid. A platinum wire, coated with gutta percha except at its end, passes into the mercury, and is connected to a binding screw to form connexion. The battery is charged with dilute sulphuric acid, in the proportion of one to eight, and the size of the outer vessel must depend upon the time which the battery is required to keep in action, and the amount of the work which it is called upon to perform. In obtaining force for an arrangement of this character, nothing can exceed the economy of material, for almost every particle of zinc dissolved contributes its effective power, and thus the cost solely depends upon the value of the zinc. There can be no question that there is nothing to be compared to this form of battery for clock purposes, and probably it will be found the best battery for telegraphic communications. Whether it can be as successfully employed for electro-metallurgic operations and other cases of heavy work as the ordinary form of Smee's battery, we are unable to

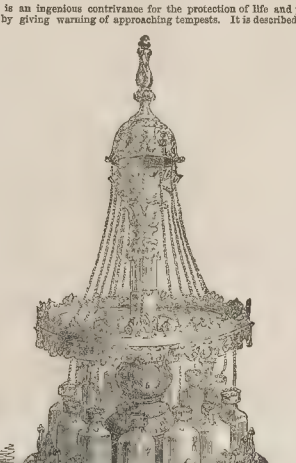


THE EXHIBITION VOLTAIC BATTERY.

tell, but recommend its trial to those who are interested in this matter. The great clock, notwithstanding the large surface exposed to the wind, and the recent high gales, has continued to mark the time in a satisfactory manner. We regret, however, to record that some mischievous or malicious person has cut the wires, on one or two occasions, which communicated the power to the dial in the Western Nave, and the same clock, having received some injury, has not performed as well as its more noble companion.

THE TEMPEST PROGNOSTICATOR. BY DR. MERRYWEATHER.

This is an ingenious contrivance for the protection of life and property, by giving warning of approaching tempests. It is described by



THE TEMPEST PROGNOSTICATOR. BY DR. MERRYWEATHER.

the inventor as "an atmospheric electro-magnetic telegraph, conducted by animal instinct." It will repay inspection by those interested in scientific researches.

A LADY'S GLANCE AT THE GREAT EXHIBITION.

NO. III.

WHILST each of the many examples of the works of nature, of science, and of art comprised in the various classes into which the Exhibition of the Industry of all Nations is divided, attracts its own peculiar circle of votaries, there is one which is found to claim successfully the admiration of every description of visitor, although addressed for the most part to the tastes and predilections of the female sex. I allude to the magnificent specimens of jewellery and precious stones with which the Crystal Palace abounds; to an extent, indeed, that half enables us to realise in our minds the wildest wonders of an Arabian tale; to believe that the hall of Vathek might not have been wholly imaginary; and that Sinbad's diamonds may find a local habitation after all. Whatever grave objects may attract grave people to this temple of concord, there are few even of the gravest who will depart from it altogether without paying a prolonged visit to the departments of Class 23. The most learned of sexes, the coldest of utilitarians, the political economist, the bishop and the Quaker, may there be found side by side patiently awaiting their turn for a passing glimpse at its marvels: half ashamed of an admiration they are unable to conceal or to disguise. There doth the philosopher arrest his steps to analyse the component parts of those wonderful substances, and endeavour to calculate the succession of ages that must have been demanded for their development. There, too, stands the sturdy labourer, with his wondering wife by his side, gazing at them with looks of undisguised astonishment, and anticipating in imagination the advantages which even a passing acquaintance with such marvels will give him over the less fortunate companions of his toil at home; whilst the *millionaire* on his left is vainly endeavouring to compute the money value of the objects before him, and lamenting that so vast an amount of capital should be so unproductively employed.

Leaving them to their several reflections, let me see if I cannot improve so fruitful an opportunity, and jot down a few memoranda which may assist in recalling to the mind this fairy fabric and the most interesting portion of contents when they shall have passed away and be no more seen. Towards the accomplishment of this object, a few smee dotes il-lustrative of the history of the gems and precious stones of the Great Exhibition may not prove unacceptable.

There are few things in the history of commerce more remarkable than the enormous mercantile value which has attached, by common consent, in all ages, and in all civilised countries, to the diamond, if at all re markable for its size and brilliancy. The measure by which the price of the diamond is usually regulated is called a carat, of which 150 are required to make the ounce. The carat is divided and subdivided into half-carats, quarters, or grains; eighths, sixteenths, and thirty-seconds. So soon as the diamonds are manufactured, or, to employ a technical term, *made*, they are handed over from the lapidary to the jeweller to arrange, display, and set, so as to produce the best possible effect, whether destined to form a necklace, ear-drop, ring, brooch, or pin. The setting should be obtruded as little as possible on the eye; for it is by concealing everything but the *effect* of his labour, that the jeweller displays the gem on which his taste and ingenuity have been expended to the best advantage. It often happens that so much pains are bestowed upon the setting of a gem, that a diamond a carat in weight may be made to appear as large as a well-proportioned stone of six grains. A diamond, properly set, therefore, is equal in value to one unset of the same quality of twice its weight. As the technical terms employed in the description of the brilliants which are exhibited in the Crystal Palace are not generally understood, a few preliminary words by way of explanation may not be considered out of place. The bezels are the upper sides and corners of the brilliant, lying between the edge of the table and the girdle The collet is the small horizontal plane or face at the bottom of the brilliant. The crown is the upper-work of the rose, which all centres in the point at the top, and is bounded by the horizontal ribs. The facets are small triangular faces or planes, both in brilliants and rose diamonds. The girdle is the line which encompasses the stones parallel to the horizon. Lozenges are alike common to brilliants and rose stones. In brilliants, they are formed by the meeting of the facets on the bezil; in rose diamonds, by the meeting of the facets on the horizontal ribs of the crown. Pavillions are the under sides and corners of the brilliants, and lie between the girdle and the collet. The ribs are the lines or ridges which distinguish the several parts of the work, both of brilliants and rose diamonds. The table is the large horizontal plane or face at the top of the brilliant. Diamonds are brilliant cut, rose cut, table cut, and *lasques*. The brilliant is, of course, the form that is most highly esteemed, because it exhibits to the best advantage the peculiar lustre of the gem; but if it ensures the best possible effect, it also entails a much larger waste of the stone. The brilliant is formed of two truncated pyramids united by a common base, the upper pyramid being much more deeply truncated than the lower. The rose diamond is the shape given to those stones, the spread of which is too great, in proportion to their depth, to admit of their being brilliant cut. It is formed by covering the rounded surface of the stone with equilateral triangles, placed base to base, making the figure of a rhomb. The table diamond, inferior still to the rose, is made of those stones, which, with a considerable breadth, are of very trifling depth. It is produced by a series of diminishing four-sided planes below the girdle; and the bezil is formed by one, two, or three of these planes. Lasques are formed from flat or veiny diamonds, and are only manufactured in India. Diamonds from one to four carats, lose little less than half their weight in the process of cutting; so that the value of a manufactured stone is twice that of a rough diamond. If the manufactured diamond is found to contain a flaw, or is what is technically called "off colour," its value is proportionately diminished, sometimes one-third, or even one-half. If it be breathed upon until its lustre is temporarily destroyed, its imperfections may be easily discovered. On referring to a series of tables for estimating the value of the diamond, which have been framed by Mr. David Jeffrey, long a recognised authority on such questions, I find that the brilliant is valued according to its weight, in the following ratio: a brilliant of the weight of one carat, £80; of ten, £800; of twenty, £3240 2s. 6d.; of forty, £12,800; of fifty, £20,000; and of one hundred, £80,000. If the shape be irregular, or the diamond be deformed by the slightest speck or variation of colour, there must be, of course, a corresponding diminution of its value. With this deduction, the principle or rule is, that the proportional increase in the value of diamonds is as the square of their weight. Having indulged in these preliminary explanations, I propose to enumerate those magnificent jewels of which either the originals or the models are at present on view in the Great Exhibition in Hyde Park, reasoning my account as I proceed with such facts and anecdotes as I have been enabled to collect respecting them.

The Koh-i-Noor, or Mountain of Light, has been repeatedly dwelt upon in these columns and in contemporary journals; but, notwithstanding the enormous value at which it has been estimated (from £1,500,000 to £3,000,000), has disappointed public expectation in no ordinary degree. The ungraceful peculiarity of its shape, and the ineffective manner in which it has been cut, although more than half its weight has been wasted in the operation, having deprived it of much of the brilliancy and beauty of which no doubt the original stone would, in skilful hands, have proved susceptible; and, in spite of the various costly expedients which have been resorted to for the purpose of exhibiting it to the best advantage, it is still very far from realising the anticipations which had been formed of its attractions. Its value has been hardly less absurdly exaggerated. Tested by Mr. Jeffrey's elaborate tables, it is worth £280,000; but the awkwardness of its shape and the injury it has sustained in the cutting, will, if duly taken into account, reduce the amount to less than half that sum. This diamond is said to have formed one of the eyes of the jewelled peacock of the famous musnud or throne of Aurungzebe: the twin eye is among the crown jewels of Russia, and weighs only 139 carats; so that the optics of this gorgeously apparelled bird must have been far from pairs. The Koh-i-Noor, however, with every other known diamond, is wholly eclipsed by one of the crown jewels of the Queen of Portugal, which has been estimated at the ridiculous price of £2,544,000, weighs 1680 carats, and is almost as large as a turkey's egg. It has never been entrusted to a lapidary to cut and polish; its possessors considering it most prudent that its character should rest upon its traditional reputation. If a thing be, as Butler assures us, worth what it is much as it will bring, where is a customer to be found for such a treasure? The exact weight and dimensions of the Durra-i-Noor, or Sea of Light, exhibited by the East India Company, has not, so far as I am aware, been ascertained. It is set as an armlet, is surrounded by ten smaller brilliants, and is evidently a gem of prodigious beauty; but, obscured by the tastelessness of its setting, demands the eye of a professed lapidary to discover the whole of its attractions. The celebrated Russian sceptre diamond, which is said to weigh 779 carats, and which has been valued at £4,854,000, is believed to be unrivalled for its extraordinary brilliancy and freedom from imperfection. The Mogul diamond—of which we have only a traditional knowledge, derived from the pages of Tavernier—weighs 286 carats, and is of an oval shape, about half the size of a hen's egg. It has been valued at £632,000; but of its present "whereabouts" I am entirely ignorant. It was discovered on the coast of Golconda, a country identified with the history of diamonds for centuries. The large diamond that formed the eye of an Indian idol, was stolen by a French soldier, and was, after many vicissitudes, purchased by Catherine of Russ a for £90,000, and an annuity of £4000 in addition, is now among the crown jewels of Russia. The Pitt diamond, found on the Malacca coast, and purchased by the Governor of Pondicherry for £20,000, weighed 410 carats, and was sold to the Duke of Orleans for £135,000. The expense of cutting it amounted to £8000, and although this process reduced its weight to 136½ carats, it is considered, so far as quality is concerned, the finest brilliant in Europe. In 1701 a committee of jewellers fixed its value at £400,000. The Persian diamond, the Mountain of Splendour, valued at £145,000, and the great German diamond, valued at £185,000, are well known by the respective models. The largest known yellow diamond in Europe, weighing 139½ carats, belongs to the Emperor of Austria. It was originally the property of the Grand Duke of Tuscany. The Pigott diamond, of only 49 carats, formed the grand prize of an English lottery upwards of forty years ago, and was gained by a young man, who sold it for a trifle. It afterwards became the property of Mehemet Ali, the late Pacha of Egypt, who purchased it of Messrs. Rundell and Bridge, for £30,000; a price which, considering its remarkable beauty, must have been very much below its value. The largest blue diamond ever known is in the collection of Mr. A. J. Hope, and weighs 177 carats. It has a deep blue tinge, like that of a light-coloured sapphire. It is cut in small facets, in the shape of a medallion; and is surrounded by twenty large brilliants, of the purest water. There is a blue diamond in the collection of her Majesty, formerly the property of George IV., which weighs 44 carats. It approaches nearer to the sapphire than to the brilliant. The King of Saxony possesses a green diamond, which forms the button to the plume of his state hat; and there are several large brilliants, some parti-coloured and of green apricot and pink, among the jewels of the late Mr. H. P. Hope, exhibited by Messrs. Hunt and Roskell. The Nassuc diamond, taken in the Mahratta

THIS SHEET WAS PRINTED IN THE GREAT EXHIBITION.

war, weighs 78 carats; but is of triangular form; and, having been polished with a view to retain as much of its original weight as possible, is far less valuable than its size would seem to indicate. The Nizam diamond, brought to this country by Warren Hastings, and presented by him to Queen Charlotte, weighs 101 carats; and is still, we may presume, among the Crown jewels of England.

Having already referred to the existence of diamonds of almost every form and colour, we must not omit to draw attention to the black diamond (not a coal, though a carbon), exhibited by Mr. Joseph Mayer, which may be regarded as a very great curiosity. It weighs 36o carats, and is so extremely hard that it has resisted every attempt that has been made to polish it. Last, but not the least useful object in the Exhibition, is the boart, a species of inferior diamond, used to cut and polish stones of this description, and exhibited by Messrs. Hunt and Roskell. *Apropos* of these gentlemen, one of the most interesting departments of the Exhibition is that in which they exhibit specimens of all the various known precious stones in their unmanufactured state, including numerous objects illustrative of the best modes in use of grinding, polishing, and preparing them for their final destination. The models of the various cut diamonds, exhibited by Mr. Tennent, the mineralogist, Messrs. Thomason, Mr. Aspley Pellat, and others, are also objects of great attraction, and will reward the trouble of a careful inspection.

Although pearls are considered by the lapidary to stand next in commercial importance to diamonds, their relative value as ornaments for the person is regarded by many as far inferior to that of the ruby, the emerald, or the sapphire. However this may be, I propose to accord to them the preference that is claimed for them. One thing at least is in their favour—they are unsusceptible of any improvement by art; we are constrained to leave them as we find them, with all their defects upon their heads. Pearls of the finest quality are those which are perfectly round, and which are thus fitted for necklaces, bracelets, jewels for the hair, and rings. The pear shape is, however, not regarded as an imperfection, because of its susceptibility of being converted into pendants for the ear, solitaires, Sevignés, and ferronnières. Their colour should be milk white, and not of a dull lifeless hue. They should be free from stains, specks, or roughness of surface; and be unshapen, but become wholly unsuited for ornaments for the person; and if the holes drilled through them, for the purpose of stringing them together, be too wide, their mercantile value is materially impaired. The largest known pearl in the world will be found among the jewels exhibited by Mr. A. J. Hope in the Exhibition of the Industry of all Nations; and, but for the eccentricity of its shape—that of a human hand—and the irregularity of its colour, would be of almost priceless value. It is of a size altogether unique, being 2 inches in length, and four inches and a half in circumference. It weighs 3 ounces, or 1182 grains, and wants but colour and symmetry of form to be worthy of a King's ransom. In the absence of these indispensable qualifications, it is merely a *lusus naturæ*, better fitted for the museum than the casket. There are several other pearls, of a very remarkable character as natural productions, in the same collection, as well as in that exhibited by Messrs. Hunt and Roskell—some black, some in the forms of a fish, and one of a pink colour.

The East India Company include among their jewels two necklaces of extraordinary beauty—one comprising 224 and the other 101 large pearls, of perfect form and colour. Those, however, who would satisfy themselves to how much greater advantage pearls appear when tastefully associated with diamonds, rubies, or emeralds, will do well to examine in detail the exquisite *parures* of this description which are among the jewels of the Queen of Spain (the crown and tiara more especially), Messrs. Hunt and Roskell, Messrs. Garrard, M. Bolin (jeweller to the Emperor of Russia), and Messrs. Fremont Maurice. Pearls are valued on the same principle as diamonds, viz. by the square of their weight. Two tables have accordingly been adopted of the prices of pearls, one for small pearls, and the other for large ones. The wholesale value of a carat of pearls, 150 to the ounce, is only 2s.; and of 100 carats, £10. The value of a carat weight of larger pearls is 8s.; of 10 carats, £40; of 20 carats, £160; of 50 carats, £1000; of 100 carats, £4000; and so on. Their value, compared with that of diamonds, is as 8s. to £5. The highest price given in the trade for any pearl is from 16s. to 20s. per carat, and this only in rare occasions. Pearls are liable to damage from water, or from atmospheric influences. If a lady washes her hands without removing her pearls from her fingers, they will sometimes turn either yellow or black. They cannot have care at the hands of their owners than any other description of jewels.

Of Oriental stones, the sapphire first claims attention. In its purest state, its colour is a clear bright indigo blue (the deeper the better) and is united with a high degree of transparency. It is, however, more commonly of a lighter blue, and cloudy and unfrequently transparent in one part, and spotted and streaked with a deeper colour in another. It is found in various parts of India, but oftener in the streams and rivers of Ceylon, and oftenest of all in Pegu, where it occurs in rounded and crystalline fragments, seldom exceeding in size a hazel nut, but though occasionally considerably larger. One of the finest, if not the very finest, sapphire in the world is in the collection of Mr. A. J. Hope. It weighs 138 carats, is extremely rich in colour, and without a flaw. Messrs. Hunt and Roskell exhibit, from the collection of the late Mr. H. P. Hope, several magnificent sapphires; among others, a splendid stone of octagonal shape, of 118 grains; another, of the same shape, of 130 grains; a third, of 65½ grains, and an opalescent sapphire, of 70¾ grains, curious but defective. Some seven or eight more, in the same case, of smaller weight, but of first-rate quality, will enable the amateur of this exquisite gem to make himself perfectly acquainted with its character in all its varieties. Sapphires, of from 20 carats downwards, are often in the market, and may be purchased unset at from £30 to £5.* The value of the sapphire depends more upon its brilliancy and colour than on its size. Mr. A. J. Hope exhibits his well-known "sapphir merveilleux," which is blue by day and amethystine by night. The effects, or stone, is another variety of asterias, and Mr. Hope exhibits the form of a star with six radii, all of which sparkle with great vividness, as its position is varied in the sun. It is semi-transparent. The finest specimen I have ever seen of this gem is in Mrs. Isabella Mendez's collection of jewels belonging to Mr. H. P. Hope, which are exhibited by Messrs. Hunt and Roskell, are no fewer than six sapphire asterias, of first-rate quality; one of them has an iris, displaying all the colours of the rainbow.

The Oriental ruby, one of the rarest and most esteemed of precious stones, is believed to differ from the sapphire in colour alone, its hardness, form of crystallisation, and specific gravity being the same. Its colour, when perfect, is a cochineal red. It is, however, oftener pale, and sometimes clouded with blue. Indeed it occurs rose-red, blossom-red, and lilac-coloured, when it degenerates into the amethyst. "More precious than rubies," is a Scriptural expression, which goes far to establish the fact of its extreme rarity in former days. One of the finest known rubies is exhibited by Mr. A. J. Hope, who has had it re-cut with advantage to its beauty; there is also in his collection a curved Oriental ruby of *cinque cento* date, of the head of Jupiter. Rubies of ten carats each are extremely rare and valuable. One of four carats has often been sold for upwards of £60. Rubies, Indian cut, may be purchased at a comparatively cheap rate; but all precious stones wrought by Indian artificers are always more or less deteriorated. A perfect ruby of six carats weight is equal in value to a diamond of the same size. These stones are, however, seldom met with of a fine quality of a greater weight than a carat and a half. There is a fine intaglio of Minerva in Mr. A. J. Hope's collection, engraved on an Oriental ruby of 53 grains. The spinelle ruby, when perfect, which is rarely the case, is of great value. Its colour is carmine, or rose-red. It is said to take that tint from the oxide of chromic, and the Oriental ruby its deeper hue from the oxide of iron. There are no fewer than eleven spinelle rubies, all more or less fine, in the collection exhibited by Messrs. Hunt and Roskell. One of them is of 23¾ grains weight. The Balais ruby is a stone of inferior quality of the same family. Most of the portraits of Henry VIII. represent him with a magnificent collar of rubies; but they no longer form part of the Crown jewels.

The emerald is next in rarity and value to the ruby. It is of a pure unmixed green, and owes its beautiful and refreshing verdure to spring. It is usually seen to the best advantage when surrounded by brilliants. It varies in colour from the palest to the deepest green, and is so rarely seen perfect that it has given rise to the proverbial comparison, "like an emerald without a flaw." There are several emeralds of extraordinary size and beauty in the Indian department of the Great Exhibition; but they are, for the most part, much obscured and deteriorated by the coarseness and clumsiness of their settings. They form the girdle of a Sikh chief. The emerald belonging to the Duke of Devonshire, exhibited in the case of Mr. Tennent, of the Strand, is one of the finest in the country. Mr. A. J. Hope exhibits an emerald in its stone matrix—a very great curiosity. The exquisite beauty of the emerald, when associated with diamonds and other precious stones, may be seen in the tiara with its green foliage of the Queen of Spain; and, if I remember aright, in a similar ornament in the compartment of M. Bolin, in the Russian Court. The value of a fine emerald of 4 carats is about £50. This stone requires to be differently set from other gems, in order to display it to the best advantage. It should be cut in steps, larger or smaller, according to the intensity of its colour. One of the largest emeralds ever seen in England was that which decorated on state occasions the turban of the Nepaulese ambassador. In Mr. Hope's collection, so frequently referred to, there are three large emeralds of remarkable size, one of which has been sacrilegiously converted into a vinaigrette.

The precious opal, in its most striking form, is far from common; but there are no tables which enable us to estimate its value. Its colour is white or pearl grey, and when interposed between the eye and the light, is pale red, or yellow, with a milky translucency. By reflected light it is rendered iridescent with emerald green, golden yellow, flame-red, violet, purple, and blue; so blended that it is difficult to fix with the eye the exact locality of any one of the colours. When these varieties of hue present themselves in small spangles, it is entitled the harlequin opal. It sometimes displays only one colour, at others the emerald green, and orange yellow: when it assumes the latter it is distinguished as the golden opal. It is often full of flaws, which, strange to say, increase rather than detract from its beauty. In the collection of Mr. H. P. Hope's jewels, displayed by Messrs. Hunt and Roskell, there are several fine opals from Hungary upwards of an inch long, and nearly an inch wide. Some of them display a profusion of prismatic colours. There are eight from Mexico, several of them of magical beauty. The opal ought never to be otherwise cut than heterogenically. This stone was held in superstitious reverence by the ancients: we read of a Roman senator who preferred death to resigning his opal into the hands of the Emperor Nero. It is no part of my present province to notice in this place the interfusion of opals with rubies and brilliants; but the opal pendent and drop set with rubies and brilliants, exhibited by Messrs. Garrard, must not be overlooked.

The family of the topazes is a large one: first, there is the Oriental topaz, then the yellow, red, blue, and white. The deeper its colour, the more valuable the stone. The topaz is not held in very great esteem. One of upwards of eighty carats weight has been sold for £100. The pink is made from the yellow topaz by artificial means. The red topaz fetches the highest price, because the most uncommon. There are upwards of a dozen Brazilian and Saxon topazes in Mr. H. P. Hope's collection exhibited by Messrs. Hunt and Roskell, more than one of which are parti-coloured. It contains also some white topazes, familiarly known as the mina nova.

The aqua marine is, as its name implies, of a sea-green colour, and is oftenest found in Ceylon and the Brazils. Sometimes it is of a greenish yellow, a bluish green, and greenish blue. It was formerly a stone of considerable value, but has been discovered of late in such quantities as to have occasioned a complete glut of it in the market; some of those exhibited by Messrs. Hunt and Roskell, are of remarkable size and beauty of colour. One is almost as blue as a sapphire, another is yellow, and others parti-coloured. One of the finest specimens that is known forms the handle of Murat's sword, and is in the possession of Mr. A. J. Hope. The largest aqua-marine in the world is in the collection of her Majesty. It was presented to George IV. by Lord Strangford.

The garnet has been confounded, improperly, I think, with the carbuncle, by the old writers on precious stones. It comes not only from India, but from Greenland, Bohemia, and Syria. A century ago it was in great request. It is now chiefly used for gentlemen's shirt pins. Garnets may be worn with mourning. There are several large and fine garnets in the Hope collection, some of which are violet-coloured, others ruby red, and others parti-coloured.

The Oriental amethyst unites in colour the blue of the sapphire with the red of the ruby. It is, in fact, the colour of the purple grape. The best stones are found in Siberia, although the greatest number are imported from the Brazils. They have long been out of fashion, and are now chiefly used in seals and brooches. Mr. H. P. Hope's collection, exhibited by Hunt and Roskell, is exceedingly rich in this beautiful but neglected gem. The amethyst loses much of its brilliancy by candlelight.

The peridot, or common cysolite, is of a rich olive green colour, of more or less intensity, and is only found in the Levant. It is neither very hard nor very brilliant, unless by candlelight, when it is always seen to the best advantage. It requires to be cut in steps to set it off properly. It is chiefly employed in bracelets and Sevignés. There is a fine engraved peridot in Mr. Hope's collection, representing Apollo and the lizard in intaglio: it is engraved by Calendrilli. This stone was exceedingly scarce a few years ago, although specimens of a very high value are plentiful enough now, we have rarely met with one of the proper intensity of colour. These stones are affected by the atmosphere, and are sometimes rendered dull and almost opaque by the cold and damp.

The chrysoberyl, or Oriental chrysolite, was in great odour a century ago. Shakspeare, intending, of course, to select the most precious gem he could think of, makes Othello declare, that, had Desdemona not have deceived him, and the world had been one "perfect chrysolite," he would not have sold her for it. The chrysolite is a yellow coloured stone that shews to the greatest advantage out brilliant-wise. The cymophane emits a luminous white ray, which seems to change its position as it receives the light. I do not remember to have met with a single specimen of it in the Crystal Palace.

The yellow crystal, rock crystal, sardonyx, and chrysophrase, belong to the same class, both in order and translucency. The cat's eye is considered as a sort of crystal enveloping amaranthus. Fine specimens of this stone are regarded with superstitious veneration by the Cingalese.

The sard was always selected by the ancients for the purpose of engraving upon them. They may sometimes be obtained very large. The chrysophras, which is of a cloudy green colour, is a poor stone, of comparatively little value. It is affected both by cold and damp, and is chiefly employed for seals and ladies' brooches. It does not admit of being cut in the ordinary way.

The opaque stones, with a single exception, hardly fall within our province. The turquoise is, however, so exquisite a gem, when set with diamonds, rubies, emeralds, or pearls, that we cannot but feel inclined to notice it. The finest variety, called *turquoise Vieille Roche*, is uniform and compact. The turquoise is much in request among jewellers. Those who would see it in perfection must refer to some of the jewels of M. Bolin, the jeweller to the Emperor of Russia; and especially to the exquisite bracelet recently purchased of that gentleman by Mr. A. J. Hope. The turquoise harmonises best with brilliants and pearls. It is easily and effectively imitated.

The jargoon used to be considered a species of diamond, but has of late years gone wholly out of fashion. In the Hope collection there are some very fine specimens. The tourmaline is chiefly remarkable for its electrical properties. It usually occurs in black and opaque crystals; its colours are green, blue, or pink. By heat or friction it becomes electric, and retains the property for many hours. The moonstone is a translucent gem of a bluish white colour. Spheroidically cut, it reflects a strong light. It is principally used for ring stones and ear-rings. The sunstone is a rich variety of aventurine, which reflects a bright flame colour. It is of a silicious character, and owes its peculiar beauty to the arrangement of its particles or scattered specks of mica in ferruginous quartz. Messrs. Hunt and Roskell exhibit a sun-stone cameo of a monkey's head, which affords a just notion of the singular character of the stone. They have also supplied a fine specimen of the sun-stone. But I have far exceeded the space I had prescribed for myself on this occasion, and must reserve for a future opportunity my notices on the *parure* jewellery adapted for ladies, which forms so very striking a feature of the Great Exhibition: meanwhile I may venture to remark, that, whatever success may say to the contrary, no philosopher will deny that objects which form so large a portion of the wealth of the civilised nations of the earth are well calculated to excite that rational curiosity which it cannot be unbecoming to gratify.

* This identical gem afforded foundation for a story from the pen of Madame de Genlis.

MUSICAL INSTRUMENTS.

(THIRD NOTICE.)

AMONG the numerous and almost infinitely varied kinds of musical instruments in the Great Exhibition, there are none of modern introduction after the pianoforte, that have become so quickly popular, or are so generally adapted for the amateur as well as professional artist, as the musical instruments the tones of which are produced by vibrating plates of metal, in contradistinction to strings as in the pianoforte, harp, violin; or tubes, as in the organ, flute, horn, &c. The concertina, harmonium, seraphine, accordion, musical boxes, &c., are included in this class: the common Jew's harp is also of the same kind; and though most simple and primitive in form and sound, we possess in it the principle on which the construction of these instruments is founded; and no doubt this mere school-boy's plaything gave the first idea, which, with the aid of science and observation, combined with mechanical ability, has led to the production of this distinct and agreeable class of modern instruments. A vibrating plate (called also a reed or tongue) is a thin narrow strip of metal fastened at one end, while the other is left free, and placed over an aperture (also cut in metal) which is nearly its counterpart, and in which it is so fitted, that, while it touches nowhere, it only allows a certain quantity of air to pass through: the current or column of air forces the plate from its position, to which it again returns by its own elasticity, and the temporary diminution of the pressure consequent on the escape of the air; and the constant series of vibrations, causing continuous tone, is excited. We have given this brief explanation of the mode of producing the sounds in this class of instruments, because, in point of construction, they are characterised by some superior qualities, which must have considerable influence on their general appreciation, such as the length of time they keep in tune, their durability, the sweet and melodious quality of the tones, with the power of sustaining or prolonging them at pleasure, and their capability of being put into very compact forms, as in the concertina, &c. The demand for musical instruments of this kind has very much increased within the last few years, and the manufacture of them forms no inconsiderable part of the industry of many towns and cities on the Continent, as well as in London. Thus, an immense number of harmoniums, organs, and concertinas are made in Paris, and imported into this country; thousands of accordions are manufactured in Germany, and exported to England and all parts of the world; and the fabrication of musical boxes of all kinds is a source of employment to a large number of persons in Switzerland.

The concertina, the most elegant and perfect instrument of its kind, was patented about twenty years ago by Messrs. Wheatstone. The invention is due to Professor Wheatstone, by whose scientific labours many valuable and important improvements in the construction of instruments with vibrating plates have been effected. Since its first introduction the concertina has steadily progressed in public favour; and, perhaps, the best proof of the sterling merits of the instrument is the readiness with which it has been taken up by professors of ability; and whenever has heard such artists as Regondi, Case, Blagrove, &c., perform on it, must agree that its invention has been a valuable addition to those musical instruments that are more especially adapted for the drawingroom; its lightness and portability are also greatly in its favour.

Messrs. Wheatstone (Class 10, No. 892) exhibit a number of concertinas of every description—treble, baritone, tenor, bass, and double; and one also dissected, to show the construction of the interior, which fully displays the care and finish for which their instruments are well known; and it may be as well to explain, that it is owing to the superior workmanship in the making and fitting the tongues, and the construction of the bellows, that the English concertinas surpass, in beauty of tone and durability, those made on the Continent. The folding harmonium, also by Messrs. Wheatstone, is exceedingly ingenious, and will be highly appreciated by travellers. It has five octaves, and is excellent in tone and quality; and, though standing sufficiently high for a person to sit to, can, by a well arranged division of the keys, and some very cleverly contrived machinery, be made to close up, and occupy a space not much larger than a good-sized tea-caddy.

Mr. Chidley (No 544) exhibits some concertinas in highly ornamented cases, and Mr Case (No. 545) some excellent instruments.

The display of harmoniums is more limited than we should have anticipated, considering the increasing popularity of these instruments. M. Alexandre and Son, of Paris, exhibits, in the French department, a very fine one, made for Thalberg, with their patent percussion mechanism, considered to be a great improvement, as it affords superior facilities for execution by the promptness with which the tone is produced. We have, also, an *orgue de voyage*, by M. Müller (No. 1365). Though a portable instrument, it does not approach, in completeness of mechanical arrangement and compactness, the one exhibited in the English department by Messrs. Wheatstone. There are also harmoniums by Debain and Alexandre, both of Paris, exhibited in the English department; but, as they are evidently out of place there, being imported, and not the manufacture of this country, we cannot notice them, as we conceive the exhibition by English agents or importers of articles stated to be obtained only of them, but of foreign manufacture, to be quite opposed to the spirit and intention of the present Exhibition, which is professedly to shew the comparative merits of each nation of the world in their several productions. There are a number of accordions from Austria, Prussia, and other parts of Germany, some displaying novelties of construction. One, in the Austrian gallery (No. 164), by Steinkellner, Vienna, is in the form of a guitar, with two octaves of keys, arranged the same as in a pianoforte. There are also some concertinas from Vienna; they are, however, far inferior to the English. In the Swiss department will be observed some highly-finished musical boxes from Geneva, some on a larger scale than has been before attempted, and playing very powerful, and playing a greater number of tunes. One, by Gay and Lusprin, Geneva (No. 82), imitates a military band, and is a splendid specimen of the kind.

The show of brass wind instruments in the French department is exceedingly good, and the great number and variety exhibited would seem to indicate the *penchant* of our Gallic neighbours for anything of a military character, even to the manufacture of drums and trumpets. First and foremost, amongst the foreign exhibitors, is M. Adolphe Sax, of Paris (No. 1161), well known in England and on the Continent as the inventor and manufacturer of the Sax horns, so beautifully played by the Messrs. Distin. M. Sax has succeeded in giving to his horn a soft, full, clear, and musical quality of tone, which was before considered almost unattainable on that instrument; and, from being scarcely ever heard but in an orchestra or a military band, has, in the hands of the Messrs. Distin, became an agreeable variety in the concert-room. The instruments exhibited by M. Sax in the Nave, from the Sax horns and cornets-à-pistons to the immense trombones, are characterised by the greatest beauty and finish, as well as elegance of form. The kettle and side-drums are also fine specimens of those instruments. Leaving the Nave, and returning to the French Musical Department, M. Besson (No. 1161) exhibits almost every species of brass wind instrument, of excellent make and construction: among them are two cornet-à-pistons of the most costly description and finest workmanship; one is of solid silver, and the other silver gilt. MM. Gauchot and Co. (1444) exhibit a large collection of instruments of excellent make; and M. A. Courtois, sen. (1160), wind instruments, with his patent curved mouthpiece to replace into rectangular pistons, the workmanship of which is very good.

The other exhibitors, of whom we can only give the names, are M. A. Courtois (1168), M. Labaye (556), and M. Roth (933). Austria, after France, exhibits the greatest number of brass wind instruments, many of them are exceedingly good. They are principally from Vienna and Prague.

Belgium, Prussia, Bavaria, and the Zollverein likewise contribute a number of brass wind instruments, but they do not call for any special notice, as they certainly are behind the French and English in the construction and finish of their instruments.

In the English department (Class 10), the display of brass wind instruments is not very extensive; but in one or two instances it makes up in quality what it lacks in quantity. M. Kohler (540), well known in England and India as being one of our largest and first manufacturers of these instruments, contributes specimens of his patent valved wind instruments, which are distinguished by the highest character of workmanship, correctness of model, and elegance of form. The patent valves are an improvement on the old sort of valves, as, by diminishing the number of acute angles, less obstruction is offered to the passage of the wind, consequently producing a richer, clearer, and more even tone, and giving greater certainty and regularity to the notes, as well as offering considerable facilities for execution, by lessening the difficulty and exertion in producing them. M. Kohler has also introduced a spiral spring, in place of the watch spring, which was so very liable to break and get out of order.

Messrs. Pace and Sons (517) exhibit cornopeans and trumpets with improved valves, and without angular trimmings. Messrs. Pask and Koenig (504), a variety of brass wind instruments. There are also several exhibitors from the provincial towns, among whom Mr. Oates, of Lichfield (520), puts forward some improvements. There are also others from Manchester, Birmingham, Dublin, &c.

For the drums, we have already spoken of those exhibited by Sax. Mr. Augustus Knoche, of Munich (No. 100), exhibits a pair of mechanical kettle-drums, which can be altered in pitch either by the hand or feet, and with much greater ease and in less time than by the ordinary method. They have been used in the Royal orchestra at Munich for the last ten years. This certainly seems to be an improvement; the only objection appears to be in the greater weight in consequence of the iron framing, and the increased cost.

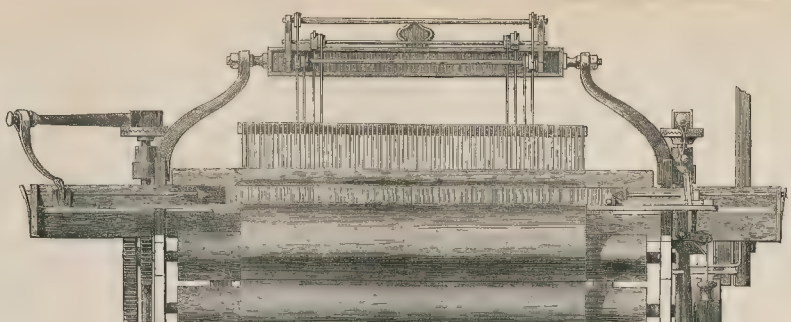
M. Rexer, of Stuttgard, Wirtemburg (26), also exhibits drums, to tune mechanically with screws.

In our next we shall notice the flutes, of which there are a great variety, with the improvements introduced by Boehm; and the violins, of which there are some fine specimens.

HARRISON'S IMPROVED POWER-LOOMS.

MR. HARRISON, of Blackburn, not only exhibits two modern looms, for light and heavy goods respectively, but also adds much interest to this part of the Exhibition, by placing, side by side with his improved machines, an old loom made about half a century since, at Abbey Mill, Paisley, and which is very similar to the power-looms at first worked in that district, in 1756, by Mr. Robert Miller, of Milton Trufield, near Dumbarton. This old contrivance was considered a wonder at the time of its introduction, although only capable of running *sixty picks* or throws of the shuttle per minute, with advantage, besides requiring the constant attendance of one person. The new looms may be driven at the rate of 220 picks per minute, and are now working at that speed both in the Exhibition and also at the mills in the manufacturing districts.

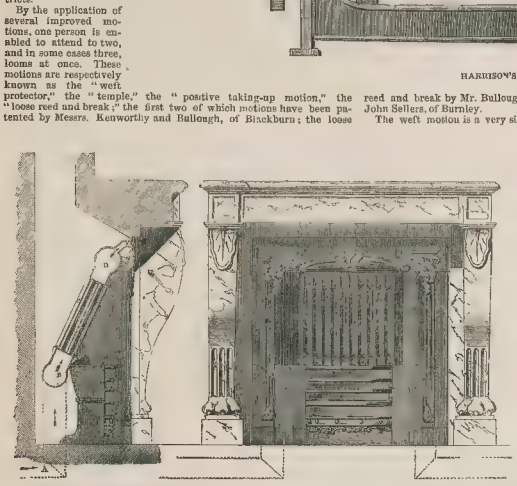
By the application of several improved motions, one person is enabled to attend to two, and in some cases three, looms at once. These motions are respectively known as the "weft-protector," the "temple," the "positive taking-up motion," the "loose reed and break;" the first two of which motions have been patented by Messrs. Kenworthy and Bullough, of Blackburn; the loose reed and break by Mr. Bullough, and the fast reed and break by Mr. John Sellers, of Burnley.



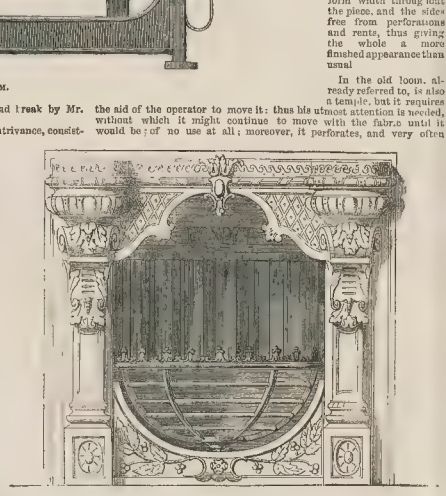
HARRISON'S IMPROVED POWER-LOOM.

The weft motion is a very simple and beautiful contrivance, consisting of a small fork which acts in connexion with the setting or handle of the loom; and whenever the weft thread breaks, or is absent from its place, the machine is immediately stopped by means of either of the above-mentioned breaks: it would otherwise go on weaving without weft, which would, of course, leave a part of the cloth unfinished, and thus the piece would be entirely damaged. This motion, therefore, dispenses with the very great care and watchfulness hitherto required on the part of the operator, and enables him to produce more cloth in a given time, thus benefiting both his employers and himself. The "temple" is a long semi-cylindrical box or trough, into which is fitted a roller, cut or fluted to nearly one-third of its length at each end, so as to give it the appearance of a file. The use of this roller, which rotates on the trough, is to keep the fabric at one uniform width throughout the piece, and the sides free from perforations and rents, thus giving the whole a more finished appearance than usual.

In the old loom, already referred to, is also a temple, but it requires the aid of the operator to move it: thus his utmost attention is needed, without which it might continue to move with the fabric until it would be of no use at all; moreover, it perforates, and very often tears the sides of the cloth.



WARMING APPARATUS, WITH PRISMATIC TUBES.—BY FONDET.



WARMING APPARATUS, WITH CURVILINEAR TUBES.—BY FONDET.

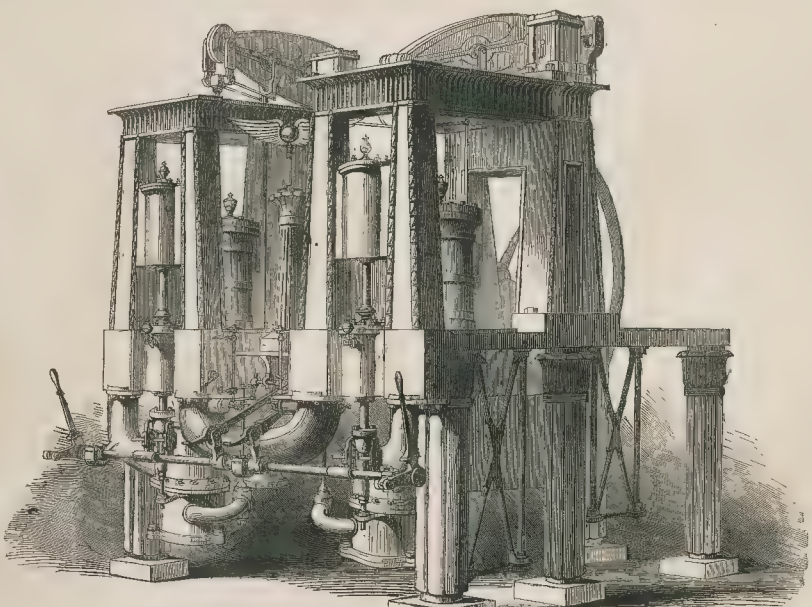
The "taking-up" motion is introduced for the purpose of ensuring uniformity of thickness throughout the piece, and regulates the number of threads of weft in a given space, by the application of a small wheel containing a certain number of teeth or cogs, acting in connexion with three other small wheels and the cloth beam, which latter at one and the same time folds up the cloth and moves it so as to ensure the desired thickness throughout; whereas, without its use, the fabric may present different thicknesses throughout.

The loose reed and break of Mr. Bullough is the most suitable for light fabrics, and the fast reed and break of Mr. Sellers for heavy goods. Whenever the shuttle fails in traversing the slay from one end to the other, a great destruction of threads is almost certain to take place in the ordinary looms; but in those to which Mr. Bullough's invention is attached the loose reed falls out of its place, and gives way to the shuttle, so that no derangement or breakage of the warp can take place.

The above-named are the leading movements of the power-loom of the present day; but there are many other motions which are but little less effective to the complete and perfect working of the whole. By the old loom, which stands on the right-hand side of the two improved looms, not more than one-third the amount of cloth can be produced as compared with the workings of the new looms, although twice the amount of labour is required to produce the same quantity in a given time.

We understand that an experienced operative will produce 28 pieces, 29 inches wide and 29 yards long, of printing cloth of *eleven* picks per quarter inch, from two looms in a factory working sixty hours per week.

The weaving of each piece costs 8½d. The same person, if set to work at one of the old looms, could only produce four similar pieces, each of which would cost 2s. 9d. for weaving alone; thus an immense saving is effected by the new looms for weaving alone. With such facts before them, our readers will not be greatly at a loss to account for our vast superiority over all other nations of the globe in the production of every description of cotton fabrics.



MODEL OF A STEAM-ENGINE.—BY HICKS, OF BOLTON.

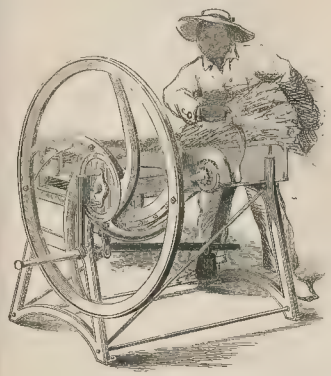
TWO SPECIMENS OF WARMING APPARATUS, BY FONDET.

These are two specimens of stoves, in cast iron, by Fondet, of Paris; in one of which curvilinear tubes, in the other prismatic tubes, are introduced. The contrivance is ingenious, and will doubtless prove successful. The same manufacturer exhibits several contrivances for curing smoky chimneys, which are deserving of attention.

AGRICULTURAL IMPLEMENTS.

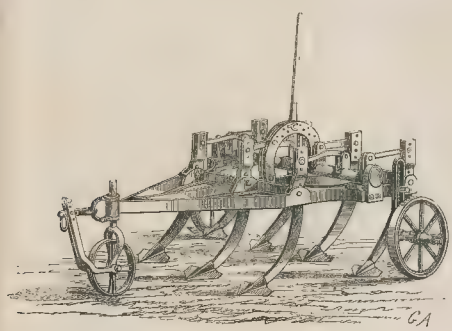
RANSOME AND MAY'S CANE-TOP CUTTER.

The machine is one of a number of valuable implements introduced by this eminent firm into the West Indies.



RANSOME AND MAY'S CANE-TOP CUTTER.

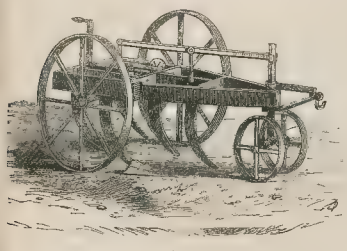
It is used for cutting cane-tops for cattle, and is in high repute there. It has two knives, and cuts the cane into lengths of half an inch. It can be worked by one or two persons, and is constructed in the simplest possible manner, requiring no particular skill on the part of those who use it. It is made entirely of metal, to avoid the inconvenience and damage which occur to machines constructed of timber.



COLMAN'S DRAG HARROW AND SCARIFIER.

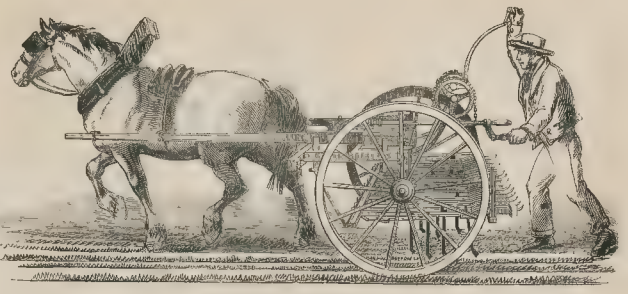
LORD DUCIE'S CULTIVATOR.

The introduction of this implement was a great boon to agriculturists, it enabling them to adopt a much higher state of cultivation at the same cost, as its strength and excellent action render it nearly equal to a second ploughing, while the labour attending it is not more than one-third. It is in this peculiarity that it differs from the machines of a similar description that preceded it: they all partook too much of the mere harrow character, and had no claims such as Lord Ducie's has to be called a cultivator. Their action was almost entirely confined to scratching on the surface, while the Uley implement disintegrates the soil to a considerable depth, and does actually in a short time, if constantly and properly used, quite change the character of the tilth. The mode in which it is raised out of the ground, and the plan by which its depth is



LORD DUCIE'S CULTIVATOR.

BARRETT, EXALL, AND ANDREWS' GORSE-BRUISER.—(SEE NEXT PAGE.)



GARRETT'S PATENT HORSE HOE.

regulated, was the invention of Mr. Clyburn, of the Uley works. The operation is performed with great ease, and the regularity and parallelism of the frame-work as it is raised or lowered is quite perfect. Our Engraving of this machine is as constructed by Messrs. Burrett and Exall, of Reading.

GARRETT'S PATENT HORSE HOE.

This implement is calculated to work an important improvement in field cultivation, as by its use corn of all kinds, drilled in rows of not less than 7 inches apart, may be hoed in a superior manner at a cost not exceeding sixpence per acre. It is adapted to all the prevailing methods of drill culture, either for cleansing crops drilled on the surface or on ridges, the axeltree of the wheels being moveable at both ends, to suit the varied intervals between the rows of plants; and as each cutting hoe works on a lever, independently of the others, the weeds are effectually destroyed, however uneven the surface of the ground, the hoes being kept a uniform depth by means of regulating keys. The steerage forms a valuable feature of the implement, as the hoes may thereby be guided with the greatest precision, perfectly hoeing the intervals without injury to the corn or plants. As much as from 10 to 15 acres per day may be hoed with one horse, a man, and a boy. The horse hoe offers particular advantage over hand hoeing, besides saving of expense, as the work may be performed at the proper time; and as the hoes penetrate a greater depth, fresh life and vigour are given to growing plants, by stirring the mould around them.

COLMAN'S DRAG HARROW AND SCARIFIER.

This is a modification of the Ducie Cultivator, and is an excellent implement as a drag harrow and scarifier, eradicating all weeds and rubbish from the foulest land: it is also efficient for opening, raising, and pulverising the soil; and with different blades fitted to the tines, it makes an excellent skim, to take off couch, &c.

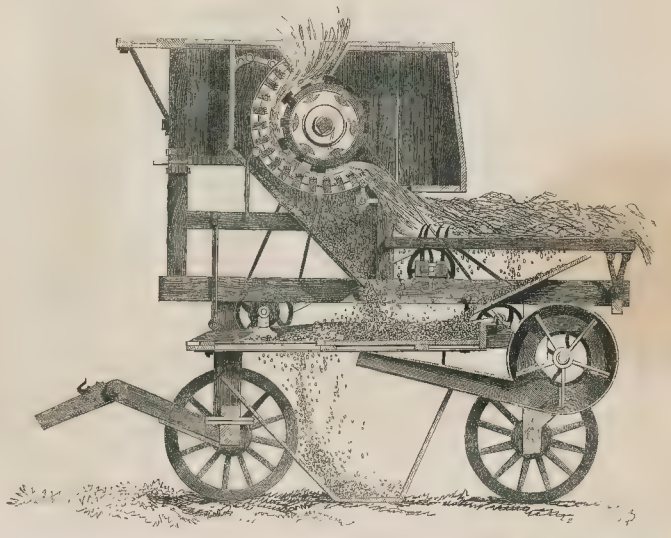
The principal novelty is in the frame at the top being suspended about six inches above the lower one, parallel with which, by means of a lever, it is moved backwards and forwards: this motion regulates the depth of the tines in the soil, without having to lift the frame of the machine, which remains always at the same height from the ground.

It is the invention of Mr. R. Colman, of Chelmsford, Essex, by whom they are manufactured.

BADDELEY'S FARMER'S FIRE-ENGINE.

The frequent occurrence of fires in the agricultural districts has led Mr. Baddeley (whose name is well known in connexion with a variety of matters connected with the means of extinguishing and escaping from fires) to design a cheap and efficient engine adapted to the requirements of the farmer. It is exceedingly portable, as one man may move it from place to place. All the working parts are constructed to bear the roughest usage it may meet with on a farm, and any farm labourer may be taught in a few minutes how to use it. The valves are of metal, and not liable to derangement; but, should any obstruction occur, it can be removed instantly without disturbing any of the working parts of the engine. The branch-pipe is furnished with a spreader, by means of which the water can be made to act over a large surface, which is specially important in the event of fire in corn or hay-ricks, or weather-boarded buildings, &c. Worked by three men, the engine will throw a jet of water between 50 and 60 feet in height, and, from the great rapidity with which it can be brought up and set to work, it will be found more efficient in arresting the progress of the fire, than one of more powerful character at an advanced stage of the conflagration. Not the least part of the advantage to be derived from the machine, is the fact, that it will be equally useful as a liquid manure forcing-pump, and for a variety of agricultural purposes, as for the special object of extinguishing flame. They are constructed for the inventor, by Mr. Merryweather, of Long-acre, which is a guarantee for their excellent workmanship and general efficiency.

BADDELEY'S FARMER'S FIRE-ENGINE.



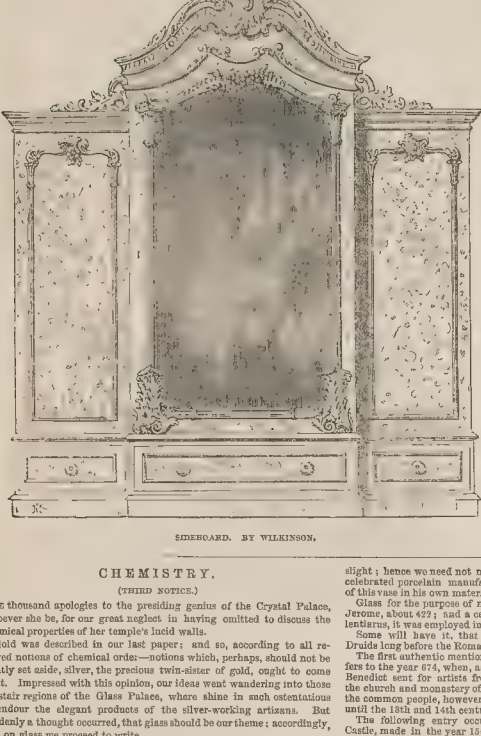
GARRETT'S IMPROVED THRASHING-MACHINE.—SECTION.—(SEE NEXT PAGE.)

BARRETT, EXALL, AND ANDREWS' GORSE BRUISER.

The introduction of gorse as food for cattle is every day gaining ground. There are times and situations when gorse is a most valuable article to cattle-feeders, its nutritious qualities being of the highest class. Various noblemen and gentlemen have used it with advantage, and made a variety of experiments, always with satisfactory results, more especially with milch cows and sheep.

The great obstacle in the way of general introduction is the difficulty of getting rid of the hard points or prickles in which the nutritive juices of the plant are contained. Until these are entirely destroyed, no animal can swallow it; though, when they are destroyed, any horse, cow, or other herbivorous animal will eat it with avidity, and prefer it to any other food, even though the animal may have never tasted it before.

The old practice was to subject the gorse to the action of heavy edge-stones (as in a cider mill), until the introduction of a proper machine by Messrs Barrett, Exall, and Andrews. This machine both cuts and bruises the gorse, and delivers it for use as soft and much like long moss, in which case, of course, any animal can eat it without inconvenience.



SIDEBOARD. BY WILKINSON.

GARRETT'S IMPROVED THRESHING MACHINE.

As comparatively few persons are aware of the actual construction of the threshing machine, we have thought it would be better to engrave Mr. Garrett's engine in section, so that the principle of its action, as well as the detail of its working, may be more easily understood.

Threshing by machinery is now the ordinary practice all over England; every large farmer has one of his own, and the smaller holders hire one for the time of persons who keep them for that purpose. The threshing machine was originally invented in Scotland, by Andrew Muckle, and was used there for a considerable period previous to its introduction into England.

The Scotch machines were, and are, altogether of a much clumsier and heavier description than the English, who have much improved upon the invention of Muckle. The Scotch generally retain the original principle, which consisted in holding the straw firmly between two rollers, while the corn was beaten or knocked out by a series of bars, fixed transversely upon a drum, revolving with considerable velocity parallel with the feeding rollers, the concave or breasting part having little to do with the actual thrashing of the corn. In the English machines, the concave is made to play the most important part, the straw being fed directly between the drum and the concave, without the use of rollers, and in its passage through it is rubbed out, instead of being beaten out, as in the Scotch manner. The great objection to threshing by either of these machines has been the damage done to the straw by the action of the beaters, it being for some purposes, such as thatching, quite spoiled. To obviate this difficulty, Messrs. Garrett, of Leiston Works, Saxmundham, Suffolk, have succeeded in bringing into general use the one called a "bolting machine." In this, the straw, instead of being fed in endways, as in all the old machines, is admitted lengthways, and, in consequence, is not bent or broken in the least by passing through. We are not quite sure whether the Messrs. Garrett were the original inventors of the bolting machine; but, certainly, they deserve the credit of having brought it into general use. The latest improvements added to their machine, as shown in our engraving, are, 1st, the improved form of the breasting or concave, and the manner of adjusting the same to the drum; 2nd, a straw shaker, which receives the straw after it has passed through the machine, and clears it of all loose kernels that may be amongst it; 3rd, a vibrating screen for separating the loose ears, short straws, caving, &c., from amongst the corn and light chaff, the latter being driven off by a blast-fan while the corn is passing over the screen. After the corn has passed the various processes above described, it will be found free from all chaff and rubbish, and, once passing through a dressing machine, it will be fit for the market.

SIDEBOARD. BY WILKINSON.

This sideboard, in walnut-tree wood and pollard oak, is remarkable for its good taste in the design, and simplicity in the ornamentation. It is not often we meet with a work so unexceptionably well finished, with so little attempt at meretricious display.

CHEMISTRY.

(THIRD NOTICE.)

THE thousand apologies to the presiding genius of the Crystal Palace, whoever she be, for our great neglect in having omitted to discuss the chemical properties of her temple's lucid walls.

Gold was described in our last paper; and so, according to all received notions of chemical order:—notions which, perhaps, should not be lightly set aside, silver, the precious twin-sister of gold, ought to come next. Impressed with this opinion, our ideas went wandering into those up-stair regions of the Glass Palace, where shine in such ostentatious splendour the elegant products of the silver-working artizans. But suddenly a thought occurred, that glass should be our theme; accordingly, it is on glass we proceed to write.

Glass has become very common now—applied to purposes of such variety, that pages would not enumerate them all. Sparkling on our door knobs, adorning our coal-cuttles, furnishing vases, goblets, mirrors, chandeliers; preserving sound and in good order liquids of almost every kind—from black draughts to champagne—from aqua-fortis to pump water. Ground into lenses, it reveals to us by the telescope the sublime immensities of the heavens; by the microscope makes known to us the no less sublime revelations of minute created forms. Extended into threads and woven into cloth, it rivals the most gorgeous fabrics of silk. Drawn into wire, it furnishes the best chronometer springs. Cast into pipes, it bids fair to rival, for common purposes, earthenware, iron, and lead; and, not content with glazing our window-frames, it threatens hereafter to usurp the functions of bricks, slates, and tiles.

Common though glass be now, there was a time when any one single vase, taken almost at random from the glass treasures of the Crystal Palace, would have rivalled in value the Koh-i-Noor. The Emperor Nero gave for two cups with handles 6000 sesterii, a sum nearly equal to £50,000 of our money; nor let the reader imagine this large sum to be in consideration of the size of the vessels, for we are told they were very small.

Some people will have it that glass is spoken of in the book of Job, ch. xxxvii., v. 18, but it seems more probable that allusion is there made to some other transparent substance. Probably the first authentic mention of glass exists in the writings of Aristotle, who proposed for solution the two questions—"Why do we see through glass, and why is not malleable?" Theophrastus, who lived about half a century later than Aristotle, mentions the formation of glass from the sand of the river Belus; and from that period the manufacture of glass became tolerably well understood. Stimulated, we presume, by the question of Aristotle—*Why glass was not malleable?* the attempts to discover a method of rendering it so have been frequent, as well amongst the moderns as the ancients. It is related of Tiberius, on very questionable authority, that the problem of forming malleable glass has been at least three times solved—once by a Roman architect, who lived in the reign of Tiberius, and who, as a proper reward for his genius, suffered the loss of his head; a second time by a Roman artist, who had his house pulled down by the populace because certain vested interests of ordinary glass makers were considered to be infringed; and a third time by a French artist during the reign of Louis XIII. Of this man it is recorded, that, having presented a relish of malleable glass to the Cardinal Richelieu, he was rewarded by perpetual imprisonment. A uniformly hard fate seems to be in store for all who work at the subject of malleable glass.

We need scarcely say that the most celebrated piece of ancient glass that has been transmitted to our own times the Barberini, or Portland vase, which survived the natural vissicitudes of many centuries, only to be shattered by a Vandal of our own times. This vase was discovered about the middle of the 16th century, enclosed in a marble sarcophagus and deposited within the tomb of Alexander Severus, who died in the year 235. The term Portland vase arose from the circumstance of its having been purchased by the Duchess of Portland. For many years this vase was imagined to have been made of porcelain, but it is now well determined to have been composed of deep blue glass. The chemical difference, however, between glass and porcelain is in reality very slight; hence we need not marvel at the fact that Mr. Wedgewood, the celebrated porcelain manufacturer, produced an admirable fac simile of this vase in his own material.

Glass for the purpose of making windows was first mentioned by St. Jerome, about 423; and a century later, we are informed by Paulus Silentiarus, it was employed in the church of St. Sophia at Constantinople.

Some will have it, that glass was made in our own island by the Druids long before the Roman invasion, but the assertion is very doubtful. The first authentic mention of the use of window glass in Britain refers to the year 674, when, according to the venerable Bede, the Abbot Benedict sent for artists from beyond the seas to glaze the windows of the church and monastery of Waremouth, in Durham. The houses of the common people, however, were not furnished with glazed windows until the 13th and 14th centuries.

The following entry occurs in the minutes of a survey of Alnwick Castle, made in the year 1567:—"And because throwe extream windes the glasses of the windowes of this and other my lords castels and houses here in the country doth decay and waiste, yt were good the whole leightes of everie windowe at the departure of his lordshippe from lyinge at anie of his sade castels and houses, and downe the time of his lordshippes absence or others lyinge in them were taken downe and lade up in safetie; and at sooch tyme as ether his lordshippe or anie other sholde lye at anie of the sade places the same might then be sette uppe for newe with smale charges to his lordshippe; whereas now the decays thereof shall be verie costlie, and chargeable to be repayred."

For the history of glass this short sketch shall suffice: let us now direct our attention to its chemistry. Glass may be defined chemically to be a compound, transparent, uncrystall.zed siliceous salt. Yes, a salt is glass; and if, reader, this expression startles you, your surprise is not likely to be diminished when you are told that not only is glass a salt, but so are bricks and tiles. In short, the substance which constitutes flint, and rock crystal, and glass-making sand, is what the elder chemists called silex, or *silica*, but what we better informed people of modern times call *silicic acid*.

Now, silicic acid unites with potash, soda, lime, the oxide of many common metals, particularly of iron and lead, the results of which combinations are so many corresponding salts, called *silicates*; and these silicates are glass.

Silicic acid, unlike most other acids, combines or appears to combine (and the whole atomic theory is involved in the alternative) with bases in any desired proportion. These combinations are endowed with certain qualities in common: for example, they are all more or less transparent; they are all more or less fusible; and, instead of passing at once from the liquid to the solid state, as is the case with most other salts, they assume the intermediate condition of tenacious paste, capable of being blown into bubbles, rolled into plates, moulded into vases, pulled out into tubes, filaments, or wire. Our readers will easily now see the distinctive characteristic qualities of glass. Although the general outline of the theory and practice of glass-making is easy enough, much care and science are involved in adapting the constituents of glass to the numerous purposes to which it is now applied. Thus, for example, by employing an excess of potash or soda, and decreasing the amount of silicic acid or *powdered* flint, we obtain a glass which is completely soluble in water, and which would be evidently unfit for all common purposes to which glass is applied. Indeed, however strange it may sound to those not chemically informed to be told that the glass of a window-frame, or mirror, or vase is capable of solution in water—such, nevertheless, is a fact. To accomplish this feat, nothing more is required than to fuse the glass with a certain additional quantity of potash or soda, by which operation it is reduced to the condition of the glass we have already described as having been originally made with an excess of potash or soda. It was in this way that the alchemists of old surprised their patrons and admirers by dissolving flints. Fusing them with a large excess of alkali, they converted them into soluble glass. Modern chemists have gone further than this—nothing being more common now than the conversion of flints into an *invisible gas*; but this gas does not come under our notice to-day.

Before altogether departing from the subject of soluble glass, it would be improper to omit pointing out a very useful purpose to which one variety of soluble glass may be applied; namely, as a sort of incombustible starch, for protecting textile fabrics from fire. If fifteen parts of sand, ten of carbonate of potash, and one part of charcoal be melted together, a variety of soluble glass results, which, although soluble in hot water, is perfectly insoluble in cold. Used as a substitute for starch it is not affected by atmospheric dampness, and renders the fabrics which it has been employed to stiffen totally incapable of taking fire. Whether this compound present any special difficulties of manipulation, we are not practical laundress enough to determine. At any rate, its exceedingly valuable qualities should not be lightly forgotten.

The varieties of glass used in the arts are exceedingly numerous, and are distinguished by marked chemical characteristics. As great precision in classification is not so much our object in writing these papers as an attempt to sketch broad outlines of the subjects which come within our sphere, it will suffice for the present to divide glass into coloured and colourless. The latter we may consider as the basis of the former, just as water may be regarded as the basis of numerous coloured solutions.

Many persons will have, doubtless, remarked the request we made by our neighbours, the French, of the term *crystal* as applied to certain kinds of glass, which are employed for the purpose of making goblets, vases, cut ornaments, and, in short, all objects where pure colourless transparency is required. The French *crystal* corresponds to the English expression, *flint glass*; an expression so far wrong, that the peculiarity of such glass depends, not upon flint, but upon *oxide* of, or *red lead*, a material which, when added to silicate of potash or soda, renders the glass more purely transparent, refrangible, and, at the same time, softer than it would otherwise be.

The art of making coloured glass is now brought to great perfection in England and France, as well as Bohemia, and involves some of the most delicate appreciations of chemical science. We will rapidly announce some of the chief substances employed in communicating the various tints. First, then, the exquisite ruby red, now so great a favourite for our ornamental vases, is communicated by minute portions of oxide of gold, while other qualities of red are communicated by oxide of iron and copper. The dead, opaque, or milk-white hue which we find imparted to some glass forms, almost assimilating them in appearance to porcelain, is communicated either by an oxide of arsenic or tin; shades of purple are given by manganese; and the opalescent yellow, so much admired, by an oxide of uranum. Most of these substances are exceedingly valuable, and their employment so generally is only rendered practicable by having recourse to the process termed by glass-makers *flashing*, namely, dipping a solid bead of white glass into a fused mass of coloured glass; then, blowing the former into a bubble, the latter coats it to a very thin extent. The operation of flashing may be compared to the veneering of one wood on another, and gives an almost infinite power of colour-ornamentation to the glass artist. Thus, by grinding off the outside coating of coloured glass in definite shapes, we have the white glass foundation showing through, and by dipping the white glass foundation into two or more consecutive baths of different coloured glasses, and carrying the grinding operation to various depths, an almost boundless variety of ornamentation may be commanded.

The art of employing coloured glass for the construction of Gothic ornamented windows is of tolerably ancient date. Probably the origin of this art must be attributed to the Romans of the Eastern empire, and probably they communicated it to the ecclesiastics of northern and western Europe. At various periods, the art of pictorial glass illumination has undergone changes of style and mode of execution, giving rise to various distinctive schools of art, on which it is not our province to touch. One remark, however, applies to all ancient windows of coloured glass; and it is this:—Although in power of grouping, drawing, and form, modern coloured glass windows have excelled their prototypes, the latter are pre-eminently superior in general harmony of colouring and tone. This fact is the more to be wondered at, seeing that chemistry and mechanism have largely added to the resources of the modern glass maker. For instance, the coloured glass-maker of the middle ages was unacquainted with the magnificent ruby red produced by gold; and in those days the surface of glass, of whatever colour, was devoid of that smooth polish which we, at this period, invariably find. On this point, a celebrated modern glass-maker asserts that it is chiefly to the latter cause, the exceeding smoothness of surface, that the artistic inferiority of modern coloured glass windows is chiefly owing; and his remark is so far consonant with analogy, that we know the impossibility of executing a water-coloured drawing characterised by any high degree of excellence on a smooth-surfaced paper: on the contrary, as the power and ambition of water-colour painters expand, so do they employ papers more and more rough.

Whatever may be the ultimate form into which it is designed to fashion glass, there are only two general methods of elaborating it into shape: the first is by the process of *casting*, the second, by that of *blowing*. What is termed commercially plate-glass, is the result of casting and polishing—processes that we will presently describe. Plate-glass is used for the better sort of mirrors, and windows of large and expensive houses; but, beyond these purposes, its uses are circumscribed. The non-chemical reader will, perhaps, marvel to be told that the glass of ordinary windows, although flat, is not plate-glass: neither is the glass employed in the construction of the Crystal Palace; both these are blown glass. Blowing and casting are from two separate processes of manipulation. First, we will describe the process of making window-glass, then the glass of the Crystal Palace. As a serviceable association of ideas is most useful in conveying information, we will not hesitate to make use of its aid. Has the reader never seen a glazier's man walking through the streets with a collection of awkward semi-circular pieces of glass on his back, each piece furnished with a thick lump, technically called a bull's-eye? Has the observer never asked himself the question why, seeing that window-frames were square, glass out of which they were to be cut should be made round, or semi-circular, and still further deteriorated by the presence of the useless bull's-eye? These imperfections (for imperfections they must be called) are an inevitable necessity of the method by which window-glass is made. It was originally a bubble. The bull's-eye is that little part where the bubble was attached to the workman's iron blow-pipe, and the ultimate form of the glass—viz. a circle—results from the gradual opening of the bubble, on being violently rotated, after an orifice has been made at the part farthest from the blow-pipe. The window-glass is formed out by the workman in the form of a circle; and, for convenience of package, it is subsequently cut into two unequal parts.

The glass employed for the construction of the Industrial Palace is called sheet-glass, and, although commencing from a bubble, the manufacture is different from that already described. First of all, a round bubble being created, the workman by a dexterous swing elongates the bubble into a cylinder, which cylinder having both its extremities cut off, and having laid open its longitudinal lineaments, is allowed, while yet pasty, to flatten on a hot iron plate, by which means a sheet of glass results.

Plate-glass, such as is used for mirrors, is formed by pouring the melted substance on a flat metal table, and rapidly passing over the mass a very heavy metallic roller. As thus prepared, the plate is rough on both surfaces, and does not acquire the brilliant smoothness of plate-glass until it has been subjected to the tedious and expensive operation of polishing.

Glass polishing is thus conducted: the plate of glass, rough and wavy as it appears when first lifted from the metallic table whereon it was cast, is now cemented on to another table by means of plaster of Paris, and sand having been scattered over its surface another piece of glass smaller than the first is placed upon it; sand again is scattered upon this, and a third piece of glass superimposed. In this way the operation of glass piling is continued until a sufficient number of plates have been thus arranged, when, by means of machinery, a motion of friction is communicated to the whole, until a sufficient portion of the uneven surface has been removed. The result of this operation is the production of glass which, although even, is rough—ground glass, in fact. The next step consists in applying friction, aided by a material less rough than sand, namely, being for this purpose the substance employed. Still the glass is not quite smooth until the ultimate finish has been given by friction, with colcothar and putty powder.

The chief use of plate-glass is for mirrors, which are formed by covering the surface of the plate with tin-foil

operation on glass. Glass, like diamonds, is cut, as the term is, by means of a rotating wheel; but there is this difference between the two operations. Friction, in the case of diamonds, is given by the flat part of the wheel, whereas it is the convex portion of the wheel which is employed in glass cutting operations. In fact, the process is precisely similar in appearance to knife grinding.

It is by this operation that the beautiful facets are produced on drinking-glasses, lustres, vases, and, indeed, the large variety of articles known under the general appellation of cut-glass.

We have thus rapidly sketched the leading process of glass manufacture: much more might be said, for the subject possesses extraordinary interest, but we have already overstepped the limits to which, mentally, we had desired to restrict our remarks.

THE MACHINERY IN MOTION.

It is allowed by most persons, whose opinions in such cases are worthy of respect, that the British machinery presents by far the most important feature of the Great International Exhibition. And what a different aspect would have been presented in this department but for the mighty aid of steam. Indeed, when we look around at the countless objects of arts and industry dispersed throughout the Building, which have been chiefly produced by the power of that wonderful agent, we may safely assert that but for the steam-engine, the Exhibition of 1851 would never even have been thought of. In drawing the attention, therefore, of our readers to the numerous machines in motion, which are actuated by a great variety of steam-engines, interspersed with the various manufacturing and other machines occupying a large area at the north-west portion of the Building, it may be as well in the first place to call to mind as briefly as possible the early history of the steam-engine, in order to show by what progressive steps it has arrived at its present almost perfect form. The origin of the application of steam as a prime mover is due to the Marquis of Worcester, who, while incarcerated, in the reign of Charles II., was one day struck forcibly with the power of steam, as evidenced in the case of the lid of his tea-kettle being raised up with great violence by the action of the steam; and that ingenious nobleman, who, in 1663, published his "Century of Inventions," describes his *sixty-eighth* invention thus:—"This admirable method which I propose of raising water by the force of fire has no bounds, if the vessels be strong enough, for I have taken a cannon, and having filled it three-fourths full of water, and shut up its muzzle and touch-hole, and exposed it to the fire for twenty-four hours, it burst with a great explosion. Having afterwards discovered a method of fortifying vessels internally, and contrived them in such a way that they filled and acted alternately, I have made the water spout in an uninterrupted stream 40 feet high; and one vessel of rarified water raised 40 feet of cold water. The person who conducted the operation had nothing to do but turn two cocks, so that one vessel of water being consumed another begins to force, and then to fill itself with cold water, and so on in succession."

As in the case with so many inventors in our own times, so with the Marquis of Worcester nearly 200 years ago. He was wholly neglected, and, no doubt, by many despised, while others would consider him as a wizard, and unfit to be loose. The valuable experiments which this extraordinary nobleman had carried out as illustrative of the gigantic power of steam were entirely lost to the world for a long period, until, towards the end of the century, Captain Savary, well known at the time for his scientific acquirements, paid considerable attention to the expansive force of steam, and subsequently invented an engine for raising water by the power of that elastic fluid, for which he obtained a patent.

The French are apt to boast of their countryman, Dr. Papin, on account of his *Digester*, as the inventor of the steam-engine. It is quite possible, however, that many philosophers were simultaneously engaged in their investigations with regard to the properties of steam.

Savary's machine consisted of two copper vessels—the one a boiler, the other a receiver—which were connected together by a pipe at the top, the pipe being furnished with a steam-cock for the admission of the steam into the receiver. A second pipe passed from the bottom of the receiver to a third pipe placed vertically, and passing from the well to the delivering cistern. Two valves were fixed in the well-pipe, one just below the entrance of the connecting pipe from the receiver, and the other just above it. The contrivance was completed by a fourth pipe communicating between the well-pipe and the upper part of the receiver: this pipe was also furnished with a cock, the key of which was connected with the steam-cock by means of a handle called a regulator. The boiler being charged with water, and a fire made beneath it, the water was made to boil, and the steam thus generated passed into the receiver, gradually warming it. When the condensation ceased, the steam passed into the rising-pipe, the lower valve remaining closed by its own weight, while the upper valve was raised by the pressure of the steam, and thus the vertical pipe was warmed. Both cocks being then closed, the steam in the receiver returned to water, and the pressure of the atmosphere on the water in the well forced it up through the lower valve, and caused it to fill the receiver. The cock being opened, and the steam in the boiler having acquired considerable elasticity, forced its way, with great violence, on the surface of the water in the receiver; thus pressing down the lower valve, and lifting the upper valve; and thus raising the water to the top of the vertical well-pipe, and delivering into the reservoir at top. By opening the injection cock, steam in the receiver was again condensed, and the action already described repeated. Several engines on this construction were erected, under the direction of Savary—especially in Cornwall, where their use for raising water from the mines was of great value.

The next improver of the steam-engine was Newcomen—said to have been a smith—who, having paid considerable attention, to Savary's engine, hit upon some important improvements; and in 1705 took out a patent for the same, in conjunction with Savary and another. One of Newcomen's principal improvements was the introduction of the cylinder and piston, which he placed above the boiler; a communication between the boiler and cylinder being effected by means of a steam-pipe at the lower end provided with a cock or regulator. The piston was suspended from one of the working beams, while to the other end of the same beam was hung the pump-rod by which the water was raised from the mine by the extra weight of the latter; but with a vacuum beneath the piston, caused by the injection of cold water, the downward stroke of the piston was produced, and thus the alternating motion ensured. The various cocks, however, of the engine required constant attention and vigilance on the part of the manager, without which serious accidents were likely to take place. This machine was manifestly a great advance on that of Savary; which latter was actuated partly by steam and partly by the atmosphere, while Newcomen's engine raised water by the action of the atmosphere, the steam being required only for producing a vacuum in the cylinder.

By the year 1712, Newcomen's engine had received many important improvements, in order as far as possible to prevent accidents from the possible inattention on the part of the person in charge of the cocks.

The next improver of the steam-engine was Beighton, who, seeing the disadvantageous arrangement of the various cocks in Newcomen's engine, and the liability to accident by the slightest inattention on the part of the manager, contrived a plan by which the opening and shutting of the cocks was effected by a self-regulating apparatus in the shape of a piece of timber called a *plug-beam*, which was attached to the working beam, by which addition motion was communicated to the various levers and forks by which the several cocks were opened and closed.

The cost of fuel in most parts of the country operated powerfully against the general introduction of the steam-engine; and the desire which naturally existed on the part of those interested in the economy of fuel, caused them to pay considerable attention to the construction of the boilers.

About 1763, the celebrated James Watt, at that time a mathematical instrument maker in Glasgow, having to repair the working model of a steam-engine, had his attention closely drawn to the nature and properties of steam, and strove to devise some plan by which to economise heat contained in the steam generated in the boiler. At first he made trial of wooden cylinders, but which, for obvious reasons, were objectionable: he then covered externally metallic cylinders with a casing of wood, which proved to be a most valuable improvement in the steam-engine. In the model of Murdock's oscillating engine, which we described and illustrated a few weeks back, and a model of which may be seen close to the large marine engines of Messrs. James Watt and Company, in the Exhibition, the cylinder is clothed externally with wood; and the same precaution may be observed in one or two other engines exhibited. The next improvement effected by Watt was the addition of his condenser. His first experiment with a view to improved condensation, was made with a metallic globe immersed in cold water, and connected with the bottom of the cylinder by means of a pipe furnished with a stop-cock, by opening which at proper intervals a regular condensation was effected.

The great step, however, in the invention of the improved steam-engine made by Mr. Watt was the use of steam above the piston, instead of the pressure of the atmosphere, which had hitherto been applied. The lower end of the cylinder being connected with the boiler, the upper end was connected with the condenser, for the purpose of producing the necessary vacuum, first on one side of the piston, and then on the other. From the improvements and alterations which Mr. Watt effected from time to time, he in 1782 produced his double-acting engine, which has been extensively used ever since. The same ingenious person tried many plans for producing direct rotative engines; but, owing to various difficulties which presented themselves, he was compelled to abandon them, and then turned his attention to connecting the reciprocatory motion of the steam-engine, so useful for pumping, into a circular motion for various other purposes to which the power of the steam-engine has since been applied. The crank which had been so long in use, unconnected with the steam-engine, occurred to his mind; but a patent for its application to the purposes already mentioned had already been taken out by a workman engaged by a Mr. Wasbrough in the construction of his engine, so that Mr. Watt was obliged to resort to some other mode of gaining his object. The result was the introduction of the sun and planet-wheel motion, which was applied to several of Watt's engines; but the crank being on many accounts preferred, the sun and planet-wheel motion got into disuse. Thus we have traced the steam-engine from its origin to the time of the illustrious Watt, in whose hands it became almost a perfect machine. The number of persons who have, from time to time, made improvements, alterations, and modifications in several parts of the steam-engine, is very considerable; and, even within the last few years, a variety of new engines in modified forms, many bearing the distinguishing characteristic of simplicity about them, have been introduced to the mechanical world, a large portion of which have found their way to the Great Exhibition.

Before drawing the attention of our readers to the various engines exhibited, it may be proper to introduce the names of those whose machines have been considered worthy of a place in the World's Fair. Commencing, therefore, at the west end of the Machinery in Motion department, we first find the familiar name of Hick, of Bolton; then, proceeding nearly in the order in which the other engines are placed, Edwards, of Birmingham, stands next; then Hulse M'Naught, Simpson and Shipton, of Manchester; J. and G. Davies, of Tipton; W. Joyce, of Greenwich; Lynch and Inglis, of Manchester; W. E. Carrett, of Leeds, whose engine has only lately been introduced; W. Fairbairn and Sons, of Manchester; Andrew Shanks, Hodge, and Co., of London; Penn, of Greenwich; the Butterley Company; Evans, of London; Hawthorns, of [Newcastle and Leith; E. Lloyd, Bishop, Pope, and Bessemer, respectively of London; Nasmyth and Co. of Patricroft; Maudslays and Field, of Lambeth; Bryan Donkin and Co., of Bermondsey; Clayton, Shuttleworth, and Co., of Lincoln; Middleton, of Southwark; Hopkinson and Cope; Manlove and Co.; Bunnett and Co., of Deptford; Barrett, Exall, and Andrews, of Reading; W. Crosskill, of Beverley; Robinson and Co., of London; and Collinge and Co., of Lambeth. Thus we find that there are 31 steam-engines exhibited, all of which, however, are not employed in communicating motion to other machinery. The aggregate power of all the steam-engines exhibited in motion amounts not quite to that of 150 horses; while a single locomotive engine is of four or five times the power. The steam to work these several machines is generated in the boiler-house, which is considerably removed from the Building, being situate nearer to Kensington Gardens. It was considered quite necessary to take this precaution, on account of the liability to fire, which, if communicated to the valuable articles within the Building, would have caused an irreparable loss to many of the contributors.

We have already given some account of the boiler-house, and the particular kind of boilers and furnaces set up within that building; and in No. 479 will be found a view of the boiler-house, previously to that part of the Exhibition establishment being completed. We are now, through the intelligence and willingness of the superintendent of the boiler-house and pipes, able to furnish additional interesting particulars. In the description we formerly gave of the building containing the boilers, only five boilers were mentioned; but, owing to several causes being added to the collection since the opening, on the 1st of May, it was found necessary to increase the supply of steam, so that now we find altogether eight boilers, the three new ones being furnished by Mr. Armstrong, of Newcastle, who is well known as the inventor of the hydraulic crane. The distance from the boiler-house to the Great Exhibition Building is rather more than 100 feet, and the extreme length of the main line of steam-pipes, which are placed in a channel constructed under the flooring of the north passage of the Machinery in Motion department, is 1000 feet, so that the extent of main supply pipes within the Building is equal to 850 feet. Leaving the boiler-house, the internal diameter of the pipes is 8 inches for a length of 189 feet, then 6 inches for 383 feet, and, lastly, 4 inches for 428 feet; the last British engine supplied from the main being that of Messrs. Hawthorn.

The branch pipes amount altogether in length to 3600 feet, varying from half an inch to two inches in diameter. All the steam-pipes throughout are clothed with a thick coating of felt, for two specific objects, the one being that of economising steam, and the other that of keeping down as much as possible the temperature of the atmosphere, which sometimes, notwithstanding the attention which has been paid to ventilation, is oppressively hot: the worst part of the whole, however, is the nauseous effluvia arising from the saddened felt, which takes place when by any mischance there is an overflow of water, which fills up the channel to about the level of the pipes. The exhaust pipe from each engine runs into a tunnel carried under ground without the boundary of the Building: the tunnel is 18 inches wide, and 24 inches high to the soffits of the arch; and the steam entering the tunnel from the various exhaust pipes is to a very considerable extent condensed, thus leaving but little steam, and that in a very attenuated state, to escape from the chimney, which stands outside the Building at about mid distance between the two extremities of the tunnel. The fuel used for the production of steam is the stone coal, or anthracite, from the South Wales field, where there is an almost inexhaustable supply. The consumption of anthracite in the eight furnaces daily is found to be about 9960 lb., or 124½ lb. to each furnace; the cost thereof for the fuel consumed, at 25s. per ton, is equal to £5 a day, or £30 a week.

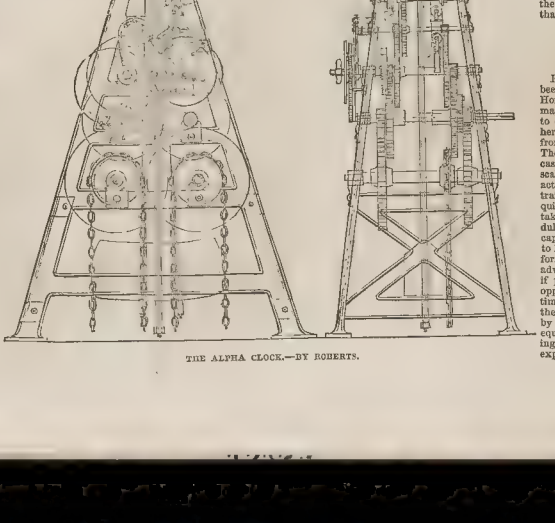
In addition to the superintendent of the Boiler-house department, there are only three stokers to attend to the furnaces.

It is a curious and highly interesting fact, that, from the boilers to the extreme end of the main steam-pipe, a distance of 1000 feet, there is only a diminution in the value of the steam of 4 lb.; thus, when at the boilers it is at 40 lb., at Hawthorn's engine, already alluded to, it is found to be 36 lb.; the same difference being observed when the steam is either at a higher or lower pressure at the boilers

We now come to the particular engines contributed by those whose names we have already mentioned, and, following the same order in which their names are registered, we will proceed to give some particulars as to each engine in turn: thus, the cotton machinery of Messrs. Hibbert, Platt, and Co., of Oldham, of which we give this week give an illustration, is driven by one of Messrs. Hicks and Son's engines, which is direct-acting, having a vertical cylinder of 9 inches diameter, with a stroke of 18 inches, and it is estimated at six-horse power. The cylinder is chiefly placed below the pedestal, the crank being above the cylinder; and on the crank shaft is a large cog-wheel, which works into a smaller wheel of the same kind, having 67 cogs; and which wheel is fixed on the first or main shaft, from which, by means of pulleys and straps, a second shaft, parallel to the first, is set in motion, and also auxiliary shafts running at right angles to the first-named. By the two parallel shafts motion is given to six carding machines, a single scutcher and lap machine, an opening and cotton-cleansing machine, a slubbing machine of 28 spindles, a second slubbing or intermediate machine of 54 spindles, a drawing machine, and a grinding machine: while by the shaft at right angles, and its accessories, the following machines are put in motion; viz. a roving machine of 120 spindles, a weft self-acting mule of 402 spindles, a twist self-acting mule of 348 spindles, a doubling machine, a winding machine, a throstle of 160 spindles, besides four power looms; the whole of the above belonging to Messrs. Hibbert, Platt, and Co. There are altogether six drivers and 32 pulleys in the above machinery.

In addition to the above, Messrs. Hicks' engine also actuates Crabtree's card-setting machine, one of the prettiest and most interesting contributions in the Building, which attracts a large number of visitors daily. As in all the most perfect machines, so in this, the natural motions of the human frame have been strictly copied, thus giving an additional charm to its operations. The fine wire of which the card is partly made, is drawn out from the reel on which it has been previously wound, cut off to the exact lengths required, removed by two artificial fingers placed in punctures already made by another elegant contrivance, and finally the ends of the wires passed through the tape are turned down at the proper angle, thus completing the operation, and placing the wires on the tape with a degree of nicety and precision truly astonishing. A complete history of this little machine—from the raising the coals from the bowels of the earth with which to smelt the ore, to the finished card—would form one of the most interesting volumes in connexion with machinery that it is possible to conceive.

On account of the distance of the American department from the boiler-house, it was quite impossible to put the machinery of the United States in motion within their own boundary. Those, therefore, that were required to be shown in action were removed to a space allotted for the purpose at the east end of that occupied by Messrs. Hibbert and Co. The direct-acting engine of Mr. Edwards is called into requisition for the purpose of driving Gwynne's centrifugal pump, the American shoe-clearing machine, the bookbinders' embossing-machine, the woodplaning, tongueing, and grooving machine, by J. P. Woodbury, of Massachusetts; and Dick's iron shearing machine. Edwards's engine has a 7-inch cylinder and a 13-inch stroke, and in the first place gives motion to Gwynne's centrifugal pump, which, as this kind of machine has created great interest in the Exhibition, we shall briefly describe. We have already directed the attention of our friends to Appold's centrifugal pump, which continues to attract as much attention as ever. The other pump on the same principle are those of Bessemer and Gwynne: to the latter only we have now to direct attention. Mr. Gwynne calls his invention the Direct-acting Balanced Centrifugal Pump. The discs of the piston of Mr. Gwynne's pump are of concave form, the hollow parts being placed immediately opposite to each other. An impeller, radiating from a boss or hollow axis, is fixed between the two discs, and mounted on a shaft, which may either be placed vertically, horizontally, or at any given angle that may be required. The narrowest part of the impeller is at the outer edge of the piston, increasing gradually in width until the edge intersects the inner surface of the opening in the suction side of the piston, from which line to its extremity at the boss its edges are parallel to each other, and at right angles to the axis of the shaft. An annular opening is left all round the circumference of the discs, the area of which is equal to that of the opening for the admission of water to the piston through a circular aperture in one of its sides. The piston is enclosed in a case of circular form, fixed parallel with the discs; and this case may be called the receiver, the area of which ought to exceed both that of the discharge pipe and that of the annular peripheral opening, so that a continuous flow of water may be ensured: the space between the sides of the piston and the exterior of the case is equal to that of the annular opening.



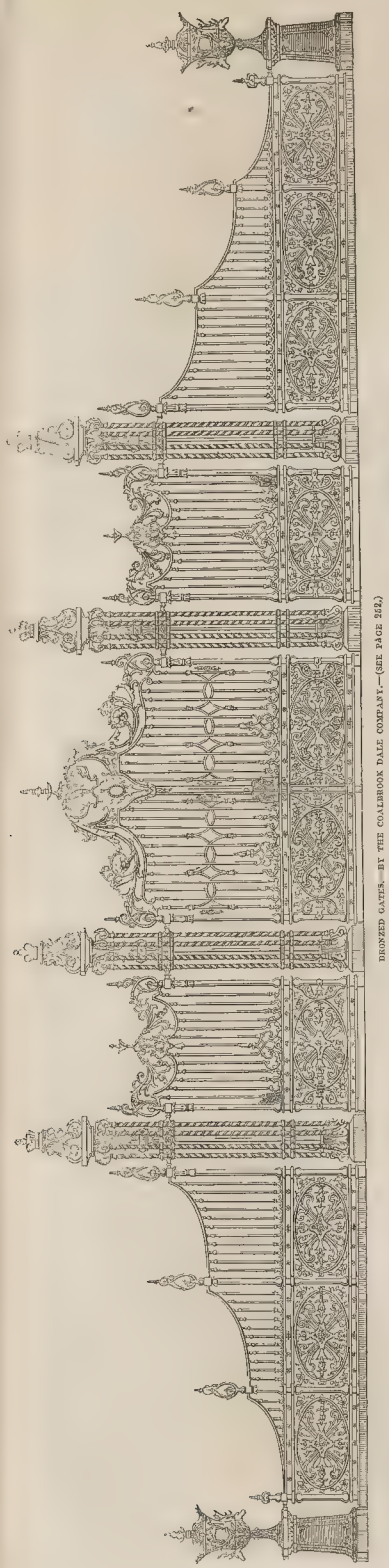
THE ALPHA CLOCK.—BY ROBERTS.

(To be continued.)

THE ALPHA CLOCK. BY ROBERTS.

Roberts's Alpha Clock has already been mentioned in an article on Horology, in a former Number. It may be convenient, however, briefly to describe its principle of action here. It is called the Alpha Clock, from its shape resembling an A. The wheels and pinions are made of cast iron, with teeth retaining the scale. It has only one weight to actuate both the going and striking trains; and the chain or cord, requiring no lateral traverse, can be taken off in any direction. The pendulum (compensation) and the escapement (remontoire) are adapted to keep the clock at an almost uniform rate; whilst the hands, being advanced at intervals of thirty (or, if preferred, sixty) seconds, afford opportunity for ascertaining the time to a second. The striking of the hour is effected through means by which the blows are given at equal intervals of time, thus avoiding both the irregularity and the expenditure of power to direct it.

THE MACHINERY DEPARTMENT OF THE CRYSTAL PALACE.—MESSRS. HIBBERT, PLATT, AND CO'S COTTON-MACHINES



BRONZED GATES.—BY THE COALBROOK DALE COMPANY.—(SEE PAGE 252.)

CARVED FONT. BY MARGETTS AND EYLES.

The workmanship in this elaborate production, which is in Caen stone, is such as leaves us no room for complaint. It is unexceptionably neat and smooth. The style of the composition, however, is of the very thick of mediæval absurdity, and demands unqualified disapprobation from those who are anxious for the advancement of art, and the principles of rational poetry upon which art should be founded.

NYMPH OF LURLEIBERG.—BY ENGELHARD.—(SEE PAGE 252.)

GIRL AT THE SPRING.—BY W. F. WOODINGTON.

THE BOY AND LIZARD. BY STEVENS.

We have referred to this pleasing little work in an article upon Sculpture, in the present sheet. We see it is now the property of Lord Colborne.

BOY AND LIZARD. BY STEVENS.

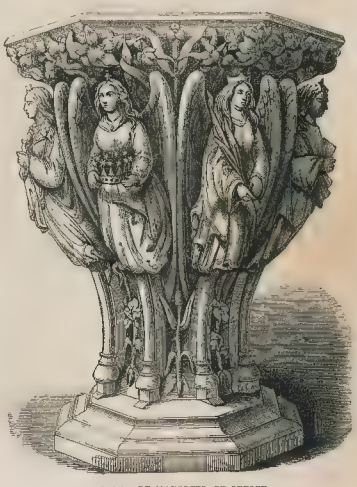
STATUETTE CARTON-PIERRE. BY GROPIUS.

This is one of the numerous statuettes in carton-pierre exhibited by Gropius, of Berlin. The subject is the Muse Melpomene.

GIRL AT THE SPRING. BY W. F. WOODINGTON.

This figure stands in the South Transept. Though by no means perfect, it is graceful in conception, and is fairly executed.

STATUETTE IN CARTON PIERRE.—BY GROPIUS.



FONT. BY MARGETTS, OF OXFORD.

THE UNITED STATES.

WE enter on the task of considering the contributions of the United States more in detail than in our last notice, with very little hope of satisfying our sensitive Transatlantic friends. We shall be able to show that they have made some extremely valuable contributions to the general collection of useful produce and of useful implements; we Englishmen, as spectators, students, and eventual purchasers, are perfectly satisfied, but this will not satisfy them, for reasons which it will be much more fair and friendly to state than to blink. It is unquestionable, that, although the American public took very little pains to gather together either the greatest number or the most important articles which really are to be found in the North American Republic, the American press, according to its custom, so bewildered the parties about to exhibit with indiscriminating praise, that the greater number were filled with most unhappy notions as to the value of the Transatlantic part of the Great Exhibition.

According to popular opinion, as taught by their newspapers, the United States were to carry off the chief glories of the "World's Fair." The spread of this opinion was not extraordinary, when we consider that it was re-echoed by the journals of every city, every town, every township, every village, from Maine to the borders of Mexico, by writers who had probably never been out of the bounds of the dominions of the United States. Now, as in the United States every one reads the newspapers, and many read nothing else, it was just as natural that the people should fancy they were going "to lick old worn-out Europe," as that one country gentleman should fancy, as they did, that we Englishmen would having nothing worth exhibiting side by side with Continental productions.

We have a perfect instance of that absurd puffing system of the American papers which has so much contributed to place Americans in a false position when they first visit Europe, in the extract from an American newspaper circulated in a blue pamphlet, purporting to describe "the Gazelle," an American carriage.

This carriage startles in the northern compartment of the American division: we have already referred to it as constructed entirely of American wood, polished, unpainted, and varnished. It deserves praise for lightness and the perfection of the workmanship, especially in the wheels and woodwork. But it is extremely ugly, top-heavy, and wanting in those graceful curves which are essential to elegance in a pleasure carriage. A square box-shape may be convenient or strong, but it cannot be handsome. Then, again, the seats are too low and the body too shallow for the comfort of the passengers; while the arrangement of the forewheels, which do not lock under, not only renders mounting and dismounting difficult, but turning a corner positively dangerous. For all these reasons, although the Gazelle shows plainly that the workmen who made it could manufacture a capital carriage from a handsome design, yet, as it stands, it is neither convenient, safe, nor handsome for town use by ladies, nor sufficiently strong and handy for a sporting carriage in the country, yet the proprietor expected to receive the "distinguished consideration" of the Exhibition visitors, after being told by the *Philadelphian Evening Bulletin* that it is a "splendid vehicle"—"a most exquisite piece of work"—that they do not astonish the eyes of all the world at the Great Exhibition we shall be surprised." * * * * "If Queen Victoria does not fall in love with this beautiful specimen of American skill, we shall be astonished. It would be just the thing for a *tête-à-tête* drive for her and Prince Albert in Windsor Park; and we shall expect to hear that she orders from Mr. Watson a carriage large enough to hold the rest of the Royal family." The *Pennsylvanian Enquirer* informs its readers that "Mr. Watson has completed a splendid vehicle for the World's Fair, in London, where we are sure it will be regarded as a triumphant specimen of Philadelphian taste and skill." The *North American Gazette* is not less florid in its praise.

Of course, when Mr. Watson finds few admirers and no purchasers for his carriage, after his expectations have been so much raised by Philadelphian criticism, he feels himself not only disappointed, but aggrieved; and his case is that of scores of American exhibitors, from patchwork quilts to pianos, who all came over armed with slips of favourable notices cut out from the pages of their local press.

To add to the severity of the disappointment, severe criticism was invited on the part of the English press by the unreasonable claim for space, which remains barely filled to this hour; and by "bumptious" boastings, which we never fail to cut down, whether of foreign or of British growth.

The result has been, that, while we were altogether very much astonished at the successful display of the British department the Americans were deeply mortified and somewhat angry at the insignificant performance of their own magnificent promises.

On board an American steamer, in which a friend of ours made his passage from New York in March last, every assemblage in the day, at dinner, breakfast, luncheon, and supper, brought out bold offers from the *Statesmen* of bets of many dollars, that their country would carry off the greatest number of prizes from all the competitors of the World's Fair. And we believe that, until the opening of the Exhibition, the same confidence prevailed in all American assemblages. Then they wonder that we laugh a little, or can they doubt that this laughing will do them good?

This small, imperfect representation of an industry which includes, amongst other occupations, the cultivation of the greatest staple of our commerce—cotton (of which, out of 770,469,000 lb. imported in 1849, more than 75 per cent. came from the United States)—which includes the construction of the finest river steamers, and some of the finest merchant ships in the world—the industry which has successfully called into operation all the arts and sciences needful for conquering and cultivating the greatest territory ever peopled by one race—contains at most two or three articles of paramount importance. The triumphs of American industry may be much better traced in a modern map and a bundle of their almanacks for twenty years, than in the miscellaneous museum which is distributed over the western end of the Crystal Palace. But, if we have laughed a little at their large promises and small performance, they cannot deny that we have given fair play and warm welcome to every display of merit.

For instance, to begin with Agricultural Implements. M'Cormack's reaping machine, which was described and illustrated by an Engraving in the ILLUSTRATED LONDON NEWS of the 12th ult., had a fair trial, on the 29th ult. It rained in torrents, and mud and wet straw soon clogged the cutters of most machines; but we have the authority, among others, of Mr. Fisher Hobbes, the well-known agriculturist, and one of the Council of the Royal Agricultural Society, who was present, for stating that M'Cormack's machine performed its work perfectly, and proved itself one of the most valuable agricultural inventions of the age.

Before setting this machine in motion, a path must be cut with reaping-hooks, or a cradle-scythe, outside the grain or grass, wide enough for the horses to travel in the first round. Four horses, two and two abreast, may be used; but it is better to employ a pair a time, with a relay of another pair ready. In dry weather, the machine can cut wheat or hay as fast as the binders can gather and bind. This invention is destined to be a most fortunate period, when the steady emigration of Irish labourers threatens to leave our farmers short of hands at every harvest. Even now the farmer is obliged, unless he lives on the highway where reapers are constantly passing, to reap all at once, whether his crops are fit for harvesting or not; so that some grain is left too long, and a large per-centage is lost from over-ripeness, and some is gathered too green. But with one of these machines the farmer can cut his corn exactly at the time that each field or each part of a field is ripe. In fact, it is not too much to say that M'Cormack's machine has solved a national difficulty. The proprietor will be ready to bear witness that he found no impediments from British jealousy, and that his success was hailed with as much enthusiasm as the damp weather would allow. It will be observed that an American plough, No. 40, has gained a prize. The others exhibited are good strong articles for bush and backwoods work, easily lifted and put over impediments of stumps, roots, or stones, but not quite fine enough work with the finish of the Scotch plough. These are chiefly well known in Canada. In the Canadian department, an iron plough, made after the Scotch model, is exhibited, which was tried last year against American ploughs, at Albany, and beat them all.

Mr. Coleman, who was sent over specially, a few years ago, by the agricultural societies of the United States, to make a tour through England and Scotland, in his printed report, pronounces the ploughing here far superior to anything he ever saw in the "States."

The fact is, that these American ploughs are exactly suited for the rough and ready work they have to do in half-cleared land. To compare them with the finished articles of Garrett, Hornby, or Ransome, is to compare two tools meant to execute totally different styles of work. In the same way, the backwoodsman uses an axe and an adze to do work that, in towns, must be finished with the plane and polished with sand-paper.

The American hay-forks deserve notice for their lightness and finish; and the same may be said of the garden tools, of all which the woodwork is very neat.

There is a garden plough, fitted with several shares of different dimensions—one wheel in front, and intended to be pushed before the gardener, like a Chilham or Maltese plough: this may be useful, especially for cutting up turf or commencing a trench. This implement has only recently been exhibited.

There are some winnowing machines, in which merit will be found, as may be expected from the ingenuity of a corn-exporting country; and among a recent lot of importations we would draw attention to a thrashing-machine, moved by horse power, on the treadmill principle, and a smaller machine intended to be worked by a dog.

Newell's lock, under the charge of Mr. Hobbs, which has already been fully described and delineated, may take the second rank in value of the American contributions as a matter of commerce. For one person who will need one of these unpickable locks at £50, there will be a hundred who will be glad to purchase one of the reaping machines at £25. Nevertheless, the lock is a first-rate article.

Howland's bell telegraph, in the Main Avenue South, a new adaptation of an old idea for superseding the number of bells for the rooms of a large establishment, by a tablet inscribed with the name of the servant, as "boots," "chambermaid," "waiter" or room, as "bar," "coffee-room," "dolphin," as the case may be, has been, we find, lately applied to the large hotel built by the Great Northern Railway Company at Lincoln, and to the Wellington Hotel in Liverpool. If it succeeds at those large establishments, it will soon make its way to our hotels and country mansions. On large steam-boats, as a means of communication between the steersman or "look out" and the engineer, the use of the bell telegraph is obvious.

Near the bell telegraph is a case of Mr. Frank Palmer's artificial legs—a very clever piece of mechanism, which imitates as nearly as possible the elasticity of the joints of the toes, ankle, and knee of a living limb. Mr. Palmer attends occasionally to exhibit and describe his invention, and then may be seen in full play as they are in use, for it was the loss of a limb which directed the attention of the inventor to the imperfection of existing substitutes; for our own part, we must confess, that, after watching Mr. Palmer walking across the avenue several times very narrowly, we could not detect any distinction between the real and artificial limb, although the wearer is a remarkably tall, stout man, and has suffered amputation above the knee.

Furniture.—A bedstead is exhibited by Betjeremann, of St. Johnstreet, Clerkenwell, not for beauty of form, but for a patent mode of junction between the joists and the posts, which dispenses with all framework or screws, and renders the taking down or putting up of a bedstead a matter of a few minutes, without the aid of a carpenter. The principle is, to speak popularly, a compound of dovetailing and the keystone of an arch, and may be applied to many uses beside bedsteads. This invention bears the grandiloquent name of the Excelsior Bedstead, out of compliment, we presume, to the American poet—*drôle de compliment.*

In chairs, the best is an arm-chair, in which, by the motion of the body, without the aid of any complicated machinery, the seat and back can be made to assume and retain a number of forms, from that of a flat couch intermediately to that of a straight back. The same effect has often been attained by arrangements which were costly and liable to get out of order. This, if not new in idea, is efficient and cheap (£3). With the rocking-chairs, which were transplanted from Lancashire to the New England States, and are now re-imported as a curiosity, we are familiar; but the fashion having died out in Lancashire half a century ago, does not find much favour in England except in nurseries. There are a set of chairs arranged on four C springs, which are new to us, and would seem to be rather pleasant for study or library use, because they give way to the body in writing, and afford a sort of lounging chair without reclining. They are called [illegible].

The revolving table, intended for a cabinet clerk's desk, was scarcely sufficiently remarkable to be worth sending. The principle is as old as convex mirrors, and suggests to us that at the refreshment-rooms in the Building, and at railroad stations, for economy of time, with convenience to the public, might be effected in distributing tea and coffee, by using a series of circular dumb waiters, placed to receive the cups. The would save all stretching across the counter, and a dozen could be served in the space of two on the present plan, for, in the face of a crowd, the waiter would only have to keep still and turning the circular tray.

Portable beds are exhibited by every nation. The notable feature of the American portable bed is that it folds up by its own gravity, on being lifted up at one end, into a space of 8 inches by 18 inches. It may be, but scarcely seems, strong enough to bear the restless tumbling of a heavy man.

The most interesting American furniture is included in the display of New England, in the Intermediate South Avenue. Here we have a set of the desks and chairs used in the New England common schools. The chairs are a great improvement on the system of benches; each child has his own, with a book-rest and pocket for books on the right hand, in some, space is economised by a single iron leg or frame for each pair, screwed to the floor. The smaller chairs, for infants, have four legs, with iron cramps for the same purpose. We commend these school fittings, from their simplicity and cheapness, to the notice of many in this country interested in village education.

The universal education afforded in the common schools of the United States is a sort of useful industry which cannot be exhibited in competition for a medal, but yet it is a system which we might imitate in many respects with much advantage.

Talking of schools, reminds us that, among the applications made for space previous to the opening of the Exhibition, was one from a Scotch schoolmaster, who required room for himself and forty of his pupils, "*to order to demonstrate, viva voce, day by day, the superiority of his system of instruction.*"

Near the American chairs are several specimens of very neat and cheap wood-work, such as bench-screws, axe-hafts, and mouldings, and buckets of coopered staves, and other ornamental woods. There is a capital American rolling-pin, on a new principle; the rolling part turns on an axis between a pair of handles. In the adjoining department are barrels full of shoemakers' pegs; and a collection of specimens of the various kinds of trees of the United States, with printed descriptions of their respective qualities.

In describing these woodworks, we have rather travelled out of the line of furniture; but we must not pass over two kinds of stuffing for bedding: first, a sort of moss in texture and colour, resembling horse-hair, for which it is proposed as a substitute, the price being only one-fourth. A large quantity of the article is exhibited, and a mattress stuffed with it, which visitors are permitted to pinch or otherwise experiment upon; and secondly, bales of maize or Indian-corn, prepared for making palliasses. This looks clean and rather soft than straw.

Articles of Food.—In this department the United States come out very strong in quantity. The quality remains, as far as the Exhibition is concerned, a matter of experiments with Monsieur Soyer, for giving a feast of the food of all nations, not having been completed.

The prime family beef in casks, half covered with fat, and quite covered with a heading of glass, looks very well; so do the glass jars of peaches, preserved in brandy, intended for her Majesty. Nothing can be more orthodox than the external covering of a long row of hams; but in such cases it is impossible to decide whether the curing has produced the Westphalian, or Cork, or York flavour.

Up to the present time, American bacon has not been worth eating; but, as they have the pig in plenty, we may be expected that some of the Yorkshire and Irish emigrants will introduce the true system of preparing flitches.

What can we say about cobs of Indian corn of all colours, from pale yellow to deep red? or what can it be necessary to say about casks of flour, when casks of the same kind fill hundreds of ships bound for England every autumn and spring?

The meat biscuit exhibited in a glass case, in the south compartment, but which the large pig in pickle will allow any person, having a right to make the request, to taste, is one of the articles of provision which we can venture to review from actual trial; having cooked and eaten one of the biscuits, we can pronounce it eatable, although very far from coming up to the panegyrics of the pamphlet testimonials in which its merits are set forth. Armies in campaign and colonists in new countries must be glad of a meal of any kind, without being nice as when they have an Astor House or London Tavern within a mile. The meat biscuit, in soups, has a greasy, nutritive taste, something like soup made with polenta and butter; it is compact, and easily cooked. As the Americans are the greatest overland travellers, and are likely to make the longest military marches, a very few years will settle the merits of the meat biscuits.

We have before referred to the process by which Messrs Stafford get rid of the unpleasant and even deleterious moisture of Indian corn, so as to preserve the flour sweet for any length of time. So long as wheat maintains its present price, and Ireland escapes a second famine, there will be little demand for Indian corn in this country, except as a luxury, and Weed Ives state; but those curious in such matters can obtain bread made with a mixture of Stafford flour, at the refreshment-rooms, in the Building, and at Oram's, baker, Charing-cross. We can vouch for its being extremely nice, a great improvement on ordinary baker's bread, a mixture of Indian-corn flour being much sweeter than alum.

Chewing tobacco must, we presume, be included among eatables. Several boxes of Cavendish are shown, one of which bears the following note-worthy inscription:—"To be presented, after the World's Fair, to Lord Wellington, by Wiley J. Stratton, Glasgow, Haward county Missouri." No doubt, if the Duke chews, this will turn out a delicious article. The articles demanding no detailed explanatory notice are truly miscellaneous, including, as they do, specimens of slate-paint, vouched to possess extraordinary qualities; of lard-oil, equal to sperm; of "sweeps" and fine-flushed cars, intended for the Prince of Wales; and some, as penholders, for the Lords of the Admiralty. White sand, of fine quality, which would be valuable here, if the freight did not render importation, unless in bulk as ballast, unprofitable; lime, in the usual manufactured; pillow marble, and soap-stone baths; and girdles for baking cakes, which would sell here *at a price*; an air-exhausted coffin, which will render embalming unnecessary; a canoe, from South Carolina, cut out of a solid trunk, which would make a pleasing curiosity on the Serpentine; and a picture of a railroad-bridge over the Susquehannah, in Pennsylvania, with a written description, stating that it cost £6000 a mile, and has been made *without debt!* The note of admiration is not ours. The last articles introduced into the Building in this month include several cheap ploughs and cultivators; a new drilling machine, to be worked by hand or a pony; several sets of tools, and carriages.

The above will, we believe, give a very fair idea of the American part of the Exhibition. The importance of the greater number of articles—such as the glass, the carriages, and the machinery—depends on the price at which they can be delivered; and, to supply this *hiatus*, the exhibitors should unite to get out a priced catalogue, like that of the Saxon department.

We may take this opportunity of saying that every country and every manufacturing district which wishes its part in the Exhibition to be profitably remembered, should endeavour, before the close of the Exhibition, to publish a catalogue of its own contributions, with prices attached. This is not only suggested as regards Belgium, France, and the United States, but Birmingham, Sheffield, and all places where they manufacture complete articles, would find it their interest to do the same.

INDIAN PRESENTS FROM HIS HIGHNESS THE NEWAB NAZIM, OF BENGAL, TO HER MAJESTY

BEFORE entering on a description of these magnificent presents separately, we may mention, that, about fifteen years ago, the father of the present Newab forwarded to his late Majesty, William IV., articles of a somewhat similar nature, and equally handsome with those of which we are about to speak. These were duly acknowledged, in a letter bearing his Majesty's signature, by the return of his Majesty's own portrait, and by conferring the Guelphic Order on his Highness—the last individual, we understand, on whom that order was conferred.

On the present occasion, it is exceedingly gratifying to know that the idea of forwarding these presents to her Majesty *emanated entirely* from his Highness the Newab Nazim himself, and that although, as in all such cases, the act required the sanction of the resident or political agent of the Governor-General, they would never have been sent, had not this spontaneous and loyal feeling originated with the young Prince himself.

From circumstances which it is needless here to mention, his Highness the Newab Nazim had not been in any way a contributor to the Great Exhibition of Arts and Industry; and as, at the time these presents were forwarded, the only vessel which allowed of any articles being transmitted to the World's Bazaar, was the steamer *Haddington*, bound from Calcutta to Suez—a hazardous experiment, we should have said, to send overland such bulky packages, encased as they were in strong deal boxes.

These were also entrusted to the charge of his Highness' physician, Dr. Young; and with what success the mission has been carried out, the public have ere this been able to judge. Too much praise cannot be bestowed on the pains taken by all parties in the transit of these presents; when we inform our readers that the largest of the packages were slung between camels across the desert, which duly reached their destination at Boulac in time to be transmitted by the usual mail, they will judge for themselves how active must have been the regard for the transit committed to their charge. The steamer *Ripon*, on the 10th of June last; and early in the following month they were, at her Majesty's express command, forwarded direct to Buckingham Palace, where Dr. Young, after having been presented to her Majesty and Prince Albert by Lord Broughton, was requested to give an explanation of the contents of the packages entrusted to his care.

They consist of a howdah, with all the trappings complete, belonging to an elephant—the howdah having two seats, the front of large, the back of smaller dimensions; the sides made entirely of ivory, inlaid, and painted in gold, and covered with a canopy gorgeously worked in gold and silver brocade, an awning in front supported by two ivory poles, and acting as a protection from the sun. The position of this awning designates the standing of his Highness, and is only to be seen in the establishment of the Nizamut. The "howdah," or covering on which the howdah rests, is of splendid velvet, the body being of velvet, with a richly-embroidered gold border, having corners of raised gold needle-work, well worth the attention of workers in fine art in our own country.

For the sake of the display of these things, it is unfortunate that a larger elephant was not obtainable; but, as we have noticed in a previous Number, the public are, at any rate, enabled to form an idea of the mode in which the howdah is fixed, as also of the facility with which the whole apparatus is borne on the back of these useful animals.

The throne, or native reception-seat, with its splendidly-worked "shamiana," or canopy, we next proceed to describe: This consists of a piece of velvet of about eleven feet square, with a rich gold and silver border of two feet in depth, leaving the centre to be occupied by the person reclining; of a separate piece of velvet of about six feet square; of one long pillow worked in velvet and gold, supported by a framework of silver bars, to prevent its receding, other smaller pillows being used in the East for the comfort of the occupant.

The two "moorchals," or emblems of dignity and rank, are only allowed to be used by a few of the princes in India, in the presence of the Governor-General. They are of great value, the handles being of the purest gold; these are held by mutes, who stand on the right and left of his Highness when reclining. The *tout ensemble* of this seat and canopy has attracted particular attention.

The state palanquin is similar to the howdah, with a long pole attached to each side, and carried by eight pole-bearers. One slight difference exists, which is, that this conveyance consists only of one seat, used as is the howdah, on state occasions alone, or when his Highness the Nawab holds his "durbar," or levee. The projecting awning resembles exactly that of the howdah in workmanship, &c.

The "palkee," or ordinary conveyance used when the sun is low in the horizon, is of rather smaller dimensions than the palanquin, having no canopy or dome above it. It is carried on the shoulders of servants, and an exceedingly easy motion is given to it when these bearers are in the habit of working or running together. The velvet and silk materials with which these conveyances are lined are all of Indian manufacture; and we cannot but admire the taste and elegance displayed not only in the mixture of colours, but also in the beautiful patterns embroidered on all the gold and silver parts of the work.

WAX-WORK.

THE great glass beehive contains a certain portion of wax. To this, in its artistic forms, as representing the productions of nature, we propose to invite attention.

The wax flowers in the Exhibition occupy a prominent and extended space. Their series of red labels strikes the eye almost immediately upon entering. They are in the North Gallery, over "Persia" and "Greece." A more graceful cluster of contributions to the great collection will not easily be found. Let us ascend the staircase, and examine the *hortus siccus* laid out by a series of ingenious gardeners, chiefly ladies. It is a little winter garden, arranged in anticipation of the intended Paxtonis. And should the idea of the great garden be carried out, and the colossal notions of the gentlemen who publish indignant and stimulating epistles be realised—if a cascade "rivalling Niagara" is to pour from the roof of the North Transept to the ground, "the large trees being rendered accessories to the magnificence of the prospect," and a hundred fountains in various parts of the Building are to be fed from the monster torrent, we think that in many of the thousand nooks and corners which will be created by the development of these bold conceptions, there will be an excellent and fitting place for a permanent display of the talent of our wax florists. If the projected garden be intended as something more than a beautiful sight, and if the science of botany is to be—as it easily might be—illustrated, progressively, in a way which has never been attempted before, the imitative art will necessarily be called in to complete many a chain of specimens. It will occur to our readers that there are vast numbers of trees and plants which it would be impossible to exhibit in a public building, having due regard to the comfort of those who are to frequent it. The magnificent palm-house at Kew is an admirable specimen of contrivance, and contains a noble collection; but for how many consecutive minutes is it possible for a person in ordinary health to endure the tropical atmosphere? The sudden plunge into a climate supposed to reproduce that wherein

> The feathery palm trees rise,
> And the date grows ripe under Eastern skies,

is in itself a reason for the comparative neglect for which the public are, we think, unfairly, complained of as regards Kew. But, though the actual cultivation of many exotics would be incompatible with the proposed purpose of the Crystal Palace, there is no reason why such plants should not be artificially represented. A most beautiful and interesting addition to the attractions and to the scientific advantages of the place might be made, if those who are to have its arrangement would call a council of botanists, and empower them to instruct Mrs. Peachey, Mrs. Dorval, the Messrs. Minton, and the other leading artists in wax, to exert their skill for the due illustration of those botanic families whose real representatives it will be impossible to introduce into the Building. We commend this suggestion to the consideration of the authorities, and, as precedent is everything in these days, we refer them to the mineralogical department of the British Museum, where, that the diamond family may be adequately shewn, we find real diamonds up to a certain size, and then paste copies of diamonds which it is impossible to obtain.

The art of modelling wax flowers is a very charming one; but a certain disfavour has attached to its practice by amateurs, on account of the deleterious ingredients which the cupidity of trade has, for the sake of cheapness in production, frequently introduced into the material. But this is merely one of the "accidents of commerce," as fraud is one only politely termed, and its results may be avoided by purchasing only of first-class tradesmen. We are informed, upon the best authority, that there is no necessity for the mixing one single gram of injurious matter into the material for modelling the most variegated bouquet that ever glowed. And, this objection set aside, we hardly know a more elegant accomplishment for a lady than the knowledge of this art. She must keep perpetually before her the most exquisite and fragrant production of nature; she must study it with the same closeness of observation as is given when making water-colour drawings; and she reproduces her flower with a cleanly and pliable material—the very type of plasticity. And as her great-grandmother adorned her walls with garlands in tapestry, our fair artist every day adds a new ornament to her apartments; she has, in plebeian parlance, something to shew for her money and trouble. And, as for the money, the economical character of the necessary preparations will not in these times be among the least recommendations in the eyes of papas and husbands. We are apprised that all the articles a lady requires to enable her to make wax flowers are a pair of scissors not too tight in the screw, a small and a large china-headed pin, one ivory pin, tinting brushes, some prepared carmine, smalt, cobalt, two shades of chrome, and white, all in powder, a little wire, and some sheet wax. This is not a very formidable array of machinery; and, this obtained, the art may be acquired by the study of any of the excellent little hand-books upon the subject, or, more easily, by a few lessons from one of the regular artists. We should, of course, prefer to see a lady in the Bloomer costume with her flapped hat and gardening gloves, tending real flowers; but, for an in-door amusement, there can hardly be a prettier one than what, if *Lady Macbeth* had been in the habit of practising it, her husband would have called the throwing one's talents

> Into the *sire* and yellow leaf.

The wax-florists at the Exhibition are chiefly English, the foreign contributions in this department being unimportant. One of the most effective instances of grouping is on the stand appropriated to Mrs. Strickland, who displays a very handsome opal vase of graceful shell-like form, containing a very charming collection of flowers. But a more interesting sight is upon another portion of the same lady's stand, and whether the eye does not so readily detect it. This is a model of that extraordinary production of America, the *Victoria regia*, respecting which so much interest has been excited. Both sides of the gigantic leaf, with its extraordinary and almost innumerable ramifications of fibre, are shown, and the flower is seen in its various stages of development. Other artists have the flower in their collections, and it is excellently re-produced; but Mrs. Strickland's is, we think, the most complete illustration of this very remarkable plant. Mrs. Temple has an exceedingly handsome case of flowers, the colours of many of which are exquisitely displayed. Mrs. Dowell's collection also deserves the highest praise, it appearing to us that this lady is peculiarly successful with the more delicate flowers, and very fortunate in the selection of her tints; there is also much artistic taste in her arrangement. In selecting a few names for mention, it must not be supposed that any censure is implied in the omission of their names, for we cannot call to mind a single instance of carelessness or unfaithfulness (so far as we have had opportunity of studying the British and foreign originals), and there is not a case in the cluster which will not reward examination. The crowd of fashionable visitants who seem instinctively to find their way to this corner of the Exhibition, testifies to the successes of the various artists. But we must specially refer to a large case, exhibited by the Mintorn family (well known for their skill in these productions, and for some useful publications on the subject), who shew a variety of the more rare and curious plants, in various stages of their existence. We do not know whether there may not be a want of what critics call dramatic keeping in this group. We are scarcely learned enough to say whether the unity of time is preserved; in other words, whether specimens in such different phases can be seen in nature at the same time. If so, and Messrs. Mintorn declined to say that the collection is as perfect in idea as in execution. A more thoroughly interesting, or more choicely assorted display of natural beauty and quaintness, we have never seen; it has a higher value than that of simply imitative art. We must also mention some wax fruit, by Mr. J. Down, with strong reproduction, not because it is not exceedingly good—much of it indeed beautiful—but because its situation is such as to induce the greatest possible amount of unhappiness to the greatest possible number of the rising generation. Upon occasion of several visits which we have paid to this part of the Exhibition, we have noticed episodes arising from Mr. Down's fruit, which is maliciously placed "on a table of original design," so low as to be on a level with the juvenile lip. We have seen wearied mothers, tugging at still more wearied brats, suddenly pulled up short at this display of fruit, and compelled to give battle to their sulky progeny, which, listlessly passing other attractions, clings to Mr Down's table, and refuses to be comforted. And, one day last month, we saw a small and greedy-eyed boy, who had slipped from the maternal gripe, and slunk back to the wax pears and apricots, busily but stealthily trying to insert a knife at the junction of the glass. We watched him, with a faint hope that he would succeed, but his incensed proprietor came up, and with a hasty swoop, and some extemporised comminations, bore him away. Mr. Down is responsible for that lad's disgust at our social institutions. And before passing from the wax flower group, we may add an expression of our regret, that differences of some kind prevented its including the very magnificent case and bouquet which had been prepared by Mrs. Peachey, one of the artists in wax to her Majesty. The stand itself, which, with its contents, was on private view, is, externally, more admirable than any of the cases in the exhibition, and the flowers would have yielded to none in variety or brilliancy of tint. The reputation of Mrs. Peachey, whose artistic talent is of a first-rate description, would have justified the authorities in some concession, and we have long cherished this department of the Exhibition with a feature of no ordinary beauty.

We ought not to leave the Gallery without glancing at a large glass-case, before which there is always such a crowd of mammas and little girls, that a male critic seems an intruder. The contents of this case hardly come under the two heads into which we propose to divide our examination of the wax-work in the Exhibition, inasmuch as they are not precisely either representations of the productions of nature, or of a group of the human family. They are, however, something between the two. The case consists of dolls, *en cire, mues et habilles*. They are by Madame Montanari, a name of which we shall have occasion to speak by and by. Certainly, it is impossible to conceive a more charming fairy court than is held in this minor glass palace. There are dolls in every stage of doll life: baby dolls, lady and gentleman dolls, and dolls of no particular age, but combining the artless smile of early dollhood with the finished oilet of a milliner's model. The hair is inserted into the head, in-tead of being gummed on in a scalp, and the eyelashes and eyebrows are similarly arranged. The costumes of the figures are superb, finished *à quatre epingles*, and the tiny ornaments, bracelets, ear rings, watches, chains, and rings, are put on with microscopic precision. There is a *partie carrée*, consisting of young ladies representing the four quarters of the world, their skins being fair or dark, according to their place of nativity; and their dresses, though in the cases of Africa and America a little idealised, are very appropriate. The magnificent *toilettes* of some of the larger ladies elicit the most charming little screams of rapture from the fair inspectors; and the baby-models, with their fat naked legs and taper fingers, extort very loving glances from young mothers. There is a quaint little nudity who stands up in front, like *Puck* among the fairies, and very grotesque by contrast with the luxurious waxwork around. Altogether, Madame Montanari may be congratulated upon having set an artistic example which will be duly appreciated by those happy parents who can afford to indulge the iconclasty of their offspring with objects the expense of which, we suppose, bears a due proportion to their elegance. In an adjoining frame, however, are idols framed upon a more economical principle; they are called by the Ashleyan name of rag-dolls, but the title does not suggest the smart-looking articles in question, which, though of course lacking the high-bred complexion and style of the wax ladies, are rosy and smiling enough. This sort of doll, which is by no means dear, is, we are informed, largely patronised by her Majesty for the benefit of the Royal nursery. Its merit is that it is perfectly soft, and therefore cannot injure a child, and is so yielding that a child cannot, in turn, injure it. Strictly, we have no right to include the rag-doll in our examination, but it may perhaps be allowed to come in with its waxen brothers and sisters, by whose side it dwells, rejoicing in the approval of Royalty.

In the Fine Art Court, down stairs, we find a few additions to the collection of wax-work modelling, as *tableaux* of flowers, copies of plants, a portrait group, several medallic portraits, and some animals. But the great wax feature of the Exhibition, and, in an artistic point of view, by far the most important work in this department of it, is a large group of figures which we find pyramidically arranged on a large table in this part of the Building. A spectator cannot fail to observe it, from a rickety canopy incessantly shaking over it, and from the number of visitors crowding round it. It certainly deserves a little attention, for it is not only a collection of exquisitely finished works, but it conveys a vivid idea of a remarkable people. The artist, Mr. Montanari (though his name be foreign, he comes into the English department by virtue of his residence in London), has endeavoured, most successfully, to illustrate "Mexican town and savage life." This he has done in a series of figures, chiefly single, but several in groups. They represent an immense variety of incidents in the life of the wild and tame Mexican. Among the most conspicuous subjects in the history of the civilised man is the bull fight, of which separate episodes are shown. In one of them the outraged and infuriate animal, smarting under the torture of the *banderilles* which are fixed in his back, is making his terrible rush.

> He digs in hard! Away,
> Away, for life and limb! See how they spur!
> Now is the time to perish or display
> The skill that yet may check that mad career.

In another group the bull's last moments are approaching: the Mexican rival of the "great Montes" is meditating the death stroke:

> And now the matadors around him play,
> Shaking the cloak and rousing the red brand;
> Once more through all he darts his thundering way.
> Vain rage! the mantle quits the covering hand—
> Wraps his fierce eyes—and o'er his neck a pang is spread.

Another, and a very well-imagined group, illustrates the period when the game is over, and the body of the slaughtered bull is being hurried away from the arena, that a living animal may take his place.

> And steeds that spurn the rein, as swift as shy,
> Hurl the dark bulk along, scarce seen in dashing by.

But these groups, excellent as they are, the fiery character of the scene being well preserved, and the dresses of the *taurador* and the trappings of the horses being very elaborately finished, are by no means the most interesting features of the collection. These, we think, will be found in the Indian and slave figures. The Indians are particularly characteristic of the fierce and predatory habits of the people we hear fresh news of by every batch of American journals; but the mixed squalor and picturesqueness of the race will be best understood by these models. There is a bit of second Fenician Rolla, holding a white child high in air; only the sentiment of the situation is reversed, as the Indian is stealing the infant ("robbing" him, the label states, but the dagger and attitude speak of felony rather than larceny). And there is a sculping scene of great horror; the long black lock of the victim being firmly grasped by his victor, who has thrown him on his knees, and brandishes the glittering knife with a fierce cry of triumph. A figure of an exceedingly aged female Indian is executed in admirable style, every fibre in her lean frame apparently developed, and her face a respect that of misery. The more pleasing aspect of Indian life is shown in the charming figures of some of the younger squaws, who are models of female beauty so far as form goes. Their bodies unfettered by drapery, a gay feather garment from the waist to the knee being about the extent of their wardrobe, their admirable proportions are brought into favourable view. The rich dark complexion glows with health, and the limbs are full of strength and vigour. Presuming these ladies to be types of their class, and not exceptional beauties, the Indian may be forgiven the pertinacity with which he fights *pro aris et focis*. Some figures of slaves, engaged in various menial offices, show a different phase of life; and these, who have, apparently, the squalor of the Indian, without his fierce bearing, look pitiable enough—they seem to have the limb, rather than use it, and their countenances wear a very degraded expression. Contrasted with them is the elaborate and glistening *toilette* of a Mexican belle, who appears with a display of gold and jewels, something like that the unlucky aborigines of her country made in the days of Cortez. She is a most captivating spectacle, and, in point of show, throws the most brilliant costumes of the Old World completely into the shade. Observe her step and manner—some indolence, some coquetry, and a great deal of fire ready at a very short notice. She is not a person on whom to offend, and yet, no doubt, she is very fascinating to her dark-eyed suitors. Further on, Mr. Montanari has thought proper to typify Mexico herself, by an allegorical figure of a gaily clad young lady, with naked feet, who is mounted upon a hillock of gold coins, in the days her banner, "looking fearlessly into futurity." In another place, and, we presume, in order to show that his faculty of representing a class is not limited, we find a white Venus, very carefully and delicately modelled by the same accomplished artist; the rosy-tinted flesh of Europe contrasting well with the glowing duskiness of the American figures. We have touched upon but a few out of this large collection, in which will be found gallant smugglers, bold bandits, grim miners, grimy charcoal-burners, a quiet worshrettes, and almost every variety of social and unsocial life. The artist is very fortunate in his treatment of most of his figures: the wax serves him excellently; but what will probably strike the mass of spectators as the characteristic of these models is the extraordinary minuteness and beauty of finish, chiefly as regards costume and ornament. Not only has the coquette her bracelet, but every jewel in her bracelet is shown—ear-rings, finger-rings, watches, all are in the same state of miraculous completeness. What would, of course, be unworthy, if not impossible in the case of a work of pure art, is here most laudable. The artist's object was imitation, not idealisation, and he has carried out his intention with extraordinary care and success. For a series of literal transcripts, executed *à merveille*, we have not often seen anything equal to Mr. Montanari's Mexican figures.

As we have said, England has nearly monopolised the wax-work of the Exhibition. If, guided by the Catalogue, we wander through the foreign department, we here and there light upon a solitary case of flowers or fruit, but we do not discover much requiring mention, except in the Portuguese department, where, in no very favourable place for view, we find some "Waxen work, by H. Ferrax and sisters," which consists of some small cases of modelled fruit, apparently executed with care, but not arranged in a way which does much justice to the fair artists.

It seems fair, at the end of such a notice, to remind such of our readers as do not take much trouble to find out things for themselves, that the "undoubted original inventors and artists in wax" are the only permanent occupiers of any part of the Crystal Palace. They are permitted to sleep there at night, and to carry on their avocations during the day, with constant liberty of ingress, egress, and regress, upon the arrangement that they do not intrude into any other part of the Building than the commodious apppropriated to their use. These are at all times open to the examination of the public, and those who would like to see the manufacture and its adaptation, have only to ascend to the Gallery, at the extreme western end of which they will find some sheets of glass so arranged as to form a kind of little conservatory within the Building, but completely isolated from it, and with entrances outside the windows. That glass is, if the author of "Orion" will allow us to borrow the phrase, the "false medium which separates bees of genius from the public."

S. B.

NEW WATCH-STAND. BY JONES.

This is a very pretty little article for the table or chimney-piece, affording security for the watch, with facilities for presenting its face in any direction desired.

NEW WATCH-STAND. BY JONES.

JEFFREY'S MARINE GLUE.

The marine glue is one of the inventions which have arisen from experiments made to attain in some measure the same object by different means. Messrs. Jeffrey, Walsh, and Co. exhibit in Class 6 a great variety of specimens of their marine glue as applied to various parts of vessels, in order to show the strength and tenacity attainable by the use of this important substance. Many years ago Mr. Jeffrey turned his attention to a process, by galvanic action, of producing copper sheathing suitable for ships' bottoms; but, after numerous experiments and considerable expense, finding the cost of production of the copper sheathing by his new process to be equal to that of the copper-plates for ordinary use for the same purpose, he abandoned his scheme. Nevertheless, his investigations on this important subject led to "the idea of employing resins insoluble in water as an effectual protection to ships' bottoms." The result was the composition which is known as marine glue, and which is now so extensively used in the navy. It consists simply of three ingredients, viz. caoutchouc, coal naptha, and shellac, in proper proportions. It requires several days to dissolve the caoutchouc previously to the addition of the shellac. The various specimens of marine glue, which are placed towards the east end of the Machinery-in-Motion department of the Great Exhibition, are well worthy of an inspection.

The specimens marked 1 and 2 are removed a little way from the north "wall," while the rest, distinguished by the letters A to L inclusive, are placed close to the same wall.

No. 1 is a piece of the mast of the *Curaçoa* frigate, after her return from South America. The glue was found to be inseparable even by the application of the wedge.

2. The next specimen is the piece of mast put together with the marine glue, and subjected to a pressure of 22 tons, by means of the hydraulic press, before the splinter could be effected. In order to show the great additional strength of the main-mast, the fore-mast, and the mizen, by the use of the marine glue, it is only necessary to observe that the number of feet of surface joined in the three masts is equal to 2128; so that only taking three tons to the foot, we have an additional strength put into these masts of not less than 6384 tons, a thing unprecedented.

The specimen distinguished by the letter A is a fib, tongued and put together with the marine glue.

The block of elm, about 12 inches square, marked B, and put together with the glue, was subjected to an explosion of gunpowder. At the conclusion of the trial, it was found that the seam or joint was perfect.

The piece of a deck (C) put together with the glue was taken from a vessel, the interior of which was destroyed by fire, and, although the underside is considerably charred, the upper side, including the glue, is perfect.

Mr. Jeffrey, at the request of Sir I. K. Brunel, prepared a cannon-ball (D), of oak, about seven inches in diameter, which was fired at Woolwich, in 1842, at an angle of forty-five degrees, to ascertain the effect of concussion on the joint when rebounding from the earth. On an inspection of this interesting specimen, it will be found that the joint is still perfect.

The next specimen, marked E, is a block of deal about twelve inches square, with a surface glued of similar extent. The wood was shattered at four tons. Thus, taking three tons per foot, we have additional strength of 36,000 tons distributed over the hull of a first-rate.

F. Short length of a model mast, of about 8 inches in diameter, exploded with gunpowder. Although the wood is rent, the splinters are confined by the marine glue.

G is a section of the same.

H and I short length and section respectively of a model mast, of about 6 inches diameter, made of northern seasoned timber, very durable and strong. This is composed of eight sections, put together with the marine glue.

The next specimen, marked J, shows the method of converting rectangular into circular timber, by dividing the rectangular piece by a segmental cut at the radius required, and then placing the under piece above the upper piece, and connecting the two pieces together with marine glue. The ribs of the roof of the Transept of the Palace of Industry were thus formed, not, however, having the use of marine glue at the joints.

K is attached to a mahogany deck, payed with marine glue; and, finally, four seams are shewn marked L, two of which are payed with marine glue, and two with pitch, which have been subjected to the same temperature under the line. The effect of the sun on the seams made of pitch has been to melt it away to the depth of an inch in parts, while the glue in the first case remains perfect.

THE GUARDIAN ANGEL.—BY VITTOZ.

THE GUARDIAN ANGEL. BY VITTOZ.

Amongst M. Vittoz's collection is a pretty little group, entitled "La Fortune et le jeune Enfant," which we have great pleasure in engraving.

GROUP OF SILVER. FROM RUSSIA.

(*See Engraving on Front Page.*)

The ornamental works in silver from Russia are chiefly contributed by two houses—those of Ignace Saxikoff, of Moscow, and Theodore Verkhovzoff, of St. Petersburgh. The style of all these works is of a high class of merit, the workmanship extremely finished, and the designs generally marked with good taste, being based mostly upon the examples of the best periods of European art. The group we have engraved is of works exhibited by the house of Saxikoff. The principal object is a large centre-piece, comprising a group representing Dmitri Donskoi, Grand Duke of Muscovy, after the battle of Koulikoff, in 1380, which delivered Russia from the yoke of the Tartars, under which it had been oppressed for 160 years. The artist has chosen the moment when Prince Michael Tverskoy comes to announce to the Grand Duke, who, having been wounded, is reclining under a palm tree, that the victory has been gained. The figures are extremely well designed, and the general effect highly artistic. There are other smaller fancy subjects distributed in various parts of the glass case, such as a goblet representing a Cossack woman, another with a Finish hunter, a third with a milk-woman, and a paper press ornamented with a group of a dancing bear with peasants, all characteristic and capitally executed. Besides these, are cups, some of the Byzantine style, some of the Russian, and various other subjects, which reflect great credit upon the taste of the old Russian capital.

Verkhovzoff, of St. Petersburgh, has also a very handsome 'display,' though of fewer works, including a bas-relief in silver on a gilt ground representing the descent from the cross, chased by hand; and another representing the Crucifixion, Prophets, and Evangelists, also chased by hand, in the old Byzantine style, and intended as an upper cover for the New Testament.

BRONZED GATES. BY THE COALBROOK DALE COMPANY.

The handsome Park Gates of cast-iron, bronzed, produced by the Coalbrook Dale Company, and which stands across the entrance to the North Transept, are justly admired as one of the most successful efforts of iron-casting of recent times. They are after an original design by Charles Crooks, and consist of a pair of principal gates and two side gates, which are hung on iron pillars of peculiar construction. Each of the gates was cast in one piece. The style is light and elegant, and the bronzing extremely rich.

THE NYMPH OF LURLEIBERG. BY ENGELHARD.

All who have steamed up the Rhine know the precipice of Lurlei, and its famous echo, which is supposed to repeat sounds fifteen times. There is some legend attached to it, in which a nymph is concerned, though at the moment we do not recollect the particulars. M. Engelhard, of Hamburg, amongst other contributions in the plastic art, presents us with an inspiration of this fanciful creation—a composition of some merit of design, and not deficient in grace.

COLLINGE'S PORTABLE STEAM-ENGINE.

Messrs. Collinge exhibit in the "Machinery in Motion" Department a five-horse portable direct-acting high-pressure engine, in which we find great simplicity, owing to many of the reciprocating parts usually observable in engines being dispensed with. In this engine, the piston, with its vertical rod, which works in guides, acts on the crank by a connecting-rod, and the slide and feed pump receive their motion from eccentrics on the fly-wheel shaft. The reversing gear is of a novel description, enabling the engine to be worked in either direction with equal effect, so that this part of the machine may be applied with advantage to marine and also locomotive engines.

The frame-work is of neat appearance, entirely without ornament—solidity of material and economy in construction having been kept in view in forming the design.

STATUETTE OF AN ANGEL.—BY GROPIUS.

STATUETTE OF AN ANGEL. BY GROPIUS.

The productions in *papier maché*, paper, and stone, by Gropius, of Berlin, exhibit great variety, and considerable applicability for building decoration. The figure of an angel, which we engrave, is bronzed, and is appropriate for a niche in a church.

CANDELABRUM, &c.—BY HARVEY AND GRAYHURST.

CANDELABRUM, &c. HARVEY AND CO.

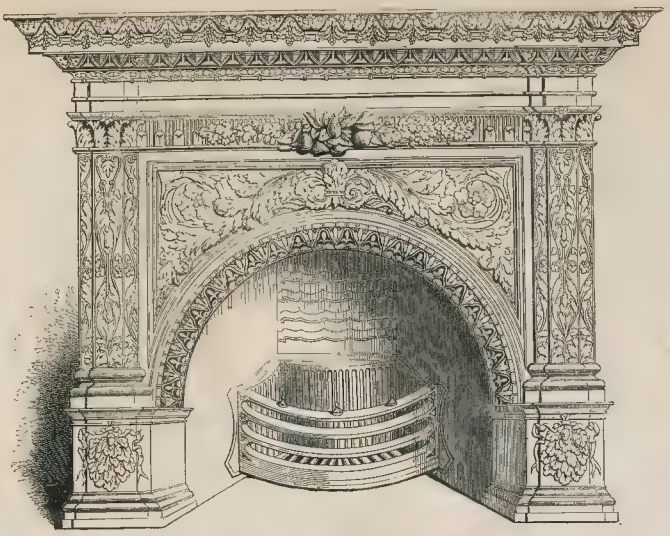
This candelabrum is extremely fanciful, and pretty in design. It is composed entirely of shell-work, mineral plants, and water. The principal figure is that of Venus, on one side of whom is a syren singing her lover; on the other hand is another of the same class of beings, entwined in a net, who is presenting the Goddess of Beauty with a string of coral. On the stem is a young triton covering her with pearls; and on the summit a Cupid shooting at every heart. The workmanship is very careful, and the whole has a pleasing effect. The silver ewer of antique fashion, and the mug, which is silver gilt, of the cinque-cento style, are both very beautifully executed.

WALL DECORATIONS IN CANNABIC. BY ALBANO.

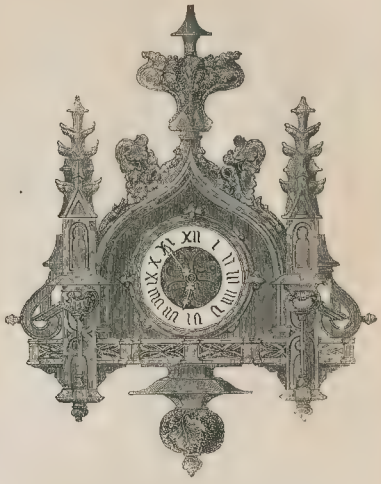
"Cannabic" is the name of a new preparation from hemp, intended to supply the place of *papier maché* and *carton pierre*, invented and patented by M. Albano. Whilst, perhaps, it has not quite the softness of surface of the former named materials, it has the advantage of great durability and of quickly drying. It was first used by M. Albano in the decoration of Covent-garden Theatre.

CANNABIC.—BY M. ALBANO.

CANNABIC.—BY M. ALBANO



STOVE — BY MESSRS CARR AND ROBERTSON, SHEFFIELD



GOTHIC CLOCK. BY TAHAN, PARIS.

STOVE. BY ROBERTSON, CARR, AND CO.

This is a very handsome stove -simple, but effective in style, and of admirable workmanship, by Robertson, Carr, and Co., of Sheffield. The upper part is of cast iron, the grate of polished iron or steel.

GOTHIC CLOCK. BY TAHAN.

M. Tahan exhibits a clock, inclosed in a small Gothic turret, in carved ash, which is very creditable as to workmanship, and will be appropriate for fixing in any part of an old-fashioned house.

HALL STOVE. BY JEAKES.

This production, placed in the centre of the east side of the Nave, is a pendant to one which has already appeared in these pages. The pair are among the best specimens of our inventions for creating artificial heat, as far as regards external appearance; and, without doubt, the glitter and cheerful appearance of this example will be preferred by many to the more laboured work in bronze of its companion. Each, however, must stand upon its own merits; and for the abovementioned qualities this subject is inferior to none.

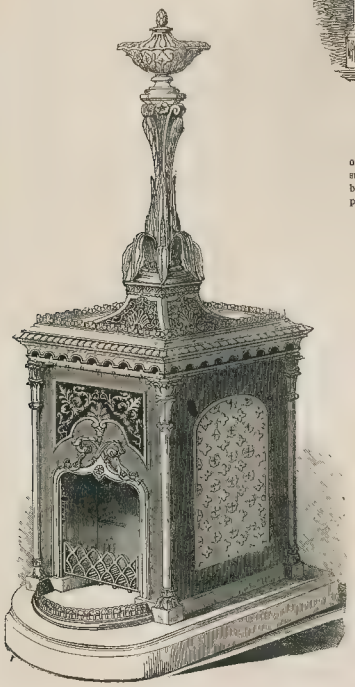
ARTIFICIAL STONE.—BY RANSOM AND PARSONS

ARTIFICIAL STONE. BY RANSOM AND PARSONS.

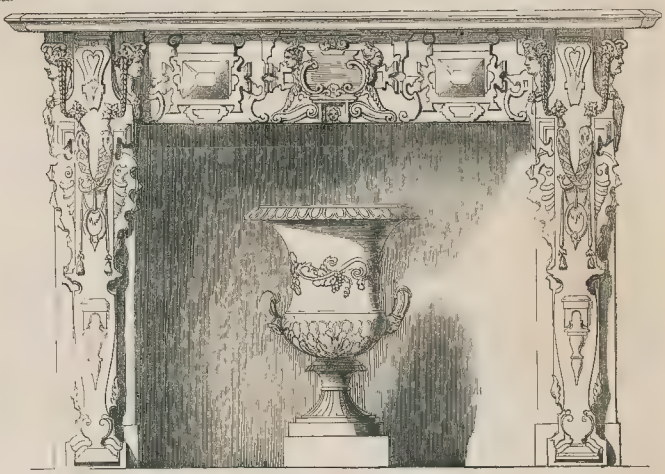
The artificial stone and marble produced by Ransom and Parsons, of Ipswich, exhibit all the essential qualities of hardness, colour, and surface. The various objects which we have engraved show the applicability of these materials to all descriptions of building and decorative purposes.

FIREPLACE AND VASE. BY THE LADYSHORE TERRA COTTA COMPANY.

The Elizabethan fireplace and the vase which we engrave are very creditable specimens of the taste and finish displayed in the works of the Ladyshore Terra Cotta Company.



HALL STOVE.—BY JEAKES, GREAT RUSSELL-STREET.



FIRE-PLACE AND VASE.—BY THE LADYSHORE TERRA COTTA COMPANY.

CAPRICES OF INVENTION.

INDUSTRY is one thing, and caprice is another, and a very different thing. In like manner, we may say that ingenuity is one thing, and whimsicality another; persevering good-sense one thing, and persevering folly a very different thing: so of workmanship and the production of a useful article, when compared with a prolonged waste of human labour in concocting and finishing a trifle, a toy, or an absurdity. These things all involve a different species of effort and result, and call for a very different sort of estimate.

Amidst the innumerable examples of well-applied labour in the Great Exhibition, so many of which we have already chronicled, and so many more of which yet remain which merit notice, and shall obtain it as far as our space will permit, it must, nevertheless, be confessed that there are also a considerable number, amounting, indeed, to a motley variety of articles, in the construction of which we are bound to say we consider that much thought, and yet more labour, have been grievously misapplied.

Foremost amongst these we must place Count Dunlu's "Man of Steel." This is a piece of mechanism, in the figure of a man, which is constructed of seven thousand pieces of steel. Most of them appear to be either springs or slides, and they are so put together and arranged as to be capable of a graduated movement, by means of which the proportions of the whole figure may be expanded from the standard size of the Apollo Belvidere to those of a Goliah. From these colossal proportions it may again be contracted at pleasure to any size between the and its original standard, as now displayed. The only utility we have ever heard suggested as derivable from this elaborate piece of mechanism, is its applicability to the various measurements of army clothiers or tailors, as it would serve for the figures of men of various sizes. We do not know whether this is the purpose assigned to it by the inventor, as it seems a very absurd one, the same result being far more easily attainable by the incomparably more simple means of half a dozen dummies, or wooden lay-figures.

Dr. Grey, of Perth, has invented a medical walking-staff, containing instruments, medicines, and other professional articles. Would not a small tin case, or a sandwich-box, have answered the same purpose far better, and far more conveniently, as it might be put into the pocket, where the "medicines," not being half so much "shaken" as in the walking-staff, would have less chance of fermentation or other injury.

Mr. W. Chamberlain jun., of St. Leonards, has invented "a machine to record votes." Surely, this might have been accomplished equally well by a more simple and well-known means, which is generally allowed to answer all purposes in this case, viz. by a pen and ink—or, if secrecy were required, by a ballot-box.

An "artificial silver nose" has been invented by Mr. Whitehouse. We will not pronounce rashly upon this; but it strikes us, that, as all artificial noses, both in shape, size, and the amount of nose required, will depend upon the amount wanting by an individual, and the size and shape, in fact, suited to his particular case, the material also of which the nose was manufactured would very often have to be regulated by the special circumstances.

Art-manufactures in *mutton fat* are certainly a novelty, and Mr. W. E. Hall, of Bideford, exhibits a "a soale, or kind of wax," made of a mixture of mutton fat and lard. We should fancy that in a hot summer, or in a cold winter when a good fire is needed in the room, these articles would be extremely liable to a change of form not at all contemplated by the inventor; nay, there might be occasions on which they "ran away" altogether.

Mr. M'Clintock, of York, exhibits a chain in regular links, the whole of which, we are informed, has been cut out of a solid block of wood: to what purpose, except to the unnecessary length of time such a performance must occupy, we are totally at a loss to conceive. Mr. M'Clintock has, however, been surpassed by a lieutenant of the navy, whose name has escaped us, and which we do not know where to look for in the Catalogue, who has achieved the same result from a block of wood with the help of no other tool than a penknife. Will anybody endeavour to surpass them both, we wonder, by doing the same thing with a pin?

We do not very well know what to say about the "ostracide," the instrument with a grand name for opening oysters, and bearing a close resemblance to a pair of sugar-nippers. It may be useful, or it may cut the oysters into rags in the operation; we hope not: but Mr. Brown, of Newcastle, will excuse us if we hint, that, to avoid this, it may be necessary to practise opening oysters with the ostracide almost as much as with the old-fashioned oyster-knife.

"The sembreeve guitar" of Mr. Dobrowsky was a good thought enough for a new name, and for a fresh attempt to prolong the sound of the notes of the guitar; but, if the inventor would have us understand by the term "sembreve" that his instrument will sustain a note in any such duration, we must plead absolute scepticism to the possibility of any instrument of this kind being made to accomplish such a result.

The enharmonic guitar, manufactured by Panormo, of High-street, Bloomsbury, claims for its original inventor and designer no less a personage than the ingenious Colonel Perronet Thompson, M.P., who some years ago invented a new kind of organ. Of the enharmonic guitar now exhibited, it is announced that it is "capable of being arranged in the perfect ratios for upwards of twenty keys." We do not doubt this; we accept it at once, not only from what we know of the scientific capabilities of a guitar, but of the great scientific attainments of Colonel Thompson: but after his enharmonic guitar has been "arranged" for any of these keys, what will be the effect of "playing" in them, amidst all this mechanical interference with the finger-board? So much for the impediments to execution, to say nothing of tone. We must say, in justice to Mr. Panormo, the manufacturer, that, being convinced his own simple guitars on the Spanish model have more tone in them than any other guitars, we regret he should have employed so much labour in the construction of this very ingenious, learned, and impracticable invention.

Mr. Jones, of Lombard-street, exhibits "a silent alarum bedstead, to turn any one *out of bed* at a given hour." This is certainly one of the most amusing inventions we ever heard of. It assumes a degree of density in the sleeper which no alarum can affect, or else a singular amount of luxurious weakness of purpose. The bed, therefore, sets the part of Resolution for the sleeper; and having been "set" over night for a given hour in the morning, the said incorrigible sleeper finds the bed revolve so as to tilt him out, and a bath, being placed by the bed-side, he may at once be relieved of all need for summoning a resolution either to get up or to take a plunge.

Let us look at a bed of a very different kind—one that, so far from making the least pretence to any special utility, presents the most abundant illustrations of how many useless and extraneous adornments can be heaped upon a simple domestic article, till it becomes a wonder for its perversity. We refer to the grand bedstead in the Austrian department of the Great Exposition. The enormity of its bed-posts, and there seem to be at least a dozen of them rising in spires of various heights, with the high relief of the carving, and the massive magnificence of the whole design, and the finish of the carving in all its parts, gives this "bed," if we must call it by such a name, far more the appearance of a great model of a Gothic cathedral.

There is a Chinese bed, which, in its way, competes with the Austrian. It is much smaller, but ornamented with all sorts of curious and elaborate cabinet-work, the greater part of which consists of inlaid mother-of-pearl.

Of a similar class to the above, in egregious ornament, we must rank the most splendid of the Oriental saddles, several of which are so thickly embroided, as to present a positive bas-relief of a very rough kind. It would almost need a suit of armour, or at least a wonderfully thick leather lining to the seat of the unmentionables, to enable a horseman to ride with such a saddle for an hour without being horridly chafed, if not flayed, by the amount of friction.

The Chinese have long been famous for their caprices of invention, and whimsicalities of workmanship, over each article of which the greater portion of the lives of several artisans appear to have been expended. We find exhibited here some of their celebrated ivory balls, richly carved outside, and containing another, a size less, inside, richly carved also, with open-work, to show you, that there are balls within balls to the extent of twenty or more, each cut clear of the rest, and carved, and capable of being turned about—like one of these being produced by means of a variety of curious tools and instruments, out of the first solid ball. This, they assert, nobody else can do; and it may be true, for the Chinese are capable of wasting any amount of time upon any triviality. It has sometimes occurred to us, that they may have discovered a certain ivory cement so strong as to be carved upon, and so exactly of the colour and character of ivory as not to be distinguishable; and if so these balls, instead of being all carved and hollowed from the solid round, may each have been cut in two, which would render the entire process easy in comparison, or at any rate would rob it, unfortunately, of the greater part of its difficulty. But this is only a speculation; we admit that we have never been able to detect the sign of a joint, and we never heard of one of their balls coming in two pieces, or even showing an artificial crack. But the Chinese are not the only people who have a love for difficulties, for the sake of the unnecessary labour and time they involve, which gives the article so much additional value in their eyes. If Quang Sing, of Canton, carves and engraves upon peach-stones, and makes baskets and boxes with the stones of apricots and nectarines, Mr. Jacob, of Coventry-street, displays egg-shells with carvings and engravings upon them, and "views inside." If Shee-king, of Macao, delights in wasting his own life, and the lives of others whom he employs, in carving a nest of ivory balls out of one solid ball, instead of obtaining a similar result (if the world *must* have these toys) by the regular tools and simple means of ivory workmanship, we find several of our own countrymen equally assiduous in substituting a common penknife in order to perform operations which proper tools would effect far more easily in a tenth, perhaps a hundredth part of the time. There seems, in fact, a sort of mania for this prænikic-work. Mr. Asson, of Chelsea, executes a model of St. James's Church South, in cardboard, with a penknife; Mr. Scollick, of Birmingham, exhibits a model of St. Paul's Cathedral; and Mr. Dickenson, of Waterloo-place, a model of York Minster, each in cardboard, and each employing no other instrument than a penknife. M. Schnitzer, of Jerusalem, exhibits two vases carved out of a species of sandstone found in Jerusalem, with a penknife, which the proprietor, Sir Moses Montefiore, takes care to inform the world was "an ordinary penknife."

In the windows of most of the great cutlers of London may be seen knives with an extraordinary number of blades; and on the ground-floor of the Grand Exposition is exhibited a large glass case, as big as a handsome summer-house, full of all sorts of fine cutlery and other workmanship in steel, the most prominent features of which are several of these preposterous knives. Some seem to have 50 blades, of all sorts of shapes and sizes, others 150 blades, and one or two of them, we feel assured, cannot display less than 400 or 500 blades. To accomplish this capricious feat, the inventors are always obliged to have recourse to a strangely thick handle, of an utterly impracticable kind as to all handling: and in the glass case now before us will be found, one in the shape of a cross, thus combining four handles, each one crowded with blades; another has the handle in the shape of a star or double cross, thus combining six handles, each one bristling with blades, and arranged at the end of each handle in the form of a fan of bright penknives and blades of instruments. But all these are surpassed in capricious ingenuity by a "knife," the handle of which, if we must call it so, is a combination of three handles, each in form of a cross, the largest being in the middle. The three crosses are combined by an upright shaft, and each of the three comprises four handles. Thus, we have twelve handles in one, and from each of the twelve there sticks out a shining fan-work of blades and steel instruments, of all conceivable shapes, and all real or imaginary offices, not one of which could be put into operation amidst such a crowd. It is one of the most wonderfully useless things we ever saw. As to the number of blades and tools, they defy calculation. In the same case may be seen miniature knives, which are actually of the same kind, and present numerous blades from a handle of an inch and a half in length. There are also miniature knives and scissors of an inch long, of half an inch long, and of a quarter of an inch long; and, by way of completing the wonder, there are twelve pairs of miniature scissors, placed in little brass scales, which show that the whole twelve only weigh half a grain. They require a microscope to be seen properly, when it becomes manifest that they are perfectly formed scissors. We suppose Messrs. Rodgers would say, in explanation of all this fancy-work, that the use of it was to show the world what Sheffield could do, not only in work, but in play.

An American inventor exhibits a combination of the pianoforte and violin, with which he assumes that pieces can be played with the effect of those two instruments in concert. Something like this, no doubt, may be accomplished by giving an attachment to the piano, which shall produce a resemblance to the sound of a violin; but in the present instance the inventor has literally attached a violin, played upon by four bows, which are put in motion by a separate set of keys on a small upper finger-board, which cause the bows to "saw" (as we may truly say) upward and downwards, with an effect which we frankly confess to be indescribable. You can see the whole operation; and a more ludicrous thing both to see and hear, it has seldom been our lot to experience.

An inventor exhibits a model of a carriage which supplies its own railway, laying it down as it advances, and taking it up after the wheels have passed over it. This is extremely ingenious; but, unfortunately, it *supposes* the existence of a level line for the operation, so that its utility becomes rather questionable.

A drinking-glass is exhibited, with a partition for soda and acid, to be mixed separately, the junction of the two streams effecting combustion only at the moment of entering the mouth. Few people could "stand this" we should think.

The model of a ship is made with bottle-corks, and rigged in the same fashion. The object of this we cannot learn.

Mr. Cossens, of Holborn, exhibits a model made in elder pith; and Mr Clifford, of Exeter, displays models made "of the pith of the common green rush," which he carefully informs us is such as is "used in making rushlights."

In one of Hogarth's prints there is a capital satire upon the expenditure of extraordinary means to produce a simple result. You see a pile of complicated machinery, which indicates that an operation requiring great power is about to be displayed. The skill of the artist in the design and in the arrangement of light and shade causes the eye to travel about and examine the various parts of the machinery in order to ascertain the work it is about to perform, when finally you discover at the bottom of the great machine an ordinary wine-bottle, the neck of which is corked, and the whole of this machinery is evidently employed in "drawing the cork." Of a similar kind of elaboration in order to effect a very simple object, we fear we must class some of the new inventions in horns and flutes, to the former of which many complicated crooks and curves, and to the latter many scarcely practicable keys have been added, merely to enable the instrument to produce a certain note which might be omitted with no great loss, or produced by other means. Nothing injures tonemore than a superabundance of mechanism. Vivier always plays on the old French horn, without any of the present complicated improvements, and Nicholson used to play on a flute much simpler than many now exhibited, and we have never heard any performer who gave so much tone to the instrument.

In like manner, we find an exhibitor who displays a model cottage composed of 2000 pieces of willow wood (these also are all carved with a penknife); and there is a table to be seen which is composed of 2,000,000 of separate morsels, all inlaid in mosaic-work. The practical philosophers and economists of modern times complain of the great waste of human labour in the construction of the Pyramids of Egypt—let them go and look at this table.

Now, we are well aware that a thousand reasons may occur to the minds of the inventors of these curiosities, whereby they may persuade themselves that what we have called "caprices" are so many instances of genius; and a thousand letters might be written to us with a view to set us right in this particular. But this would be merely adding to the waste of time. It is not a question of argument, but of fact. There are the articles now to be seen in the Great Exposition; and those who are interested in the point can go and inspect them, and then ask themselves, "Are they useful?" We acknowledge their cleverness—in some cases, their extreme ingenuity; but there we stop.

CLOCK. BY SUSSE FRERES.

CLOCK. BY SUSSE FRERES.

This time-piece, intended for a chimney-piece, is in bronze. Above is a figure of Sappho; and on either side of the face are bas-reliefs of Venus and Diana. It is nicely executed, and, altogether, an elegant drawingroom ornament.

MR. CATLIN'S INDIAN FAMILY AND ITS MANUFACTURES.

A MUSEUM OF MAN IN THE EXHIBITION.

SINCE our first notice of the Aboriginal productions in the Exhibition, Mr. Catlin has brought the articles here mentioned out of his famous Indian collection; and unquestionably these almost solitary specimens of Indian industry make us largely Mr. Catlin's debtors. Their completeness so amply compensates their paucity, that he may be fairly said to have obliterated the neglect of others, in not eagerly seizing this happy occasion to display Aboriginal merit. The truthfulness of expression in the quiet features and attitudes of these two Indians proves how well Mr. Catlin has studied a race which may make his countrymen great in sculpture by its abounding in "*models only equalled in Greece*;"* and his judicious observation of this fact is gloriously supported by the contribution of Hiram Powers to the Exhibition.

These few signs of the occupations, the tastes, and the affections of the denizens of America will not be among the least suggestive of the cheering subjects in this great assemblage of man's works. The well known enterprise and ability of Mr. Catlin need no new encomium; but the one little group he now presents to us is far too remarkable in itself, and in its bearing on the fate of 50,000,000 of our coloured fellow-creatures in North and South America, to be simply enumerated among the things exhibited.

Here is *the stoic of the woods*, calmly witnessing the marvels of many lands, in some of which he has himself been an object of wonder. He is the type of the warriors, who, with a handful of brave men, have for three centuries made head against the enormous odds of European discipline and power; and who, in these latter times, have not in vain stood up against millions of unscrupulous, but unscalculating invaders. Nobly indeed stands he here in the breach, to tell the civilized world that the alleged *necessity* of ruin to any branch of the human race is not only an unholy paradox, but the allegation betrays the grossest contempt of facts and a glaring ignorance of history. He does better in simply appealing to the tenderest affections of the heart, by asking sympathy for his people in the person of his child. He also enlists our reason in favour of his race, by pointing at the Indian mother's ingenuous and laborious handiwork which mantles the girl.

Who can reflect on the story told by this group without a pang, at the cruel impolicy of leaving such germs of civilization unprotected and undeveloped?

We are unable to destroy the *brown* man every where, willing as we are to do it; and after all the horrors perpetrated wherever white men have gone, that brown man is more erect before us than ever

Mr. Catlin's chief here tells us *how* we may mend the melancholy past in this matter. We must treat the less civilized races as we would ourselves be treated, and bring them within our kindest community of social sympathies. So much is taught in the portraiture of the Indian's *child*.

Furthermore, the curious and useful clothing of them both; their gay ornaments, and rude historical symbols, shew how steadily, and pleasantly, and reflectingly, too, the Indian's leisure can be employed.

Dress of the Chief:—Deer-skins, with beautifully tinted porcupine-quills, and scalp locks. The head-dress is constructed of war-eagle quills, and ermine, surmounted with buffalo horns, cut thin and polished in the way usual with the Jews The necklace is made of the grisly bear's claws; a lance in his hand, and a quiver and bow are slung at his back. His tobacco-pouch, of otter's skin, hangs across his arm. His moccassins are of deer-skin. *Dress of the girl*:—Dressed skins of the mountain sheep, which are softer than deer-skin. Moccasins, or beaded boots. Wampum or necklace and ear-rings of the bivalve fresh-water shells, and necklace of elks' teeth, which are rare.

Of the numerous articles on the person of the Chief and his daughter, it will suffice to select one for special notice.

This is the woollen robe of white, yellow, and black colours, on the girl's shoulders. It is manufactured by several women, of the wool of the wild sheep of the Rocky Mountains, a thousand miles beyond the limits of civilisation. The work is many months in completing; and justly is the challenge offered here, as Mr. Catlin himself is known to have often made it elsewhere, to discover the secrets of this curious work, or for the looms of England to copy this truly splendid fabric. Its dyes, its texture, and its symbolic figures, are all studies. For strength and for warmth, it is perfect; whence its teaching and origin, are great mysteries—whether connected with the labours of the sisters of fate of classic antiquity, or with those of the weird sisters of the north, are points alike obscure. The identity of this Western industry with that of the East will not fail to strike every observer; and it is earnestly to be hoped, that may of the hundreds of thousands who will here meet this Indian family, will feel how urgent is the call on us to lessen the evils of their condition.

These valuable products of native American ingenuity, unaided by the resources of capital, or by the advantage of subdivided labour and machinery, give the red Indians a title to our consideration. Such things go far to prove a community of industrial talents, and fully justify the resolution passed at the Peace Congress the other day, at the suggestion of M. Girardin, of Paris, that the aggressions of *strong* nations upon *weak* aboriginal tribes ought to be abhorred.

Upon what principle can we refuse the protection of the law of nations to men whose capabilities are thus demonstrated to be equal to our own, and whose hearts are proved, by all we know of them, to be like ours. It is this equality of treatment by *law* that must now be established on the firmest bases. If we would but respect in their case the rights of man, of which in our own we rigorously enough exact the observance, less would be heard of sanguinary conflicts between barbarians and civilized men, which are the great disgrace of our time.

These Indians and their works suggest a powerful motive for making the Exhibition *permanent*. Groups of such figures of all nations, correct in costume and features, would have peculiar attractions. The wax-work in Westminster Abbey and Madame Tussaud's gallery are the amusement of children compared

* Catlin's Indian Letters, (4th ed., 1844,) Vol. I., p. 16.

with what might be assembled here. Mr. Catlin's collection should be bought for the Crystal Palace; and thus, with many others of a like character, be saved from dispersal. Thus would be realised the idea of a Museum of Man, so brilliantly exemplified in Captain Shippard's large historical map, for the purpose of popularising the lessons of humanity to our fellow-men in every clime. Lectures on the whole subject, especially on an improved international code, should be read in these ethnographical galleries, to all the schools in turn, as well as to the public at large. History and descriptions of manners might thus be brought to bear particularly upon questions of policy; and what began in amusement, will end with instruction.

The American merchant Mr. Dunn's Chinese collection was an admirable example of what can be accomplished in this way. In such a museum there should, of course, be combined foreign occupations with national portraits, and foreign productions with the native mode of raising them.

Here would be found a frequent attendance of the Indians from America, the native African, the Hindoo, visitors among us; and a school of modern languages might with care be formed in a winter garden of perpetual spring. Mr. Paxton has not yet directed sufficient attention to this element of high utility in his famous design.

LETTERS FROM LONDON

ON

THE GREAT EXHIBITION AND OTHER MATTERS.

BY PELEG E. WHEELER,

WITH AN INTRODUCTION BY BAYLE BERNARD.

(*Continued from page* 136.)

LETTER VII.—TO DR. HIRAM TUCKER, MOUNT CLEAR VISION, PENOBSCOT.

THE EXHIBITION—ITS RELATIONS—FIRST IMPRESSIONS AND GREAT CONTRASTS—SAXON AND CELTIC—FREE AND FETTERED RACES—SPECIAL FEATURES AND DISTINCTIONS—CHINESE, INDIAN, RUSSIAN, GERMAN, ENGLISH, AND AMERICAN—CONCLUSION.

RESPECTED DR. TUCKER,

WHAT's a man to do when he ought to talk and can't—when he's so full he can say nothing—when he's so wise it makes him stoopid—when he's got a lump of gold in pocket, and not a cent by way of currency? If you choke a stream in that way, of course it overflows; and if you stuff a skin, you bust it: but it aint so with the brain; its door seems to open inwards, and the more it's packed the more it seems to jam the latter fast. I vow if 'taint my own case—if I aint in a most uncommon fix, Doctor; if I aint as bad off as a fox with a spring trap in his gizzard. You know what was my business here, to see the Exhibition; that was my chief send. Whatever I saw besides, the old country and the folks in it, and the grand old mammoth capital, my real and special purpose, not only from our townsfolk, but all the intellect and enterprise, I may say, of our State, was to give a full and true account of the world's wonder in the Park—a clear plan of the Building, and a list of its contents, that should serve as a public dokyment for libraries and archives; the substance, size, and vally of every article exhibited, with names of owners and of purchasers up to my latest writing. And how have I proceeded? Why, I accordingly took a lodging as near to the Warehouse as I could; and here for a bull month have I been going to it daily, for nine hours at a spell, winding my way about it with my eyes upon the stretch, jist as prying as a weasel and as supple as a snake; taking every section on't, long and cross and sideways, middle path and side ones, courts, and tents, and galleries; pulling round by this post and mooring by that counter, climbing up one staircase, and diving down another. Still I vow if I believe it's got an implement or fabric I aint squinted at or handled, or a foot in its twenty acres but mine's been over twenty times. And what on airth's the upshot? Why, as I tell you, Doctor, nothing! I'm so knowing I can't speak. I've swallow'd such a lot that I aint able to digest it. I've got what you call a surfit; feel as if my brains were busting, and the only way to save 'em is to hoop my skull with iron.

So you see the fix I'm in, Doctor, and what a blistering I'm gitting; when letters are coming daily, wondering what the snake's the matter; why in the plague's name don't I write—I've seed the show by this time, and why don't I describe it—jist the Building and contents on it, or the contents alone—that's all. You remember Asa Whipple, when he'd a mind to stand for President, and the Deacon said he had only to make the Union think as he did. "Yes," said he "that's all," and I rather think I'm like him—all I've got to do is to make our people think as I do—look and feel with my five senses—that's all—quite a trifle. Why, great nation! Doctor, if I was stump'd to go and serve ing London, and for no reason but its bigness, because, as I said, it's a Congress capital—a hundred glued together, what the dogs am I to do now, when this show is jist like not ing that was ever seed or heerd on since the airth began to spin—when it's as new as a fresh comet, and about as easy to make out; when it's as strange as a law of matter that's got to show us its results? Size aint the greatest wonder, except it's to a savage. Multitood's as wonderful, and so again's variety. There's no mountain that can puzzle you like the million plants it nourishes, and there's no human work whatever that can paint the look of this: you know there's no knowing unless you've a scale to go by; and so, s'posing I was possess'd of a thousand lawyer power of talk, and could make a team of the strongest epithets to drag the idea before you, I want to know where'd be the vally if you'd no standard in mind to try it by and make sure it was a fact? 'twouldn't vantage you a cent, and I should only waste the paper, and you an uncommon dear sight of patience. Still there's a track through every wood, Doctor; and granting I can't say everything, is that a reason altogether that I shouldn't speak at all? Granting there's no doing justice either to the Building or the things in it—its million looks of beauty and skillfulness, is there aint it possible to give a notion of its general effect, and by means of its special features, and its broad and grand distinctions, to hand you in material with which to build the place yourself; I supplying walls and basement, and you, with your own fancy, putting in the lath and plaster? I guess that's our only plan, Doctor. 'Taint the only case you've heard on, where we can't do all we wish, nor that we've found out that our dooty is to do the best we can.

Well, then, Doctor, the first thing I've got to say is, that this great show of the Park has got two kinds of relation—first, to its own time, and next to its contributors; and, to begin, I want to ask what's the natur of its own time—aint it that of progress? Has there ever been an age when the great interests of our spesby went ahead as they do now—when knowledge was so diffused, or so applied to useful purposes, when the stream was so swift and deep, or put so many wheels in motion? But that aint all my question; what began the current? Twarnt spontaneous like combustion; it must have had a source, and what was that? Why, our own great revolution. Yes, Doctor, that's the fact; however, it may be larf'd at, it aint to be upset. The independence of Ameriky was the first move in that of man's. Just note the steps that foller'd it, and see if they aint as regular as rounds upon a ladder, or stony marks up a hill. Take the first—the stir in France. Didn't that come out of ourn? If want and tyranny laid the fire, didn't our cinders kindle it? Didn't a whole raft of her young patriots come and serve their time with us, before they went home with Larfyette, and set up for themselves? And after her great flame had travell'd over Europe, shrivelling up old feudalism and other weeds of that sort, didn't it flare across to England, and send into it a heat which burst out at last in reforms and abolitions? first of the white slaves in the country, and then the blacks abroad; and side by side, or following it, warn't there that grand current of discoveries which aint half completed yet, and which has made the time we live in an age of revolution? Take gas as a beginning; gas which push'd aside lamp oil, that type of old worldnotions, that had neither strength nor steadiness, but was altogether dim and gloomy. Then steamboats, grander still, to put an end to sailing—another old world notion that made us slaves to wind and tide, when here came in a principle that raised the slaves to masters. Warn't that a revolution? Then steamers upon land, when the rail displaced the waggin, and the "iron horse" was found to have the best idea of going; and then, to cap 'em all, the telegraph; when roads were made of wires, and thoughts were sent a travelling a little quicker than their skulls? I want to know whether each on 'em warn't a first-rate revolution, and whether all on 'em warn't owing to the one that we invented?

Well, Doctor, it being the fact that ourn's the age of progress, what's the fact of this Exhibition? why, that it's the age's grandest evidence and most triumphant symbol; the noblest emblem of the triumph of the peace and industrial principle over the aggressive and destructive; the surest hope that human good is made to conquer human evils, and proof that peaceful intercourse begets the knowledge that extends it. This is its first relation, Doctor—its connexion with its age; but it's got another—to its contributors, and what's that? why, simply this, that it's nothing more than a proof of progress, it's also the best measure on it. If it's a table on which the world has recorded its advancement, isn't it clear, also, that it's a scale to ascertain each part of it—a gauge of every nation's movement, from the foremost to the last—whilst it also serves to show both what marks and what connects them? Thus, if England and Ameriky contribute use and substance—France and Italy, fine arts—and the East, luxury and splendour—aint it clear, that, whilst you see the rank of each in cultivation, you see also what they want to make their own possession perfect. To know our wants, is our best knowledge, since it is that that stirs up our energy; and this is the Exhibition's vally, if we choose to understand it; to prove by direct comparison what each people stand in need of, and so urge 'em to take something in exchange for what they give. Don't you see, then, at a wink, its great beauty and distinction, that it seems to combine within itself the scheme of a complete industrial system, only the elements, at present, scattered over a hundred courts and counters?

And now, what was my first impression when I entered the Peace Palace? I've already spoke about its substance, its shell of glass and iron, and said I held it to be typical, denoting the strength and clearness that our spesby stand in need of; and I spoke also of its form as carrying out this notion, being low, and firm, and practical, taking a good hold of the airth; but there was another fact that struck me to be as pleasing as the rest, and, you'll see, jist as appropriate, and that is, its direction. It lies from east to west, Doctor, which, as you know is the path of progress—the direction it has taken from its rising in Chaldea to its meridian in England, from the plains of Shinaar, all the way to the praries of Winconsin. Westward it has moved allers, and westward 'twill continue until it has gone clean round the globe, and reached its point of starting—till it has spread its light and liberty through the last abode of savageness. So you see this Mr. Paxton has got some clever notions, and here was the ground of one, as good almost as that of the show itself. But now comes the hitch, Doctor; how do you think it has been carried out? As the Building contains products from all quarters of the globe, they aint, of course, upon a level—some are forrerd, some are backard. Here's Toonis, Turkey, and Chiny, making and using at this moment all the implements and fabricks that were in wear among the Patriarchs. When you look at their contributions, you see sand, and smell hot air. There's a desert right afore you, and lazy camels lounging over it, jist as the whole world used to lounge when time was of no vally; and here's England and Ameriky, with their steam and rail and telegraph, showing what the world requires in the ery we've got up to. Now, you see that these five countries form the two ends of our history—the old world and the new—man as he was in infancy, four thousand years ago, and as w see him now in manhood, in the times and lands we live in. Now don't it stand to reason that these countries should have been ranged in the order of their progress; that the pathway of the Building, lying as it does from east to west, should have been made to represent the actual path of history, by mapping Ashy in the east of it, and Ameriky in the west, and Europe in the centre? Wouldn't this have made the Building a grand diagram of history—a model of the world's progress—when its pathway down the centre would have shown Time's westward track, and the nations on each side of it the stages of its movement? Apart that a truth worth teaching? They talk of the Show's vally as a means of dication—say that's another good on it, and one of its great objects; and, accordingly, all the schools have pour'd into it like mill-streams, and professors by the conch-load have jump'd upon its counters to lectur to their pupils; and if this notion had been adopted, jist now the world of knowledge their young skulls might have been pack'd with; they'd have larnt history with a look—taken in the pith of libraries by one movement of the head—seen the two ends of our history opposed to one another, and the steps that mind has took to reach its present stature: wouldn't that be education, and something worthy of our age? Not crawling along to knowledge by the old school rate of going, but flying by the system that teaches things instead of signs, and offers the mind the kernel, whilst it throws away the husk. And what do you think's the fact, Doctor?—I know you won't believe it—why, I'm sorry these Commissioners aint the biggest fools in Europe; if they arn't gone and turned the Building into one long stoopid blunder—made it a jumble jist as bad as if the different countries had all been shook together by an airthquake or a whirlwind. They've actually clapp'd Ameriky at the east end of the pathway, England at the west, and Ashey and Afriky right smack into the centre. What do you think of that, now? aint that a view of history?—ain't that a proof of fitness to assist in education? Wouldn't you think such a set of fellows had been born down in a fen, and come to London in a flock, to represent their brethren?

But what were my next impressions? Now, if the great fact of this Show is its wonderful variety, rendering it altogether impossible I could give you a just account of it, you'll see that all that's feasible is my singling out such looks of it as show the big varieties, whilst I let alone the small ones. When we go into strange countries we see a dozen leading features—in its government, its townships, and its general social system—which are all so many circles running one into another; and we take one of these, perhaps, as a sample of the lot, and that's the road that I go, jist to take up the varieties that show the Exhibition strongest, and finish off with speshal features in each country's contribution. Now, the first difference that struck me was in regard to race—the opposite track that people take in enterprise and product; the Saxon race, on the one hand, going for use and gain and substance; and the Celtic, or the southern ones, for beauty, show, and splendour. The one working for the wants and solid interests of man, and t'other for his pleasures and his personal adornments. Now, I think it is clear that both are needed to satisfy his natur', and develope industrial energy by labour and exchange, still we've heer'd the question ask'd—which of the two is superior, and likely in the send to have the whip-hand of the world? Now, that's a point, I think, that the Exhibition settles, for it claps the fact before you; that, whilst the Celtic folks show nothing in the way of useful science, contribute not a mossel to the actual wants of man, the Saxons, on the other hand, not only furnish everything, but are able, if they've a mind to't, to do their neighbours' work as well. Side by side with their steam-engines, and solid furniture, and implements—they also show their marble statties, their silk, and lace, and gold-work, which is plain that time and practice will make as first-rate as their knives. They also can do the fine things as well as the good and strong ones; make a table for men to dine at, and put the carving round the legs. Now, I s'pose this goes to prove that if society requires the union of the useful and the beautiful, and one race can do but one on 'em, and t'other can do both, I want to know if 'taint as plain as 'rithmetic can make it, that the Saxons are the cleverest, and must one day hold the whip.

The next difference that struck me, Doctor, was the influence of climate—the great fact of the inequality of the four quarters of the globe. Whilst Afriky and Ashy seem to work but for themselves, contribute little man can use out of their own infarnal regions—whilst they've neither strength nor skill to compete with northern industry; Europe and Ameriky, it's plain, can work for the hull world, and send cotton to hot climates as well as furniture to cold ones. Aint this important fact, Doctor, as regards our race's destiny? Don't it point to the two fields of its ultimate exertions? Don't it shew that man's a plant, who, if form'd to take root anywhere, in moderate climats only can come to its perfection? Whilst a third difference agin, Doctor, was in respect to institooshun—was the difference of aspect between the free and fetter'd races; and here agin this Exhibition is a great book of instruction, every leaf of it having a lesson that may be pondered with advantage. Now, I needn't tell you, Doctor, my opinion upon slavery. If there's a man in the Union hates it, his name is Peleg Wheeler; if there's a man that thinks it not only a cuss and stain upon our country, but 't will one day be its ruin, if 'taint pretty soon got rid of, it's him agin jist mentioned. But, at the same time, let's be just, Doctor: slavery aint confined to skin; there's plenty on it in Europe—millions there of white men, as much degraded as our blacks: so the clear course for a man is to hate it under all forms, and wherever he finds it lurking, in whatever skin or country. And arter its first offance, its great sin agin humanity, what is it we should hate it most for? Why, its obstacle to progress. When you make a man a slave, 'taint only he's no more a man, but he ceases to live for men—he lives only for his master; he's an animal that's only useful to the hand that holds the whip, and only lives for food and slumber; the world then loses all the good that would have come out of his freedom, that's been crushed in his mind and energy,—and here's a signal proof on it. What has the slave sent to the show? raw produce, nothing more, jist the product of hand labor. And who is it that's filled its space with all its brain-work, use, and beauty? who but the freeman, Doctor? the freeman, who works for all humanity?

And now, to finish off with jist a look all round the Warehouse, and a word on what I think the speshal feature of each sample; and s'pose we begin wi' Chiny, as that's the oldest country—Chiny, that has allers been first-rate for making puzzles, and that we have allers said, Doctor, was the biggest one itself. Now ain't the pictur in their teacups an image of the people? Three fellers on one leg going over a bamboo bridge, which is the very thing they were doing five thousand year ago, and there they're at it still, and harn't got over yet. Aint that the Chiny mind—a look of motion, but no progress? skill, and sense, and industry, all wasted upon trifles? Don't they still go on cutting twenty balls within one another? making lamps like scooped out pumpkins, and Chinymen to shake their heads, as if at their own inventions? Aint these curus critturs jist the big boys of the world? and aint that their sample's character, jist the big boys' contribution?

Next take Ashy gin'rally, Ingy, Turkey, Parshy; and what's the featur there? why, if you want it in plain words, Doctor, it's the wild beast contribution, it's nothing else from first to last but a piece of homage to destruction—a grand flaring glorification of selfishness and slaughter; not an article amongst it for the use or good of man, but all tributes to his vanity or engines for his death—pistols, swords, and daggers, all bright with gold and carving, or warriors' dresses, kiver'd with jewels, and flashing like the sun. A pretty sample, aint it, to send to a Peace Palace? unless it's by way of contrast to its furnitur' in general; jist as we see, on a doctor's shelves, poisons and antidotes together. Though there's one thing in the lot that I must say is satisfactory. Hanging up amongst it are skins of tigers and wild beasts—who, of course, must be considered the fighting man's grand ancestors—the models, for the most part, of all true martial heroes. So you see these skins were wanted as a piece of filial reverence, and carve, as I consider, to stamp the whole collection.

We'll next move into Europe, and take its two big empires, Austria and Rooshy, and what do we see there? a mix'd look, not a doubt. Implements and fabrics, both for human good and injury—and skill, and taste, and energy employed in both directions, but the good in 'em the least part, and that not meant for many, but shown in things of luxury for the enjoyment of the few; and the cause on't is apparent. Here Europe herds her white slaves, men fettered to the soil, and bought, sold, and worn out with it, at their lord's and ruler's pleasure. This explains the curus mixtur' of these grand Imperial samples—the good was produced spontaneously, the bad to please their rulers; the man worked for his fellow-men, the bondsman for his master. 'Tis the white slaves' contribution; and moving westward to North Germany, to France, Switzerland, Belgium, there we see mind spreading like the light and heat of sunshine. We see the collections rising both in use and human feeling, growing good and beneficial, and at the same time universal, not for the sarvis of the few, but for the use of all humanity; till at last we come to England, the great head of Eastern progress, and behold in hers the great triumph of fraternal contributions!

Yes, Deacon, it's a fact, in the friendly fight of the Exhibition, England's won the day. In this race between all nations she has carried off the prize. Measured by the interests and demands of human welfare, her collection is the jam—the top notch of the whole, first in all departments of practical utility, and second only to the first in all the fields of taste and beauty.

And how about Ameriky? Well, it's no use to disguise it—the truth was known some months ago, so it's no pain to speak it now; the fact is, Doctor, we've failure—an indisputable failure—and the sarcy part of it all the greater, because the fault is all our own. Everybody knows that we've a flood of first-rate notions in every field of science which we hain't been pleased to send, which, either through prejudice or meanness, we have been such fools as to keep at home. And what's the consequence? why, of course, that we're vallied at our own estimate; and the poorest critter of a European has felt justified in sneering at us. We've wilfully damaged our own character, and almost want a show of our own here to wipe off the disgrace. The only thing we have made a stand in is the article of sculptur. The only hook we hang by is Hiram Powers's statty. That "Greek Girl," it's admitted, is the star of the Exhibition, notwithstanding there's a whole raft of marble gals beside her, every one of which deserves a pair of eyes to look at. That's all our consolation. If we show nothing in invention, we've done su'thing in imitation which whips Europe out of sight. In sculpture, if not the sciences, we've gone on ahead, full bile; but as for any novelty, tho' we're jist those 'twas expected from (and that makes my wrath the greater, seeing, as I do, the disappointment), why—eh—yes; hold on a bit; we *have* shown some invention—done su'thing that's quite original. What do you think, Doctor, of the art of *sculpturing in soap?* Aint that a new idea? and, what's more, illustrated in the immortal head of Washington—the face of our great deliverer actually sculptured out of shaving stuff; and his grand and manly mouth looking as if 'twas bursting into lather! Aint that a splendid notion. I guess that whips the world. And so, as my say is ended, I remain, dear Dr. Tucker,

Your faithful friend and servant,

PELEG E. WHEELER.

GREATOREX'S HOISTING MACHINE.

CLASS 5, NO. 415.

HOISTING machines, or "lifts," were originally invented to supersede the use of cranes, derricks, and tangles, especially for the interior of Manchester and other large warehouses and buildings, which, from time to time, have been much improved in many of their details; and which are now in very extensive use, not only for warehouses, but also for club-houses, hotels, and other large establishments. In London, the extensive warehouses of Messrs. Bradbury and Greatorex, and of Messrs. Morley, Baker, and Tucker respectively, are fitted up with such machines; as also the Reform, Conservative, Army and Navy, and other clubhouses. In the latter case, however, the use of these contrivances is chiefly for elevating and lowering to the different floors, dinners, breakfasts, &c., so that hot closets are required to be appended to them. Not only was such a contrivance designed for the present Fishmongers' Hall, but also a "hot plate dining table."

The chief advantages of the lifts are economy of labour and space, together with the utmost convenience in the raising or lowering goods to or from the different storeys of buildings, instead of carrying the same up and down stairs.

The principle, however, of the "lift" is of far more extensive application to public buildings for ascending rooms, especially in the case of lofty erections. The Colosseum may be mentioned as a building in which such apparatus was found to be most useful, as an ascent to the top by the ordinary stairs is very fatiguing. Lifting rooms were proposed for the stations of the intended City and West-End Railway, designed to be carried by a spacious tunnel under the New-road and City-road respectively.

The machine is supposed to be fixed in a section of a building of the warehouse class, and may be worked either by hand or steam power from any story. It contains several improvements on those ordinarily in use, as in the arrangement of the breaks, the motion for shifting the gear, &c., by which the machinery is simplified and its action rendered more certain.

The mode of applying the machine is as follows:—The floor of the ascending box is brought to the level of the floor of the warehouse, and secured by the break. The goods are placed on to the floor of the machine, the break released, and the endless rope on one side of the machine being pulled, causes the box and its contents to ascend to the particular floor

SIDEBOARD. BY FOLKINOIS

as required, when the whole is instantly stopped by turning the break-handles, on the right-hand side of the apparatus One such break-handle is applied for each story. There are both fast and slow motions, according to the nature of the loads required to be moved; and these are available on any floor, by simply turning to the right or left the handles under each of which is an index-plate, with the words "fast," "slow," or "out" (of gear), respectively marked thereon.

The model is constructed to one-eighth of the full size, and represents a machine capable of raising to a height of 50 feet about half a ton, by the labour of two men, in about two minutes. This is with a slow motion. It is perfectly manageable with half the weight by one man: an additional balance weight being provided in the centre, gives additional power, and can be applied at any moment. A break motion, a simple arrangement, is fixed inside the box to enable any person to descend without additional assistance from any other floor of the building, and to stop at any other floor to which he may desire to go.

SIDEBOARD. BY FOURDINOIS

This, which is undoubtedly one of the best pieces of French furniture sent for our exhibition, deserves particular attention for the thought which has been bestowed upon its design: and which is more evident therein than in any other similar work of foreign taste.

The four figures, instead of being the usual repetition of the emblems of the quarters of the world, are representations of the dessert, wine, coffee, and tea: beyond this judicious choice of ornament, the spectator observes that the intention of each figure is so clearly and cleverly marked as to be unmistakeable, this is a virtue too often wanting in more ambitious works, to be passed over in silence. The figures on either side represent fishing and hunting; all are beautifully sculptured. The little figure at the top of the design is too small; and the petty conceit of coupling the dogs at the base, although a topic of admiration for young ladies and gentlemen, is too serious a breach of taste to be slighted: the deer resting on the banquette, or rather where the banquette should have been placed, is likewise a specimen of that false spirit of æsthetics, which supposes that because nature is beautiful in itself, literal imitations of nature are equally beautiful in all places. It will be noticed that the Engraving shows the picture which occupies the centre of the design as darker than the whole framework: this is the reverse of the fact, but its success shows what ought to have been the case.

It is to be regretted that anxiety for brilliancy of effect has caused the introduction of side brackets for lights between the figures; now the middle division is lighter than the lower and upper s... s, and the top is heaviest of all.

FURNITURE.—BY WEBB, BOND-STREET.

FURNITURE. WEBB, BOND-STREET.

The table, exhibited with two chairs, claims to be Elizabethan, and of old workmanship, from its apparently free and careless handling, nevertheless, the carving of all the three articles is equally beautiful. The table is a very pretty, well-proportioned design, and is superior in every respect, but that of execution, to the chairs, which are left quite plain at the back, in the French fashion, and are too loaded with projecting ornaments to be used with comfort.

THE ILLUSTRATED LONDON NEWS

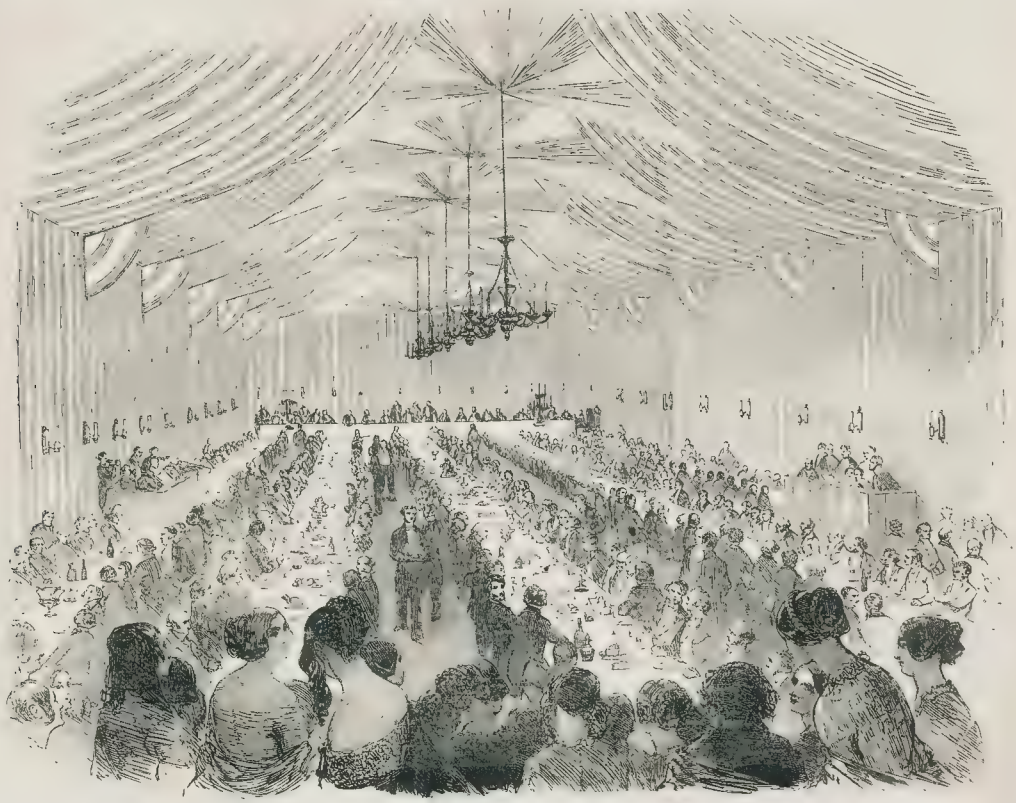
No. 513.—VOL. XIX.] FOR THE WEEK ENDING SATURDAY, AUGUST 30, 1851. [SIXPENCE.

WHAT IS TO BE DONE WITH IRELAND?

It was imagined by some hopeless Englishman, sick of the very name of Ireland, that the only means to relieve Great Britain from the constant nuisance inflicted upon her by Mr. O'Connell's "gem of the sea" would be to shove the troublesome jewel out into the Atlantic Ocean, midway between Liverpool and New York, and to establish the Pope as its temporal and spiritual sovereign. It is a pity that the engineering difficulties in the way of the arrangement are insurmountable. How satisfactory the result would be to all parties! England would be freed from the greatest difficulty of her wisest statesmen, from a constant drain upon her purse, and from a daily trial of her temper; while Ireland would be as independent as Smith O'Brien would wish it—the very limbo of common sense—the great retrogressionist in an age of civilisation—the Paradise of superstition and intolerance—the College of Cullen, believing in a sun a few miles off, and a few yards in diameter—and the neatly rounded domain and snug inheritance of Popes and Popery. The Italians, who are as much afflicted with the Pope as England is, would be equally delighted, and Italy, as well as England, would enjoy a little relief from the curse of theological strife and priestly domination. Alas! that the beautiful vision cannot be realised! We say nothing of the sterner wish of another sorely bewildered politician, whose remedy for the ills of Ireland was to put the whole country under water for twenty-four hours, and then to raise it up again, that it might be colonized *de novo* by Saxon-blooded men of pith and reason. But the sad reality shows us our Ireland in its old place—not to be sent adrift into the wide Atlantic—and not to be subjected to the cruel water-cure—but to be fixed where it stands, and as determined as ever to remain in close proximity to us—to make itself uncomfortable—to forswear and renounce the only means by which nations can expect to prosper—to return evil for good, and to show no signs of life or activity, except by the bitterness of its hatred.

It would seem that for great empires, as well as for small individuals, there is always a principle of compensation at work. If a man be prosperous, highly esteemed, and powerful, he has some secret grievance or annoyance, some hidden sore, which teaches him to beware of pride and self-sufficiency, and which brings him on a level of happiness or unhappiness with the rest of his fellow-creatures. Great Britain, with her free, industrious, and enterprising people, with her constitution the envy of all surrounding nations, and under which more practical liberty is enjoyed than falls to the lot of any other people on the face of the globe, would be, perhaps, too fortunate were it not for Ireland. Ireland is her constant monitor—to remind her that she, too, is mortal and vulnerable, and that pride and self-complacent security are not to be indulged in even by the greatest and mightiest of nations.

We must bear our burden as we may. It cannot be said that for the last four-and-twenty years the English nation and its rulers have been hostile to Ireland, or indifferent to the fate of her people. Whatever their fathers may have been, the present generation of Englishmen have acted as if the social and moral welfare of Ireland were the great things needful to be accomplished in this age. When Ireland complained that the religion professed by the great majority of her people disqualified them for the enjoyment of various rights of citizenship, the people of England, although they had no sympathy with that religion, and believed it to be false, not only treated Popery with the deference and respect due to conscientious belief, but threw down the civil barriers which their forefathers had erected against it, and gave Roman Catholics every privilege and right possessed by others. When Ireland, suffering under a long course of misrule—inflicted not by Englishmen but by Irishmen—was exposed to the ravages of an awful famine, aggravated if not produced by the exclusive reliance of a miserable, listless, degraded, and decaying peasantry, upon a miserable and precarious root, England distributed among them the most magnificent charity that was ever recorded in history, and saved her helpless and almost hopeless millions from otherwise certain death. It seemed that for a time calamity had taught the Irish wisdom; and that, under the pressure of unexampled disasters following in rapid succession, the old feuds had been forgotten, and that religious rancour had lost its edge. We believe that the Irish are not naturally ungrateful, and that, if left to their own instinctive kindliness of heart, they would have acknowledged that they had found in the English a generous eagerness to succour them in their calamity, a sincere desire to elevate their



BANQUET TO ROBERT STEPHENSON, ESQ., M.P., AT BANGOR, ON WEDNESDAY.—(SEE NEXT PAGE.)

social condition, and to make Ireland as great, as glorious, and as free as her illustrious poet imagined they might become. But the miserable ambition of a Brummagem Wolsey, and the misguided policy of a hybrid Sovereign, who endeavours to support his waning authority as a temporal Prince by his grasping and intolerable assumption as a spiritual power, marred the fair prospect, and let loose the full tide of religious hatred over the land. Not contented with equality, the priests of Rome asserted superiority; and for a barren title, which can have no possible meaning but to insult the faith of the people of England, and the Church by law established, they wilfully shipwrecked the reviving fortunes of Ireland. We now see the unhappy result: British capital, that was about to flow into Ireland to fructify in the remotest corners of the land, has been retained on this side of the Channel, and strong-headed, shrewd, solvent, and practical men, the very men whom Ireland imperatively needs, and who were about to establish themselves in her long neglected, but cultivable and improvable wilds, have resolved to stay at home—afraid to trust their fortunes to the chances of a country where a foreign sovereign rules over the hearts of the people, and where the priests supersede all other functionaries except the soldiers and the police. Such a consummation is deplorable in the highest degree. If British statesmen, by an act of aggression upon their parts, had commenced the unhappy strife, of which the present bitterness is but a foretaste of that which is to come, no language would have been too severe to denounce their conduct. But the Protestant people of Great Britain absolve their rulers from all blame in the matter. The attack came from Rome, and was deliberately made and mischievously intended. It was aimed at Protestantism and at the English Church; and, although the stoppage of the social progress of Ireland was not, perhaps, a portion of the scheme, it was accepted as a necessity of the conflict so wantonly provoked. How easy a thing is mischief! A child or a lunatic can set fire to a city; and a Pontiff, whose temporal authority is so weak, that, were it not for the bayonets of an alien power, his own subjects would drive him into exile, has sufficient power of evil to poison the whole existence of the strongest and apparently the most secure empire on the face of the globe. But, in this unfortunate struggle, which Englishmen neither sought nor instigated, the greatest sufferer will be Ireland. Agriculture impeded, improvement stopped, time wasted, and opportunity ruthlessly thrown away—these, seasoned by an insult to Protestantism, are the present victories of the Pope. Were the insult and the aggression the sole evils, they might be patiently borne by the social machinery that are certain to follow the revived animosities of creed in Ireland are far more serious. Perhaps, when the peasantry—still relying upon the potato—shall be visited by another famine, consequent upon the failure of a crop which is always precarious, shall die by the roadside by thousands and ten of thousands as they did before, even the Roman Catholic bishops and archbishops may be startled into the remorseful conviction that their victory was dearly bought. Unhappy Ireland wants daily bread. Her priests have nothing better to give her than the barren pebbles of Cardinal Wiseman's titles, or the subtle poison of the theological controversy that comes to them from Rome.

GRAND BANQUET TO ROBERT STEPHENSON, ESQ., M.P.

(From our own Correspondent.)

On Wednesday last the banquet appointed to be given to the above-named celebrated civil engineer, as a mark of high admiration and respect for his splendid professional talents and his world-famed scientific skill, took place at Bangor Ferry, situated on the Carnarvon shore of the Menai Straits, and about two miles distant from the port of Bangor, North Wales. The festival was initiated by a committee of gentlemen in Carnarvonshire, at the head of which was the Honourable Colonel Pennant, M.P. for the county; the Honourable Lloyd Mostyn, M.P., and other magnates of the northern district of the Principality; and the locality chosen for celebrating the *fête* was exceedingly appropriate, being within view of the Britannia Tubular Bridge, that wonderful and amazing structure which spans the Menai Straits, and connects the two opposite shores of Carnarvon and the island of Anglesey. It is well known to our readers, that this remarkable bridge is one of the most interesting objects of visiting this marvellous structure. The weather being fine, and the scenery along the route delightfully diversified, an excellent opportunity was afforded for viewing the massive proportions of the magnificent tubes, and the other novel bridge, the heavy and colossal proportions of which stand out in such striking contrast with the slender and gossamer-like components of its elder rival the Menai Suspension-bridge, which is used for ordinary vehicles and foot passengers; both structures being situated within a mile of each other. The party having returned filled with lively impressions of the wonderful and stupendous of the majestic pile, the company began to assemble at the George Hotel, adjoining which a spacious pavilion had been elegantly fitted up for the banquet, adorned with drapery, vine-wreaths, and ornamental devices. Covers were laid for about 400, and a gallery erected for the special accommodation of the fair sex, who were invited to be present to witness the interesting proceedings. At six o'clock, Colonel Pennant and the distinguished guest of the evening, Mr. Robert Stephenson, M.P., took their seats at the principal table, being supported, amongst others, by the following:—The Hon. Lloyd Mostyn, M.P.; Sir Charles Felix Smith, Sir Lowa Parry, Mr. W. Jackson, M.P. (a director of the Chester and Holyhead Railway); Mr. Bulkeley Hughes, M.P.; Sir John Hanmer, Bart., M.P.; Mr. H. W. Wynne, M.P.; Mr. Joseph Paxton; J. Sanderson, Esq., Chief Bey, first secretary interpreter to his Highness the Viceroy of Egypt; Sir R. Bulkeley, M.P., Lord-Lieutenant of Anglesey; Mr. Joseph Locke, M.P., for Honiton; Mr John Williams, M.P. for Macclesfield; Mr. Bulkeley Hughes, M.P.; the Very Rev. the Dean of Bangor; Mr. Frank Foster (engineer to the Metropolitan Commissioners of Sewers); Mr. Edwin Clarke (of the Electric Telegraph Company); Mr. M. A. Borthwick, C.E.; Mr. Bemingway (one of the contractors of the Chester and Holyhead Railway), &c.

Mr. Rogers' brass band, from Liverpool, and a company of glee singers, led by Mr. Ryall, were engaged for the occasion, and enlivened the festivities with their performances. As the procession—headed by the chairman and Mr. Stephenson, followed by the vice-president—took the banquet hall, the band struck up, in spirited style, "See the conquering hero comes," and a salute was fired from the steamer *Fairy*, in the river. When the company had all assembled, the pavilion, which was brilliantly lit up, presented a gay and animated appearance

Grace was said by the very Rev. the Dean of Bangor. On the removal of the cloth, "Non nobis Domine" was chanted. The glee singers then sang "God save the Queen," "Prince Albert and the Prince of Wales," together with the other loyal and patriotic toasts, were then duly honoured. After which,

The Chairman, amidst profound silence, rose to propose the toast of the evening—"Our distinguished guest, Robert Stephenson, Esq." He said, it must occur to every mind which reflected on the great improvements effected in this country during the last twenty-five or thirty years tending to ameliorate the social condition of the country, and to develop its natural resources and its industry, that, whether those improvements consisted of docks, harbours, lighthouses, bridges, or railways, they were mainly indebted for them to the skill and energy of our civil engineers, although no property had more honoured or respected, or had attained a reputation more widely spread, than that of their honoured guest. The fame of Stephenson was not confined to England, but extended to every country in the civilised world—(Cheers)—and the engineer who aimed to connect the Atlantic and the Pacific, or to carry a highway through the jungles of India, required to study the principles of Stephenson before he could overcome the obstacles which nature had thrown in his way. (Renewed cheers.) But his crowning work, the Britannia Bridge, situated so near to the spot on which they had assembled—a structure unrivalled in the annals of engineering, and which would have formed an imperishable monument to his fame. (Cheers.) Living in the vicinity of the operations, they had had better opportunities of appreciating the difficulties which Mr. Stephenson had had to encounter, than persons living at a distance. They had been amazed at the enormous magnitude of the task which he had undertaken: they had, day by day, seen with the liveliest admiration the gradual putting together of Stephenson's tubes, the marvellous facility with which they had been floated, and the wonderful machinery by which they had been elevated to the destined altitude. And it was these feelings of admiration, in connection with a deep sense of the importance of the Britannia Bridge, and the railway of which it formed a part in facilitating the communication between England and Ireland, which had elicited the tribute of praise in which that meeting had resulted. (Cheers.) It had been said that that gathering should have assembled at an earlier period; but it should be remembered that the delay had had that advantage at least, that it had afforded the Bridge a year's trial—it had stood the test of the winter gale, and had falsified all the predictions of those who prophesied that it would fall to pieces as soon as a heavy train had run over it. (Cheers.) Under the influence of these feelings, then, he asked them to join him in drinking "The health of Mr. Robert Stephenson" with the utmost enthusiasm. (The toast was drunk amidst unbounded applause, accompanied by a salute from the *Fairy*.)

Mr. R. Stephenson then rose to return thanks, which was the signal for the renewal of vociferous cheering. He said, he begged them to accept his warmest and most heartfelt thanks for the honour they had done him by making him their guest. He assured them that he should ever remember that day, not merely as one on which he had received a high compliment, but as a testimony of their thorough appreciation of the difficulties of the novel and gigantic work which they had seen gradually rise before their view. (Cheers.) When at length he had completed a work of that magnitude, it was generally thought that from that moment it went out of his mind; but he could assure them, that the Chester and Holyhead Railway, of which the bridge formed so conspicuous a feature, still continued to occupy his most anxious attention. That railway, he believed, at no distant day, would become one of the most important links of railway communication in the empire. (Cheers.) Railways in England had not only given a prodigious impetus to that commercial supremacy which had been long a distinguishing feature of this country, but they had diffused comfort and happiness throughout every corner of the land. The working classes, in particular, were greatly benefited by them, because they raised the working man, in point of locomotion, to the level of a peer of the realm. (Renewed cheers.) Any one looking back twenty years ago, could not fail to perceive that the civilisation of this country had then reached a point beyond which it could not go unless some improved mode of locomotion was discovered. (Hear.) That discovery had happily been effected, and the grand secret of our progress of late years lay in the abundance and cheapness of iron. The epochs of civilisation were marked by the refinement given to the implements of human industry. It was not until man had discovered iron that he made any rapid progress. Iron had been the great civiliser, and it was working wonders all around us at the present moment. England had produced from the bowels of the earth, during the last twenty years, more rude ore than was necessary for a railway that would form a girdle round the entire globe, and he believed that we had not yet reached anything like the position which the agency of iron would ultimately secure to us. (Cheers.) The hon. gentleman concluded by repeating his thanks for the honour which had been done to him.

The Chairman afterwards gave "The health of Mr. Locke, M.P., and the other engineers who had co-operated at the floating of the tubes of the bridge."

Mr. Locke acknowledged the compliment, and remarked that, having had an intimate friendship with Mr. Stephenson of thirty years' standing, he could not but feel that honour conferred upon him was in some degree shared by the profession to which they both belonged.

The healths of Mr. Edwin Clark, Mr. Frank Foster, the Directors of the Chester and Holyhead Railway, and Mr. Paxton, were then proposed and duly acknowledged.

The memory of Mr. Telford and of Mr. George Stephenson (Mr. R. Stephenson's father) were severally drunk in solemn silence.

The Lord-Lieutenants, the members of Parliament, the High Sheriffs, &c., of the Principality, were also proposed; and, after some further complimentary toasts, the festivities of the evening were brought to a close

Our acknowledgments are due to the authorities of the London and North-Western and Chester and Holyhead Railways, for their obliging attention to our Artists.

TESTIMONIAL TO MR. RONEY.

One of the most interesting observances peculiar to our present social system is that of acknowledging the meritorious conduct of persons in official positions of trust, by the presentation of some memorial, of artistic design which shall constantly keep in recollection such exemplary services. Of this class of distinctions—honourable alike to donors and receiver—are the very elegant pieces of plate here engraved; and consisting of a centre ornament, and one of a pair of fruit-baskets, in silver, which have just been presented to Mr. Roney, late Secretary to the Eastern Counties Railway, by the junior officers and clerks of that establishment. The centre-piece bears the following inscription:—

TESTIMONIAL PRESENTED TO MR. RONEY, SECRETARY OF THE EASTERN COUNTIES RAILWAY COMPANY.

"Presented to C. P. Roney, Esq., by the junior officers and other servants of the Eastern Counties Railway Company, upon his retirement from the secretaryship, in acknowledgment of his uniform kindness and consideration evinced towards them during the period of his connexion with the service.—1851."

The testimonial was presented on Monday morning, with an appropriate address, by Mr. Hall, the assistant secretary, and a deputation of 14 subscribers for the plate; Mr. Roney having come to town from Dublin to attend the Eastern Counties meeting. Mr. Roney acknowledged the present in a well-graced speech, and expressed the deep gratification he felt, that those servants of the Company with whom he had been connected, as their senior in office, should, on his leaving them, have spontaneously come forward to respond to that courtesy and consideration which he had always endeavoured to carry out towards his junior officers, so as to render at all times the performance of their duties as agreeable as possible.

The testimonial was designed and manufactured by Messrs. Smith, Nicholson, and Co., of Duke-street, Lincoln's Inn-fields. It consists of a centre table ornament, and two baskets for fruit, the whole of rich and tasteful design. The value of the plate is 180 guineas.

QUICK PASSAGE.—The American mail steamer *Pacific* arrived in the Mersey at ten o'clock on Wednesday evening, from New York direct. She left that port on the 16th inst., at midday, and was therefore again accomplished the voyage in barely ten days, allowing for difference of time. On her first day out she ran down and sunk a brig, but saved the crew. She lost some hours in lying to for repairs to her paddle-wheel, damaged by this collision.

THE ROUTE TO CALIFORNIA BY THE ISTHMUS.—The news from California, given in another place, was brought to New York by the steamer *Prometheus*, from Chagres, with 300 passengers, and over half a million of dollars in gold dust. The *New York Herald* says of this arrival:—"The arrival of the steam-ship *Prometheus* at this port on Wednesday is equivalent to the introduction of another epoch in the history of our inter-oceanic communications with California, and the Pacific Islands, and the Eastern hemisphere. The trip from San Francisco, *via* the newly-opened Isthmus route of the Lake Nicaragua and the Sann river, and thence to New York, by the Vanderbilt line of steamers, just accomplished, establishes at once the practicability and the advantage of this route. The passage was made in twenty-nine days, and when the route is completed, it is expected that it will only require about twenty-two days from San Francisco to this city."

FOREIGN AND COLONIAL NEWS.

FRANCE.

From France this week we have scarcely any news of interest,

The only matter in the political world worth noticing is the declarations in favour of the revision of the Constitution, which continue to be made from time to time by the general councils of the departments. Amongst these which are specially mentioned is the council of the Seine and Marne (Paris), which has come to a resolution declaring the necessity of the revision of the Constitution, and especially of the 45th article, which provides against the re-election of the President.

The council general of Somme have also adopted a resolution in favour of revision. Such a decision was unexpected, as General Daingarnier, the representative of this department, possesses considerable influence in it, and is not only opposed to revision, but voted against it in the Assembly. The result, therefore, to which the council have come, is regarded as important. From all appearances, the general councils of the departments will, with few exceptions only, come to the same determination.

According to the *Patrie*, an agent of M. Crémieux has been apprehended at Lyons, upon the charge of endeavouring to seduce the soldiers from their duty.

A statue has been erected at Fontainbleau to General Damesme, who was killed at the barricades in June, 1848. It was inaugurated with much pomp, on Sunday, in the presence of M. Benoist (de la Meurthe), the Vice-President of the Republic, MM. Drouyn de Lhuys, Bavoux, and Pepin Le Halleur, representatives of the people. M. Godin is the sculptor.

A letter from the Count de Chambord arrived during the week in Paris, the object of which, it is said, is to put an end to the divisions existing at present amongst the Legitimist journals and representatives. The Prince declares that he regrets profoundly these divisions, and entreats the persons devoted to his interests not any longer to furnish to the world the spectacle of disunion. It is said that this letter has produced a great effect on those who have been pertinated to read it.

The wheat harvest is completely terminated in France, and the fine dry weather of the last fortnight has enabled the farmers to get in the whole of their crops in excellent condition. Some districts which have given the greatest yield are Lorraine and Alsace. In these districts the yield is above the average; in the other parts of France, it is about an ordinary one, not more. A good part of the wheat of 1850 is still on hand.

UNITED STATES.

The latest accounts this week from New York are to the 16th inst. At Washington a rumour gained very general credence that the Hon. Daniel Webster will not return there to resume the reins of the late State department, but deliver them over to the President with the re-assembling of Congress, which was deemed to be conclusive evidence that he intends to contest the forthcoming election for the Presidential chair.

There had been a great excitement at Buffalo in consequence of the arrest of a coloured man, said to be a fugitive slave. An attempt at rescue was made as he was being conveyed to gaol, but ultimately the authorities beat down the opposition.

From California the accounts are to July 15. At the mines Lynch law was still exercised out, three men having been executed during the fortnight. The Mayor of San Francisco had issued a proclamation, calling upon all good citizens to withdraw from the Vigilance Committee, and abstain from all participation in these acts of violence. The war between the whites and Indians had been renewed near the Klamath River, and five persons had been killed.

From Cuba the intelligence is, as usual, most contradictory. All the private accounts from the island concur in representing the cause of the patriots as progressing most successfully, their numbers now amounting to 4000, with four pieces of artillery; but the official proclamations make light of the entire movement, and assert that it is almost put down. Skirmishes were of frequent occurrence; but from all private sources information are to be relied upon, they have hitherto resulted in favour of the insurgents.

INDIA.

Advices have been received this week from Calcutta of July 15, and from Bombay of July 26, in anticipation of the Overland Mail, but they contain nothing important. A conspiracy to release Dewan Moolraj from his imprisonment at Fort Wiljam had been discovered, and the object of it frustrated. The report of Goolab Singh and several British officers having been murdered is contradicted. The fact of a part of the Nizam's territory being about to be taken for the debt due to this country is confirmed. The punishment of transportation has been introduced into Nepaul, and Allahabad has been selected as the first convict station. It is a singular fact, that the King's brother and General Jung Bahadur's brother and cousin are the first three prisoners doomed to pay that penalty for five years, for being the principal instigators in the late attempted rebellion at Katmandoo. Several villages in the neighbourhood of the Runn of Catch had been washed away by inundation, and many lives were lost.

AUSTRIAN VENGEANCE.—Professor Leopold Ianss, the person referred to in the following decree, is a highly respected man, a distinguished artist, who never meddled with politics, and served in the Imperial chaps. of Vienna full twenty-seven years:—"Decree.—Ianss.—It is has been ascertained that Leopold Ianss, violinist at the Imperial Royal chapel, has not only played in the concert which took place in London, the 12th of July, for the benefit of the Hungarian refugees, but that he has likewise composed a duet on Hungarian melodies for that occasion, he is dismissed, by higher command, from his office as violinist and as professor of the piano and the violin at the Imperial chapel; moreover, he is no longer to receive any salary from the last of August. Issued from the High Chamberlain's office, 12th of August, 1851.—LICHTENSTEIN."

AN INDIAMAN AND ANOTHER VESSEL BURNED AT SEA.—On Tuesday, two serious disasters were made known at Lloyd's—fires at sea, resulting from spontaneous combustion, and occasioning the total loss of two vessels, one named the *Jaeger*, engaged in the East Ind a trade, and the other a large barque employed to convey coal to supply the West India mail steamer *Esk* at Port Royal Island. The loss of former named vessel is regretted to be very heavy. She was a large ship, probably about 600 tons, manned by a crew of 28 individuals, under the charge of Captain Bartlett, and was at the time of the unfortunate calamity proceeding on a voyage to Liverpool (where she belonged) from Calcutta, with a cargo of saltpetre, sugar, and rice. On the 26th of July last, some of the crew noticed an unusual degree of heat below, and made it known to the chief officer on deck, who forthwith proceeded to ascertain the cause. There was no appearance of smoke on deck, but the moment the hatches were taken off the aft hold it shot forth in clouds, thereby announcing to every one on board that the ship was on fire. Attempts were made to gain its locality by removing the cargo and throwing it overboard, but the inauflorable vapour and smoke arising from the cargo almost suffocated the men, and consequently prevented the work from proceeding further. It was, however, ascertained that the fire was raging amongst the cargo in the aft of the vessel, and the only means available to get at it was through the lower deck. Many apertures were cut, and the pumps were got into play, and their full power was ejected on to the smouldering mass beneath, other portion of the crew being severely employed at the buckets. All these exertions were useless, for the conflagration gained upon them with fearful rapidity: the flames soon burst forth up the main hatchway, and, firing the mainmast, set fire to the rigging with lightning velocity, thus rendering the position of the crew one of great peril. Providentially, a ship named the *Europa* had been down to their assistance, the master having observed the smoke from the burning vessel, and put about, to aid the crew, if possible, to extinguish the fire. The boats were immediately lowered, and all hands were brought from the blazing ship. Fortunately, the great quantity of saltpetre on board, the fire raged with intense fury. Within half an hour of her crew leaving, the wheiu length and breadth of the ship presented one immense blaze, and the fire was roaring like a tremendously. In a short time she was burned down to the water's edge, and about midnight the wreck disappeared. The spot was in lat. 36 south, long. 40 west, in the Southern Ocean. The *Europa* landed the crew of the *Jaeger* at Falmouth on Friday morning. The other vessel was, confident the fire was the result of spontaneous combustion, but can give no accurate information as to the character of the goods which caused the catastrophe. The ship, which was the property of Messrs. Gibbs, Bright, and Son, merchants at Liverpool, was with her cargo but partially insured. The second unfortunate loss by fire was the *Kelly Castle*, belonging to Harlepool, chartered by the West India Mail Steamer Company to supply coals at their *dépôt* at Monte Video. That the coals spontaneously ignited, and that on the 5th of June the *Kelly Castle* was found to be on fire. There was no want of exertion on the crew's part to save her from destruction. They worked at the pumps day and night to keep the fire under, but to no purpose; and were at length compelled to take to the boats, where they were exposed four days and nights, suffering great privations, before they were picked up. The vessel that saved them was the *United Kingdom*, from Calcutta, for London, and which deserving the highest commendation for searching for one of the boats, they having parted and lost sight of each other.

ALAS! THE SENATORIAL ELOQUENCE.—"Mr. Speaker: Sir, our fellow-citizen, Mr. Silas Higgins, who was lately a member of this branch of the legislature, is dead, and he died yesterday in the forenoon. He had the brown-coloured hair, and was an uncommon individual. His character was good up to the time of his death, and he never lost that voice. He was fifty six years old, and was taken sick before he died at his boarding-house, where board can be had for a dollar and seventy-five cents a week, washing and lights included. He was an Ingenuine by birth, and in the early part of his life had a father and mother. His uncle, Timothy Higgins, served under General Washington, who was buried soon after his death with military honours, and several guns were fired in firing salutes. Sir, Mr. Speaker—General Washington would have voted for the tariff of 1846 if he had been alive and hadn't a died sometime beforehand. Now, Mr. Speaker, such being the character of General Washington, I motion that we wear crape around the arm of this legislature, and adjourn til to-morrow morning, as an emblem of our respects for the memory of S. Higgins, who is dead, and died of the brownceraters yesterday in the forenoon."

It appears from the official returns which have just been published by the police, that the number of foreigners who have visited Paris during the last six weeks has greatly exceeded that for the corresponding period for several years. In July the number was 8360, of whom 2,913 were English, and 928 Americans.

METROPOLITAN NEWS.

PROPOSED SALE OF THE NEXT PRESENTATION TO THE PARISH OF ST. LUKE'S, CHELSEA.—On Wednesday, the day appointed for the sale by auction of this valuable church preferment, a large number of the inhabitants of the extensive parish of Chelsea attended for the purpose of witnessing the proceedings, amongst whom were Mr. Ryder, the chairman of the Board of Guardians, Mr. Jones, the convener of a local meeting to consider the propriety of endeavouring to secure the presentation of the parish; and other influential inhabitants. After the sale of some other properties, the auctioneer (Mr. Robert Man Farebrother) stated that he had to offer the next presentation (subject to the life of the present incumbent, now in the 76th year of his age) to the Rectory of St. Luke's, Chelsea, which consisted of the detached rectory-house, with offices and gardens, extending to 3¼ acres of excellent glebe land, let for 26 acres of glebe land, let on building leases for lives, which, together with the commuted rent charge in lieu of tithes, create an income of £1604 8s. 2d. per annum; with a prospect of a further increase of £500 per annum as the lives upon which the glebe lands are let drop in. The rector, during his incumbency, has also the right of nomination to the ministry of the Old Church, now the parish chapel, producing about £300 per annum, the present incumbent in his 83rd year. After reading the above particulars, the auctioneer stated that the heavy duties of the parish required the assistance of two curates, whose salaries, together with highway rates, &c., caused a deduction of £387 from the annual income: and said that, taking every source of income, patronage, and reversionary interest into consideration, according to the tables, the value was about £15,000, but it was for bidders to decide what it was worth. The auctioneer then invited any person in the company to make any observation or ask any questions; but a dead silence was maintained, and the lot was put up at £8000; and the biddings went on by £100 each, until they reached £8300, at which price the hammer fell, and the auctioneer declared the property was not so 6.

UNIVERSITY COLLEGE HOSPITAL.—The committee have received notice of a legacy of £300, free of duty, bequeathed by the late Mrs. Mary Ann Beetham, of Upper Gower-street, and directed to be paid within six months after her funeral.

THE HOUSE OF LORDS.—An official notice, signed by the Lord Chamberlain, has been issued, stating that, in consequence of the resumption of the works at the House of Lords, the issue of tickets for viewing the house will be discontinued after the 6th of September, until the meeting of Parliament.

METROPOLITAN STATION OF THE SOUTH-EASTERN RAILWAY.—The company's large new station being now in all respects completed, furnishes perfect accommodation for the great influx of continental traffic, and which, but for the enlargement, during the last six months, could not have been adequately met. The railway arcade has been opened, but owing to the high price asked by the company for the rents, only two shops are at present occupied. For an ordinary small shop, without any additions, the rent required is £100 a year; and for one shop, intended as a stationer's and newspapersellers, the rent asked is £350 a year, there being already a newspaper stall in the station for the trains start. This speculation of the railway company from which so much was expected, is so far at present thought to be a failure.

CLOSING OF THE NEW-ROAD.—On Monday this great thoroughfare was closed for carriage traffic from the end of Seymour-street to King's-cross (a distance of about half a mile) by the erection of barriers at the order of the authorities of St. Pancras. It is expected, from the exceedingly deteriorated state of the road, that several weeks will elapse before it can be ready for public use.

BLACKFRIARS-BRIDGE.—The works in progress for arresting the subsidence of this structure and rendering it convenient for traffic, are so far advanced, that it was re-opened for traffic on Friday morning. Superficially, no difference is discernible in the present state of the roadway and that which preceded it. The granite, however, is now laid upon a bed of concrete, supported by a framework of timber, instead of a mass of earth occupying the entire interval between the arch and the roadway.

THE CASE OF LORD RANELAGH AND THE OFFICIALS OF THE GREENWICH LINE.—On Wednesday, Mr. Metcalf, barrister, applied to the Court of Chancery, on behalf of Lord Ranelagh, for a writ of certiorari to remove from the Central Criminal Court to the Court of Queen's Bench the indictment found against his Lordship by the grand jury at the former court last week, for an assault on the officer of the Greenwich Railway. The Lord Chief Baron (Sir F. Pollock), who was sitting at chambers, at once granted the application, and the case will be tried at the sittings after Michaelmas Term.

METROPOLITAN SEWERS COMMISSION.—On Tuesday the first meeting of this commission since the passing of the Amended Sewers Act, was held at the Chief Office, Greek-street, Soho. Mr Edward Lawes, the newly-appointed chief commissioner, presiding. In his opening address he stated that it was his intention to give his personal attendance daily at the office, in order that he might furnish any information which might be required to persons seeking for facts with the working of the late sewers commission. With regard to the measures which the commissioners might think fit to adopt, he, of course, could not then give an opinion; but this he might say, that it was their most anxious desire to prevent, as much as possible, any interference to drainage as far as possible, while at the same time they intended to promote economy. He was glad to find that they were in this respect supported by the act of Parliament which had recently passed, and also that they should be enabled to hold courts in various localities, so as to suit the convenience of parties whom business might call upon to attend. He would assure the public that the commissioners were indeed most anxious to effect every economy in their power, and, as a means of promoting, in every way, the convenience of the ratepayers. Payments for current expenses were then ordered, and it was further agreed to execute extensive works in Holloway-road, Mortonroad, &c. These works were also ordered to be executed, regardless of expense, on the Greenwich district, to the amount of £1300. The result of these works will be the closing of a large superficies of offensive ditchway bounding the eastern and western sides of Greenwich Park, and the construction of a covered-in brick tank in the Trafalgar-road, capable of holding 7000 feet of sewage. After some further routine business, the court adjourned.

GREENWICH HOSPITAL, WOOLWICH DOCKYARD AND THAMES TUNNEL.—From an official return of the number of visitors to the above places, it appears that an enormous increase has taken place during the last three months. Those who visited the Painted Hall in Greenwich Hospital during the months of May, June, and July, 1850, amounted to 6652, 7431, and 6318 respectively, making a total of 20,398. In the same three months of the present year the numbers have been 8040, 29,855, and 44,781, being a total of 78,671. The estimated number of visitors who merely entered other parts of the building during that period were, in 1850, 26,000; and in 1851, 140,000; thus making a total for 1850 of 46,404, and for 1851 of 182,671. The numbers who visited or passed through the arsenal are estimated at 58,400 for 1850, and 363,171 for 1851. It will be seen, therefore, that the increase during the past three months exceeds that period of last year by 281,000. The number of foreigners who were admitted to the painted Hall during the three months of 1850 was 1451, and of 1851, 60,899. The Greenwich and Woolwich steam-boat traffic during the season has exceeded that of last year by 346,000 persons. At the Woolwich Dockyard the total number of visitors for June, July, and August, 1850, was 5023, 91 of whom were foreigners. The total number of the same period this year is 28,926, of whom 8315 were foreigners. At the Woolwich Arsenal the returns since the 1st of May for the three months of 1850 were 1031, of whom 103 were foreigners. The numbers this year have increased to 28,250, including 3072 foreigners. Upwards of 5000 persons have also been landed daily from the Watermen and Old Woolwich companies' steamers during the last two months, to visit the Thames Tunnel.

FIRES.—A destructive fire broke out on Tuesday morning in the premises belonging to Mr. T. P. Marks, plumber and glass-merchant, at No. 12, East-street, East Greenwich. The flames were first discovered about a quarter before one o'clock, at which time they had obtained such a firm hold of the lower part of the building, that it was with the greatest difficulty the inmates escaped. One female, in jumping from a window, broke her left leg. The premises, which were not mastered before the whole of Mr. Mark's stock in trade, furniture, and wearing apparel were destroyed, and the building gutted. The house No. 14 likewise sustained great damage, and the roof was partially destroyed. Nos. 10, 11, and 12, belonging to Mr. Smith, of the Trafalgar-road, were also considerably damaged, and No. 15, belonging to Mr Clayton. The origin of the fire is unknown. Two other fires, both involving great destruction of property, also occurred on Tuesday—one in Drury-lane, the other at West Brompton.—On Wednesday morning, at one o'clock, a fire was discovered in an immense range of combustible premises situate in Pleasant-row, Pulham-street, Mile-end New Town, used as lard and oil works, and supposed to belong to Mr. Crossley, of Old Montague-street, Whitechapel. The building was originally erected for a sugar-house, and, consisting of great altitude, extended a considerable distance backwards, whilst the frontage was, at the least computation, 100 feet. In spite of the utmost exertions of the firemen and the vast torrents of water scattered over the blazing pile, it was nearly two o'clock before the least impression could be made upon the fire, and not before the building was all but destroyed. Whilst the Brigade engines from Jeffrey-square and Wellclose-square, were proceeding at a rapid pace towards the scene of conflagration, meeting their Spitalfields, the two ponderous machines came into such vio.ent collision with each other that one of the engines was disabled. The ladder smashed the legs of Mackey, the lead engineer, who was severely injured, so much so that he was obliged to be removed to the hospital. The shock was also so severe that a policeman of the H division who was directing the firemen, was dashed off the engine and sustained several serious injuries, amongst which were a number of fractured ribs.

DISCOVERY OF A MANUFACTORY OF SPURIOUS TEA.—The detective revenue police corps, acting under Mr. Scott, have this week discovered an important seat of the spurious tea trade. The premises in question are No. 9, Bond-street, Commercial-road. The officers, on entering the suspected house, proceeded to the kitchen, where they found in working order the wooden presses, drying trays, leather and muslin bags, colouring matters, and all the apparatus and materials employed in the art of giving to exhausted tea-leaves the semblance of the genuine product. Besides a great quantity of raw and partially converted material, 96 packages of the finished article were discovered in a form ready for the market. Neither the conductors of the process nor the owners of the plant were discovered, although their early apprehension is expected. The stock and utensils were, however, seized, and conveyed to the Revenue-office, in Broad-street.

THE ORLEANS FAMILY.—On Tuesday, the anniversary of the death of King Louis Philippe, a funeral service was celebrated in the French (Roman) Catholic Chapel, George-street, Portman-square, by M. l'Abbé Mailly. At ten o'clock the members of the Royal family of Orleans now in England—the Queen Amelia, the Duchess d'Orleans, the Comte de Paris, and the Duc de Chartres, the Duc and Duchesse de Nemours, and Comte d'Eu and Prince d'Alençon, the Prince and Princess de Joinville and Prince Pedro—entered the chapel, and took their places near the altar. They were attended by Mesdames la Duchesse de Sutherland, Marquise de Wind, the Duc de Montmorency, General Comte Damas, General Comte de Chabannes, General Comte d'Houdetot, General Comte Friant, &c., aides-de-camp of the late King; Comte Anatole de Montesquiou, General Comte de Montguyon, M. Reynier, M. de Rumilliac, Admiral Hernoux, M. Trognon, Drs. Gudénau, de Mussy, and Blache, and other faithful servants of the Royal family. Among those who came expressly to pay their pious homage to the memory of the King were M. Guizot, General Aupick, M. Dumont, the Duc de Montebello, Comte de Salvandy, Comte de Montalivet, and M. Jay, ministers to Louis Philippe; the Duc de Trévise, Marquis de Rumigny, General Jacqueminot, Comte de Jarnac, Admiral Baudin, Comte Darn, Baron Vigier, MM. de Lasteyrie, Creton, Ferdinand Barrot, Estancelin, Horace Vernet, Monsieur and Madame Dovinck, M. A. Blanqui, M. H. Le Sueur, Messieurs F. and J. Veuillot, M. G. Sallandrouze, M. Reyniès, M. de Rumilliac, and Madame Devimes, and many other French ladies and gentlemen of distinction. The chapel was quite full, and a great number of persons were obliged to remain outside for want of room.

ROYAL ORTHOPÆDIC HOSPITAL.—On Tuesday the half-yearly general meeting of the governors of the Royal Orthopædic Hospital was held in the board-room, Queries Harris, Esq., the founder, and one of the presidents, occupying the chair. The report stated that during the months 766 in and out patients had been admitted, being an increase over the preceding half-year of 104, and making the total admissions since the opening 11,336. The income of the same period reached nearly £1600, being an increase of £246 over the receipts of the former half-year. The chairman stated that the Earl of Shaftesbury had become the president of that hospital; and having congratulated the meeting upon the progressive prosperity of the charity, the business of the day terminated.

POSTAL FACILITIES.—The Postmaster-General has announced that correspondence addressed "*Poste Restante*," or to be left at the Post-Office, or Post-Office till called for, may be retransmitted; and that arrangements have been made for parties who may wish to avail themselves of the regulation previous to their departure from the metropolis, to leave their address in the Secretary's office, St. Martin's-le-Grand.

BRITISH MUSEUM.—The exterior of the new building is now almost complete, and the interior arrangements are in a forward state of progress. The whole of the scaffold and the unseemly buildings on each side and above the colonnade, have all been removed with the exception of a very small portion, and a high and elegant iron railing painted brown, and ornamented with gold gilding, has been erected on a basement of solid blocks of granite. At each end of the railing square pillars of granite have been constructed, leaving a carriage entrance of gigantic proportions, with iron wicket entrance on either side, for the admission of visitors. The front of the new building can now be fully seen, and presents a chaste and imposing appearance. The Museum is open to the public during three days in the week, and a countless throng of visitors, principally composed of country people, wend their way to and fro, and in and out, from morning till evening, both inwards and outwards all day long. The Library, which is on the ground-floor, immediately on the right-hand side of the entrance, is now open to the public without ticket, and thousands avail themselves of the unrestrained admission to view the extensive collection of valuable and rare works in the Library, and which are admirably arranged in neat compartments. One of the principal features of attraction is the old charter manuscripts, and other public documents, which are displayed in glass cases to the gaze of the curious. The antiquarian department is also an object of great attraction, and excites the admiration of the learned and the wonderment of the ignorant in such matters. Altogether the British Museum is now in its exterior appearance one of the handsomest of our public edifices.

BIRTHS AND DEATHS.—In the metropolitan districts, the births registered for the week ending Saturday last, August 23, were—Males, 772; females, 683: total, 1455. The average of six corresponding weeks in 1845-50 was 1281. The deaths numbered in the same week were 936. The deaths in the week ending July 26th were 956; in August they rose successively to 1010, 1038, and 1061; and they have again declined to 936. In the corresponding week of 1849, when epidemic cholera was raging, the total mortality rose to 2456 deaths, more than half of which were the consequence of its fatal violence; in the same week of 1847 it rose to 1087; but, with these exceptions, the number registered last week is higher than in any of the corresponding weeks of 1841-50. Of the 936 persons who died last week, 502 were children under 15 years of age, 262 were 15 years and under 60, and 164 had reached 60 years or upwards. 290 children, whose deaths are now recorded, had not attained one year of age. In the summer returns epidemics are in the ascendant, and this class now includes 314 fatal cases. Of this number, 168 are due to diarrhœa, dysentery, and cholera; next in amount is typhus, with which remittent fever, rheumatic, &c., counts 54; smallpox, measles, number each 16; scarlatina, 15; hooping-cough, 8; croup, 5; and thrush, 10. Though scarlatina does not spread fatally at the present time, particular families have suffered severely; and in the notes of registrars, a case in Deptford is reported where the disease in the same family carried off two children, while a third has also been attacked in the same family, the house being without drainage, and consequently subject to an accumulation of nuisance. The tubercular cases in the table of this summer are of peculiar importance; it comprises scrofula, which was the fatal cause in 10 cases, tabes mesenterica, and hydrocephalus, which number respectively 14 and 90, and phthisis (or consumption), which numbers 136. The deaths by violence are mentioned disease is about the ordinary amount. The deaths ascribed to disease of the respiratory organs are 72, those from diseases of the digestive organs 53, neither of these results differing much from the average of the corresponding week. Twenty deaths from cholera were registered in the week. The disease has been fatal chiefly to young children, four only of the sufferers having been of mature years. The duration of the illness is specified in 256 of the fatal cases, and in only one of these did death ensue in a less period than three days. When "Asiatic" cholera prevails, one-half the cases terminate within 24 hours; the disease which is common at this period of the year, and called "English" cholera, though not confined to this country alone, does not, in half of the fatal cases, produce death in less than three days.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean reading of the thermometer was above 30 in. on Monday, Tuesday, and Wednesday; and the mean of the week was 29 941 in. The mean temperature of the week was 53·8 deg., or about 3 deg. below the average of the week in the years 1841-50. It was highest on Thursday and Friday, the highest on each day having been 79·8 deg, and the mean about 68 deg., which is more than 7 deg, above the average. The wind generally blew from the south-west.

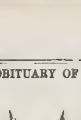
A GAS ENGINE.—An interesting piece of news from America is the assertion made in the Cincinnati papers, that a Mr. Solomans, of that city, has invented a gas engine, which is to supersede steam:—"With common whiting, sulphuric acid, and water, he generates the gas. Five dollars worth of these materials, says the *Sonpareil*, will serve to propel a boat across the Ohio half a dozen times; and if there be no leakage, it will keep the boat in motion until it wears out. The fluid has a pressure of 50 pounds on the square inch, while water has none except that of gravity. Water at the boiling point gives a pressure of 15 pounds. With the addition of 30 degrees of heat the power is double, giving 30 pounds; and so on, doubling with every addition of 30 degrees of heat, which raises the 3840 pounds under a mean of 60 degrees to 1080 pounds; no engine can endure. But with the gas, twenty degrees of heat gives 1080 pounds; 40 degrees gives 2160 pounds; 80 degrees gives 4320 pounds; that 120 degrees less than boiling heat gives a power of 8640 pounds to the gas, than 452 give by converting water into steam. The result is that it requires 1800 dols. of expense to run a boat to New Orleans and back with the old engine, while this one will do the same work for 90 dols. The machinery for putting its own gas, while a small furnace, almost half as large as a common furnace for heating flat-irons, furnishes all the heat he desires. A handful of charcoal does the work, and the boiler is as large as a good cooking-stove. The size of a gas engine is not a new one. In this case a most dangerous explosive mixture is made, which readily ignites—not with the whiting, but the carbon of the vessel in which the acid is contained. The greater the power, the greater the danger. Every lad that has studied chemistry has fired off glass cannons charged with this kind of gas. The description above given with the quotation marks is taken from a Cincinnati paper

NAVAL AND MILITARY FORCE OF NAPLES.—At this moment, when the attention of Europe is directed by Mr. Gladstone's *expose*, to the manner in which the King of Naples lords it over Sicily and South Italy, the following account of the physical force of the kingdom of the Two Sicilies may not be without use in truction and entertainment to some of the readers of this Journa.. The military peace establishment consists of 45,000 armed men; the infantry numbering 29,000, the cavalry to 4500; the artillery and genie to 2600; while the gendarmes number upwards of 8000. The military age extends from 18 to 25; each soldier (with the exception of the gendarmes, artillerymen, and volunteers, who have to serve eight years) being at liberty to return to a civil occupation after five years' service. This force, which in time of war or public disturbance can be increased to 64,337, is not, however, so effective as is one-fourth the number of British or French troops, for the men are badly-disciplined, ill-paid, deficient in *courage moral*, and the other qualities which constitute good soldiers; their conduct in the late revolutionary wars when they fled before a handful of freshly-levied men, led one to conclude, only attests the truth of these strictures. Contemptible as the military establishment, the naval is still more so; it consists of but two line-of-battle ships, five frigates, two corvettes, and a few smaller vessels, mounting in all 496 guns. There are three battalions of marines, two consisting of 1000 men each, and the other of 600 men. The murmurs of dotage and imbecility must have, indeed, rendered the public mind of Magna Grecia corrupt, worthless, and degraded, when such a force is sufficient to strangle, its opinion, and check all yearnings for free institutions.

KENSINGTON GARDENS have been closed to equestrians and vehicles of any sort, so that the danger and alarm of being run over, experienced by frequenters of these delightful gardens, is now at an end.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

SIR HENRY HEATHCOTE.



ADMIRAL SIR HENRY HEATHCOTE was the fourth son of Sir William Heathcote, Bart., of Hursley Park, Hants, and the uncle of Sir William Heathcote, the present Baronet; he was born in 1777, and entered the British Navy early in life. He became a Post-Captain in 1798, and afterwards a Vice-Admiral of the Blue in 1841, and latterly an Admiral of the Blue. He saw much active service. In 1804, while in command of the *Galatea* frigate, he escorted a fleet of merchantmen to the West Indies. He was Captain of the *Scipio*, on the Mediterranean station, at the close of the late war. He received the honour of Knighthood in 1815, on the recommendation of Sir Gore Ousely, Bart., Ambassador to Persia, and Mirza Abul Hassan, Envoy from that country, who in 1811 he conveyed to Persia in H. M. ship *Lion*. For many years this gallant officer was the King's agent, victualler and store-keeper at Sheerness. The Admiral married, in 1799, Elizabeth, daughter of Thomas Gusco't, Esq., by whom he has had four sons and seven daughters. His eldest son is an officer in the army, and his second son is a clergyman of the Church of England. Sir Henry Heathcote died recently at his residence, near Havre-de-Grace.

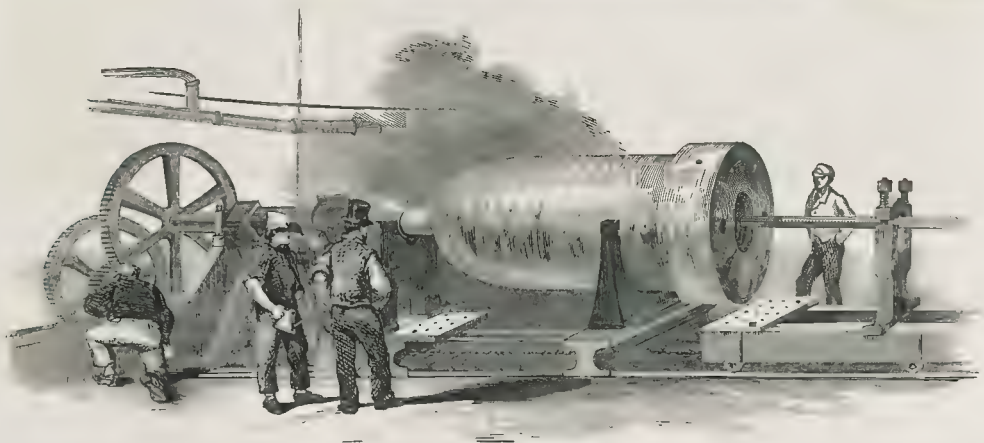
LORD JOHN HAY.

REAR-ADMIRAL LORD JOHN HAY was the third son of George, seventh Marquis of Tweeddale, and brother of the present Marquis. He was born on the 1st of April, 1793. He entered the British navy as a first-class volunteer, on the 4th December, 1804, on board the *Monarch*, Captain Searle, and he rose, during his distinguished career, through the various grades of his profession, to that of Rear-Admiral of the Blue, which he obtained just before his death.

Lord John Hay was one of the most active and skilful officers in her Majesty's service, and he proved on many occasions essentially useful to his country. He lost his left arm at the cutting out of some vessels in Hybres Bay; and on the night of the 16th July, 1808, he contributed to the capture, after a memorably furious engagement, of the Turkish man-of-war, *Badere Zaffer*. In 1815, the Lordship commanded the *Queenan*, in which sloop he served in the Channel and North American stations until 1818. During the recent Spanish Carlist war Lord John Hay had charge of a battalion of Marines, and acted as Commander-in-Chief against the Carlists in the north-east of Spain. His gallant conduct in that capacity earned him a high reputation, especially for the part he took at the siege of Bilboa, and subsequently in aiding the British Legion at Bernaal, and in protecting its retreat when repulsed by the Carlists. He received, in 1837, the Grand Cross of the Order of Charles III., and the Companionship of the Bath. He was also a K.C.H., and naval *aide-de-camp* to the Queen.

In 1846 Lord John Hay was appointed Assistant Superintendent of Woolwich Dockyard, Chairman of the Board of Naval Construction, and a Lord of the Admiralty: this last office he retained till he was made, on the 9th Feb., 1850, Captain Superintendent of the Dover packets.

His Lordship married, in 1824, Lady Susan Montagu, youngest daughter of Lord Rokeby



BORING THE CYLINDER OF THE "BRITANNIA PRESS," AT THE BANK QUAY FOUNDRY, WARRINGTON.

CYLINDER OF THE GREAT HYDRAULIC PRESS USED FOR RAISING THE TUBES OF THE BRITANNIA BRIDGE.

In association with the event represented upon the front page of this week's Number of the ILLUSTRATED LONDON NEWS—namely, the Dinner given to Mr. Robert Stephenson, at Bangor, in commemoration of his completing the Britannia Bridge—the accompanying picture of the casting of a very important portion of the machinery requisite for this vast work will, doubtless, be especially interesting at the present moment.

Before we describe the operations here pictured, we should observe that the great "Britannia Press," which has already excited so much attention in the engineering world, forms one of the most prominent features in the Mechanical Section of the Great Exhibition. It is exhibited by the Bank Quay Foundry Company, of Warrington, by whom it was constructed, and who were at a very large outlay in forwarding their truly gigantic machine to the "Crystal Palace."

The various parts of the press, amounting to an aggregate load of about sixty tons, required a special train of the North-Western Railway Company to convey it to London. This train consisted of eleven trucks and two "break" vans, each mounted on four wheels only—the greatest load on any one truck being the cylinder, of fifteen tons.

The journey as far as Rugby was unattended by any circumstances worthy of notice, except that at every station it was found necessary to make a stoppage of about a quarter of an hour, in order to allow the axles of the trucks having the cylinder and crosshead time to cool. This, of course, occasioned considerable delay; but the whole time occupied between Warrington and Rugby was only seven hours.

In consequence of the greatly increased traffic at Rugby, owing to the junction of the Midland Railway with that of the North-Western, the station-master deemed it prudent to keep back part of this extraordinary train until the daylight of the following morning, when the trucks, containing the cylinder, crosshead, and jacket, were forwarded, and arrived safely at the Camden station, where the whole, being transferred into Chaplin and Horne's waggons, was conveyed to the Great Building in Hyde Park, sixty powerful horses having been engaged for the service. The arrival at the Building created much interest, as the leviathan machine was conveyed to its destination.

The cylinder, necessarily of great strength, is 22 inches internal diameter; the thickness of the cast-iron being 10 inches; the length externally is 9 feet 1½ inches.

To form the cylinder by the ordinary process of casting, it required 22 tons of fluid metal; the surplus being for the head, *or git*, which weighs 2½ tons.

A view of the process of casting the cylinder, as taken by our artist at the Bank Quay Foundry, is here shown. In this operation three powerful cranes were used, each of which is capable of raising 40 tons. Attached to each of these cranes was a ladle, one holding ten tons of fluid metal, while each of the others contained five tons. The whole of the the metal was poured into the cylinder mould through four 2 inch runners. time occupied in this operation amounting to only 2½ minutes. In the next place, the head, or "git," was kept in a fluid state for six hours after the "run," by replacing the metal, as it became stiff, with metal fresh from the furnace, and of the highest attainable temperature, for the purpose of filling up the space in the immense body of metal below, consequent upon the contraction. When, after three days, the cylinder was partly denuded of the outer coat of sand, it was found to be red-hot. In seven days it was raised from the pit in which it had been cast, and in ten days it was sufficiently cool to allow men well inured to heat to approach it, for the purpose of removing the remaining sand.

Owing to the great contractile power of iron in its transition from the solid to the fluid state, it was found very difficult to dress the core from the interior; and some idea may be formed of the effect upon the core by the compression caused, by the *ten-inch* metal contracting to *nine-tenths* of its substance.

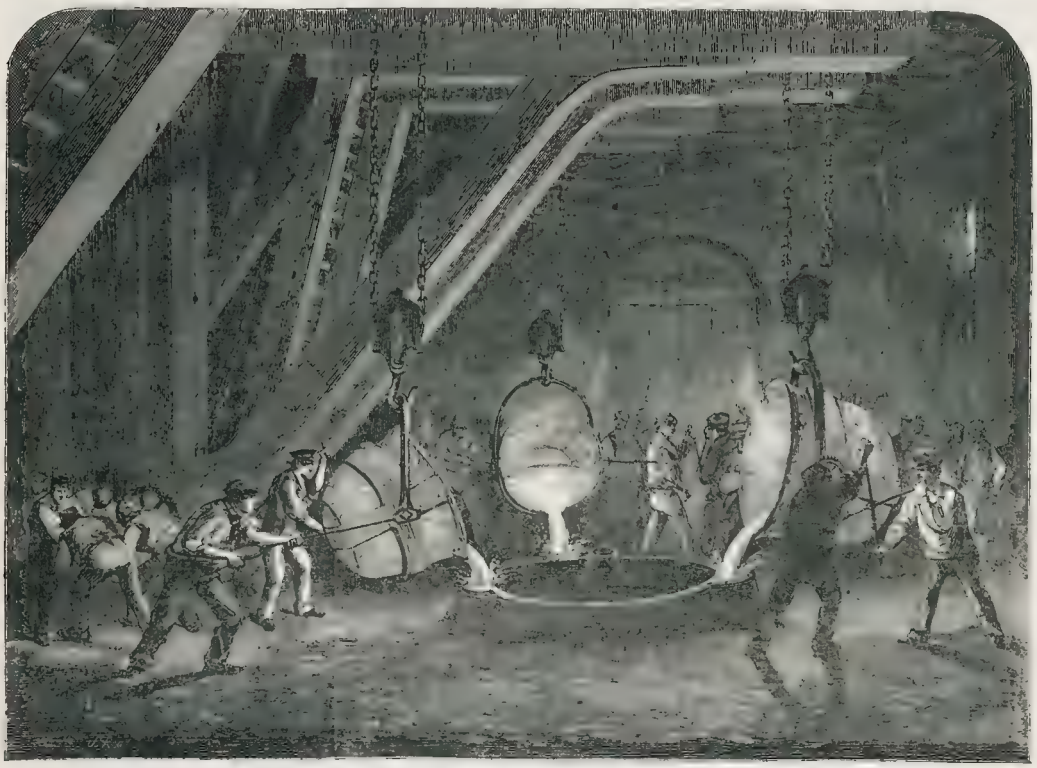
The fire-brick core was first baked in a large oven to such a degree of hardness, that, upon being struck with a hammer, it sounded as a bell.

The core bricks were all broken up by means of long bars of iron, and then extracted one piece at a time. The loam was found to be so hard, that even the point of a diamond was found to produce no effect upon its surface.

The boring was the next process; the same as that used for finishing the inside of guns.

After the first tube had been raised, the cylinder met with an accident, which Mr. Clark describes as follows:

"In little more than a fortnight after the operation, the presses were removed ready for raising the next tube. They were lowered and raised again by means of capstans with an eight-inch rope; and in this operation another accident occurred with the unlucky press. The cylinder was lowered from a cat-head at the top of the tower. The rope from the blocks led to a capstan on the beach, on which three turns only were taken. While the cylinder, weighing 15 tons, was suspended at an elevation of 140 feet above the water, the rope unexpectedly surged on the capstan, and was dragged out of the hands of the men who were holding it. The cylinder descended with fearful velocity, dragging the rope through the block-tackle and round the capstan, which fortunately became pallid by the jerk. As the velocity increased the cat-head in the tower gave way, and the cylinder fell on the stone shelf below, fracturing the masonry and gliding off fifty or sixty feet into the Straits. Several men were injured, and a sailor, who was serving out the coil of rope, was dragged round the capstan and killed. None of the tackle was broken, and the press was easily raised by ropes attached to, it and was found to be uninjured by the fall."



CASTING THE [illegible] OF THE "BRITANNIA [illegible]" AT THE [illegible]AY FOUNDRY, WARRINGTON.

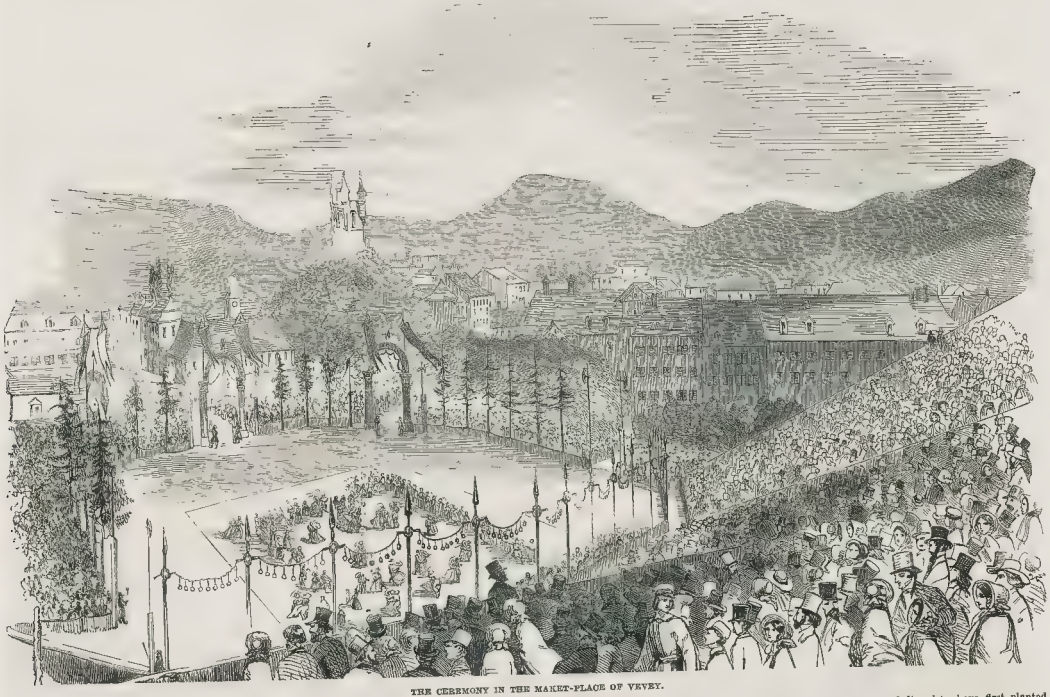
LA FETE DES VIGNERONS, AT VEVEY.

CAR OF CERES.—SUMMER.

CAR OF PALLAS.—SPRING.

Whilst a handful of *fast* tourists have, within the present month, been "seeking the bubble reputation" by climbing the snow-clad pinnacles of Mont Blanc, the peasantry of the smiling valley on the opposite side of the Lake of Geneva have been celebrating a picturesque festival, which has afforded the highest gratification to the multitudes of visitors and residents from all parts of Europe, who flock to Switzerland at this period of the year.

The scene of this commemoration was Vevey, one of the most enjoyable places in the world, situated upon the margin of the Lake Leman, at a point where the scenery of its banks is, perhaps, most beautiful. Rousseau has glorified it in his "Confessions;" but the festival we are about to describe is associated with fame of much higher



THE CEREMONY IN THE MARKET-PLACE OF VEVEY.

antiquity, and is traceable to that overflow of gratitude to bounteous nature, which, more or less, characterises all states of society.

The canton of Vaud, of which Vevey is the second town, is famed for its vines, which are considered equal to any in Europe; and the sunny district, extending hence to Lausanne, and called La Vaux, possesses an antiquarian celebrity for replenishing the soul-reviving cup from the choicest vintages. The Romans are believed to have first planted the vine on these hills; the discovery of a stone inscribed "Libero Patri Colliensi," proves that they had erected a temple to Bacchus at Collium,

WINTER.

CAR OF BACCHUS.—AUTUMN.

a little village, now called Cully, on the margin of the lake, between Vevey and Lausanne.

In such a region it was very natural that the grateful outpouring of the people should take the lead, which, by the way, is worth following, since it brings about profitable industrial results. A society, or guild, of some antiquity, called "l'Abbaye des Vignerons," having for its motto, "Ora et labora," exists at Vevey. Its object is one of direct utility, in promoting the cultivation of the vine; "and for this purpose it despatches every spring and autumn 'experts,' qualified persons, to survey all the vineyards of the district, and upon their report and testimony it rewards the most skilful and industrious vine-dressers with medals and pruning-hooks (*serpes d'honneur*), as prizes."

The bestowal of rewards is a very seasonable occasion for popular rejoicing; and, accordingly, this society celebrates once in fifteen or twenty years a festival called "La Fête des Vignerons." The last celebration was in 1833, and the one previous to that in 1797; that we are about to describe took place on the 7th and 8th of the present month. The official programme is before us, bearing on its title-page the motto of the guild, "Ora et labora," good advice well followed. The historical introduction glances at the epoch of the vintage as characterised by festivity in all wine-growing countries; for then has the culture escaped the peril of frost, heavy rain, and hail, the season is, therefore, one of festivity; and, softly adds the writer, "Cette époque est encore celle où le plus grand nombre de marriages se contiennent puisque, après avoir reçu le prix de ses travaux, le vigueron peut doter ses enfans."

The origin of the vine-dressers' *fête* at Vevey has been lost in what the writer affectedly calls *the night of time*; but the reader is enlightened by the information, that when, in 1688, a terrible fire destroyed two-thirds of the town, it also burnt nearly all the archives of the society, from which only was saved a manual dated 1647, and a bacchanalian or loving-cup, bearing the escutcheons of the abbots, the oldest of which was dated 1618. Tradition, however, refers the source to the *fêtes* of the Athenians, held in honour of Ceres and Bacchus.

Contenting ourselves with some 100 years antiquity, we learn that the holy fathers of the Monastery of Hautcrêt, in the district of Oron, and other proprietors, possessed a considerable extent of vineyard in the environs of Vevey; and, as a reward to the vine-dressers, they got up a characteristic procession, bearing implements, after which they sat down to a frugal repast, whereat, however, wine was distributed profusely, and the conviviality ran high with songs in the *patois* of the country. For a long time the procession kept its primitive simplicity; but each year brought amateurs and money contributions, which led to the introduction of new features or properties; and thus were admitted to the procession the allegories of classic fable—Bacchus and his cask (the foolish have their tub, and the witty their butt); with Ceres and other divinities.

The *fête* in 1797 was very brilliant; that of 1819 was still more splendid, notwithstanding the intervening calamitous years, and the *fête* of 1833 was very magnificent.

This year, the funds of the Society being prosperous, and a fine vintage at hand, the members determined on another celebration. The preliminary arrangements are simple enough. The Society appoint a commission, assisted by "experts," who inspect the vines at the two most important periods, that is, after the pruning and the fall of the leaves. The success of the vine-dressers is impartially recorded; and the two most fortunate during nine years are rewarded with a crown and a medal of honour. Fifty other dressers, whose success extends to six years, receive a medal of honour and a prize, and those of three years receive prizes.

The report of the commission charged with getting up the present *fête* details the programme, and gives the list of the members of the council, the executive commission, &c.:

The first division of the procession (*troupe d'honneur*) consisted of the archer of the ordre; 6 young vine-dressers, carrying crowns and prizes; the Abbot, 6 members of the council, the society's flag; besides vine dressers, wearing crowns, and carrying a wreath of flowers; members of the executive commission, the secretary, constable, &c.

The second division (*troupe de Pales*) was headed by 35 musicians and 3 trumpeters, 8 bearers of crowns and bouquets of flowers, the high priest and attendants; two children, carrying a pair of turtle-doves in a cage; Pallas, in the chariot of Spring, drawn by two black cows: then followed children of Spring; gardeners bearing flowers, fruits, and vegetables; shepherds and shepherdesses leading sheep, goats, and a dog; reapers, bearing sickles; haymakers, with rakes and a car of hay; cowherds and cows, and milkmaids, &c.

The third division (*troupe de Cérès*) differed from the preceding one chiefly by Ceres and her attendants, in the car of Summer, drawn by a pair of red oxen, formed its principal group: preceded by reapers, bearing sheaves of corn, and children carrying bee-hives; and followed by gleaners and harvesters, carrying sickles and ears of corn; a load of corn and attendant; threshers, winnowers, ploughmen, and sowers; a harrow and driver, a miller and ass, and two young drovers with a basket.

The fourth division (*troupe de Bacchus*) was headed, like its predecessors, with 35 musicians and 3 trumpeters; then came 8 bearers of crowns, flowers and fruits, not forgetting grapes; the high priest, accompanied by 2 young fauns, bearing *thyrsi*; Bacchus, in the car of Autumn, drawn by four white horses covered with tigers' skins; 6 Indians leading the tigers; 2 Indians in the car; 2 Indians at the side, bearing the canopy and fan; 12 fauns surrounding the car; 5 satyrs carrying clubs; 16 fauns, with *thyrsi*; 16 Bacchantes, with tambourines; Silenus upon an ass, and 2 Indian attendants.

Then came a long train of workmen from the vineyard, headed by musicians; the chief of the vine-dressers in Spring, with attendants bearing planting implements; pruners, pruning-knives, &c. Next appeared the chief of the vine-dressers in Autumn, with a flag, and 2 rustic attendants; bearers of fruits; 24 male and female grape-gatherers; a wine-press and attendants, upon a car; coopers in a car; a man carrying bully, &c.

The fifth division (*la noce et la troupe d'Hiver*) was headed by musicians; a Vaudois bridegroom and an Argovien bride; their parents Vaudois and Argovians; 4 wedding friends, Vaudois vine-dressers; 20 boys and girls in Swiss costumes; and a car, with the bride's dresser; followed by chamois-hunters and the car of Winter, with wood covered with snow, attendant wood-cutters, &c.

The sixth division (*Saisons*) was headed by drummers and fifers and players of wind-instruments; officers and soldiers, who headed the *cortège*, and formed its guard of honour.

In the town of Vevey, the market-place (about the size of Finsbury-square) was the principal scene of the *fête*, and arranged so as to show it to the greatest advantage, and at the same time accommodate a great number of spectators. Here was built an amphitheatre, with covered circus, with 8000 seats, which were let at one franc each; and a public *café*: and around were ranged the several *troupes*, the whole within young trees and a rustic balustrade; and when the *troupes* were ranged within this verdant framework the effect was highly picturesque.

There were also built three grand triumphal arches—to Spring, or Pallas; Summer, or Ceres; and Autumn, or Bacchus—each most characteristically decorated. There was also a spacious platform for dancing; a tribune for the coronation ceremony, surrounded with places upon tripods, which blazed at night with resin fires, and illuminated the entire place. Three staircases led to the tribune, the middle one being *Chomeur*, for the crowned vine-dressers and the high priests; ornamented with flowers and evergreens, and guarded by soldiers. In the centre was a statue of Liberty, upon a column pedestal; and the banner, trade and general decoration of the tribune had a very pleasing effect. Throughout the place were poles with streamers, indicating, by their colours, the positions of the several *troupes*. There were, also, decorative flags and trophies upon the amphitheatre, &c.

The festivities commenced on Thursday, August 7, at four in the morning, with a salvo of twenty-one cannons. At five, the *troupes* or divisions of the procession, assembled in various parts of the town, and next was formed the Swiss guard of honour. We can, however, only add, that the *first day's* proceedings were the crowning of the two vine-dressers, with invocation, hymn of praise, and chorus; the procession being, however, the most striking feature of the day, after the crowning there was dancing and singing, a procession through the town; and then, again, dance and song—a banquet closing the day's festivities. The *second day*, Friday, August 8, was devoted to dancing and singing—a banquet, and a ball and illumination in the evening.

It is estimated that there were some 40,000 persons present at the recent *fête:* and when we tell the reader that the programme extends to forty pages, and the "book of the songs" to thirty-two, he will conclude there to have been an ample modicum of entertainment for the two days. Altogether, the semi-classic character of the proceedings must delight reminded one of the pastorals and bucolics of the bard of Mantua.

A few parting words of the banquet, whose "Bathe and Breach" had laid down the guests upon the water side; but the repast was simple and frugal as a ploughman's meal. The places were indicated by flags, and the spot had no other decoration than that which nature had given it. The various costumes were grouped beneath the noble trees; and the beautiful lake and the sublime Alps presented a spectacle which art will never approximate. The ball on the second evening was, however, of a very fairy-like character; but there was more substantial meaning in the whole *fête*, "*qui rend hommage au travail et à l'agriculture.*"

We should add, that the accompanying illustration of the Vevey Market-place was sketched by Mr. Burford, jun., of Leicester-square, during the *fête*.

CALENDAR FOR THE WEEK.

SUNDAY, August 31.—Eleventh Sunday after Trinity.
MONDAY, September 1.—Partridge Shooting begins.
TUESDAY, 2.—London burnt, 1666.
WEDNESDAY, 3.—Oliver Cromwell died, 1658.

BOOKS, &c., RECEIVED DURING THE WEEK.

Hunt a Hand-book to the Great Exhibition.—Hunt's Photography.—Strickland's Lives of the Queens of Scotland Rambles in North Wales.—Memoirs of Dr. Chalmers. Vol. 3.—The Literature of the Day.—Illustrated Catalogue, Part 3.—Rise of Schoolmistress.—Young Lion of the Dale.—The Crystal Palace.

L'EDITION FRANCAISE.

L'ILLUSTRATED LONDON NEWS, en FRANCAIS,

Renferme dans son Numéro de SAMEDI, 30 AOUT, toutes les nouvelles les plus intéressantes dans la politique, la littérature, les arts, le théâtre, &c. On y trouvera ainsi divers articles de critique et d'actualité, ainsi qu'une Chronique de l'Exposition. Le plupart de ces articles sont accompagnés de belles Illustrations.

Tous les Numéros qui ont paru depuis le commencement ont été réimprimés. On peut se les procurer séparément, ou réunis en un brochure, avec une couverture magnifiquement illustré. Prix du Cahier, contenant Douze Numéros et une magnifique Vue du Palais de Crystal tirée à part, 6 shillings.

NOTA.—Les Propriétaires de l'ILLUSTRATED LONDON NEWS croient devoir faire observer ici, que le Journal Français publié sous le titre ci-dessus n'est point une traduction de l'Edition Anglais, mais bien une publication et une rédaction toute séparée et dirigée à Londres par des écrivains de la presse Parisienne.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 30, 1851.

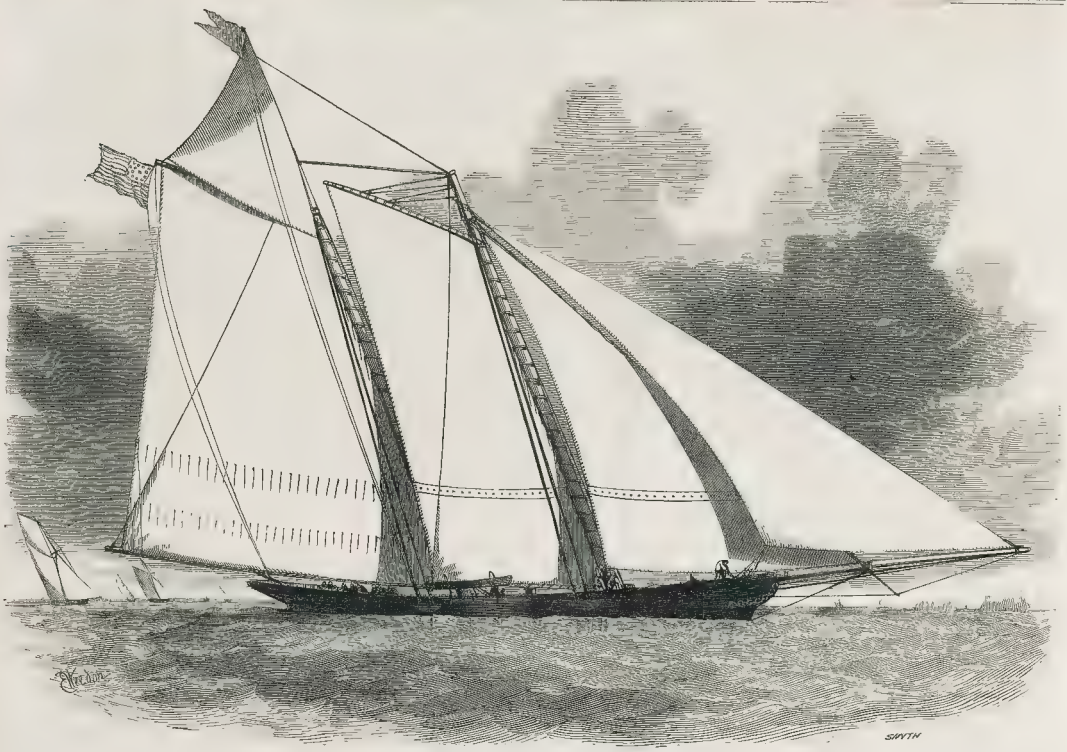
We have extracted in another column an article from the *Times* on the subject of the Stamp Duty on Newspapers. That particular impost, like all impolitic taxes, is not only bad as a whole, but in every part. Our contemporary, without entering into the great question, whether the Government should or should not impose a penny or any other stamp duty upon the broadsheets which act as the purveyors of political intelligence, confines itself, in the article we have quoted, to the minor, but very important question of the policy or justice of limiting the size of newspapers by the operation of the stamp. In the reasoning of our contemporary we fully concur, and add a few facts with reference to our own Journal, which will show the uselessness of the limitation as regards any purposes, social or other, which the Government can have in view, and its injustice as regards ourselves and our readers. It often occurs, on occasions of public interest, and especially when the Engravings which we offer to our subscribers are greater in number or in size than usual, that our ordinary sheet is insufficient for the full detail and due illustration of the remaining news of the week, and that we require an additional half-sheet to keep up with the march of events. For these half-sheet Supplements—which are as much a part of the particular paper with which they are issued as the name or title itself—we never make any charge, and stand, in this respect, in the same position as the *Times*, which only prints supplements that it may be enabled to present the public with the news of the day as fully as the public demand, and as in our age the general and well understood interests of society require. Here, however, the Government interposes; and because the newspaper with the supplement exceeds the arbitrary size originally fixed by Lord Monteagle (then Mr. Spring Rice), it demands an additional stamp duty of one halfpenny. It seems to us that there is no more justice in this case than there would be if the Government, in imposing the Income Tax, took 3 per cent. only from men of a certain size and weight—say 6 feet 10 inches in height, and 11 stone in weight—and demanded 4½ per cent. from every man whose proportion and weight exceeded this standard. For ourselves, when we issue a double paper, at a double price, and in fact supply the public with two newspapers instead of one, we have no other objection to the tax than that there should be such a tax at all; but when we issue a gratuitous Supplement, out of the sheer impossibility which continually arises of expressing our news and our illustrations within the charmed superficies of a certain square inches of Mr. Spring Rice, our objection takes a wider range. We might even grant the original penny stamp to be fair, without admitting that the additional halfpenny was either just or politic. For every gratuitous half-sheet Supplement which we issue, we have to pay to the Government, for halfpenny stamps, over and above all other taxation, upwards of £200, and sometimes of £250 or £300. Of course, with such a burden upon our energies and our resources, we cannot be expected to be over liberal in our gratuitous Supplements; but, were it not for this tax of £250, we should much more frequently increase the size of our paper, and might possibly give a Supplement every week. We have no objection to provide the paper and print, the Engravings, and all the literary, pictorial, and general matter necessary to make our Journal more and more worthy of the patronage of its readers; but when the officials of Somerset House put their hands into our purse to this enormous extent whenever we are inclined to fetch up any arrear of news, we endeavour, in self-defence, to make such occasions as rare as possible. And, while our readers thus lose the advantage which we would be willing to afford, the Government at the year's end finds itself no richer by the inroads it makes upon our money. If it insists upon having its £200 or £250 for our Supplement, we stand upon the defensive whenever we can, and keep ourselves within our old limits, thereby consuming a much less quantity of paper than we should otherwise do. By this means, the revenue, while it on rare occasions receives our £250, continually loses the Excise duty of

1½d. per lb. on the large quantity of paper which we should otherwise consume.

What the Government takes from us in the stamp one week, it loses in the Excise duty in the next; so that, while the proprietors of newspapers, and the public are the losers, the Government is no gainer by the bargain. Let the Government leave the size of a newspaper to be settled between those who supply the commodity and those who purchase it. That would be the common sense and the common justice of the matter. We are not arguing for the mere repeal of the additional stamp. We should be glad if the tax were entirely abolished, as we should then be enabled to give the public the whole advantage of the diminution in price; but if the stamp duty is to be retained, we do not see why the limitation of the size of newspapers within Lord Monteagle's inches should make a part of it. In fact, the Government might as well limit the size of a penny loaf as of a newspaper; and while the Excise duty remains upon paper, its policy is as suicidal as it is otherwise objectionable. But all these taxes upon political and general knowledge are indefensible. Look at them in what light and from what side we will, we find something mischievous and unjust about them. The true remedy would be to abolish them altogether.

WE all know, that, as regards liberty, in the name of which the Revolution of 1848 was accomplished, our friends of the French Republic enjoy much less than was permitted them under King Louis Philippe. That Monarch and his Ministers, although they instituted prosecutions without number against the press for the expression of free opinion on matters of public policy, allowed some shadow of liberty to public writers. The newspapers were permitted to discuss political, social, and general questions; and, if not very violent and personal, escaped the notice of the Procureur du Roi. But, under the Republic, there is no liberty of opinion at all. The press is enslaved, and the censorship of Italy itself can hardly be more severe in the repression of honest thought than the Ministry of Louis Napoleon. It is not only violence and personality that are forbidden, as under Louis Philippe, but the most ordinary dissent from the opinions, and the most mild condemnation of the acts, of men in power. For very harmless article in the *Evénement*, against capital punishments, M. Charles Hugo has been condemned to a heavy fine and to six months' imprisonment. The article, which attacked nobody, was written perhaps with the vehemence of a young man, perhaps with a little bad taste; but certainly it displayed no other feeling than one that was creditable to the heart of the writer. That our readers may see what freedom of opinion is in France, we subjoin it, as follows:—

THE EXECUTION OF MONTCHARMONT.—Four days ago, in an open square of a French town, and in the face of day and civilisation, the law, that is to say, the divine and sacred force of society, laid hold of a wretched man, who plunged and kicked, and having bound him neck and heels, dragged him by the hair of the head to the scaffold, blushing from his lacerated skin. Four days ago, before a population in profound consternation, the law, for an hour together, wrestled with crime. What had this man done against society? He had killed. What was society doing to this man? Why, making him a martyr. Partisans of capital punishment, what was your object in bringing this wretched assassin to the guillotine? To show apparently to all, human justice in its forces and power—to raise in the minds of the masses the sentiment of right, by calling on them to assist at the punishment of a vile creature—to accomplish, in fact, a solemn, imposing, and terrible act. What have you done? You have committed a violent, terrible, and regretable act; instead of enlisting the crowd on the side of the law, you have almost made them range themselves on the side of the sufferer! This man, who had a little before been an object of horror, you change into an object of pity. You employ two, then four, then I know not how many, to kill this man, who struggled against being put to death. The first executioner failed, then you call a second; at length, after had a day of toil and effort, you succeed in putting an end to him, and you wipe off the blood from your knife, and the sweat from your brow. No! you have not been imposing—you have not been solemn—no, you have not been terrible. You have been odious,



THE SCHOONER YACHT "AMERICA."

would not start. The following were the entries for the Queen's Cup, the course being round the Isle of Wight:—

Yachts.	Tons.	Owners.	Flags.
Volante ..	48 ..	J. L. Craigie, Esq. ..	White.
Fernande ..	127 ..	Major Martyn ..	Purple and orange.
Surprise ..	15 ..	W. H. Woodhouse, Esq. ..	White, black Maltese ×.
America ..	170 ..	Commodore Stevens ..	Blue, with stars.
Alarm ..	193 ..	J. Weld, Esq. ..	Red and white.
Wildfire ..	42 ..	F. Thynne, Esq. ..	Blue and white chequered.
Fanny ..	92 ..	H. Young, Esq. ..	——
Bacchante ..	80 ..	E. H. Jones, Esq. ..	Blue and white cross.
Constance ..	218 ..	Marquis of Conyngham ..	Blue, with red hand.
Destiny ..	197 ..	C. P. Leslie, Esq. ..	——

At ten o'clock the yachts took their station off Ryde pier, when, in consequence of there being the desideratum for the *America*—viz. a six-knot breeze, she declined starting with the squadron, and the *Fernande* and the *Constance* were also withdrawn.

At five minutes after ten o'clock the starting gun was fired from the Commodore's yacht, the *Brilliant*, when the *Wildfire*, belonging to the Cork Regatta Club (which, though not in the race on Friday, headed the American clipper for a considerable distance on that occasion), was the first to get under weigh towards the westward with a light breeze from the W.S.W., with a strong ebb tide, followed by the *Bacchante*, and close in her lee by the *Volante* and *Alarm*.

The Needles were rounded as follows:—

	H.	M.	S.
Wildfire	1	15	0
Bacchante	1	18	0
Volante	1	23	0
Alarm	1	23	0

In making up to the starting-point off Ryde, the *Volante*, who appeared to have been rather badly handled, made a series of short tacks, and the *Alarm* taking advantage of this, made a long tack, and succeeded in first arriving off the *Brilliant* schooner, when the signal gun proclaimed her victorious. The following is the time of arrival:—

	H.	M.	S.
Alarm	5	26	0
Bacchante	5	30	0
Volante	5	30	0
Wildfire	5	31	0

Just before the vessels above-named had got in, the raking *America* was seen making her way round the Nab Light, and with a most extraordinary movement made one reach from the light to Stroke Buy, and by another tack rounded the *Brilliant* in gallant style. To accomplish the same feat that the *America* had performed the *Alarm* took 10 tacks, and the *Volante* made at least 20 for the same distance. Although not in the match, and not leaving the starting point, as has been stated, for 65 minutes after the rest, the *Yankee* clipper, now became the wonder of the south, rounded the *Brilliant* at 5 41, thereby accomplishing the distance within ten minutes of the *Wildfire*, and gaining in round numbers 40 minutes. Had the *America*, therefore, proceeded into the match at the appointed hour, there can be no doubt that the same fortunate result would here have greeted the "flying stranger," as she succeeded in obtaining last week at Cowes against the entire Royal Yacht Squadron.

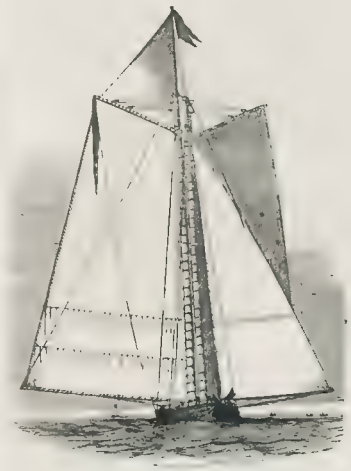
At about six o'clock, the visitors on the pier were much satisfied on observing the *Fairy* steam-yacht approaching from the direction of Osborne, with the Royal standard flying from the main; and it was soon made known that her Majesty, Prince Albert, and the Royal children were on board, who had come down to witness the yachts which had contended for the prize, which it is her Majesty's intention to confer annually upon the club. After coming opposite the pier, and receiving the hearty plaudits of the spectators, the *Fairy* proceeded on her return to Osborne.

The day being the birthday of his Royal Highness Prince Albert, a Royal salute was fired from the Club-house in honour of that day, and a similar demonstra-

THE MATCH BY THE CLUB OF ALL NATIONS AT COWES.—THE "AMERICA" YACHT MAKING A "START AHEAD."

tion was made by the *Vengeance*, 90, lying at Spithead, which was gally dressed with colours of all nations from stem to stern.

Preparations for the International Contest.—The greatest excitement prevails as to the result of the single match between the *America* and the *Titania*. The latter vessel is now being fitted with new spars and other improvements; but at present, no day has been named when their respective merits are to be tested. In fact, no positive arrangements can be made, as it will rest entirely with the Earl of Wilton, the Commodore of the Royal Yacht Squadron, when he shall consider the day suitable for the purpose.



THE "AMERICA." BOOMING OUT.

The *America* was fully described in our Journal for August 9.

As many of our readers may not be conversant with the technicalities of ship-building terms, we have endeavoured, in the accompanying diagram, to give the relative position of the beam (or extreme breadth), as it occurs in the old style of yacht, and in the *America*.

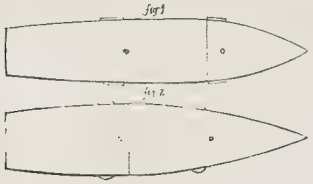


Fig. 1 represents the shape of vessels on the old plan—the dotted line being the position of the beam.
Fig. 2. Plan of the *America*.

CARRIAGE PREPARED FOR HER MAJESTY BY THE GREAT NORTHERN RAILWAY COMPANY.

THE QUEEN'S VISIT TO THE NORTH.

The arrangements for the reception and transit of the Queen to the North, via the Great Northern Railway, were completed under the direction of Mr. Lewis Cubitt, the engineer, and Mr. Seymour Clarke, the general manager of the Great Northern line.

Three superb saloon carriages have been built by the Railway Company for the occasion—one for her Majesty and her Royal Consort, another for his Royal Highness the Prince of Wales, and the third for the Royal suite. These carriages have been built by Mr C. C. Williams, of the railway carriage works, Glasshouse-yard, Goswell-street.

The Royal Saloon is 18 feet 1 in. long, by 7 feet 4 in broad, and is constructed entirely of East Indian Moulmein teak, unpainted, but highly varnished. The mouldings are richly gilt, and the doors bear the Royal arms, superbly painted and surrounded with a wreath of laurel, the quarters bearing the Orders of the Garter, Bath, and other orders of knighthood. Over each doorway is fixed a splendid gilt crown. The moveable glasses are provided with Mr. Williams's patent balance-weight arrangement, by which means they can be placed to any height required, and worked with ease. The interior of the carriage is lined with the richest white brocaded Indian silk, and the pattern raised bouquets of flowers. At one end of the saloon is placed a couch, covered with the same material as the carriage is lined with. At the opposite end is a withdrawing-room, fitted up with a mirror, extending from top to bottom of carriage, and having on each side of it, washstand, &c. Attached to the door of partition there is a mirror extending the whole depth, and which reflects back the light from a lamp fixed above the couch, and provided with a powerful reflector, thereby most effectively lighting the saloon. On either side of this door is placed an elegant easy chair, which, as well as two small easy-chairs, for the use, if required, of any of the Royal children, is covered with the same material as the couch. In front of the couch is placed a richly-carved walnut-tree table, the whole of the furniture, both in the saloon and withdrawing-room, being of the same material. The curtains, which are of beautiful pale green silk, are attached to gilt rods, and the floor is entirely covered with a dark maroon carpet with a scarlet figure, of the same pattern as that in the House of Lords.

The Prince of Wales's carriage and the carriage for the Royal suite are of the same size and material as the Queen's carriage, and are constructed in a similar manner, with withdrawing-room, &c.; the interior of both carriages being covered with plain drab brocaded silk: the furniture is of walnut-tree wood, and the couches and chairs being covered with an elegant dark-blue figured silk; the curtains also are of blue silk. The carpets are of the same pattern as in the Queen's saloon; the colour, blue with a white figure.

It being generally known that Wednesday was fixed for the final departure of her Majesty and Prince Albert, with the Royal family, from the Isle of Wight, and that the Royal party would arrive at the Nine Elms Station shortly after twelve o'clock, long before the time appointed a number of well-dressed ladies and other persons assembled on the line of route from the station to Buckingham Palace, to witness the Queen's arrival

Shortly after eight o'clock on Wednesday morning, her Majesty, his Royal Highness Prince Albert, his Royal Highness the Prince of Wales, the Princess Royal, Prince Alfred, the Princesses Alice, Helena, and the rest of the Royal family, attended by Lord Alfred Paget, Lord in

HER MAJESTY'S DEPARTURE FROM THE GREAT NORTHERN RAILWAY TERMINUS, AT KING'S-CROSS.

Watting; Hon. C. B. Phipps, Equerry in Waiting; the Hon. Captain Gordon, the Countess Desart, and Miss Hildyard, left Osborne House, and embarked on board the *Victoria and Albert* yacht, commanded by Lord Frederick Fitzclarence, arriving, after a calm passage, at Portsmouth Dockyard, at about a quarter to ten. Her Majesty on landing was received by Sir Francis Blagdon Capel, Sir Edward Parry, General Sir Charles Napier, in addition to the Dock authorities. The Royal party immediately proceeded to the platform of the station of the South-Western Railway, where they were received by Mr. Chaplin, M.P., the chairman of the company; Mr. Cornelius Scorin, and Mr. Gooch, Esqrs. Her Majesty and Prince Albert, with the Royal family and suite, entered the carriages, the luggage and attendants of her Majesty having previously arrived, when the Royal standard was hoisted, and precisely at ten o'clock, the signal for departure being given, the train, which consisted of seven carriages, started, and arrived at the terminus at Nine Elms exactly at twenty minutes to twelve, the Royal standard being hoisted on the platform, where her Majesty and the Royal family were welcomed with the usual demonstrations of loyalty and respect.

The Queen arrived at Buckingham Palace at twenty-five minutes to one o'clock precisely. The *cortige* consisted of four Royal carriages, each drawn by two bays. Her Majesty was escorted by a detachment of the 4th Hussar Light Dragoons, preceded by an outrider. In front of the Palace, and in St. James's and the Green Parks, several thousands of persons assembled to witness her Majesty's arrival; and the moment the Royal carriage in which her Majesty was seated entered Buckingham Gate, she was received with the most enthusiastic plaudits, which her Majesty and Prince Albert acknowledged with the most condescending and affable manner. The Royal party appeared to be in excellent health and high spirits. On her Majesty alighting at the main entrance to the Palace the Royal standard was hoisted. The crowd remained promenading in front of the Palace, and in the parks, during the time the Royal party and suite remained inside to take luncheon, which was about an hour. Shortly before half-past one the Royal carriages were again brought round. The first was entered by her Majesty, Prince Albert, the Prince of Wales, and the Princess Royal. Two of the other Royal children were in the next carriage, and a third was occupied by Lord J. Russell, who now joined the Royal party. Her Majesty was received with the usual demonstrations of loyal affection, which was most graciously responded to both by her Majesty and Prince Albert.

On leaving the palace, the course taken by the Royal carriages was as follows:—

Through St. James's-park as far as Marlborough-house, emerging into Pall Mall by the gates near the Royal German chapel, St. James's, thence by Waterloo-place, Regent-street, Cavendish-square, Leicester-square, Cranbourn-street, Long Acre, Hanover-street, Endell-street, Bloomsbury-street, Charlotte-street, Bedford-square, Gower-street, Torrington-place, Gordon-square, Gordon-street, Tavistock-square, Tavistock-place, Compton-street, Brunswick-square, and Guilford-street, into Gray's-inn-road, thence up Maiden-lane to the terminus.

At a quarter to two o'clock the Royal carriages drove into the station. Prince Albert was the first to alight, and the Queen, the Prince of Wales, and the Princess Royal immediately followed. They were received more immediately by Mr. Denison, the chairman of the company, the other directors, Mr. Cubitt, the engineer; and Mr. Mowatt, the secretary; and welcomed also most cordially by the very large assemblage of spectators of both sexes, who had been collecting and augmenting from twelve o'clock, and who were stationed on a portion of the platform which was railed off on either side of the place of debarcation. Without staying to enter the reception-room, which the loyal zeal of the directors of the company had prepared for her use, the Queen at once entered the centre carriage of the attendant train. In the same carriage with Prince Albert, and the two eldest Royal children. The carriage next to that of the Queen was appropriated to the Premier; that preceding it to a maid of honour and the lady in waiting. There were in all eight carriages, those in the rear being occupied by Mr. Denison, Mr. Mowatt, and a party of the directors. While preparations were being made for starting, Prince Albert engaged in conversation with Lord Jocelyn, who was in attendance. In about five minutes after the Royal *cortige* arrived at the station, the signal was given for departure, and the Queen commenced her journey to the North amid the acclamations of all present. Mr. Sturrick, superintendent of the locomotive department, drove the engine.

BOSTON

The Royal party arrived here at half-past six o'clock in the evening. The station was decorated with flowers and evergreens, and the platform was covered with scarlet cloth, and protected by an awning. Her Majesty and Prince Albert were received by the Royal carriage by Mr. Denison, and immediately on alighting were presented with addresses from the corporation and inhabitants of the borough. The Queen stopped to speak a few words to Sir Charles Wood, the Chancellor of the Exchequer, who was standing on the platform, as were also Lord Cathcart in full regimentals, attended by two aides-de-camp. The band of the 1st West Yorkshire Yeomanry Cavalry was stationed at the opposite side of the platform, and played the National Anthem. The Royal family entered the carriages, and proceeded to the town, amidst the loud plaudits of thousands of spectators, who evinced their delight in a variety of ways, such as cheering, waving of hats and handkerchiefs, &c. On reaching the National School, the children, who were on a platform, sang "God save the Queen." Her Majesty passed on to the Angel Hotel, where a guard of honour, consisting of the soldiers of the 85th Infantry, were waiting to receive the Royal party.

In the evening the Mansion House, Guildhall, and several of the residence of the professional men and tradesmen, were brilliantly illuminated. The devices at the Mansion House consisted of the corporation arms—a castle, with the motto "Son comfort et Siesse," a crown, and the letters "V. A." On the Guildhall was a crown on the pediment, and underneath the word "Welcome," and V. A." on each wing. This was immediately opposite the Angel Hotel, and had an imposing appearance. The other devices in the town were generally of a tasteful character.

In the evening a dinner was given by George Johnson, Esq., mayor, to a party of about 160 persons, amongst whom were Mr. Denison, M.P., the chairman, and several directors of the Great Northern Railway. The dinner took place in the banqueting-room of the Mansion-house.

The proceedings of the day terminated by a grand display of fireworks, in a field at the south end of the town, at which thousands of persons were present.

Her Majesty, the Prince, and suite, left the Angel Inn, Doncaster, at nine o'clock on Thursday morning, and were received by the Mayor and authorities at the railway station. The Royal train then left, *en route* for Edinburgh.

BIRTH-DAY OF THE PRINCE CONSORT.—Tuesday last being the anniversary of his Royal Highness Prince Albert's birth-day, flags were flying on the various churches and public buildings at the west end of town, and at night many places were illuminated with stars and other devices. Amongst the most conspicuous was Her Majesty's Theatre, over the front of which was a splendid crown, and "P. A.," surmounted by wreaths, the whole in lamps of variegated colours The Guards' Club, of one of which his Royal Highness is Colonel, displayed a very fine "P. A.," surmounted by a Royal crown in gas, and having in the centre a brilliant star, surmounted by the motto of *Tris Juncta in uno*." There were also several stars and crowns over the shops of his Royal Highness's tradespeople. The St. Anne's Theatre displayed a large star, in jets of gas, lighting up a display of imitation paste ornaments, with very brilliant effect. At Windsor the day was celebrated by Royal salutes, fired at Fort Belvidere and in the Bachelor's Acre; by merry peals on the bells of St. John's church and St. George's chapel; a public dinner at the Castle Hotel, and ball and an imposing appearance. The other devices in the town were generally of a tasteful character.

THE DUKE OF WELLINGTON AT THE BRITANNIA BRIDGE.—His Grace the Duke of Wellington arrived on Thursday evening week, by the express train, at the Bangor station, for the purpose of inspecting the Britannia Tubular Bridge. His Grace was met at the station by T. A. Smith, Esq., of Vaenol, with whom he proceeded on foot, followed by his carriage, towards Bangor-ferry, where he passed the night at the George Hotel. Before six o'clock on Friday morning, the Duke, in company with Mr Smith, was met at the Britannia-bridge by Mr. Leigh, the resident engineer of the line; and, after having closely inspected the tube, returned to the Bangor station, and at half-past seven set off, accompanied by Mr. Leigh, by an express train, for the purpose of inspecting the Conway-bridge, so as to be in time to proceed from thence by 9 45 train for London. The Duke looked remarkably well, and seemed much gratified whilst inspecting the Britannia tube. It was an interesting sight to see two veterans so distinguished in different field operations walking side by side up the Holyhead-road from the railway station.

MUSIC.

WORCESTER MUSICAL FESTIVAL.

(From our own Correspondent.)

WORCESTER, Thursday.

Notwithstanding the all-absorbing attractions of the London Exhibition, the 129th annual Festival of Worcester, Hereford, and Gloucester has been given this week, at the first-mentioned town; the local amateurs having resolved to run all risks, rather than postpone the meeting and abandon the regular order in the gatherings of the three choirs. The stewards who have so handsomely come forward on this occasion, to undertake, in conjunction with the guarantee fund (about £800) of the citizens of the town, the financial responsibilities of the Festival, are the Earl of Harrowby, Sir C. Hastings, M.D., W. S. P. Hughes, Esq., Mayor of Worcester; Rev. H. H. Cradick, Canon, and Rev. A. Wheeler, Precentor of Worcester Cathedral; Rev. C. Crews, Vicar of Longdon; J. Benbow, Esq., M.P.; J. P. Brown Westhead, Esq., M.P.; G. Rushout, Esq., M.P.; R. Clive, Esq.; W. E. Essington, Esq.; and W. Hancocks, Esq. The meeting is under the immediate patronage of the Queen and Prince Albert, and the Bishop of Worcester is the President. It was Dr. Thomas Bisse, Chancellor of Hereford, who first suggested the idea of the collections at the Cathedral doors after the performances of the three choirs, for the benefit of the widows and orphans of clergymen in the three dioceses: the text of his first sermon (in 1725) in aid of the charity was taken from Ecclesiastes—"I got me men singers and women singers, and the delights of the sons of men, as musical instruments, and that of all sorts." Originally, only choral services were performed on the occasion; but the knowledge of music progressed, the arrangements were on a larger scale, and there can be no question that these annual festivals have been the pioneers of art in this country. The collections each morning at the Cathedral, after the prayers, are exclusively appropriated to the charity, the outlay for the engagement of *artistes*, and the incidental expences, being paid for the sale of tickets; the stewards and guarantee fund being the resort only in case of deficiency. It was in 1809, at the festival in this town, that the plan of giving miscellaneous concerts in the evening, and of devoting the mornings to sacred works, was commenced, and has since been established to the present day. In 1785, the privilege of music progressed, the arrangements were on a larger scale, and there can be no question that these annual festivals have been the pioneers of art in this country. The collections each morning at the Cathedral, after the prayers, are exclusively appropriated to the charity, the outlay for the engagement of *artistes*, and the incidental expences, being paid for the sale of tickets; the stewards and guarantee fund being the resort only in case of deficiency. It was in 1809, at the festival in this town, that the plan of giving miscellaneous concerts in the evening, and of devoting the mornings to sacred works, was commenced, and has since been established to the present day. In 1785, the privilege of music progressed, but, owing to a dispute with the corporation, the Dean and Chapter granted their celebrated choir to the city officials, and the Dean and Chapter granted their celebrated choir to the city officials, and the Dean and Chapter granted their celebrated choir to the city officials, and

THE NEWSPAPER STAMP.

(From the *Times.*)

Though the committee on newspaper stamps has not ventured to pronounce very dogmatically on the original objects of the inquiry, it has placed in a clearer light some of the anomalies maintained in this branch of taxation. A newspaper is so far held to partake of a public character that it receives public consideration, and it is distributed under what are the cheapest and most favourable conditions the agency of the public post. This distribution has sometimes been described as a liberal equivalent for the stamp duty. We believe, however, that the privilege of free post enjoyed by newspapers is traceable in consideration of a more enlightened character than the mere wish to compensate a tax which might much more readily have been removed at once. Government owes a co-operation to the universal distribution of that knowledge by which the economy is maintained in the love of freedom, the path of progress, and the way of peace. It is both proper and politic that the aid of the postal machinery should be extended to the public journals; but how are we to define the publications to which this aid is due? The committee acknowledge their inability to ascertain the strict meaning of the term "news;" but this is less remarkable than that there should be such strange mistakes as to the material constitution of a "newspaper." All the world considers that in purchasing this morning's edition of *The Times* it purchases one paper; Government looks that it purchases one and a half.

In every possible sense but that created by act of Parliament, *The Times* of today is a single paper. It is confined to the information of a single daily period; it has its single, peculiar number in the series of our impressions; it has its own share, and no more, of whatever a paper contains; and, above all, it is supplied to the public at the price fixed charge of a single copy. By every rule, therefore, of justice and equity, it should be taxed as a single copy by Government, and yet we are compelled to pay for a copy and a half. This result arises from the notable conception of a Whig Minister, who was graciously pleased to specify the extent of information which the public might receive for five pence. In buying a newspaper, a purchaser was not permit ed to get all which the seller might be inclined to give. A public journal was defined, not as a collection or production of one kind or another, but as a surface of letterpress not exceeding an area 1320 square inches. If it surpassed these dimens ons and reached to 2220 inches, it was described to be a newspaper and a half; and if it exceeded 2295 inches, it was set down as *two* newspapers, all evidences of the senses to the contrary notwithstanding. The effect of this device was naturally to deprive the public of what they might otherwise obtain for their money, or at any rate to tax the publisher so heavily for such piece of liberality as to confine his sacrifices to the fewest possible occasions. We usually give the readers of the *Times* a full sheet in exchange for their 5*d.* Government does its best to reduce this number to 8, and panels us enormously, whenever, at periods of emergency, we extend the bargain to 16.

Beyond doubt, if an article is to be the subject of taxation, it may be necessary in some cases to specify the unit of measurement, and enact the limits within which a commodity is to pass for one article, and beyond which it is to be taken as two. It would be unjust, in levying a house tax, to consider every tenement as a single dwelling-house, neither more nor less, whatever might be its size or rental; and it would be folly to assess foreign wines by the cask, without defining what a cask might contain. But there is a certain rule of great simplicity which will infallibly resolve this difficulty wherever it can be applied.—*Whatever is sold at a fixed price may be taxed by the fixed measure.* Whatever the seller defines as a single article in receiving his money, may be safely appraised as a single article by the officers of the revenue. If the price of a cask of wine was fixed at £10, nobody would ask Government might very securely remit to the seller the care of seeing that the cask did not materially exceed the dimensions pr sumed. The infallible laws of trade will always secure such a commercial balance between the cost and the gue, that no apprehensions in this respect need ever be entertained. The case is exactly this between ourselves and the public. It stands to plain reason that we could only sell the matter of two newspapers for the price of one at a loss to ourselves immensely exceeding the profit we could make by defrauding Government of a stamp. As long as we take 5*d.*, and 5*d.* only for our paper, it may be relied upon that we shall not increase the dimensions of our impression to the damage of the revenue; though as long as we are fixed for the slightest improvement of the bargain, it is clear that we must frequently curtail our commodity to the loss of the public. Occasionally periodical publications issue a double number" at a double price, and in this case they are fairly charged with a double duty; but such an idea is incompatible with the title and functions of a daily journal. If we publish the substance of twenty numbers in the morning, we must still publish our number to-morrow. We cannot get two days into one, or defraud the revenue by making one stamp cover the matter of two. Our payments, like our issue, must recur with every successive number, and to limit the bulk of the article which, under these conditions, we might contrive to supply, is simply to lay fetters upon enterprise, and to circumscribe the advantages of the reader.

Our experience is just as much an integral part of the paper as any other four pages out of the twelve. To say that it is printed on a separate sheet is only saying, that it is so printed as to secure the greatest convenience of form and distribution in the contents of the paper generally. It would be as unreasonable to print all the twelve pages together on a single slip twenty-four yards long. The shape given to a newspaper is a mere matter of fancy. Some journals take the form, some an oc.avo. Some are published in columns, others of their matter, some 32, some more. The *Times*, when folded and prepared for manual use, is usually in three sheets and no one of these is any more an extra number than the other. The *Times* of the day is that precise quantity of matter; but the endeavour to confines under a heavy penalty to a certain number of pages, whether may be the pressure or magnitude of events, can be nothing but a proportionate blow at the diffusion of knowledge, the spirit of enterprise, the freedom of journalism, and the interests of the public.

The mere idea of defining a "newspaper" by its superficial area is preposterous in the extreme; but even if it were thought fitting to refer to such a contrivance, it is perfectly manifest that an impression must always be kept sufficiently close to the treadmill unity by the simple operations of profit and loss. What we are content to sell as a single paper, Government may be safely content to tax as such. There are limits to the power of human machinery, capital, skill, and judgment. A newspaper, like everything else, must be made productive; and if the price remains fixed, the article supplied can never be so indefinitely magnified as to affect its taxable proportions. The tax on a "supplement" is a fine for providing the public with more than a certain amount of information, and stands convicted, upon the first inquiry, of equal impolicy and injustice. If newspapers are to contribute to the revenue, they should do so on the broad principles of reason and right, and not on the basis of their "superficial areas." Their dimensions are matter for arrangement between the proprietors and the public; and whether they are stamped for 5*d.* or 1*d.*, or stamped for postage, all should be treated as single impressions which are sold at a single price.

THE CHESS TOURNAMENT,

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—When Theseites only rallied, he was allowed to go on as long as he pleased; but Achilles felled him with a single blow of his fist when he directed his coarse ridicule to a subject more dignified than himself. On this principle, I would have allowed the anonymous Chess writer in *Bell's Life* to complain, with admirable self-consistency, of the "rotten eggs" thrown at him by another anonymous; but when he resorts to such remarks as the following, he must be ordered to withdraw them by proof, or eat his own words with the grace of a self-convicted liar. He is reiterating his assertion, that the games lately played at the National Tournament were played in a private room by the players expressly for publication:—"The player stipulating for this condition is open to the imputation of being actuated by one or more of the following motives:—1*st.* He feels unequal to the game of his brother players at large while playing, because he fancies the majority of them will like to see him licked. 2*d.* He prefers a 'wrangle,' if he can neither 'win' nor 'lie.' 3*d.* He may wish to bribe his adversary to lose an important game." He then proceeds with this very significant fandango—"Of course, we do not say that any of the players in the match in question had any of these feelings! then why not have played throughout in the face of the world?" meaning thereby that the said players were actuated by these unworthy feelings. All these disclaimers are positively bashe-faced, as everybody knows. The anonymous Chess Editor of *Bell's Life* has, then, with a felicity of expression peculiar to himself (for I presume that there are no other Chess writers), and certainly none among the gentlemen of letters, who would indulge in such terms as "neither win nor lie," "a tanker and his trull," and similar *eleganties literatium*), charged upon the players in the Tournament, that they played in a private room, because they "would be the wrangle," or "to bribe their adversaries." This impugns the honour of Mr. Wyvill, Mr. Andersen, Captain Kennedy, Mr. Staunton, and many others, of direct implication, it also affects every member of the committee, including many noble as well as Chess distinguished names. I was a subscriber to the Tournament, though neither a player nor a member of the committee. I am therefore entitled to call on the Chess editor of *Bell's Life to London* to make good his "negative pregnant." It is in vain to make the call in a letter addressed to himself: I know by experience, that, if this is done with the publication of your name, it subjects you to insulting rejoinder. But it is done anonymously, then the slanderer, being himself anonymous, pitcons'y talks of "rotten eggs." I therefore appeal to you, as the acknowledged Chess organ of the day, to insert this challenge in your paper. Though I do not choose to enter the lists of scurrility with this or any other writer, and therefore assume a *nom de guerre*, my name is well known to you, and you are able to vouch for the fact that I am neither a writer in this or any other Chess controversy, nor directly nor indirectly interested in the Tournament or its results, or in the credit or any of its players. But, in common with all honest men, I abhor trickery and manœuvring, with the same hatred that I abhor anonymous slanders. If there is the very smallest foundation for charging upon the players the degrading motives thus ascribed to them, I shall withdraw my name from the St. George's Club with disgust. If, as I verily believe, it is a foul and unfounded imputation, I shall publish my opinion of the author (who, though anonymous, is well known to me and most Chess amateurs), in a way that will assuredly inform him who the party is that writes under the true character of A CANTAB.

The Rev. H. P. Hope, incumbent of Leigh, and chaplain of the Shrewsbrine Union Workhouse, has been committed for trial on the charge of forgery. It is supposed the rev. gentleman was involved in railway speculations.

31. R to K Kt 5th	R takes B	77. Q to K Kt 7th (ch)	K to Q R 3d
32. K to R 2d	Q R to K sq	78. Q to Q B 7th (ch)	K to Q Kt 3d
33. Q to K Kt sq	B takes R	79. Q to Q B 8th (ch)	K to Q R 3d
34. Q takes Q (ch)	K R to K Kt 3d	80. Q to Q Kt 8th (ch)	K to Q R 5th
35. Q to her 2d	P to Q B 3d	81. Q to Q Kt 6th	P to Q Kt 6th
36. B takes R (ch)	B takes R (j)	82. K to the 2d	B to Q Kt 4th
37. Q to K Kt 5th	Kt to Q B 2d	83. Q to Q B 7th (ch)	K to Kt 5th (disc. ch)
38. Q to Q Kt 6th	Kt to Q Kt 4th	84. K to his 3d	R to Q B 4th
39. Q to Q 8th	Q to Q Kt 3d	85. Q to Q 8th	Kt to Q 6th
40. Q to her 2d (f)	R to Q sq	86. Q to Q 4th (ch)	K to Q 5th
41. P to Q B 4th	R takes Q P	87. K to Q 2d	P to Q Kt 7th
42. Q to K B 4th	Kt to Q B 4th	88. Q to Q B 3d (ch)	K to Q 4 5th
43. Q to K B 6th	Kt to Q 3d	89. Q to Q 2d (g)	K to Q Kt 3th (ch)
44. K to Kt sq	R to Q 8th (ch)	90. K to Kt sq	R to Q R 7th (ch, g)
45. K to B sq	R to Q 7th (ch)	91. K takes B	R takes Q
46. K to Kt sq	R to Q 8th (ch)	And wins.	

(a) In a preceding game, Black replied with K B to Q B 4th, which is certainly inferior to the present move.

(b) The best move; reducing the game, cautiously enough, to a position where the King's Gambits evaded

(c) Decidedly better than taking with the Pawn.

(d) While intentionally leaves the Pawn. If Black had taken it, the following variation proves that he would have gained nothing:—

WHITE.	BLACK.
11.	Q takes P (ch)
12. B to K 3d	Q to Q B 2nd
13. P to K 5d	B to Q Kt (best)

Regaining a Pawn, with a better position.

(e) It would perhaps have been as well stronger to play R to K Kt 3d; for example:—

WHITE.	BLACK.
16	R to K Kt 3d
17 Kt takes K P	R takes P

With a better position.

(f) This appears to be the only move by which Black can keep his ground.

(g) Taking the Kt would have been injurious; *en gr.*—

WHITE.	BLACK.
24. P takes Kt	Kt takes Kt
25. P takes R	Kt takes Q Kt P

This shows the advantage of White's 23d move. It would have been almost equally bad for Black to have taken the Q Pawn, as the reader may soon discover on playing through that variation.

(h) We should have preferred playing R to K 7th: in that case, the following is not an unlikely continuation:—

WHITE.	BLACK.
28. R to K 7th	B to Q 4th

(To avoid the fatal consequences of Kt to K 5th, attacking both Q and B)

29. Kt to K 5th	Q to K 5th
30. R takes K Kt P (ch)	K to Kt sq

It must be admitted, however, that the move actually adopted by White is of a much higher order of play.

(i) Unquestionably superior to playing B to K B 5th; to which Black would have replied with Q to K R 3d, and have relieved himself from all embarrassment.

(j) P takes R would have been safer.

(k) He should rather have played Q to her 2d th.

(l) The checks were unavailing. White prudently receiving not to budge an inch beyond the corner

(m) An excellent move. Nothing but the greatest care could have prevented White winning something as the crisis

(n) This defence is certainly very creditable to the patience and resource of the Russian amateur. With his unaided genius he has managed to keep the whole adverse force at bay for nearly fifty moves, and frequently left in doubtful wheather, with all his superiority, Black would do more than make a drawn battle

(o) White did not make the obvious move of Q to her B 3d (ch), foreseeing the following:—

WHITE.	BLACK.
83 Q to her B 3d (ch)	B to Q Kt 5th
84. K takes Kt	R to Q 4th

(p) The young p yer should observe the extr me care such games as this require to the last. If Black had taken the Q, the game was drawn!

WHITE.	BLACK.
418. Kt to Q 5 5th	B takes P (dis ch)
19. K to B 3d	Q to K 2d

WHITE.	BLACK.
20. K takes B	R to K R. 5th

And wins

THE CHESS TOURNAMENT.

Another of the highly-interesting matches which the managing committee have appointed to conclude the memorable passage of arms has terminated during the past week, and, as in that recorded by us in our last, between Mr. Buckle and Mr. Löwenthal, in favour of the English combatant. The match last over was won by Mr Staunton against Major Jaenisch, and ended by Mr. S. scoring seven games to his opponent's two, two other games being drawn.

Owing to a succession of drawn battles, the encounter betwixt Messrs. Horwitz and Burd is still pending. At the time of our writing, Mr. Horwitz has gained five games; his adversary, two; and four have been resigned as drawn.

Of the return match between Mr. Löwenthal and Mr. Williams, which has been considerately arranged to afford the latter another chance of retrieving his lost ground, two games only have been fought; the English player winning one, and the other being drawn.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

Her Majesty has been graciously pleased to direct that the order for permitting private carriages to pass through Buckingham and Stanhope-yard Gates into and out of St. James's Park, which will expire on the 31st of this month, be renewed for six months from the 2d of September next.

The Great Western Railway Company have at last determined on meeting the public wants by allowing the laying down a line of telegraphic communication from Slough, to join the telegraph at Exeter, and there will be a direct communication by electric telegraph from Plymouth to the metropolis, and thence to the principal parts of the kingdom. The South Devon Company also mean to have a direct communication with Exeter, so as to avoid the break in the communication which has hitherto taken place at Newton.

The Government Inspector has made his report on the fire which occurred in one of the London and North-Western trains in July last, from which it appears that the fire originated by spontaneous combustion in a portmanteau belonging to a passenger. The practice of carrying lucifer matches among personal luggage has before led, we understand, to similar casualties, the friction produced by the vibration of the train being sufficient to cause ignition. There is a heavy penalty leviable on the carriage of such dangerous articles, unless under peculiar precautions, and we understand that it is the intention of the directors to enforce it, whenever discovered, as an act of safety to the public.

There were only 106 public acts passed in the late session, being the smallest number passed for some years. At the commencement of the session, an act to shorten such matters took effect, and the phraseology of the statutes is different from those passed in the preceding year.

The Jewish Synagogue in the Rue Notre Dame de Nazareth, at Paris, had become gradually so much out of repair, that the service was removed to very insufficient premises in the Rue de Montmorency. As this provisional arrangement could not last any longer without grave inconvenience, the municipal council of Paris has just voted 180,000 francs for the rebuilt of the old synagogue. The whole expense will be about 185,000*f.*, of which sum 60,000*f.* will be asked for from the state, and the Jewish Consistory will provide the remainder.

The *Monitore Toscano*, of the 13th inst., announces the creation of a Tuscan Consulate-General at St. Petersburgh.

The Baron de Forest, Minister of Foreign Affairs at Naples has just informed the Chargé d'Affaires of Norway that the provisional treaty of navigation now existing between the two countries will not be maintained for the future, except for the direct navigation between the two countries.

Before the end of this year three great lines of electric telegraph will be entirely finished in Hungary; one from Pesth to Szolnok. Another from Czezod to Szegedin, and the third from Czongrad to Arad. These lines will connect together twenty large manufacturing towns and several smaller places.

Don Hannibal de Gasparis, the Neapolitan astronomer, who has, in the course of the last few years, discovered no less than five new planets, has, by a special decree of the 4th, been named Professor of Astronomy at the University of Naples.

Professor Pietro Savi, of Pisa, has proved, in a paper which he read on the 3d inst. to the Academy of the Georgofili, at Florence, that the cryptogramous plant which has this year attacked the vine, and caused so much uneasiness to Italian agriculturists, is the same plant which from time immemorial has attacked rose-trees, mallotus, and other plants, and which Desmaziéres describes under the name of *Sphæria tumefaciens*. Its great development this year is attributed by the learned botanist to the peculiar atmospherical influence prevalent during the present summer.

On Sunday morning a sermon was preached at Old St. Pancras Church, by the Rev. W. C. Williams, in aid of the funds for establishing the St. Pancras almshouses, the object of which is to supply a want long felt in that wealthy and extensive parish, of a refuge for the respectable classes of the parishioners who, in old age find themselves overtaken by misfortune and adversity. The rev. gentleman took for his text the parable of the good Samaritan (Luke, chap. x., v. 30—35). He stated that the building would be commenced as soon as £5000 was collected, of which £2,300 had been received, and it was intended to form a wing for the widows of parishioners, and single women qualified as parishioners

Colonel Trotter, of Staindrop, now in his 86th year, on Tuesday week, was out with his gun and dogs at Woodlands, near Cockfield, and, after about five hours' sport, returned home to dinner, with seven and a half brace of grouse in his game-bag, all shot by himself.

An official notice has been issued relative to gunpowder stores at Liverpool, stating that the Lords Commissioners of the Admiralty, with the approval of the Master-General of her Majesty's Ordnance, and the commissioners for the conservancy of the river Mersey, have selected that part of the river Mersey which lies along the western side of the Eastham Sands, to the eastward of Broomboro' Pool, for the mooring of vessels suita le for the reception and storage of gunpowder, in conformity with the act 14 and 15 Vict. cap. 79.

It is in contemplation by the town council of the borough of Devonport to rent some of the Ordnance land contiguous to the town for a public park, promenade, and play ground. The movement is in favour of a public park originated in the want felt by some of the large schools, and has now both warmly taken up by the corporation.

On Monday, a man named Chitterfield accidentally fell from the deck of a steamer into the river Thames, at Kew bridge, and was drowned. His wife and child, were on deck, and rent the air with their shrieks. The poor woman was taken ashore in hysterics

A beautiful Episcopal chapel, dedicated to St. Paul, was, on the 15th instant, consecrated by the Lord Bishop of St. Asaph, at Dolfor, in the parish of Kerry, in the county of Montgomery. It contains 120 sittings, all of which are free, and was erected at the expense of T. G. Newnham, Esq., C.E., of Newton, by Mr Baggaley, builder, of Welshpool, at a cost of £600. A sign of the building adopted by the architect is that which prevailed during the reign of Edward III.

The foundation-stone of Trinity Church, in the district of Langley, and parish of Halesowen, was laid by the Right Hon. Lord Lyttelton, on Thursday (last week), in the presence of a large assemblage.

An additional exhibition is to be held in the Government Domain, Sydney, in October. It is to include products from Australia, the neighbouring countries, and the islands of the Pacific.

We learn with much regret that the author of "The Wild Sports and Natural History of the Highlands" has met with a severe wound by the accidental discharge of a gun. On Tuesday week, in consequence of the carelessness of an attendant, the gun went off while his arm was touching the muzzle, and the discharge of shot tore away part of the flesh of his right arm. Fortunate y the bone was not hurt; and as he is doing well since receiving the injury, we trust it will only occasion him a few days' confinement.

The Lords of the Treasury have issued a further order, directting that on or before the 30th day of August, 1852, a list of duties of Customs due on goods deposited in warehouse at Manchester under the act of 7th and 8th Vict., chap. 21, shall be paid to the Customs, or removed to some other bonded warehouse, within that time; in default of which the goods shall be liable to be forfeited, and dealt with as the Board of Customs shall see fit.

Lately there have been discovered in Brittany some valuable workings of anthracite, which contain also a considerable sprinkling of gold.

The following important provision appears in the late act of Parliament on steam navigation:—"After the 31st of March, 1852, it shall not be lawful for any steam-boat, of which surveys are required, to go to sea, or to steam upon the rivers of the United Kingdom, without having a safety-valve upon each boiler, free from the care of the engineer, and out of his control and interference, and such safety-valve shall be deemed to be a necessary part of the machinery upon the sufficiency of which the engineer surveyor is to report."

The construction put upon the act of Parliament 59th of George 3, c. 31, by the judges, having precluded the House of Lords from hearing the case of Mr. Bradley Dyne de Neale on his petition to the attention of several distinguished members of the Legislature, and the matter is likely to become the subject of Parliamentary inquiry in the next session, when Lord Brougham will take it up. In such hands substantial justice cannot fail to be attained.

The Paris *Messager* states that it is intended shortly to send a French expedition into the Japan seas. It is said that it will consist of a frigate, a corvette, and a steamer, under the orders of a rear admiral of great experience in the Pacific and the Chinese waters. The expedition will be at once military, commercial, and scientific; its object will be to re-open a European commerce, which has been closed since the 16th century.

The *Szabinian Mercury* states that the affairs of Hungary have seriously occupied the attention of the Council of Ministers at Vienna, which had called together the communal organisation should be made public in the course of the month. It is to resemble that of the other countries of the Empire, that each commune may choose the Magyar tongue or one of the Sclavonian ones. The Austrian Schavonians intend holding a Congress at Agram to propose the adoption of a common language, which plan the Government does not oppose. Several Russian *savans* intend being present.

On Monday, the Lord Mayor and the Lady Mayoress entertained a select party of visitors from Kew and its neighbourhood at their yearly in the Venetian Parlour, and among the guests were Monsieur Amédé Bergé (a son of the Prefect of the Seine), Monsieur and Madame Dupuytrien, Monsieur Reogemont, Monsieur and Madame Courtois, &c

Letters from Vienna of the 14th inst. state that M. Warrens, proprietor and editor of the *Lloyd* newspaper, had been expelled the city, by order of the Emperor, for having given publication to a series of articles severely reflecting upon the Government.

A *fête* was given on the 18th, by the united Chess Clubs of Potsdam and Berlin, to M. Andersen, on his return from the tournament in London. Sixty members were present; among the number was Max Lange, a distinguished chess player from Magdeburg. Before sitting down to supper, the latter and Andersen played a game together for the edification of the spectators, and Andersen came off victorious. M. Andersen is now on his way to the Baths at Salzbrunn, and thence returns to his birth-place, Breslau, to resume his functions as Professor at the Gymnasium.

The workmen in the employment of Mr. Cubitt, the eminent builder, having some time since requested to be allowed to leave off work at four o'clock on Saturday afternoons, he has granted the request without making any reduction in their wages—an arrangement found to be of great advantage to the workmen, upwards of 1500 in number.

INAUGURATION OF THE PARIS AND NANTES RAILWAY, AT NANTES.

OPENING OF THE PARIS AND NANTES RAILWAY.

(From a Correspondent.)

ANOTHER mercantile sea-port (says *Galignani*) has just been, as it were, brought to the gates of Paris; another iron artery has been added to the heart of the country, to increase its circulation, and to animate, by its vivifying influence, the commercial interests of the capital and the departments through which it passes. On Sunday, the 17th inst., Nantes celebrated its inaugural *fête*, and the taste and liberality of the municipal council, and the able management of the directors of the railway, insured a splendid *fête*. Two trains arrived on the previous day from Paris, each bringing about 1000 visitors, and an immense influx took place from the surrounding neighbourhood, so that every house and hotel was full. All along the part of the section now inaugurated, comprised between Angers and Nantes, the stations were gaily dressed out in flags, and the country people in their Sunday clothes were assembled. The line offers nothing particularly worthy of notice; it passes for the most part along the banks of the sandy Loire, and has not a tunnel, viaduct, or any other work of art of consequence throughout the whole distance.

The proceedings of the day commenced with the distribution of 200 livres of the savings-bank of 20 francs to the same number of poor children belonging to the charity-schools, drawn by lot from a number whose conduct was considered to merit reward. The next operation was a procession of the Mayor and the municipal authorities to lay the first stone for a new fish market to be erected in Nantes, after which they proceeded to the terminus to await the arrival of the train with the Minister, &c., from Paris.

Wide as are the spacious quays of Nantes, vast as was the provision left for the public accommodation by the railway company, in appropriating to the probable exigences of their own traffic a large and commodious station on the wide Prairie de Manves, and extensive as are the public promenades of the Cours St. Pierre, which overlooks the vicinage of the railway station, large as was the space destined for the public, all was filled from three o'clock by dense and increasing masses, filling up every available space, or protruding from every door and window, as though the city had been abandoned by its 75,000 inhabitants.

As everywhere when Frenchmen have to decorate a place for festivity, all was gay, and elegant, and attractive at the railway station. At its extreme verge four vast columns rose, surmounted by the national tricoloured flags in abundance. Upon shields which these four columns bore were inscribed "Paris," "Tours." "Angers," "Nantes." Along the line, flag-staffs, with groups of flags springing from a circular shield, on whose exergue was depicted a wreath of leaves bound with ribbons, and on its centre a brilliant display of every shade of yellow, converging from the darkest to the lightest in a point, the effect of which was as admirable as novel. These extended from one end of the station to the other; at which, as will be seen in the View of it which we have given, were colossal pedestals, bearing four fine statues, representing France and its fine arts, Nantes and its commerce, Angers and its industry, and Bretagne and its science. At the head of the station, a beautiful piece of tapestry, in which the grouping of a battle scene was excellent, and the colours brilliant and well preserved, formed the back of a temporary chapel, or *reposoir* or altar, the front of which was richly decorated with carpets and hangings of crimson and gold, as were the stands of the authorities. From these, on each side of a very narrow oblong, proceeded the stands or tribunes for the guests of the municipal officers, and which were speedily filled with brilliantly dressed ladies, officers, &c.

About four, the civil and military authorities, attended by their guests, the deputations from Angers and Tours, and escorted by the staff of the National Guard and the garrison, took their seats, whilst the National Guard, instead of doing that which the troops of the garrison are so adroit in doing, namely, forming a trellis fence with their piled muskets, and then mingling at their ease in the crowd with their wives and families, instead of this they formed an impervious fence, with the portly Pompiers. During this interval the four bands of the National Guard, of their artillery, of the Pompiers or fire-brigade, and of the 11th Regiment of infantry, alternately played some beautiful pieces of music.

Next arrived the splendid *cortège* of the Bishop of Nantes and his clergy, with magnificent banners, and gold and silver crosses. His Lordship, wearing his richest ornaments, and surrounded by the gorgeously decorated canons and other dignitaries of the Church, was ushered upon the railway by a psalm. The Bishop seated himself in the centre of the chapel, and his clergy grouped round him.

The programme had announced half-past four for the salvos of 21 cannon on the arrival of the train bringing the authorities from Paris who were to open the railway; but it was five before they arrived. At a very moderate speed the engine rolled up to the head of the station, and stopped: the Minister of Public Works, M. Magne, accompanied by several of the Administration, some representatives and many principal men of the capital, were received by the authorities of the city and the rail; and took the places assigned to them in the stands.

Shortly afterwards, four equally strong but sombre engines and tenders, gaily decorated with a group of national flags, displayed like a hand of cards on their front, advanced abreast of each other on the four lines of rail to the head of the station, when the enthusiasm of the people broke forth in loud tokens of applause and admiration. The Bishop descended the steps of the altar of his chapel, and surrounded by his clergy, the authorities, and the guests, proceeded in the usual form to bless the station, the rails, and locomotives. The cannon roared, the bells of the neighbouring Cathedral of St. Peter pealed forth; the chaunting of the choir rose, and the four locomotives received their baptismal names of "Angers," "Saumur," "Tours," and "Nantes," the arms of which towns they respectively bore. A profound silence ensued, during which the Bishop addressed an impressive speech to the assembly.

After the ceremonial of the baptism of the locomotives and the benediction of the rails, the clergy, followed by the civil and military authorities and the guests, left the station under the escort of the National Guard. The *cortège* made its way with great difficulty through the crowd, which extended almost to the Prefecture, where the whole arrived, but unavoidably in somewhat straggling order.

THE RECEPTION.

M. Gouja, the able and estimable Prefect of the department of the Lower Loire, immediately afterwards presented to the Minister of Public Works the departmental, municipal, military, clerical, and scholastic authorities at the Hotel of the Prefecture. At night, the much-admired *façade* of the Hotel was brilliantly lighted with lamps, covering the whole of the railing in front of the court of the Prefecture.

THE BANQUET.

About nine in the evening, the spacious hall of the Exchange was splendidly lighted with wax tapers and lustres in great profusion, besides other decorations in excellent taste. The principal portico was surmounted by a large anchor and helm in beautifully coloured lamps, with some other ornamental devices, and the windows and cornices were bordered with lamps, the whole producing a splendid effect. The band of the 11th Regiment was in attendance, and executed some choice national airs.

The Minister of Public Works was seated next to the Mayor, who was also supported by M. Betting of Lancaster, and M. Ferdinand Favre, late Mayor of Nantes, and now one of the representatives of the department. Next to these were the other representatives of the Lower Loire. Near the Prefect were the former representatives of the department, and the former members of the deputation.

At the dessert, M. Colombe, in an eloquent address, proposed the health of the Minister of Public Works, M. Magne, who replied, and proposed "Prosperity to the Town of Nantes," which were drunk with great enthusiasm.

The party immediately afterwards separated.

Next morning, the Minister and a large party proceeded down the river, in a steamer, in order to see what works are necessary for the improvement of the navigation of the Loire between Nantes and its mouth. He returned in the afternoon; and the inauguration was further celebrated by a regatta, races, a balloon ascent, a banquet at the Hôtel de Ville, an electric light display, a *fête de nuit*, fireworks, &c.; all which lasted until the next evening.

THE YACHT CLUB ROYAL BELGE REGATTA, AT ANTWERP.

THE GREAT FAIR AND REGATTA AT ANTWERP.

There are two fairs held annually in the town of Antwerp: the first, or Little Fair, in June; and the second, or Great Fair, the first Sunday after the Assumption. The first fair is the only one which carries out its original intention, namely, to bring together strangers from all parts of Belgium and the south of Germany for the transaction of business. The great festival, which was this year held with more than usual pomp, and is, strictly speaking, a pleasure fair, lasts four days, during which little or no business is done. It commenced on Sunday, 17th August, when the different choral societies from the principal towns of Belgium, from parts of Germany and France, were met at the railway station, and conducted to a spacious hall in the *cité*, where they contended for gold and silver medals, and prizes of money. On Monday, the various bands of the militia held a similar contest, but in the open air. On Tuesday took place the "Grand Procession of the Giant," in which figured the famous car which Rubens made for the occasion, and which still continues to aid the splendour of the procession. It was drawn by eight white horses, four abreast, conducted by men in the ancient Spanish costume. This car was followed by a ship in full sail, and several boats; and a whale spouting water, attended by dolphins, figured in the line of march.

The afternoon was occupied by the first part of the Regatta, which was conducted in a manner very creditable to the Yacht Club Royal Belge, when we take into consideration that this club has only been in existence a few months. The principal prize was won by an English race boat, manned by Englishmen, but a boat from Ostend was very close upon its heels. Our Illustration shows this contest.

On the second day the sailing match took place, when a beautiful yacht, belonging to Prince Henry of the Netherlands, an English yacht, and several Dutch cutters, sailed down the river at 10 A.M.; but the wind failed. The Englishman, which was first, dip not appear till past eight in the evening.

Besides this amusement there were several prizes given to the best marksmen among the peasants with bow and arrow, which is a favourite weapon here. The whole closed with a torch-light procession and music on Wednesday evening.

THE CHINESE FAMILY.

The great honour conferred by our most gracious Majesty, of an interview at Osborne Palace, last Monday week, on Mr. Chung-Atai, a Chinese gentleman, who, with his two small-footed wives and sister-in-law, lately arrived in this country from Canton, forms the subject of the accompanying Illustration. It being the first instance of any Chinese family having enjoyed so high a privilege, and the enterprising spirit being so remarkable which must have been exercised in order to enable them boldly to make up their mind to leave their own celestial country, and thereby overcome the strongly-rooted prejudices which exist in every Chinese mind, against allowing any lady of condition to leave China, render the event extremely interesting. Of their reception at Osborne we gave full particulars in our Journal of last week. (See page 238.)

After experiencing much difficulty with their own authorities in Canton, with reference to the departure from the country of the small-footed ladies, the interesting group, at length, were enabled to have everything arranged; and, on the 26th February last, embarked at Hong-Kong for London, on board the British ship *Lady Peel*. During the voyage, although it was a very long one, they appeared perfectly comfortable and happy. They occupied poop cabins, communicating with each other, which enabled them to be constantly associated; and, being all of a quiet and amiable disposition, enjoying much each others society, they formed an instance of complete family happiness, which might well afford a pattern to many a family in our own land. After leaving China, the first land near which the ship anchored was the island of Sumatra, where a supply of fruit and stock was obtained. Nothing could exceed the delight and surprise expressed by them on the appearance on board the vessel of the strange and uncouth figures of the Malayese. The next land was the island of St. Helena; and, as fresh water on board had for some weeks previous been very short, and much inconvenience thereby experienced, the sight of land again was welcome indeed. Here, the Governor of the island, Lieutenant-Colonel Clarke, with his side-de-camp, and several ladies and gentlemen, came on board, and were gratified by an interview with the singular party.

The *Lady Peel* eventually arrived at Gravesend on the 10th of this month, and the family were all safely landed and received with open arms by English friends, who had for some time been expecting them, and to whom they had brought letters of introduction.

One of the objects of their visit to this country being to view our Great Exhibition, they had that gratification on Saturday last. The helpless condition of the feet of the ladies (the sole of their shoe not occupying more then 1½ square inch space) ill fitting them for making their way amidst a crowd, it was deemed more expedient that they should go on the forenoon devoted to the visits of invalids. Accordingly, dressed in the handsomely embroidered satins of their own country's manufacture, they were drawn in Bath chairs through the passages of the Crystal Palace. They were much delighted, and struck with wonder at everything they saw; and they received considerable attention from one of the Executive Committee, who kindly accompanied them in their progress round the Building. The party were greatly gratified by the desire evinced by the exhibitors present to enable them to view as completely as possible their several specimens of manufacture; and, in the French department particularly, much polite attention was shown them by several exhibitors, who kindly removed ar-

RECEPTION OF THE CHINESE FAMILY BY HER MAJESTY, AT OSBORNE.

ticles of dress from their cases to permit a more close inspection on the part of the Celestial ladies.

After a short sojourn in the metropolis, we believe it to be the intention of these remarkable strangers to visit Paris.

In the accompanying Illustration, the portraits of the Chinese Family are from the Daguerréotype by Beard mentioned in the account of the reception at Osborne, in our Journal of last week. The foremost figure is Chung-Ati; next him is his jun or wife, who had the honour of singing before the Queen; next is the elder consort; and the third lady is her sister-in-law; and the female attendant. The reception was given in one of the principal drawingrooms of Osborne, wherein hangs Winterhalter's large picture of the Queen, Prince Albert, and the Royal family.

THE GREAT EXHIBITION.

At length we think we may venture to say that there is a decided falling off, or lull at least, in the daily attendance at the Exhibition, since the numbers have been very far from reaching the average of the past two months. This may perhaps be accounted for in the fact that in many parts of the country the war is engaging immediate attention; and this is proved by the almost total absence of those whose external characteristics bespeak agricultural occupations: while it is a fact of some importance, that many of the associations amongst the working classes in the manufacturing districts made arrangements for their visits in September, believing that the keen appetite of London lodging-house-keepers for high prices and limited accommodations would be somewhat abated; and that, as there would be fewer visitors at that period than during the months of July and August, the members of these associations would stand a better chance of getting the value of their money than in the height of the season. This arrangement, too, was urged upon them by the more far-seeing of those who were deputed by the Royal Commission to visit the manufacturing districts, since it possessed two advantages—that of giving more time to realise the exquisite sum without any very extraordinary strain upon their means, and the probability that that sum would go further after the London season than during its continuation. We feel quite confident that the last two or three weeks of the Exhibition will be as full of excitement as any period since the "shilling" days commenced.

Apropos of that same shilling. Would not the present be a very excellent opportunity to open the Exhibition at a lower fee? Say two days per week at 6d. There are thousands in this metropolis who have never yet seen this great display of industry and skill, to whom the sight would be a great treat, and, more than that, may be of great value too. We speak of those engaged in that silent under-current of industry, whose labours are in the lowly and dark stations of society, and whose holidays are only those heads are bared to Sundays as Easter and Whitsuntide. At other times all is a blank. Now, these comprise an immense portion of the population of this metropolis, to whom 1s. is a serious object: even 6d., perhaps, is too much; for, when it is considered, that, in addition to the entrance fee, a day's work has to be sacrificed, and probably a wife and two or three children would form the party—for it would be incomplete without them—at least one fourth of the weekly income of numbers would have to be expended in making the visit; the total cost not being the mere admission fee, but the loss of a day's wages too. Our weekly tradesmen and gentry would hesitate if asked to pay in proportion; that is, one-fourth of a week's income to be all owed to see the Crystal Palace, would be a price that none of them would give if it were ten times cheaper than it is; yet it would be cheaper to them than to this poor mechanic, whom we wish to see it at something within his very limited means.

Another scheme for preserving the Building is said to be about to be propounded, in which its maintenance, independantly of either Royal Commission or Government, is to be shown to be feasible. This, supposing the Woods and Forests are willing, will be a great point gained, since no public grant seems at all likely to be obtainable; and as to the surplus, that is a secondary matter as far as the general question is concerned. As regards the appropriation of this surplus, the Mayor of Birmingham (Mr. Lucy), whose activity on behalf of the Exhibition is so well known and so highly appreciated in the north, has, with his fellow-townsmen a proposi tec not unlike the one we made in our last. This is in the form of a memorial to the Prince and the Royal Commission, and calls attention to the Conservatory of Arts and Manufactures at the Conservatoire of Arts and Manufactures of Paris, as offering examples for similar institutions in this country: and proposing that there should be founded with the surplus proceeds of the Exhibition, as being strictly within the terms of the pledge of 1850, "a Great Central College of Arts and Manufactures in London," as also a Museum of Arts and Manufactures," and that provincial schools having the same object in view (such as Government Schools of Design) should be connected with the Central College, and be carried on under the same system; and, in order that the public may be satisfied with the administration of these provincial establishments, and have a voice in the general system of education, which is of such importance to our commercial prosperity, it is suggested, "that, when such provincial schools may be founded in boroughs, the Mayors should be *ex officio* members of the General Board of Management or Direction." This memorial has been received in Birmingham with great unanimity, and a hearty approval given to its suggestions, and it is now in the course of signature. Here, then, we have a definite proposition to the Commissioners to open the question, "What is to be done with the surplus proceeds of the Great Exhibition?"

The French Government have sent over the pupils of the Naval College of Brest, in a Government corvette, under the command of Captain Tresone, for the purpose of visiting the Exhibition, which they have done during the past week. The Admiralty gave directions to the superintendent of Woolwich Dockyard to show these youngsters every attention, and to facilitate their inspection of the dockyard, and any public institution they desired to see, on which it might be deemed useful to them to have pointed out for their notice. This is the right spirit. They have six days granted to them to see the Exhibition.

The question as to the removal of the immense mass of goods now deposited in the Building is beginning to attract attention. The packing up of great numbers of the articles will be found to be a most delicate task, and one which will not be easily got through. Some people talk of clearing the Building in two months, but we do not believe that it can be done much under four. Take Austria as an example. There are 740 exhibitors, each of whom carefully packed his own workshop, or warehouse, with the articles sent to the central *dépôt* for the reception of goods in Vienna. These were forwarded *en masse* to London for exhibition; the difficulty, care, and responsibility of the packing rested with the exhibitors. In the re-packing, however, all this must be taken by the Austrian officials, who are responsible for the due and safe performance of the work; so that the work that was originally done by a very large number of persons, will now have to be done by a very small number, and those, too, inadifferently acquainted with the peculiarities of many of the articles they will have to pack up. To get rid of all this difficulty, a grand sale by auction has been gravely proposed: this, if carried out, would have been a disgraceful conclusion to such a work as we have seen achieved; but, though it was earnestly reported that such was to be the finishing stroke, yet the Royal Commission has sufficient good sense to decide shall take place within the precincts of the Exhibition, and that the goods must be returned in due course after the close. No doubt arrangements have been made by a large number of the foreign exhibitors, either for the sale of their articles, or for their consignment to suitable places in the metropolis. This will largely facilitate the removal of the goods and clearance of the Building; but the Executive Commissioners, in this final responsibility, an undertaking before them of no ordinary character, and one which requires all the business tact and past experience to get through safely and honourably. Exhibitors, however, will, as heretofore, have to help themselves in these matters; and we trust that while taking care that none but properly-qualified persons are permitted to enter the Building for the removal of the goods, none of those vexatious regulations which certainly created no small amount of trouble and anxiety during the arrangements, will be had recourse to. Begging, praying, and paying, too, is rather more than many persons will be now inclined to put up with; and any disturbance of the present feeling with which the Exhibition is regarded will be a source of regret to every one. Fair and proper regulations, every one will see, are desirable; but then, they must be business-like and to the purpose, and not mere marinetisms, which, however to the purpose in a dockyard or an arsenal, are not precisely in place where it is a question of warehousing or unwarehousing a variety of manufactured articles or works of art. There was a little too much of this during the arrangements, which ought to be avoided in all future work.

ANOTHER "LEVENSIDE" CASE.—According to the local papers, letters have been received at Greenock, by the owners of the *Elizabeth*, of that port, from Calcutta for London, from the master, Mr. Cheyne, announcing that he had been boarded by the Manilla on 6th June, by a party of Spanish military on board, 90 in number, partly Government and partly East India Company's troops, having become unmanageable and assaulting the officers of the ship, who could get no redress. The officers, however, continued resisting or refusing to do their duty. On one occasion, the surgeon in the employ of the owners had got drunk and was put in arrest by the master, but released by the military officer in command, who stated that this master was to return in due course after the close. No doubt arrangements have been made by a large number of the foreign exhibitors, either for the sale of their articles, or for their consignment to suitable places in the metropolis. This will largely facilitate the removal of the goods and clearance of the Building; but the Executive Commissioners, in this final responsibility, an undertaking before them of no ordinary character, and one which requires all the business tact and past experience to get through safely and honourably. Exhibitors, however, will, as heretofore, have to help themselves in these matters; and we trust that while taking care that none but properly-qualified persons are permitted to enter the Building for the removal of the goods, none of those vexatious regulations which certainly created no small amount of trouble and anxiety during the arrangements, will be had recourse to. Begging, praying, and paying, too, is rather more than many persons will be now inclined to put up with; and any disturbance of the present feeling with which the Exhibition is regarded will be a source of regret to every one. Fair and proper regulations, every one will see, are desirable; but then, they must be business-like and to the purpose, and not mere marinetisms, which, however to the purpose in a dockyard or an arsenal, are not precisely in place where it is a question of warehousing or unwarehousing a variety of manufactured articles or works of art. There was a little too much of this during the arrangements, which ought to be avoided in all future work.

LITERATURE.

LE MOIS DE MAI À LONDRES, ET L'EXPOSITION de 1851. Par JULES JANIN. London: Mitchell. Paris: Michael Levy, Frères.

THAT the immortal "J. J." should have paid us, *nous autres Anglais*, the compliment of consolidating, for our especial benefit, his impressions of ourselves and our Exhibition into a charming little volume like that before us, is by no means one of the least successful of the triumphs won for us by the crystal wonder, now, it is said, doomed. And among the recollections of the Exhibition year, there are few which educated England will preserve with more pleasure than the reminiscence that the pen of the chief critic of Parisian journalism was, for a period devoted, to the illustration, in its own especial and fascinating style, of the day which future almanac-makers will doubtless balance against the "Evil May-Day," which has so long looked portentously upon us from the calendar. We hasten to signify our acceptance of M. Janin's literary courtesy, as not only valuable from the high position and eminent talents of the gentleman who tenders it, but also from the real earnestness and sincerity manifested in every page. It is sometimes that the most accomplished scatterer of graceful *badinage* whom the literature of the age can boast, should have been excited into a reality of fervour when dealing with our last and most memorable *Tour de Mot*.

How shall we describe the style of M. Jules Janin? It is clearly a reviewer's duty to attempt a definition, but the task is a difficult one. There is a story of Cuvier and the French Academy which is something to the purpose. "Ah! M. Cuvier," said the President of the Dictionary Committee, as the great naturalist entered one day, "welcome! We have just been giving a definition of the word 'crab,' one which includes both the genus and the species, and will be valuable. We have said 'Crab, a red fish, which walks backwards.' What do you say?" "Gentlemen," replied Cuvier, "I compliment you. With a slight exception, your definition is admirable. Only, a crab is not red; it is not a fish, and it does not walk backwards. Otherwise, your definition is unexceptionable." Now a French reader of our definition of M. Janin's style might, with all the politeness of M. Cuvier, accept it in every syllable of our words. We will not attempt it. Where would be the use? What Frenchman requires to be told of M. Janin's brilliancy? And to what Englishman could we attempt to make convey an adequate idea of the manner of the pert critic of the *Debats*? Where is the necessity (unless upon the *decet repetita placebit* principle) of telling our readers that M. Jules Janin combines the sincerest and keenest critical acumen with the happiest power of ornamental expression; that, like MM. Harmodius and Aristogiton, he wreathes his glittering sword in the greenest myrtle, but that the graceful sheath in no way impedes the fatal thrust. That he realises, *a mervcille*, when it pleases him, the English phrase of "shadowing forth" the truth which, in its naked reality, startles more and perhaps produces more expression than if it came in mortal nudity. That no modern writer has more tact in serving a cause by advancing not merely the cause itself, but those opinions in its favour, in an off-hand, incidental manner, making it appear that they slip from him *en passant*, but that he values them not, while actually they are so artfully marshalled as to their ultimate effect. That he is incomplete without them.—that M. Janin—though his extraordinary facility of style, his *copia verborum*, is sometimes mistaken for redundancy—is in reality a writer whose epithets are very choice, whose *epigrammes* are very few and whose epitaphs are very true. That he takes up a subject any trifle—an opera dancer's ancle, or a despotic sovereign's oath—and envelopes it in a sort of sparkling mist; plays about it with the sagacious politeness of the olden school of French writers; elevates it into a sort of importance; hints at all the wonderful or clever things that *might* be said about it; draws all eyes upon it; and, when it is sufficiently cocked up and notorious, there suddenly glances through all that mist of apparent verbiage, but really artful treatment, one keen trenchant phrase, which goes to the very heart of the matter, for good or for evil. That M. Janin is, moreover, although one of the most acute of critics, one of the most kind-hearted, good-natured of men; and, though remorseless to pretenders, of whom he has slain his thousands, is always ready, with the powerful open aid his command, to introduce, encourage, and assist real artistic talent. We do not, we repeat, see the necessity of saying this to a French reader, who knows it; or to an English reader, who, if he do not know it, has only to command a *tirmaetre* of the *Journal des Debats*.

M. Jules Janin commenced his career on the opening of the great Exhibition; and we remember, in traversing the Transept on that day—*nihil crebi notanda*—that, among the notabilities, the "well-developed" presence of the original of the clever sketch by M. Daumier, in the *Charivari*, was pointed out by numbers of his own countrymen, and recognised with great pleasure by many of our own. In the letters which are now collected, and which were originally published in the *Presse*, the necessity of saying this of which M. Janin is connected, he describes that day with a verve and a precision which do credit to his genius both as a reporter and as an artist. He speaks of the great Exhibition (perhaps, indeed, somewhat too much for in no merely complaining spirit, but writing as one who knows the exigences of his country, he hints at a regret that when France has to inaugurate one of her own gigantic displays, she will not, by the aid of the resources of political differences, look to take the initiative in consigning a national work to those for whose benefit it has been designed. It is not for us to dwell upon such a topic, but it is not for us to pass it by unnoticed when alluded to by such a writer as M. Janin.

His first letter is dated from London, on Exhibition-Eve. He has described with great spirit the journey to Calais, the inhospitable punctuality of the steam-boat, which made no allowance for passport delays (work at this nuisance, M. Janin, and our acclamations are ready for your honour will be shaken from them), the *petit supérieur* of the Dover engine, and the arrival in the great city. A few days after the Opening day before the opening, and bestows a little friendly sarcasm upon the protestinations of his own countrymen, who, however brilliantly they achieve their work at the last, can never be induced to believe that it will be done. We written tribute to M. Paxton is introduced with the opening chapter, which also contains a pleasant allusion to the poor Oriental superintending the Turkish department, whom the London pas [illegible] of his "compagne fidèle, sa machine élégante à l'odorante vapeur, sa consolitrice et son amie hospitalière—sa pipe." If the Industrial Exposition has its Shakspeare, M. Janin is certainly the Boz of the Inauguration of the Exposition, as we have said, is described—the meeting of the Duke of Wellington and Mr. Cobden not being forgotten and the second letter ends with some observations called out by the opening of the Crystal Palace to M. Janin, but which we advert to as showing the really thoughtful way in which he regards a subject. He objects to the presence of statuary in the Exhibition, consisting it misplaced, unnecessary, and incongruous. We could grapple with this objection; we prefer merely to indicate that it has been raised.

The Exhibition, which occupies two long letters, being dispatched, M. Janin has leisure to devote himself to other subjects. London Sunday, which he contrived to make so charming a day that he hopes to have many more, is cleverly depicted; and we have also his impressions of the Abbey, of Chiswick, and of Hampton Court. The former is succeeded by a letter at poor Lady Byron, wife of a *pieuvre hvestrate*, being introduced), and a very interesting account of the sailing of Claremont, in which M. Janin, with his usual tact, remembers to assure the French nation, that sincerely earnest were those illustrious exiles in their hopes for the triumph of France in the late *fête* of Neuilly. Our next visit to Westminster is well and appreciatingly criticised; but M. Janin doubts (the doubt may be perpetuated by one who lives within cry of the Louvre and within sight of Versailles) whether we have not a little overdone the matter in decorating the new edifice. *Bouales*, gentlemen of the fresco! And the restaurateur of the letters is made up of a series of sketches of our public, private, political, and social life, which, altogether, altogether, altogether, is very different from that of most tourists. M. Janin likes us, we flatter ourselves, and writes lauding us where we deserve laudation, and sometimes where we do not; and when he "bites at his pen" because we will not have the Westminster M. Pope has it. Nothing can be more frank, witty, and eloquent than this accomplished Frenchman's glittering disquisition.

He tells us a story, by-the-by, on page 41, in which we feel inclined to set him right, the rather that the veritable version of it tells better for M. Janin's argument, besides placing its subject in a better position. He speaks of the fanatical tract distributors, and of the annoyance they occasion to good sectarian publications to those whose position makes them fit objects for gratuitous teaching, force them into respectable houses, and upon those who have no desire that unsectarian instruction should be thrust upon their children or dependants. M. Janin speaks of a case having occurred in the Park, in which a *citoyen Anglais*, walking with his daughters, saw in the hand of one of the young ladies a tract which had just been given her by an itinerant distributor. "*Après l'avoir second avec raideur, (c'était un pauvre diable de praticateur chanceiant mellitant), il lui jeta son sermon au visage*," says M. Janin, "avec beaucoup d'esprit." Our text was not the slayers was one of the most popular and gifted men who was walking with the daughters in the Park, and, as above stated, saw a tract in the hand of one of them. Taking the tract, the author turned to the only individual near, a sanctified, dirty-looking person, and gave him a little boy, and asked the former if he had given the young lady the tract. "No, sir, I did not," said the man, in a whining tone, and casting down his eyes. "Then you sent your boy to do it; why will you speak a falsehood?" "Indeed, sir, I did not. Look at me," said the author; "do you not think, from my appearance and station in society, that I am more capable of giving my children a proper education than you are, and do you not think I am more enlightened than you, who have no mission, to thrust upon my child teaching of which I know nothing? Take your tract back." There was no roughness, no "flinging in the man's face," nothing but a proper and grave reproof by a gentleman and a father to a presumptuous inferior. The pertinacity, however, with which persons of this case force their way into houses where they have been ordered not to come, might deserve treatment like that described by M. Janin. Who, we are sure, will be glad to have the anecdote before him in its accurate shape.

We have only to add, that we have read M. Jules Janin's "Mois de Mai," with great pleasure, and we cordially recommend it to our readers as a most pleasant, sprightly, and sparkling record of the impressions produced by a memorable period upon one of the wittiest, shrewdest, and kindliest of Parisian writers.

An unfortunate labourer, named James Perry, was killed on Tuesday by a fall from a scaffold, at Sir W. Molesworth's, in Eaton-square.

THE "AMERICA."

The great interest and admiration which the extraordinary sailing powers and peculiar rig and model of the *America* have excited, has called forth from various correspondents of the daily papers observations which are worthy of notice. One gentleman gives the following account of the source of the *America's* superiority: he says, "that a desperate rivalry has for a long series of years existed between the pilots of the neighbouring states of New Jersey and New York, in America. At one time these pilots were so numerous and influential, that they became of importance in political and other elections. Their success in their calling depended, of course, entirely on the swiftness of their boats, and they were always trying every imaginable plan in boat-building to secure celerity. In these experiments they were often pecuniarily assisted by politicians and rich men who wanted their electoral support. These pilots being, from the very nature of their trade, experienced and daring sailors, they were never afraid to try any experiment in sailing in any kind of boat that promised swiftness, no matter how hazardous it appeared. After innumerable trials and failures in boat-building, the builders of these boats have hit upon a model, which, as far as it is adapted for speed, surpasses anything perhaps in the world. It is according to this model that the American clipper yacht, belonging to Mr. Stevens, has been built, and which has been brought over to this country, and beaten the crack yachts of our aristocratic patrons of the turf. There is no place in England where any such circumstances exist as could give rise to the extraordinary competition which exists amongst the pilots of New Jersey and New York, nor anything in the country to draw forth such persevering zeal and ingenuity in boat-building similar to that which has existed in America."

Another, signing himself G. W. B., corrects some errors which a former correspondent had fallen into. He writes: "Your correspondent 'H' is in error as to the accommodations and qualities of the *America*; in the first place, she is more than six feet high *under* the beams. He asserts that she is barely six feet between the beams, meaning from plank to plank.

Second, she is not especially a "racing craft;" she has unusually large and, I may say, luxurious accommodations, and she is nearly of the same form and rig as our New York pilot boats, the *Mary Taylor* and *M. H. Grinnell*, of 81 tons, which cruise as well as at a distance on the land during our winter months, and which the writer of this has had experience of, and found as much comfort on board of one of these vessels as could be on board of any small vessel at sea. One of this same class has been to California *vid* Cape Horn."

As to the willingness of Commodore Stevens to run with the cutters, there can be no doubt, as he has already given in an entry for the 9th to the Royal Yacht Club to run against any cutter belonging to the yacht clubs, warning any advantages that cutters may have from their rig, he asking, as before, that he may have at least a mile and a half beam breeze and be satisfied on account of his rig to "boom out" (his masts raking so much that his sails would not have room before the wind); and that he preferred to run for a piece of plate of nominal value; but if, if wished, he would run for any sum under 10,000 guineas.

With respect to the match between the *Titania* and the *America*, it was expected at Cowes during the early part of the week that it would come off on Thursday; but, whatever grounds there were for this anticipation, the matter was put out of the question by the discovery on Wednesday morning, that, in the course of the night, the *America* had touched the ground, and carried away about 20 feet of her false keel. This accident was of so much importance, that immediate attention was deemed necessary, and she sailed at once for Portsmouth harbour, there to have her defects made good.

NATIONAL SPORTS.

The racing bill of fare for the ensuing week is plethoric, if not very *recherché*, embracing no less than nine courses—viz. Scarborough and Knites on Monday; Warwick (with a capital programme) and Wilmslow on Tuesday; Rochester, Lincoln, and Aldrin, on Wednesday; Bungay on Thursday; and Barnet on Friday. The regatta list comprises, that for Monday being Radcliffe, Lambeth, and Kildare (Dublin); for Tuesday, Teignmouth; for Wednesday, Carnarven; and for Thursday, Greenwich, Lyme Regis, and Worcester. Cricket fixtures: Monday, at Sheffield and Birkenshaw; Wednesday at Shrewsbury; and Thursday at Leamington.

TATTERSALL'S.

MONDAY.—The betting this afternoon was absolutely "fastuvless," but took a wide range, and afforded a quotation upon no less than six different events. We give the averages:—

	DERBY HANDICAP.		
11 to 10 agst Abbess of Jervaux		5 to 1 agst Cneeus	5 to 1 agst Icebih
	LEAMINGTON STAKES.		
7 to 1 agst Goldfinder		10 to 1 agst Castle	
	15 to 1 agst Fugleman	15 to 1 agst Windhound	
	GREAT YORKSHIRE HANDICAP.		
9 to 2 agst Nancy		15 to 1 agst Teddington	
8 to 1 — Cossack		15 to 1 — Vatican	
	ST. LEGER.		
5 to 1 agst Ban	2 to 1 agst Bernadotte		10 to Prime Minister
	11 to 2 agst Rockingham.		
	LEAMINGTON.		
85 to 1 agst Kenney	40 to 1 agst Major		50 to 1 agst Mokanna
33 to 1 — Clarissa	40 to 1 — Rheims		50 to 1 — Garforth
40 to 1 — Vancouver	50 to 1 — Nimm		50 to 1 — Mr of Gwynne.
	CAMBRIDGESHIRE.		
20 to 1 agst Nancy	40 to 1 agst Windhound		50 to 1 agst Vancouver
40 to 1 — Swindler	50 to 1 — Mr of Gwynne		66 to 1 — Bordeaux
	66 to 1 agst Miss Middleton.		

THURSDAY.—No betting.

DERBY RACES.—TUESDAY.

The TRIAL STAKES of 5 sovs each.—Mr. Parr's Clothworker, 1. Mr. Sherratt's Egret, 2.

The CRAVENSHIRE'S PLATE of 100 SOVS.—Lord Lurgan's Cneeus, 1. Mr. King's Abbess of Jerveaux, 2.

The PRODUCE STAKES of 10 sovs each.—Mr. Halford's Prime Minister, 1. Mr. Dodsland ad. Aris, 2.

MAIDEN PLATE of £30, added to a sweepstakes of 5 sovs each.—Mr. C. Peck's Crookshanks (Charlton), 1. Mr. Fowler's The Reaper (Osborne), 2.

WEDNESDAY

CHATSWORTH STAKES of 10 sovs each, with 50 sovs added.—Mr. R. Oliver's Ischia, 1. Mr. J. Parr's Clothworker, 2.

CHESTERFIELD STAKES of 5 sovs each, with 50 added.—Mr. Halford's Peppermint, 1. Mr. Dudley's Conrad, 2.

INNKEEPERS' PLATE of 50 sovs.—Mr. T. Parr's Clothworker, 1. Mr. Sharratt's Egret, 2.

EGHAM RACES.—WEDNESDAY.

PRINCE OF WALES'S STAKES of 5 sovs each, with 20 added.—Mr. Death's Guardsman (G. Maun), 1. Mr. G. Drew's Cossacha (C. Knight), 2.

KING JOHN STAKES of 25 sovs each, with 50 added.—Mr. Gralwicke's Flirt (Kitchener), 1. Mr. Grevil e's Greenwich, 2.

RUNNYMEDE STAKES (HANDICAP) of 10 Sovs each, with 30 added.—Mr. Peacock's Espleiton (C. Adalet), 1. Mr. Hurnsby's Joe-o'-Sot (Hornsby, jun.), 2.

RAILWAY STAKES of 5 Sovs each, and £35 added by the South-Western Railway Company.—Mr. Greville's Chaffinch (Harding), 1. Mr. Dorrlon's Chaplet (Collins), 2.

THURSDAY.

THE SURREY AND MIDDLESEX STAKES. Don Pedro, 1. Little Jack, 2.

THE MAGNA CHARTA STAKES.—Plumstead, 1. Poetess, 2.

THE QUEEN'S STAKES.—Mr. Drew's Cossack, as the only starter.

AMATEUR STAKES.—Shropshire Witch, 1. Jack-in-the-corner, 2.

RICHMOND AMATEUR REGATTA.

The annual regatta amongst junior gentlemen amateurs at Richmond, one of the most genteel meetings of the season, took place on Wednesday, and afforded some very excellent sport. The prizes were, as usual, very handsome, and the attendance of spectators extremely numerous, the beautiful barges of Captain Styles (late the Goldsmiths'), which had been engaged for the occasion, being thronged with the *élite* of the neighborhood.

FOUR-OARED RACE FOR A SET OF SILVER PRESENTATION CUPS.—There were three heats, and the distance was from Sion House to Richmond Bridge. Final Heat: The Argonauts, 1; Petrel, 2: Meteor, 0.

EIGHT-OARED RACE FOR SILVER PRESENTATION CUPS.—Third and Final Heat: Messrs. E. Mosser and J. Nottidge, 1. Messrs. Burton and Gregory, 2.

SCULLERS' RACE FOR A SILVER WHERRY.—Third and Final Heat: Mr. G. F. Measom (Crimson), 1. Mr. Heatrie (Orange), 0.

A dingey and "scratch" match wound up the day's sport.

RICHMOND WATERMEN'S REGATTA.

RICHMOND WATERMEN'S REGATTA.—This regatta, in honour of the birthday of his Royal Highness Prince Albert, came off on Tuesday. There were four heats. The distance was from the Water-gate, at Mr. St. Margaret's, up to the Duke of Buccleuch's, and down to the Bridge to finish. Final heat:—T. Mackinney and Measom, 1. R. Measam and J. Jackson, 0; Platt and Jackson, 0. Won by half a length only.

TOWER (EXHIBITION) REGATTA.—The two days' regatta, under this title, in compliment to his Royal Highness Prince Albert as the originator of the Great Exhibition, commenced on Tuesday, and notwithstanding the unfavourable state of the weather, the day's sport passed off most satisfactorily. The contest was for a boat, and other prizes, for free watermen. There were four heats, which were started from the Ship Stairs, round the St. Margaret's, Dock-buoy to the Eel Chain (twice round). Final heat:—W. Murgatroyd (pink), 1; D. Fennis (red), 2; G. James (light blue), 0. The regatta closed on Wednesday, with a contest amongst watermen's apprentices, for a coat, badge, and freedom. The attendance was, as on the previous day, very considerable, and everything passed off most satisfactorily, every arrangement having been made to insure approbation. Fourth and Final heat: J. R. Fennis (Punk), 1. W. Wallner (Light blue), 0. W. Lyng (Green), 0. Green took the lead, but could only hold it for a short distance, when the winner passed, and won by five or six lengths. The coat was presented, with the other prizes, at Astley's Amphitheatre, on Thursday evening, and an equestrian procession formed upon the occasion.

COUNTRY NEWS.

LIVERPOOL CHAMBER OF COMMERCE.

The quarterly meeting of the members of the Chamber of Commerce was held on Monday; Thomas Berry Horsfall, Esq., president of the council, in the chair. There was an unusually numerous and highly-respectable attendance of members.

The Chairman opened the proceedings by a brief address, after which he called upon the secretary to read the report, of which the following is an epitome:—"The first subject al uded to is that of Customs reform, and the council regret that little progress has been made by the committee of the House of Commons with reference to matters of interest to the mercantile portion of the kingdom, their attention having been chiefly directed to subjects connected with the port of London. With reference to the recent enactment for the arrest of absconding debtors, the directory and other publications issued in connection therewith has resulted from it. The council appointed a committee to watch the progress of the Patent-law Amendment Bill, and, being convinced that the absolute monopoly now granted to such inventions is highly adverse to the public interest, they are glad to know that, during the next session, the whole subject is intended to be thoroughly sifted in a select committee of the Lower House. The special committee on the war-risks of trade continue their exertions; and it is believed that the subject is now under the consideration of the London and North-Western Railway with the view of affording to Liverpool that participation in a fair and equitable arrangement to which it is entitled. Among other matters that have been brought under the notice of the council during the session are—commercial law; smuggling at Shanghai; ocean penny postage—the council having memorialised the Government to allow vessels to carry a mail, the postage on each letter to be twopence, one penny of which to be paid to the vessel carrying them; the false imprisonment of a British subject by a Venezuelan Government; the grievances of the steam-packets, which has been referred to a special committee; the inefficiency of the present arrangements for examining the baggage of passengers, respecting which the council have communicated with the dock committee; lastly, the mode of delivering letters at the Post-office, respecting which the council request the opinion of the Chamber on the plan suggested by Mr. Banning, that no letters should be delivered without the production of a card."

W. Brown, Esq., M.P., seconded by Mr. J. Aspinall Tobin, moved the adoption of the report, which was carried unanimously.

Mr. Hodgson made some observations respecting the present inefficient system of commercial law, and urged the necessity of the formation of tribunals of commerce

Mr. Heath drew attention to the great benefits to the commercial community which the absconding debtors act would confer.

A question was asked by Mr. Francis Shand relative to the returns required by the Inconsistence Commissioners from the principals of firms, as to the salaries paid to their clerks; to which the Chairman replied, that, on reference to a file of the *Times*, it would be seen that the subject had been mentioned a few months ago in the City article of that paper, which had called forth a letter from the Clerk to the Commissioners, stating that no such return had been authorised by them.

Mr. Arnott made some observations relative to the Sound dues; and moved, seconded by Mr. Bonit, that the Government be memorialised to inquire into the Sound dues and their appropriation in the renewal of the treaty with Denmark; and that the members for the county and borough be requested to follow it up.

The motion was unanimously adopted.

After some other routine business, the proceedings terminated.

BAMPTON (OXFORDSHIRE) GREAT CATTLE FAIR.—This, the most noted fair in this county for the sale of live stock, was held on Tuesday. The supp y was quite as extensive as on any former occasion, and the stock shown superior. The business was numbered many, and it was evident from their early attendance that business would be somewhat brisk. By seven o'clock many thousands of cattle and sheep were on the ground. Store beasts were in great demand, for which high prices were demanded; but in effect sales, the sellers were obliged to make great abatements, when a great many sales took place, but at much lower prices than was anticipated. Milch and incalf cows ruled steady, both as to prices and demand, and such as had calves by their side made from £16 to £18 each. The sheep fair was exceedingly brisk at the best wethers making 30s to 34s. each; wether lambs, 18s to 21s. ditto the best ewes, scored upon the tooth, 26s. to 28s. ditto; ewe lambs, 18s. to 20s. ditto. Pigs were in great demand, and sold freely at high prices. Cart colts, two years old, made from 18 guineas to 25 guineas each, but aged horses declined in price.

THE GREAT NORTHERN RAILWAY.—With the view to prevent accidents in the tunnels on this line, it appears that underground telegraphs are now being laid through the several tunnels on this railway, so as to enable the man stationed at each end to communicate with the man at the other end, when a tr in goes in or comes out of the tunnel. It is intended that no second train shall be allowed, under any circumstances, to enter a tunnel until a message has been received from the guard of the train last passed out. On Saturday last, at the Welwyn tunnel, one of Mr. Henley's magneto-electric instruments, which are to be used, was connected at each end, and the first trial on this line was made by the master and the clerk of Mr. Hamilton, in the presence of some of the railway officials, and Mr. Dobson, from Mr. Cubitt's, the engineer. The trial was reported as most satisfactory. The great facilities Mr. Henley's instrument are stated to be that no battery is required, no at ntion necessary to keep it in working order, and that its action is always certain.

THE Compound Householders Act, passed during the last session of Parliament, has been brought somewhat effectively into operation in Manchester under the superintendence of the registration committees. Monday was the last day for claims to be sent in, and the League Registration Society, on behalf of the Free-Trade party, have sent in claims for 1,000 new applicants in making c aims, the greater portion of whom claim under this bill. The only other registration society is one calling itself the Protestant Defence Association, and from some of applications they have sent in, about 300. This makes about 900 persons whose names will probably be added to the register under the bill, independently of those who will have claimed by direct application to the overseers and others. The number on the complete register of last year was 11,841, so that the increase will form a large percentage, considering how ill-informed people are at present as to the scope and design of the act, and, indeed, as to its existence.
